TABLE OF CONTENTS

Initial letter "T" of the phrase Temptavit Deus Abraham *in a 14th-century Paris missal. The illumination shows the "sacrifice" of Isaac. Rheims, Bibliothèque Municipale, Ms. 2301, fol. 49v.*

To-Tz

TOAFF, Italian family of rabbis. ALFREDO SABATO TOAFF (1880–1963) was born in Leghorn and studied under R. Elijah *Benamozegh at the Leghorn Rabbinical College, where he was made professor, and in 1923 succeeded Samuel *Colombo as chief rabbi of Leghorn. A member of the Italian Rabbinical Council for many years (from 1931), he was several times its president. He headed the Leghorn Rabbinical College and was head of the *Collegio Rabbinico Italiano in Rome from its reopening in 1955 until his death, which occurred in his native city. He was the author of many works on, and translations into Italian of, biblical and post-biblical Hebrew literature, as well as of writings on the history and traditions of the Leghorn Jewish community (such as *Cenni storici sulla Comunità Ebraica e sulla Singagoga di Livorno*, 1955). Many of his writings show the influence of E. Benamozegh, whose *Scritti Scelti* (1955) he edited. A bibliography of the writings of Alfredo Toaff appears in: E. Toaff (ed.), *Annuario di Studi Ebraici* (1965), 215–6.

His son, ELIO TOAFF (1915–), was born in Leghorn and was the last rabbi ordained by its Rabbinical College, before its closure by the Fascist regime (reopened 1955). He was rabbi of Ancona (1941–46) and of Venice (1946–51) and was called to Rome to succeed David *Prato as chief rabbi of that community in 1951. A member of the Italian Rabbinical Council and head of the Collegio Rabbinico Italiano from 1963, he edited the *Annuario di Studi Ebraici* at the college. Elio was a member of the executive of the Conference of European Rabbis. On April 13, 1986, he welcomed Pope John Paul II on the first visit ever by a pope to a synagogue. He wrote articles and translated studies on Jewish, biblical, and historical topics from Hebrew into Italian.

[Sergio DellaPergola]

TOB (Heb. טוֹב), biblical place name. When *Jephthah the Gileadite was expelled from his father's house, he went to the land of Tob (Judg. 11:13). "A man of Tob" (Heb. *ish Tov*) is mentioned alongside the Aramean armies which came to the aid

of the Ammonites during their war with David (II Sam. 10:6, 8). The phrase "a man of Tob" apparently refers to the people of the land of Tob (cf. the usages "man of Israel," "man of God"), or to a Tobite ruler (cf. the terms for Canaanite rulers in the *El-Amarna tablets).

Documents from the second millennium B.C.E. mention a place called Ṭby or Ṭubu, along with cities in *Bashan. It has been suggested, therefore, by B. Mazar, that the land of Tob is to be located in the vicinity of the settlement of Taiyibeh, east of Edrei. It seems that the land of Tob was back country, and that it served as an asylum for outlaws.

[Bustanay Oded]

TOBACCO TRADE AND INDUSTRIES. Throughout the first two centuries after the discovery of tobacco for Europe through Christopher Columbus, *Marranos took part in spreading its cultivation and in introducing it to Europe. Jews took up smoking (widespread from the 17th century) and snuff taking (widespread from the 18th), and entered the trade in tobacco, which, starting out as a luxury article, became a mass consumer commodity.

At Amsterdam, the first important tobacco importing and processing center in the 17th century, Isak ltaliaander was the largest importer, and 10 of the 30 leading tobacco importers were Jews. Ashkenazi and poor Sephardi Jews were employed in processing tobacco for snuff: the profession of 14 out of 24 bridegrooms in a list of 1649–53 was tobacco dressing. In this period Jews took an active part in the tobacco trade of the *Hamburg center. The first Jews to settle in *Mecklenburg in the late 17th century were tobacco traders from Hamburg who leased the ducal tobacco monopoly; outstanding was Michael Hinrichsen nicknamed "Tabakspinner." Sephardi Jews filled an important role in the "*appalto*" system of contracting for the monopoly on the tobacco trade (or other products). The monopoly concession system was also practiced in the Austrian provinces and the southern German states. In this, Sephardi Jews were often the contractors because of their previous experience. The business carried considerable risks, including fluctuating prices, varying quality, deterioration through adulteration, and the hazards of war.

Diego d'*Aguilar managed to hold the tobacco monopoly in Austria in 1734–48, using Christian nobles as men of straw. In the second half of the 18th century the tobacco monopoly of Bohemia and Moravia was in the hands of members of the *Dobruschka, *Popper, and *Hoenig families, whereby they rose to importance and amassed wealth. Jews succeeded in holding the tobacco monopoly in only a few principalities in Germany. In the 19th century Jews entered the open tobacco market. In 1933 Jews engaged in about 5% of the German tobacco trade and industry, primarily as cigar manufacturers.

In Eastern Europe snuff processing was widespread, and tobacco was a staple ware of the Jewish *peddler. When in the mid-19th century cigars and cigarettes entered the mass market Leopold *Kronenberg, the Jewish industrialist and financier, was one of the main entrepreneurs in Poland, owning 12 factories in 1867 and producing 25% of the total. Of 110 tobacco factories in the *Pale of Settlement in 1897, 83 were owned by Jews, and over 80% of the workers were Jewish. This participation continued into the 20th century, and the Jewish tobacco workers were active in the ranks of socialism. The huge Y. Shereshevsky tobacco factory in Grodno employed, before World War I, some 1,800 workers. The nationalization in Poland of the tobacco and liquor industries in 1923–24 was a severe blow to the many Jews who gained their livelihood from them. The leading tobacco factories in Riga, Latvia, were owned by two wealthy Karaites, Asimakis and Maikapar.

On the American continent Jews traded in tobacco as early as 1658. It frequently served as legal tender and was a stock retail article of the Jewish peddler. However, Jews played a considerable part only in the snuff trade, among them the firms of Asher and Solomon, and Gomez. Judah Morris, who wrote the first Hebrew book to be printed in North America, became a snuff trader. The last quarter of the 19th century brought an influx of impoverished Jewish immigrants from Eastern Europe who entered the cigar and cigarette industry, and, after the garment industry, it had the largest concentration of Jewish workers in the United States. The first professional cigar makers were generally Jews of Dutch or German origin, who employed the immigrants in their factories or in sweatshops. The Jewish firm of Keeney Brothers, makers of "Sweet Caporals," employed approximately 2,000 Jewish workers. The Durham factory almost exclusively employed Jews. Tobacco workers, organized by Samuel *Gompers, became the spearhead of the labor union movement in the United States in the 1870s and 1880s. Subsequently Jewish participation in the cigarette industry declined through the creation of large concerns, though many cigar firms remained under Jewish ownership. In New York and the major cities the tobacco retail trade occupied a high proportion of Jews. A survey by *Fortune* magazine (*Jews in America*; 1935) stated that "Jews have practically blanketed the tobacco buying business, where Jews and buyer are synonymous words, and they control three of the four leading cigar-manufacturing concerns, including Fred Hirschhorn's General Cigar, which makes every seventh cigar smoked in America." The *Culman family of Philip Morris, involved in American tobacco from the mid-19th century, was a giant of the industry. In Canada Jews played a leading role in introducing the tobacco industry; Mortimer B. Davis was known as the "tobacco king" of Canada.

In Great Britain cigar making was traditionally associated with Dutch Jews, who formed the main body of Jewish immigrants in the mid-19th century; cigar making was the most widespread occupation in London's East End in 1860. In 1850, 44% of the meerschaum pipe makers were Jewish, and 22% of the cigar manufacturers. East European Jewish immigrants introduced cigarette making into England. In 1880 Jacob Kamusch, an Austrian Jewish cigarette entrepreneur, brought

310 workers, mainly Jewish, to his Glasgow cigarette factory. Isidore Gluckstein founded his first tobacconist shop in 1872 and became the biggest retail tobacconist in England, up to 1904. Bernhard *Baron was a large-scale cigarette manufacturer in America and England.

Sephardi Jews played an active role in the tobacco trade from its beginnings in the Ottoman Empire. The *Recanati banking family began as *Salonika tobacco merchants. Thrace and Macedonia were major tobacco-growing areas; the *Alatino (Alatini) family became sole suppliers of the Italian tobacco monopoly.

[Henry Wasserman]

In Israel

Tobacco growing was first introduced in the country in 1923/24, in order to solve problems of unemployment. New immigrants from Bulgaria and Greece took an important part in the development of the industry. All kinds of tobacco products are manufactured in Israel. In 1969 the overall production included 3,700 tons of cigarettes, 15,000 kg. of cigars, 60,600 kg. of tumbak, 40,100 kg. of snuff, and 16,600 kg. of pipe tobacco. In the same year the consumption of tobacco products amounted to nearly IL 200,000,000 (about 2% of the total private consumption in Israel), including mainly locally produced products but also about $6,000,000 worth of imported products. There were 15 manufacturing plants in Israel, employing 875 workers and processing mostly locally grown tobacco of Oriental aroma. Tobacco was grown mainly in the non-Jewish sector in northern Israel. In 1950 tobacco-growing areas amounted to 9,000 dunams, and tobacco-product manufacture reached 600 tons. By 1969 tobacco was grown in 35,000 dunams and production increased to 2,200 tons. Since that time tobacco production has dropped radically, to 150 tons on 5,000 dunams by 1990, but cigarette imports have risen dramatically, by about 2,500% between 1970 and 2000 along with a 33% increase in tobacco leaf imports. Local cigarette production rose from 3,668 million cigarettes in 1970 to 4,933 million in 1995. The industry employed around 600 workers in the late 1990s.

TOBACH, ETHEL (1921–), U.S. leader in the field of comparative psychology and the use of psychological knowledge for the public good. Tobach was born in the Ukraine to Fanya (Schecterman) and Ralph Wiener. Two weeks after her birth her parents fled with her to Palestine to escape pogroms. When Tobach's father died nine months later, her mother immigrated with her to Philadelphia and became an activist in the garment workers' union. Tobach also worked at blue-collar occupations while attending Hunter College in New York City, from which she graduated Phi Beta Kappa in 1949. Shortly after World War II she married Charles Tobach, a fellow radical who belonged to her union. He encouraged her to pursue graduate work in psychology at New York University, where she received a Ph.D. in 1957.

Tobach spent her entire career at the American Museum of Natural History, rising to the rank of curator. Although she taught at a number of universities in the New York City area, for most of her professional life she was a full time researcher in animal behavior. Her research was voluminous and broad in scope. Her empirical articles focused on the link between stress and disease in rats; she also contributed extensively to the study of emotionality in rats and mice, and explored the biopsychology of development and the evolution of social behavior. Tobach was a consistent critic of genetic determinism; one of her most important contributions to psychology was the book series, "Genes and Gender," initiated in 1978 with Betty Rosoff. These books critically examined psychology's relatively unsophisticated view of the interactions between biological and social processes.

Tobach was vice president of the New York Academy of Sciences in 1972, president of the American Psychological Association Division of Comparative and Physiological Psychology in 1984–85, president of the Eastern Psychological Association in 1987–88, and president of the APA Division on Peace in 2003–4. In 1993 she received the Kurt Lewin award from the Society for the Psychological Study of Social Issues and in 2003 she received an award for Life Time Service for Psychology in the Public Interest from the American Psychological Foundation.

[Rhoda K. Unger (2nd ed.)]

TOBACK, JAMES (1944–), U.S. writer, screenwriter-director, and producer. Born in New York City, Toback was educated at Harvard University (A.B., 1966) and Columbia University (M.A., 1967). He served as an instructor in English at the City College of the City University of New York and wrote *JIM: The Author's Self-Centered Memoir on the Great Jim Brown* (1971). He was also the author of a sports column appearing

in *Lifestyle*, a film critic for *Dissent*; and contributed articles to numerous magazines, including *Esquire, Sport,* the *Village Voice, Harper's,* and *Commentary.* Toback wrote the screenplays for *The Gambler* (1974) and *Bugsy* (1991) and was the writer and director for *Fingers* (1978), *Love and Money* (1982), *Exposed* (1983), *The Pick-Up Artist* (1987), *The Big Bang* (1989); *Two Girls and a Guy* (1997), *Black & White* (1999), *Love in Paris* (1999), *Harvard Man* (2001), and *When Will I Be Loved* (2004). Subsequently he wrote the screenplay for the French remake of his film *Fingers*, translated into English as *The Beat That My Heart Skipped* (2005).

[Amy Handelsman (2nd ed.)]

TOBENKIN, ELIAS (1882–1963), U.S. journalist and author. Born in Russia and taken to the U.S. as a boy, he served as Russian expert for the U.S. Committee on Public Information. He was correspondent for the *Herald Tribune* in Eastern Europe and Germany, and in 1926 spent five months in the U.S.S.R. and wrote an uncensored account of the Communist regime. His first novel *Witte Arrives* (1916) described the Americanization of an immigrant Jewish family. *God of Might* (1925) dealt with the problems of intermarriage. Among his other books were *Stalin's Ladder* (1933) and *The Peoples Want Peace* (1938).

TOBIADS, dynastic family of political importance from the time of Nehemiah to the end of the Hasmonean revolt. The name Tobiah remained in the family on the basis of pappyonomy, handed down from grandson to son, for many generations. There is good literary evidence for at least four prominent members of the family and archaeological evidence of their country seat in Transjordan for several hundred years in the Hellenistic period. The family may have had earlier ancestors, such as Tobijah, returnee from the Exile, mentioned by Zechariah (6:9 and 14); Tubyahu, "arm" and "servant" of the king, mentioned in the Lachish letters of 588 B.C.E.; and even the "son of Tabeel," a usurper planning to replace King Ahaz (Isa. 7:6), all as claimed by Mazar (1957).

The Tobiad estate was at Tyros (Ẓur, or "rock"), some 13 mi. (20 km). west of Rabbat-Ammon (Philadelphia) and was rediscovered by Willam Bankes in 1818 (Irby and Mangles 1823), thanks to a full account of it by Josephus. He described it as a *paradeisos*, a kind of Persian country estate, consisting of a marble fortress (*birta*) with animals carved on the walls, and surrounded by a moat; a long series of defensible caves; some enclosed halls and vast parks; and located between Arabia and Judea, not far from Heshbon (Ant. 12:222–34). His account is accurate, though not in all details. The site is known today as Airaq (or 'Iraq) al-Amir ("Cliff of the Prince"), based on the cliff of caves, and the name Tyros, or Ẓur, is still preserved in that of the adjacent valley, Wadi Sir. Two of the cave entrances carry a large Aramaic inscription, TOBYAH, to the right-hand side of their doorways. The chief building, of monumental size though plainly not a fortress, sported at each corner a frieze of lions (with two eagles above) and had two unique panther fountains (Lapp 1963). It is called the Qasr al-Abd ("Castle of the Slave") and was largely restored by a French team in the years 1976 to 1986 (Will and Larché, 1991). It was built by Hyrcanus, the last of the Tobiads, and largely completed, but much of its megalithic construction was toppled by later earthquakes (Amiran 1996).

The earliest Tobiad to be described in some detail is Tobyah, "the servant, the Ammonite" (Neh. 2:10). He was one of the chief opponents of Nehemiah, when he came to rebuild the walls of Jerusalem in 445 B.C.E. As Tobyah was allied to *Sanballat of Samaria and Geshem the Arabian (2:19), all major landowners, it is likely that their opposition was mainly due to the land reforms being forced through by Nehemiah (5:11). Tobyah was well connected to other Jewish aristocratic families by oath (6:17–18) and to the priesthood by marriage. He was given rooms in the offerings chamber of the Temple by the High Priest Eliashib, but Nehemiah had him expelled and insisted that the place be ritually cleansed thereafter (13:4–11). The title given him by Nehemiah, "the servant, the Ammonite," is generally taken to be a rank implying ministerial service to the Persians in Ammon, and some have claimed that he was governor of the Persian province of Ammon. But that post is not attested to and the title could also be pejorative, as implying that Tobyah's pedigree was not faultless, seeing that, on their return from the Exile, the Benei Tobyah clan had not been able to prove "they were of Israel" (7:61–62).

The second known prominent member of the family was Toubias, who was visited by Zenon, acting on behalf of Appolonius, chief minister to Ptolemy II Philadelphos of Egypt. The papyri records of his journey through Palestine and Transjordan are dated to 259 B.C.E. He visited Surabit (Ẓur bayit), the birta of Ammonitis, where he conducted trade with its chieftain Toubias. Zenon brought grain from Egypt and several contracts record that he received slave boys and girls and exotic animals in return. The animals, consisting of horses, dogs, donkeys, and asses, were sent as gifts to Appolonius and to Ptolemy directly (Tcherikover and Fuks 1957). The contracts were witnessed by Persian and Greek soldiers and indicate that Tyros was then a military camp as well as an animal breeding center under Toubias and well known to the Egyptians.

Josephus wrote extensively on the subject of Joseph, son of Tobias, and his son Hyrcanus (Ant. 12:154–236) in a section that is generally known as the Tobiad Saga, or the "Tales of the Tobiads" (Goldstein 1975). His account had been seen as mainly fictional, as it contains many fabulous deeds of the two Tobiads, but when the evidence of the Zenon Papyri (as above) came to light in 1918, and when Josephus's description of Tyros was seen to accord with the facts on the ground, it was necessary to take him seriously. He tells us that Joseph's mother was a sister of the High Priest Onias, and that as a young man he was elected as *prostastes* (chief magistrate) of the Jews in place of Onias, who had refused to pay tribute to Ptolemy, the Egyptian Pharaoh. Joseph went to Alexandria and obtained the office of tax farmer to Ptolemy for Coele-Syria (Palestine) and, with the help of Egyptian troops, ex-

tracted tax sums that pleased his master. He also enriched himself and, according to Josephus, enhanced the status of his Jewish brethren. He carried out this work for 22 years. In his old age he sent Hyrcanus, the youngest of his seven sons, to Alexandria to attend the birthday celebrations of the new Pharaoh's son. Hyrcanus took the opportunity to supplant his father as tax farmer by offering a huge sum of his father's funds to the new Pharaoh, thus outbidding all others, and excluding his older brothers, who had not been interested in making the journey. His father and brothers naturally took umbrage and on his return Hyrcanus had to flee Jerusalem to Tyros, where he set up the family estate, as previously described. He dwelt there in conflict with his Arab neighbors for seven years and eventually committed suicide when Antiochus IV Epiphanes came to the Seleucid throne in 175 B.C.E., and made an end of the Tyros estate.

This detailed account raises as many questions as it answers. Much of the inconsistencies are due to the continuing wars between the Ptolemies and the Seleucids, who eventually gained control of Palestine from the Ptolemies in 200 B.C.E. It appears that Joseph the tax farmer was pro-Ptolemy and managed to supplant his uncle Onias, who was unwilling to pay tribute to Ptolemy when he saw the Seleucids in the ascendant. Later his sons sided with the Seleucids, while the youngest, Hyrcanus, remained loyal to the Ptolemies. Hyrcanus had to retreat to Tyros in the face of the Seleucid victory and when the Seleucids started to expand their Empire under Antiochus IV, he thought his fate was sealed. But it may not have been so.

After the discovery of the Zenon Papyri in 1918, it was assumed that Joseph, the son of Tobias was the son of the Toubias of the Zenon Papyri. However, that places him at too early a date, and it is more likely that he was the son of a grandson of that Toubias, who carried the same name. It was Onias II who had refused to pay tribute to Ptolemy III Eurgetes, and when his successor Ptolemy IV Philopater won a surprise victory against the Seleucids in 222 B.C.E., Joseph was appointed in place of his uncle, Onias II. Twenty-two years later, he sent Hyrcanus to the birth celebrations of the son of Ptolemy V and Cleopatra I, and Hyrcanus took the tax farmer post from Joseph. This may not have been such a coup, as in exactly that year, 200 B.C.E., Antiochus III finally wrested Palestine from the Ptolemies, so the taxes should now have gone to the Seleucids. However, he generously transferred those taxes to Cleopatra, his daughter (Schwartz 1998), and it seems that Hyrcanus was astute enough to see they would then go to her husband, his master, Ptolemy V. Meanwhile Ptolemy's general Scopas tried to retake Jerusalem but failed to do so in 198 B.C.E., and it is then that Hyrcanus was ousted from Jerusalem and spent the rest of his days, and his wealth, in developing the family estate at Tyros.

It is unlikely that Hyrcanus committed suicide or even died in 175 B.C.E. The Seleucids were too busy, in Jerusalem and Egypt, to take notice of him and it is more likely that he survived until at least 169 or 168 B.C.E., when Antiochus IV returned from Egypt and punished the Jews for believing him to be dead. He may then have turned his attention to the remaining pockets of Ptolemaic resistance. In any case we know that the estate stood until 163 B.C.E., when it was overrun by the Seleucid general Timotheus, who massacred about a thousand men of "our fellow Jews in the region of Tubias"(II Macc. 5:13). It also appears that Jason, the hellenizing high priest, who displaced his brother Onias III, and built the gymnasium in Jerusalem (II Macc. 4:12) had, in his turn, to flee in 171 B.C.E. from the more extreme usurper Menelaus, and came to find sanctuary in "Ammonite country" (II Macc. 4:26), probably in Tyros with his cousin Hyrcanus.

From the archeological evidence it is clear that it was Hyrcanus who built the Qasr al-Abd, it being in the Hellenistic style of the late second century B.C.E., similar to palaces at Alexandria and Ionia (Butler 1907, Nielsen 1994). For many years it was considered to be an unorthodox temple built to challenge Jerusalem, but no altar has been found and the interior, now reconstructed by the French team, is quite unsuitable for use as a shrine. The French have concluded that it is "Le Château du Tobiade Hyrcan" but that is unlikely. It was designed to stand in the center of a lake, for which there is good evidence, and was a grand monumental building whose lower floor, of small rooms surrounded by massive monoliths, could only, in their opinion, be designated as mere storerooms (Will and Larché 1991). And access via the lake would have been cumbersome. Therefore it is more likely to have been intended as a mausoleum to his distinguished family by its last scion, Hyrcanus, as surmised many years ago by W.F. Albright. The group of lion sculptures at each corner represent the guardians of a typical Ionian mausoleum, and the upper eagles represent the messengers that carry the souls of the dead to heaven. The small rooms of the monumental lower story were for burials and the columnated upper story for funereal banquets (Rosenberg 2004).

Hyrcanus turned the whole of the family estate into a Hellenistic garden city (*paradeisos*) as Josephus claims (Ant. 12:233). He renovated the ancient caves and turned two of them into *triclinia*, or feasting chambers. He built a small aedicule, as a shrine or tomb (Butler 1907), a vast dike to the lake he intended to form around the Qasr al-Abd, a *nymphaeum* (water source) on the hillside, and a monumental gateway to the estate. He converted the older buildings on the upper site – which go back to the Iron Age, and which had been the original *birta* (fortress) of the estate (Gera 1990) – into spacious halls with plastered walls (Lapp 1963). It is impossible that he could have done all this in the seven years allocated to him by Josephus, though it is clear that he did not live to finish the Qasr.

The two TOBYAH cave inscriptions are now safely dated to the fourth century B.C.E. (Naveh 1976) and show that the estate was that of the Tobiads well before the time of Hyrcanus. It was a true *paradeisos*, in that its development began in the Persian period, adjacent to the original *birta* on the upper site.

The Tobiads were clearly Hellenizers from the time of the Tobyah of the Zenon Papyri and played an important role in the events leading up to the Hasmonean revolt. Joseph, son of Tobias, in particular would have brought customs of Alexandrian life and luxury, in the wake of his increased wealth, to Jerusalem. And the Tobiads would have supported the High Priest Jason in building a gymnasium and designating Jerusalem to be a Greek *polis*. Nevertheless, when it came to the war against the Seleucids, the Tubian Jews sided with the Hasmoneans and *Judah Maccabee crossed the Jordan to avenge the death of the thousands slain by the Seleucids in the land of the Tubians (II Macc. 12:23).

[Stephen G. Rosenberg (2nd ed.)]

TOBIAS, ABRAHAM (1793–1856), Charleston businessman and civic leader. Born in Charleston, Tobias received little formal education. He prospered as an auctioneer, vendue master, and commission merchant. He was a director of the Union Bank of South Carolina for 21 years, a member of the City Board of Health (1833–37), and a commissioner of pilotage for Charleston harbor (1838–43). He participated in the turbulent politics of the period as a States Rights Party member, supporting John C. Calhoun's position. As a trustee of Beth Elohim synagogue, of which his great-grandfather, Joseph *Tobias, was a founder (1749), he was a key figure in the 1840s when the congregation split over installing an organ and making other ritual reforms.

[Thomas J. Tobias]

TOBIAS, JOSEPH (1684–1761), colonial settler of Charleston, South Carolina. Tobias, whose parentage and birthplace are unknown, was of Spanish lineage. He served as Spanish interpreter in the British navy prior to coming to Charleston in the early 1730s. During the long-standing hostilities between the English and the Spanish in the South, Tobias served the South Carolina government as a Spanish interpreter. In 1741 he became a naturalized British subject, being one of the first Jews in the colonies to apply under an act passed by Parliament in 1740. Tobias was one of the founders and first *parnas* of Charleston's congregation Beth Elohim, organized in 1749. His wife, Leah, was the daughter of Jacob De Oliviera, one of the original Savannah Jewish settlers in 1733.

[Thomas J. Tobias]

TOBIAS, MOSES (1694–1769), merchant of *Surat, India. A native of Cochin, Tobias was appointed in 1728 director of the Surat Portuguese factory by the Portuguese viceroy and undertook many important negotiations with the neighboring native rulers as accredited "agent of the Portuguese nation." The Portuguese archives in Goa have preserved many documents attesting to his diplomatic role in Surat, in which he was succeeded by his son Isaac and other members of his family throughout the 18th century. Moses Tobias conducted commercial transactions on a large scale and was a shipowner whose vessels sailed the Arabian Sea and the Indian Ocean. Dutch records of the day frequently register the movements of the "Jew's ships of Surat" under the command of presumably Jewish captains such as Jacob Moses and Moses Alexander. Tobias' tombstone inscription, in which he is styled "*nasi,*" i.e., president, of the Surat Jewish community, is one of the few preserved in the old Jewish cemetery in Surat.

[Walter Joseph Fischel]

TOBIAS, PHILLIP VALLENTINE (1925–), South African anatomist and paleoanthropologist. His paternal grandfather Phillip Tobias served the Central Synagogue of London from 1854 to 1904. Professor Tobias was the great-great-grandson of Isaac Vallentine (1793–1868), founder of the *Jewish Chronicle*. Born in Durban, South Africa, Tobias taught at the Witwatersrand Medical School from 1951. From 1959 until 1990 he served as head of the department of anatomy. He was dean of the Faculty of Medicine (1980–82), member of the Witwatersrand University Council (1971–84), and the only simultaneous holder of three professorships at Witwatersrand University, Anatomy, Zoology, Palaeo-anthropology. From 1994 he was Professor Emeritus of Anatomy and Human Biology. He was founder and president of the Institute for the Study of Mankind in Africa (1961–68, 1983–84), president of the Royal Society of South Africa (1970–72) and of the South African Archaeological Society (1964–65), founder and first president of the Anatomical Society of Southern Africa (1968–72) and

South African Society for Quaternary Research (1969–73). From 1994 to 1998, he was president of the International Association of Human Biologists. Protégé and successor of Raymond Dart, who discovered the first African australopithecine, Tobias was from 1959 closely associated with Louis and Mary Leakey, who found early hominid remains in northern Tanzania. Some of these fossil hominids Leakey, Tobias, and Napier identified as a new lowly species of man, which they named *Homo habilis* (handy man) representing a more hominised lineage than the australopithecines. Tobias later adduced evidence that *Homo habilis* was the world's earliest primate with a capacity for spoken language. To a series of volumes on Olduvai Gorge, Tanzania, Tobias contributed a monograph on the biggest-toothed australopithecines, *Australopithecus boisei*, and two volumes on *Homo habilis*. His oeuvre of over 1,100 published works includes nearly 500 articles in periodicals, 125 chapters in books, and over 50 books and monographs. He is recognized internationally as a leading authority in palaeo-anthropology and has received 17 honorary doctorates, the Carmel Award of Merit of the University of Haifa, and many medals, honorary professorships, civil decorations, and memberships of academies. He has written inter alia on living Africans, genetics, race and racism, academic freedom, and the harmful effects of apartheid on South African education. Tobias was active in Jewish communal affairs, including the Board of Deputies and the Great Synagogue of Johannesburg.

[Gali Rotstein and Bracher Rager (2nd ed.)]

TOBIAS BEN MOSES HA-AVEL (or **ha-Ma'tik**, "the translator"; 11th century), *Karaite scholar. He laid the theoretical and educational foundations for establishing the Karaites in the Byzantine milieu. According to Elijah *Bashyaẓi (*Iggeret Gid ha-Nasheh*, 4a) Tobias studied under *Jeshua b. Judah, translated his works from Arabic into Hebrew, and brought them to Constantinople. He would therefore seem to have lived in the second half of the 11th century. However, two letters in Tobias' own handwriting found in the *Genizah* of Cairo indicate that he went to Jerusalem as early as the 1030s (or possibly the 1020s). At any rate he had returned by 1041, after he, like other Karaites, became involved in a bitter controversy which split the *Rabbanite community in Ereẓ Israel between the supporters of *Nathan b. Abraham and the followers of *Solomon b. Judah Gaon. Tobias could not have been a pupil of Jeshua b. Judah since both apparently studied under Joseph b. Abraham ha-Kohen "ha-Ro'eh" (al-*Baṣīr), Tobias even translating some of al-Baṣīr's letters into Hebrew. A few years later, at all events before 1048, Tobias headed the Karaite community in Byzantium. He went to Egypt, perhaps as an emissary, and there instituted regulations for the synagogues of his community. His authority was recognized by all "the communities of Edom [i.e., Byzantium] both near and far" (letter to Abraham b. Yashar *Abu Sad al-Tustarī in Egypt; see Z. Ankori, in: *Essays… S.W. Baron* (1959), 38). As the independent leader of the first Karaite center in the Byzantine Empire, he several times addressed questions on halakhic matters to the scholars in Jerusalem. Their answer to his query on intercalation was kept as a ruling for the Diaspora communities (Judah Hadassi, *Eshkol ha-Kofer*, 76a).

Epithets

The epithets by which Tobias is remembered in Karaite history are an indication of his personality and activities. His membership of the *Avelei Zion of Jerusalem while he was a student in the academy there led to his designation *ha-avel* ("the mourner") and *ha-oved* ("the worshiper"); his role as commentator and decisor on the laws of his community gained him the honorific *ha-baki* ("the erudite"), in addition to the conventional appellations *he-ḥakham* ("the sage") and *ha-maskil* ("the teacher"). Tobias attests that he was also called *ha-sofer* ("the scribe"), possibly in reference to his art (as demonstrated by his fine calligraphy in manuscripts which have survived). The title *ha-ma'tik* ("the translator") best describes Tobias, which then meant both translation and knowledge of tradition (*masoret*).

Works

With the exception of several liturgical poems (two of which were included in the Karaite prayer book), Tobias' works consist for the most part either of actual translations of works by his teacher Joseph al-Baṣīr from Arabic into Hebrew – *Sefer Ne'imot*, i.e., *Kitāb al-Muḥtawī* ("Book of Melodies"); *Sefer Maḥkimat Peti*, i.e., *Kitāb al-Tamyīz* (or *al-Manṣūrī*, "Book for the Enlightenment of Fools"); and *Sefer ha-Moladim*, one of eight chapters from *Kitāb al-Istibṣār* ("Book of Festivals") – or of compilations of Arabic material from other "Jerusalemite scholars" and its adaptation in Hebrew as the basis for Tobias' original work. This applies to his philosophical treatise *Meshivat Nefesh* (extant in manuscript), and his halakhic commentary, in many volumes, *Sefer Oẓar Neḥmad le-Va-Yikra* (only the first part, on Lev. 1–10, has survived in manuscript; passages from it have been published by Neubauer, Poznański, Mann, and Ankori). In this case Tobias himself states (at the end of the work) that his investigation is based "on Arabic works which I would have rendered into Hebrew," particularly on the Arabic commentaries of *David b. Boaz and *Japheth b. Ali ha-Levi, tenth-century Karaite scholars.

Halakhic System

In the legal field, the term *ha'takah* (Ar. *al-naql*) denotes the principle of tradition (precedence) in the determination of law. Its original (i.e., Rabbanite) meaning naturally refers to the Oral Law. But the tenth-century Karaite polemical writers, who borrowed this term from their Rabbanite opponents, attributed to it, in accordance with the classic standpoint adopted by this sect, two separate aspects and designated them as follows: on the one hand, there is acknowledgment of "*ha'takah* which all regard as authoritative," i.e., the prophetic tradition which has been preserved for posterity "in the books and prophecies transcribed with the Torah in the possession of Israel" (according to the definition of *Sahl b.

Maẓliaḥ ha-Kohen in S. Pinsker (ed.), *Likkutei Kadmoniyyot* (1860), 34); on the other, the authority of non-biblical tradition is rejected and it is laid down that "any *ha'takah* which has no support from Scripture is worthless" (Aaron b. Elijah of Nicomedia, *Gan Eden*, 8b/c, and Elijah Bashyaẓi, *Adderet Eliyahu*, 9d, 48c, 82b. All further citations are taken from the latter source). The original version of Tobias' definitive treatise on the theory of *ha'takah* has not survived and its position among his lost works is not known. However, its inherent boldness and revolutionary consequences were perceived by subsequent generations of scholars who preserved his text, with slight linguistic changes, and interpreted it repeatedly as they saw fit. In his endeavor to establish an intellectual and legal criterion for compromise solutions necessitated by time and place, Tobias recognized in both theory and practice the positive and dynamic function of the principle of *ha'takah* for his contemporaries, as it was also understood by the Rabbanites. In order to mollify conservative Karaite opinion, Tobias based this awareness on the fictitious assumption that all the activities of the Karaites, even seeming innovations, must have a foundation in and derive proof from Scripture, and "those who say that *ha'takah* exists without support from Scripture merely show that they lack the intelligence to find its legal validity in the Torah."

At the same time as the Karaite concept of tradition was in the process of being enriched, there existed in Karaism a corresponding trend whereby the concept of "community" (Heb. *edah* or *kibbutz*; Ar. *al-ijmāʿ*) was assimilated within the comprehensive context of tradition. Thus Tobias' fundamentally broader concept of *ha'takah* absorbed the ingredients of the Karaite principle of "consensus of the community," one of the earliest sectarian impediments to authoritative halakhic initiative. On the strength of this twofold development, *ha'takah* (which Tobias also called *kabbalah*, i.e., chain of tradition, while others called it *sevel ha-yerushah*, i.e., traditional custom) was harnessed in its new context to the positive process of later Karaite legislation. In the course of time *ha'takah* was to rise to the level of the two other fundaments of Karaism, the Torah (Scripture) and comprehension (*da'at* or analogy; *hekkesh*, Ar. *al-qiyās*), and even to become the leading principle. It completely changed the attitude of the Karaites toward the Talmud and its place in Jewish history, and ended by paving the way to the radical reforms effected in Byzantine-Turkish Karaism in the 15th century.

TOBIT, BOOK OF, one of the books of the *Apocrypha included in the Septuagint and Vulgate in the canon.

It is the story of Tobit, an honest, upright man of the tribe of Naphtali, who observed the precepts and was exiled to Assyria by Shalmaneser (III?). When he came to the land of his exile and the king of Assyria (Sennacherib) put many of the Jewish exiles to death, Tobit endangered his own life by defying the royal decree and arranging for the burial of the victims. His action came to the knowledge of the government and he was compelled to go into hiding until Esarhadon ascended the throne and *Ahikar, Tobit's nephew, was restored to his post as the king's scribe. Tobit then resumed his beneficent activities. It happened that on one occasion, when he had returned from burying an abandoned corpse, and lay down to sleep in his courtyard, bird's droppings fell into his eyes and he became blind. In his distress he remembered that some time before he had lent his relative in Rages of Media ten talents of silver. He therefore requested his son – called Tobias – to claim the money. The young man went in the company of a guide. On the way, as they passed the River Tigris, the guide advised him to catch a fish and preserve its heart, liver, and gall. Later as they passed Ecbatana in Media, the guide told him that his kinsman Raguel (Reuel) dwelt there, and that he had an only daughter, Sarah. She had already been married seven times, but the bridegroom had died each time on the night of the wedding, and according to the law of the Torah, since she was the young Tobias' kinswoman she was bespoken to him and not to a stranger. In order to drive away *Ashmedai, the demon who slew the grooms, the guide advised him to burn the heart and liver of the fish. Tobias did as ordered and was successful. His father-in-law, who was glad to see him alive, doubled the duration of the festivities from seven to 14 days. Meanwhile the guide, who had gone to Rages to bring the debt, came back, and they returned together to the home of Tobit the elder. When they reached Nineveh the son smeared the gall on his father's eyes, and his eyesight was restored. Tobit wanted to pay the guide his hire, but then it became known to him that the guide was none other than the angel Raphael, one of the seven angels who carry up prayers to Heaven. The aged Tobit, being aware that the end of Nineveh was near, commanded his son to leave the city and to go to Media after his father's death, which he did.

Various conjectures have been put forward with regard to the source of the tale. In the past it was usual to give the historical explanation that the story reflects the prohibition in some period against burying the dead, whether in the Persian era, or the Greek (under Antiochus IV), or the Roman (cf. Graetz; cf. Katznelson). However, the Roman era is much too late (the book is now known from the Dead Sea scrolls); there is even no reflection of the religious persecution of Antiochus IV, nor has the story any visible connection with the Persian custom of not burying the dead (moreover, its author praises Media). In recent decades the conjecture has gained acceptance that there is a connection between the story and the widespread folkloristic motif of a young man who saved a dead body from creditors who wanted to prevent its burial, and was then rescued by the deceased's spirit from mortal peril. The story of Tobit, however, does not speak even of a single creditor but of people put to death because of their devotion to burying the corpses of those executed

by royal decree (as in the story of Antigone), and the bride is not a legendary king's daughter, but a kinswoman bespoken to her relative; nor is there mention of the many fabulous deeds which characterize the folklore tale. Probably, what the author really had in mind were the two popular "precepts," known from both the apocryphal and early talmudic literature: the first that one is in duty bound (even if he be a Nazirite or a high priest, who must keep away from any uncleanness) to bury a corpse found at random (*met mitzvah*, "the burial of the dead that is a precept"); and the second that there is special merit in marrying a kinswoman (cf. Tosef., Kid. 1:4; TJ, Naz. 7:1; and there are many stories of scholars who did so).

The book itself appears to be as early as the Persian era. It contains a prophecy on the building of Jerusalem, but there is no allusion to the Hasmonean wars. It appears to have been compiled in Media. To this the Iranian name "Ashmedai" (from Aeshma-Dawa) seems appropriate. There is also the very fact that the whole story turns around descendants of the ten tribes. From talmudic and other sources, it is clear that until a very late period the ten tribes were believed to thrive in Media and in the surrounding countries. Furthermore, in Babylonia (in a wide sense) more than in any other place, they were concerned about the genealogical purity of the Jews of the Exile. Moreover, and connecting of Tobit with Ahikar shows that in that place and time Ahikar was a well-known personality, which again lends support to the earlier date. The book is regarded as the most artistic story of the Apocrypha. Though dealing with various motifs, it retains a simple style and character. The original language was either Hebrew or Aramaic. Several fragments of the book were found among the Qumran scrolls both in Hebrew and in Aramaic. The Greek text is preserved in many versions, a long one (S) which is attested to in the Qumran library, a short one (A and B), and a third one, which is represented in many minuscules. Several Hebrew versions were preserved in the Middle Ages, but they all seem to be later adaptations. A very shortened version of the tale found its way into the well-known *Midrash* **Tanḥuma*.

[Yehoshua M. Grintz]

In the Arts

The book's ethical message was congenial to the early Christian Reformers, notably Martin Luther (who recommended Tobit as a subject for comedy). A pioneer of the drama in Sweden was the Lutheran writer and preacher Olaus Petri (Olof Petterson), whose *Tobiae Commedia* appeared in 1550. Other works of the period were a Danish play by Hieronymus Justesen Ranch of Viborg, the German *Meistersinger* Hans Sachs' comedy, *Die gantz histori Tobie*, Joerg Wickram's German prose comedy, *Tobias* (1551), and a mystery staged at Lincoln in 1564. These were followed by several more works in the 17th century, but interest in the theme later waned, although the 19th century saw the appearance of Milovan Vidahoric's Serbian epic, *Mladi Tovija* (1825). In recent times, however, the subject has been revived in works such as James Bridie's *Tobias and the Angel* (1931) and Gonzalo Torrente Ballester's modern Spanish miracle play, *El viaje del joven Tobias* (1938). Bridie succeeded in revitalizing the Apocryphal story by injecting humor and colloquial speech into his realistic interpretation of the old theme.

In art there have been several cycles of works illustrating the story of Tobias, such as the fourth-century sarcophagus of St. Sebastian in the Appenine Way, Italy; 13th-century carvings at Chartres Cathedral; eight scenes in the Berlin Museum by Pinturiccio or Giulio Bugiardini; and paintings by Francesco Guardi for the Church of the Angel Raphael in Venice. The story of Tobias particularly appealed to *Rembrandt: the blind Tobit with his wife Anna (Tobit 2:11–14) is the subject of a meticulous early Rembrandt in the Moscow Museum and of several later works, including one in Berlin. These are studies of humble Dutch interiors, with a soft light filtering through the windows. There is also a painting by Rembrandt (Hermitage, Leningrad) of the younger Tobias taking leave of his parents as he sets out on his journey (5:17–22). Tobias and the angel (ch. 6) was a favorite subject in early Renaissance Italy. Merchants sometimes had their sons painted as Tobias accompanied by a guardian angel if they went away on business. The youth would be shown dangling his fish, followed by a little dog. The subject inspired paintings by Pollaiuolo (Pinacoteca, Turin); Filippino Lippi (Bension Collection, London); a follower of Verrochio (National Gallery, London); Botticelli (Academy, Florence); and Perugino (National Gallery, London). In "The Virgin with the Fish" by Raphael (Prado, Madrid), the kneeling Tobias holding his fish is presented by the angel to the Madonna. A painting by Rembrandt in the collection of the duke of Arenberg, Brussels, of the restoration of Tobit's sight (ch. 11) has been admired for the exactitude with which it depicts an operation for cataracts in the 17th century; and one in the Louvre shows the archangel Raphael taking leave of Tobit and his family (12:16–22).

In music Tobit's song of praise, *Magnus es Domine in aeternum*, is included among the Cantica of the Roman Catholic rite, and sung to a simple psalmodic melody. In the 16th century, a motet, *Domine deus patrum nostrorum*, is found among the works of the composer Jacobus Gallus (Handl), and there is a *Historia Tobiae* in the manuscript of Hungarian historico-biblical songs known as the Hofgreff Collection. The subject was sometimes used for oratorios by minor 17th-century composers: a work often mentioned in the history of the oratorio, Matthias Weckmann's dialogue *Tobias und Raquel*, was for long attributed to his better-known contemporary, Johann Rosenmueller (c. 1620–1684). More prominent composers turned to the subject for oratorios in the 18th century: Antonio Caldara (*Tobia*, text by Apostolo Zeno, 1720), Antonio Lotti (*Il ritorno di Tobia*, Bologna, 1723), Georg Reutter the Younger (*Il Ritorno di Tobia*, Vienna, 1733), Joseph Mysliveczek (1737–1781), and Baldassare Galuppi (1782). The outstanding work of this period was Haydn's oratorio *Il ritorno di Tobia* (text by Giovanni Gastone Boccherini, written in 1774–75). Haydn produced an augmented version in 1784 (a

revised version was made by Sigismund Neukomm in 1806); and the work is still occasionally performed, as is its overture. A charming curiosity is Beethoven's jocular canon, *O Tobias, heiliger Tobias!* (1823), addressed to his publisher and friend Tobias Haslinger: according to the composer, he conceived the canon in a reverie on a coach ride during which he dreamt that he was transported to the Holy Land, felt very saintly, and through further flights of association came to think of "Saint" Tobit and his friend's good qualities. In the 19th century, the subject was taken up by several French composers in short succession, following upon Pierre-Louis Deffés' cantata (1847); Bizet (*L'ange et Tobie*, cantata, c. 1885–87, unfinished, text by Léon *Halévy); Gounod (*Tobie*, small oratorio, c. 1866, text by H. Lefèvre); and E. Ortolan (another setting of Halévy's libretto, 1867). Works of the 20th century include the opera *Tobias and the Angel* by Arthur Bliss (1959–60; text by Christopher Hassall); and Darius *Milhaud's *Invocation à l'ange Raphaël*, a cantata in four parts for women's voices and orchestra (text by Paul Claudel, published 1965).

TOBY, JACKSON (1925–), U.S. criminologist and sociologist. Toby received his Ph.D. from Harvard University in 1950. He taught at Brooklyn College, N.Y., and at Harvard. He then took on the position of professor of sociology at Rutgers University, where he became chairman of the Sociology Department in 1961. He specialized in problems of adolescence and deviant behavior and was chief consultant to the Ford Foundation youth development program (1959–63). In 1966 he prepared a report on "Affluence and Adolescent Crime" for the President's Law Enforcement Commission. He served as director of the Institute for Criminological Research at Rutgers from 1969 to 1994. His subsequent research focused on undergraduate education and the causes of and remedies for school violence.

His publications include *Social Problems in America* (with Harry C. Bredemeier, 1960); *Contemporary Society: Social Process and Social Structure in Urban Industrial Societies* (1964); *The Evolution of Societies* (with T. Parsons, 1977); and *Higher Education as an Entitlement* (2005).

TOCH, ERNST (1887–1967), composer. Born in Vienna, Toch studied medicine and philosophy and was self-taught in music. After studying piano with Rehberg, he became a teacher of composition at the Mannheim Hochschule fuer Musik (1913). In 1921 he received his Ph.D. with the dissertation *Beitraege zur Stilkunde der Melodie* (published as *Melodielehre*, Berlin, 1923). In 1929 he moved to Berlin, and in 1934 he settled in the United States. From 1937 he lived in Hollywood and taught at various universities. Though his earlier compositions show a rather romantic style, he later turned to a more modern idiom and also experimented in compositions such as *Gesprochene Musik* (1930).

His music is strongly lyrical and shows a classical sense of form; in piano compositions, his style is more brilliant. Toch's works include four operas; orchestral works; chamber music; incidental music for plays, films, and radio plays; and choral works (including *Cantata of the Bitter Herbs*, a Passover oratorio, 1938). The overture to his opera *Die Prinzessin auf der Erbse* (1926) is often played.

TOCH, MAXIMILIAN (1864–1946), U.S. paint chemist. Born in New York, Toch graduated in chemistry and law before entering his father's paint business. He became an expert on the authenticity of paintings. He was professor of industrial chemistry at Cooper Union, New York (1919), and professor of the chemistry of artistic painting at the National Academy of Design, New York (1924). During World War I he invented the "Toch system" of camouflage. Among his books are *Chemistry and Technology of Mixed Paints* (1907), *How to Paint Permanent Pictures* (1922), and *Paint, Paintings and Restoration* (1931).

TOCHNER, MESHULLAM (1912–1966), Israeli literary critic. Born in the Ukraine, Tochner was taken to Bessarabia by his family during World War I. In 1925 he went to Palestine, settling in Jerusalem. He taught at the Teachers' Seminary of Beit ha-Kerem, Jerusalem.

He published literary research articles in Israel's newspapers, literary periodicals, and anthologies, and in the jubilee volumes for S.Y. *Agnon. Tochner was one of the most perceptive critics and interpreters of Agnon's works; *Pesher Agnon* (1968), a collection of his essays on Agnon, with the addition of critical remarks by D. Sadan, was published posthumously.

TODD, MIKE (**Avrom Hirsch Goldbogen**; 1909–1958), U.S. producer and impresario. Born in Minneapolis, Minnesota, Todd was the son of a Polish-born rabbi. He produced 21 shows on Broadway, largely light musicals. These include *Call Me Ziggy* (1937); *The Hot Mikado* (1939); *Star and Garter* (1942); *Something for the Boys* (1943); *Mexican Hayride* (1944); *Up in Central Park* (1945); *As the Girls Go* (1948); *Michael Todd's Peep Show* (1950); and *The Live Wire* (1950). His production of the tragedy *Hamlet* (1945), starring Maurice Evans, set

the record at the time for the longest run of any Shakespearean play on Broadway (131 performances).

Todd was a financial promoter of two motion picture filming innovations, Cinerama and Todd-AO, the latter of which he codeveloped. Cinerama was introduced to film audiences in 1952 with the stomach-churning *This Is Cinerama*. Todd-AO was introduced in 1955 with the wide-screen film *Oklahoma!* In 1956 Todd made the $6.5 million film of Jules Verne's *Around the World in 80 Days* (Academy Award winner for Best Picture) which, by the time of his death in a plane crash, had grossed $33 million.

Of his three marriages, the second and third were to the film actresses Joan Blondell (from 1947 to 1950) and Elizabeth Taylor (from 1957 until his death).

TODESCO, HERMANN (1791–1844), Austrian industrialist and philanthropist. Todesco was born in Pressburg (Bratislava) to Babette, née Pick, of Breslau, and Aaron Hirschl Wellisch (Welsche) of Pressburg, a silk merchant, who acquired the surname Todesco after numerous trips to Italy (*tedesco* is Italian for "German"). In 1789 he was included in the list of Jews permitted to reside in Vienna. Hermann's business abilities soon brought him appreciable wealth and position. He was an efficient military contractor and established one of the first cotton mills in Marienthal (near Vienna), introducing modern machines and methods from abroad. In 1835 he bought an estate in Legnaro, Italy, where he planted mulberry trees for raising silk worms. Todesco was one of the founders of the Vienna temple in 1826 and was distinguished by his munificent philanthropic activities. He donated a school to the Pressburg community, made a magnificent bequest for a Jewish hospital in Baden, and gave large sums to the Vienna Jewish community to develop handicrafts. Shortly before his death he was nominated a member of the *Kollegium* of the community and opened a public kitchen for the poor. Hermann's banking firm was managed after his death by two of his seven children, Eduard (1814–1887) and Moritz (1816–1873). Eduard continued his father's philanthropic policies by establishing generous foundations to help needy army officers and impoverished Jewish students.

TOEPLITZ, OTTO (1881–1940), German mathematician. Toeplitz was professor of mathematics at Kiel (1920) and Bonn (1928–35) until his dismissal by the Nazis. He immigrated to Palestine in 1939 and held an administrative post at the Hebrew University. He contributed to many branches of research in pure mathematics; his main interest was in matrix algebra. He wrote *Von Zahlen und Figuren* (1930) and published articles on Plato's mathematical ideas in *Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik*, a periodical which he helped found.

TOHORAH (Heb. טָהֳרָה; "cleansing," "purification"), the ceremony of washing the dead before burial, performed by *mit'assekim* ("attendants"), members of the **ḥevra kaddisha*. The body is laid on a special *tohorah* board, the feet toward the door to indicate the escape of the impurity. While the body is undressed, thoroughly rubbed and cleansed with lukewarm water, the *mit'assekim* recite biblical verses (Zech. 3:4; Ezek. 36:25; Song 5:11, etc.). Then the head and the front part of the body are rubbed with a beaten egg, a symbol of the perpetual wheel of life. (This part of the ceremony is only observed nowadays in very Orthodox circles.) Thereafter, "nine measures" (9 "*kav*," 4½ gallons) of water are poured over the body while it is held in an upright position. This process is the essential part of the *tohorah* ceremony. The body is then thoroughly dried and dressed in shrouds. The *tohorah* rite for great rabbis and scholars, called *reḥiẓah gedolah* ("great washing"), is more elaborate. "Nine measures" of water are used several times: the body may even be immersed in a *mikveh* ("ritual bath"). This custom, however, was strongly opposed by leading rabbis because it discouraged women from attending the *mikveh*. In addition to the washing of the body, the hair is combed and the fingernails and toenails are cut (Sh. Ar., YD 352:4). The basis for *tohorah* is in Ecclesiastes 5:15, "as he came, so shall he go" (meaning: as when man is born, he is washed, so too when he dies, he is washed; *Sefer Ḥasidim*, ed. by R. Margaliot (1957), no. 560). The ceremony of *tohorah*, as well as all other burial details, is not mentioned in the Bible. At the burial of kings, however, sweet odorous spices were used (II Chron. 16:14) and the Tombs of the Kings in Jerusalem have a bath below the entrance to the courtyard, which may have been built either for cleansing the dead or for the ritual use of priests. *Tohorah* was observed in mishnaic times, as can be derived from the statement that limited washing and anointing of the body is permitted on the Sabbath (Shab. 23:5). Talmudic literature mentions the cleansing of the body with myrtle and the cutting of the hair of the deceased (cf. Beẓah 6a; MK 8b). *Tohorah* for women is performed by the female members of the *ḥevra kaddisha*. After *tohorah*, the attendants clean their hands with salted water. Most traditional cemeteries have a special annex to the cemetery called *bet tohorah* ("cleansing house"). In recent times, however, *tohorah* is generally performed at the mortuary of hospitals (or by the undertaker). *Reform Judaism has discarded the ritual of *tohorah*.

TOHOROT (Heb. טָהֳרוֹת; lit. "cleannesses"), the last of the six orders of the Mishnah, according to the traditional arrange-

ment mentioned in the homily of *Simeon b. Lakish (Shab. 31a), but the fifth order according to R. *Tanḥuma (Num. R. 13:15). *Tohorot* discusses the *halakhot* of the different categories of ritual purity and impurity.

It contains 12 tractates, arranged in descending order according to the number of chapters: **Kelim*, containing 30 chapters, on vessels susceptible to impurity; **Oholot*, 18 chapters, on ritual impurity arising from the overshadowing of a dead person; **Nega'im*, 14 chapters, on uncleanness relating to leprosies; **Parah*, 12 chapters, on the *red heifer; **Tohorot*, ten chapters, mainly on conditions rendering foods unclean; **Mikva'ot*, ten chapters, on the pools for ritual immersion; **Niddah*, ten chapters, on uncleanness relating to the menstruant; **Makhshirim*, six chapters, on the fluids rendering food susceptible to becoming ritually impure; **Zavim*, five chapters, on uncleannesss from gonorrhea; **Tevul Yom*, four chapters, on uncleanness, lasting until the sunset, of one who has gone through ritual immersion during the day; **Yadayim*, four chapters, on the uncleanness of unwashed hands and their purification; and **Ukẓin*, three chapters, on the uncleanness transferred by the stalks or husks of fruits or plants – 126 chapters in all. Because of its length, some divided *Kelim* into three *bavot* ("gates"), namely *Bava Kamma, Bava Meẓia*, and *Bava Batra*, each containing ten chapters, as was done with **Nezikin* (see **Bava Kamma*). In the Tosefta of *Tohorot, Kelim Bava Kamma* has seven chapters, *Kelim Bava Meẓia* 11, and *Kelim Bava Batra*, seven chapters; *Oholot* has 18, *Nega'im* nine, *Parah* 12, *Niddah* nine, *Mikva'ot* seven (or eight), *Tohorot* 11, *Makhshirim* three, *Zavim* five, *Yadayim* two, *Tevul Yom* two, and *Ukẓin* three chapters. Apart from the tractate *Niddah, Tohorot* has no *Gemara* in either the Jerusalem or Babylonian Talmud.

[Abraham Arzi]

TOHOROT (Heb. טָהֳרוֹת; lit. "cleannesses"), fifth tractate in the order of the same name according to the enumeration in the standard Mishnah. According to *Hai Gaon it is the seventh. It is also the seventh in the Tosefta, if the three sections into which *Kelim* is divided there are counted as one.

The name *tohorot* ("ritual cleannesses") is actually a euphemism for *tumot* ("ritual uncleannesses") since *Tohorot* deals essentially with the rules of the lesser degrees of uncleanness, effects of which last until sunset only. It details the laws of cleanness and uncleanness regarding foodstuffs and liquids, persons engaged in their preparation or consumption, and vessels employed in the process.

Chapter 1 begins with the 13 regulations concerning the carrion of clean birds, and those relating to unclean birds and cattle. It continues with a discussion of the extent to which foodstuffs of major and minor grades of uncleanness may be combined to form the prescribed minima. Also discussed are the conditions under which the same or different grades of uncleanness may be conveyed to a number of loaves or pieces of dough that cling to one another. Chapter 2 discusses uncleanness that may be conveyed to wet or dry **terumah* by the hands of clean and unclean persons, the various grades of uncleanness a person may contract through eating, and the resultant uncleanness of foodstuff in contact with other foodstuff possessing various grades of uncleanness. Chapter 3 deals with the grades of uncleanness and minimum amounts applicable to foodstuffs capable of changing their state of fluidity to one of solidity and vice versa. Also discussed is the cleanness or uncleanness of those objects whose bulk is increased or decreased by weather conditions. The chapter concludes with an exposition of doubtful uncleanness, and this continues to the end of chapter 4 which deals with cases of doubtful uncleanness as a result of which *terumah* is to be burned, and doubtful instances that are finally regarded as clean. Chapters 5 and 6 are mainly concerned with doubtful cases of uncleanness in which a distinction is made between location in a private domain and location in a public domain. In the former, all doubtful cases are declared unclean, while in the latter, they are considered clean. Also discussed are instances in which both a private and public domain are involved. Chapter 7 discusses forms of doubtful uncleanness which result from the presence of an **am ha-areẓ* or his wife. Chapter 8 concludes the discussion regarding the *am ha-areẓ*. Rules regarding the stages when foodstuffs begin and cease to be susceptible to uncleanness are next specified. A discussion concerning the uncleanness of beverages concludes the chapter. Chapters 9 and 10 conclude the tractate with the regulations concerning the stages at which olives become susceptible to uncleanness, and the laws of cleanness and uncleanness that apply to an olive-press and a winepress. The Tosefta to this tractate is divided into 11 chapters. Since there is no *Gemara* to *Tohorot*, the Tosefta is extremely valuable for the elucidation of many difficult passages in the Mishnah. All the commentators therefore made extensive use of the Tosefta in their explanations of the Mishnah. The Tosefta does not totally correspond to the Mishnah. It does not contain any laws that correspond to Mishnah 1:1–4 or 2:1. Tosefta 4:1–4 includes material which is not contained in the Mishnah. It was translated into English by H. Danby (*The Mishnah*, 1933), and J. Neusner published a translation of both the Mishnah (1991) and the Tosefta (2002) of *Tohorot*.

[Aaron Rothkoff]

TOHOROT HA-KODESH, an important work of ethical literature. First printed in Amsterdam in 1733, this anonymous work has been wrongly attributed to Benjamin Wolf b. Mattathias. The error arose from the fact that Benjamin's name

is mentioned on the title page, not as the author but as the person who brought the work to the press, and, it seems, collected the funds necessary to finance the printing. According to his introduction, the author chose to remain anonymous in order to avoid pride of authorship, and probably also because of the harsh criticism of contemporary rabbis, institutions, and customs contained in the work. The original title of the work, the introduction indicates, was *Hanhagot Yesharot* ("Right Ways of Behavior"). Evidence in the book shows that the author was from Poland, and in the work he occasionally compares the customs of Eastern Europe with those of the Orient. It seems that the author was poor, wandered from place to place, and knew Russian. I. Halpern attempted to prove that the author lived in Poland during the *Chmielnicki persecutions (1648–49), which left a deep impression on him, and that he finished the work a decade or two later. B.Z. Dinur and D. Tamar, however, hold that the work was probably written in the first decade of the 18th century. The later date is somewhat more credible in view of the historical and biographical facts recorded in the work itself. The writer, a Lurianic kabbalist like most authors of ethical works at that time, divided the book into six parts: (1) daily behavior, including the proper way to study at night and to perform the morning rites; (2) synagogue and prayer; (3) business and ethics, and the necessity to study and pray even while attending to daily tasks; (4) evening rites; (5) behavior during Sabbath and festivals; and (6) all aspects of social conduct. Social criticism holds a central place in this work. Ethical literature's preoccupation with just social behavior as the supreme religious goal is clearly presented, especially in the criticism of contemporary rabbis. In fact, the author emphasizes that right social behavior takes precedence over study of the Torah. Dinur included *Tohorot ha-Kodesh* among those East European ethical works which anticipated modern Ḥasidism and carried some of its social and religious message.

BIBLIOGRAPHY: B. Dinur, *Be-Mifneh ha-Dorot* (1955), index; I. Halpern, in: KS, 34 (1959), 495–98 (=*Yehudim ve-Yahadut be-Mizraḥ Eiropah* (1968), 396–400); D. Tamar, in: *Aresheth*, 3 (1961), 166–72 (= *Meḥkarim be-Toledot ha-Yehudim* (1970), 131–7).

TOKAT, capital city of the province bearing the same name in northern Anatolia, situated on the banks of the Yeşil Irmak. The community was founded by Jews from *Amasya in 1530. After the Amasya blood libel in 1553, most of them returned to Amasya in 1565. During the Ottoman period there existed a small Jewish community in Tokat. Tokat then was also the scene of a blood libel, instigated by Armenians; as a result of an intervention by Moses *Hamon, Sultan *Suleiman's chief physician, the Jews were able to prove their innocence. In the 16th century Jewish silk merchants traveled via Tokat to *Aleppo and *Persia. A document from 1574/75 noted 29 Jewish households and 27 Jewish bachelors in the community. The traveler Tevernier visited the city in the 17th century, but wrote only about Muslims, Christians, and Armenians who lived there. Yet it is known that R. Zemach Narvoni lived in Tokat in 1642, and we can assume that there existed an organized Jewish community. Hebron emissaries R. Moshe Halevi Nazir and R. Yosef Hacohen visited Tokat between the years 1668 and 1671 and 1675–1677. The latter spent a short time in Tokat in 1684 when he traveled to many communities to collect money for himself. At the beginning of the 18th century the Shabbatean Ḥayyim Malach met *Shabbetai Ẓevi on his way from Bursa to Tokat. At that time Rabbi Joseph ben Mordechai from *Jerusalem lived in the city. At the beginning of the 19th century about 100 families lived in the community; by 1927 only 20 families were left. There are two Jewish cemeteries and an old synagogue, where a **genizah* was found. Jews originally handled the town's commerce, but they were gradually replaced by the Armenians who used more up-to-date methods and mastered the foreign languages required for the export-import trade. As a result of this, the Jewish community scattered.

[Abraham Haim / Leah Bornstein-Makovetsky (2nd ed.)]

TOKER, ELIAHU (1934–), Argentinean writer, poet, translator, and researcher in Jewish literature and lore. The scope and spirit of his works are oriented both to Jewish traditions of the past, and to the building of a contemporary Jewish-Latin American identity. His eight books of poetry include *Lejaim* ("To Life," 1974); *Piedra de par en par* ("Wide Open Stone," 1974); *Padretierra* ("Fatherearth," 1977); *Homenaje a Abraxas* ("Homage to Abraxas," 1980); *Papá, mamá y otras ciudades* ("Dad, Mom and Other Cities," 1988); and *Las manos del silencio* ("The Hands of Silence," 2003). His translations include valuable anthologies such as the following: from Yiddish – *El resplandor de la palabra judía: antología de poesía ídish del siglo XX* ("The Radiance of the Jewish Word: Anthology of 20th Century Yiddish Poetry," 1981); *Poesía de Avrom Sútzkever* ("Poetry by Avrom Sutzkever," 1983); *El ídish es también Latinoamérica* ("Yiddish is also Latin America," 2003); from Hebrew – *El Cantar de los Cantares* ("The Song of Songs," 1984); *Pirké Avot* ("The Sayings of the Fathers," 1988), and anthologies of kabbalistic, talmudic, and rabbinical texts. He also published critical editions of the Argentinean Jewish writers César Tiempo, Carlos M. Grünberg, and Alberto Gerchunoff; collections of Jewish proverbs and jokes; and volumes devoted to the Holocaust and to the victims of the attack on the Buenos Aires Jewish Community building in 1994. His poems have been translated into Yiddish, Hebrew, French, German, and Portuguese. Toker received several awards in Argentina and Mexico. He was also active in Jewish cultural and community

life in Argentina, and participated in national and international conferences on Jewish Latin American issues.

[Florinda F. Goldberg (2nd ed.)]

TOKHEḤAH (Heb. תּוֹכֵחָה; lit. "reproof"), the name given to the two comminatory passages in the Pentateuch (Lev. 26:14–45; Deut. 28:15–68). The Mishnah referred to them as the "chapters of curses" and they were designated as the Torah reading for fast days. These sections must not be divided, but must be read by one person (Meg. 3:6, 31b). In order to begin and end with more favorable sentences (Meg. 31b; TJ, Meg. 3:8, 74b), the reading is commenced before the curses and concluded after them (e.g., Lev. 26:10–46; Deut. 28:7–69). The Deuteronomy chapter was considered the more severe since it contains no verses of consolation and is written in the present tense. The public reading of these passages on their appropriate Sabbaths generated fear among the listeners, and it therefore became customary for the reader to recite them quickly in a low voice. People were reluctant to be called to the Torah for these portions. In some communities it became customary to give this *aliyah* to poor people who could not afford to pledge donations for the more desirable *aliyot*. The person was not called up by his name, but the sexton simply said "May anyone who wishes rise to the Torah" (Rema to Sh. Ar. 428:6). It later became the general practice for the sexton or the reader of the Torah to accept this *aliyah*. However, in some communities, the rabbis insisted on receiving these *aliyot* to demonstrate that the word of the Torah need not be feared.

[Aaron Rothkoff]

TOKYO, city in *Japan. Jewish history, culture, and religion were generally unknown to the Japanese of Tokyo before the end of World War I. Although the city had been designated the imperial capital in 1868, Jews who took up residence in Japan before World War I settled in the great port cities of *Kobe, *Yokohama, and *Nagasaki. Acquaintance with things Jewish was largely limited to Christian missionaries and their converts. This state of affairs changed somewhat after 1918 when a small number of Jews fleeing from the Bolshevik revolution in Russia made their homes in Tokyo, and many Japanese encountered Jews and witnessed antisemitism during Japan's military expedition in Siberia (1918–22). During the 1920s a handful of Japanese antisemites founded organizations and engaged in publication, mostly in Tokyo, but their work was generally ineffectual. With the spread of Nazism in Germany and the drift of Japan after 1932 toward closer relations with Hitler, professional antisemites – military and civilian – attempted with little success to spread their message of hatred among the Japanese people. When Japan surrendered to the allied powers in 1945, Tokyo soon emerged as a center of Jewish life and activity in Japan. Many of the Jews who helped to stimulate a wide variety of Jewish activities were among the thousands of American troops stationed in Tokyo during the American occupation of Japan (1945–52). The civilian Jewish community grew slowly during and after this period as hundreds of Jews, mainly from the United States and Western Europe, settled in the city for professional and commercial purposes. Jewish life gravitated toward the Tokyo Jewish Center which was established and maintained by the local community. In the late 1950s some American Jews studied briefly the feasibility of "missionary" work in Japan, especially in Tokyo, but the idea was soon abandoned. A Jewish community, supplemented by a steady stream of temporary residents from abroad, continued to exist in Japan's capital city. In 1971 there were approximately 300 Jews living in the city. In the first years of the 21st century the permanent Jewish population of Tokyo amounted to fewer than 200 people, though the transient Jewish population brought the total up to somewhat fewer than 1,000. These included representatives of businesses and financial institutions, as well as journalists and students, mostly from the U.S. and Israel. The Jewish community center houses the only synagogue in Japan as well as a school (with classes twice a week up to the eighth grade), a library, and a *mikveh*.

[Hyman Kublin]

°**TOLAND, JOHN** (1670–1722), Irish-born deist, active in the theological and political controversies in England at the beginning of the 18th century. Toland was born in County Donegal, supposedly the illegitimate son of a Roman Catholic priest. At the age of 16 he rejected Catholicism, became a Presbyterian, and studied at Scottish universities. A friend of John Locke, he eventually became a Deist and, later, a Pantheist. Among his many publications was *Reasons for Naturalising the Jews in Great Britain and Ireland on the Same Footing with All Other Nations* (anonymously published in London in 1714, reprinted 1939). This was not as has frequently been stated a plea for the naturalization of the Jews, but for facilitating the naturalization of foreign-born Jews and thereby attracting them to England. The economic and philosophic arguments that Toland used to demonstrate the utility of the Jews to the country showed a tolerance in advance of his day. Toland also translated into English *The Agreement of the Customs of the East Indians with Those of the Jews* (London, 1705).

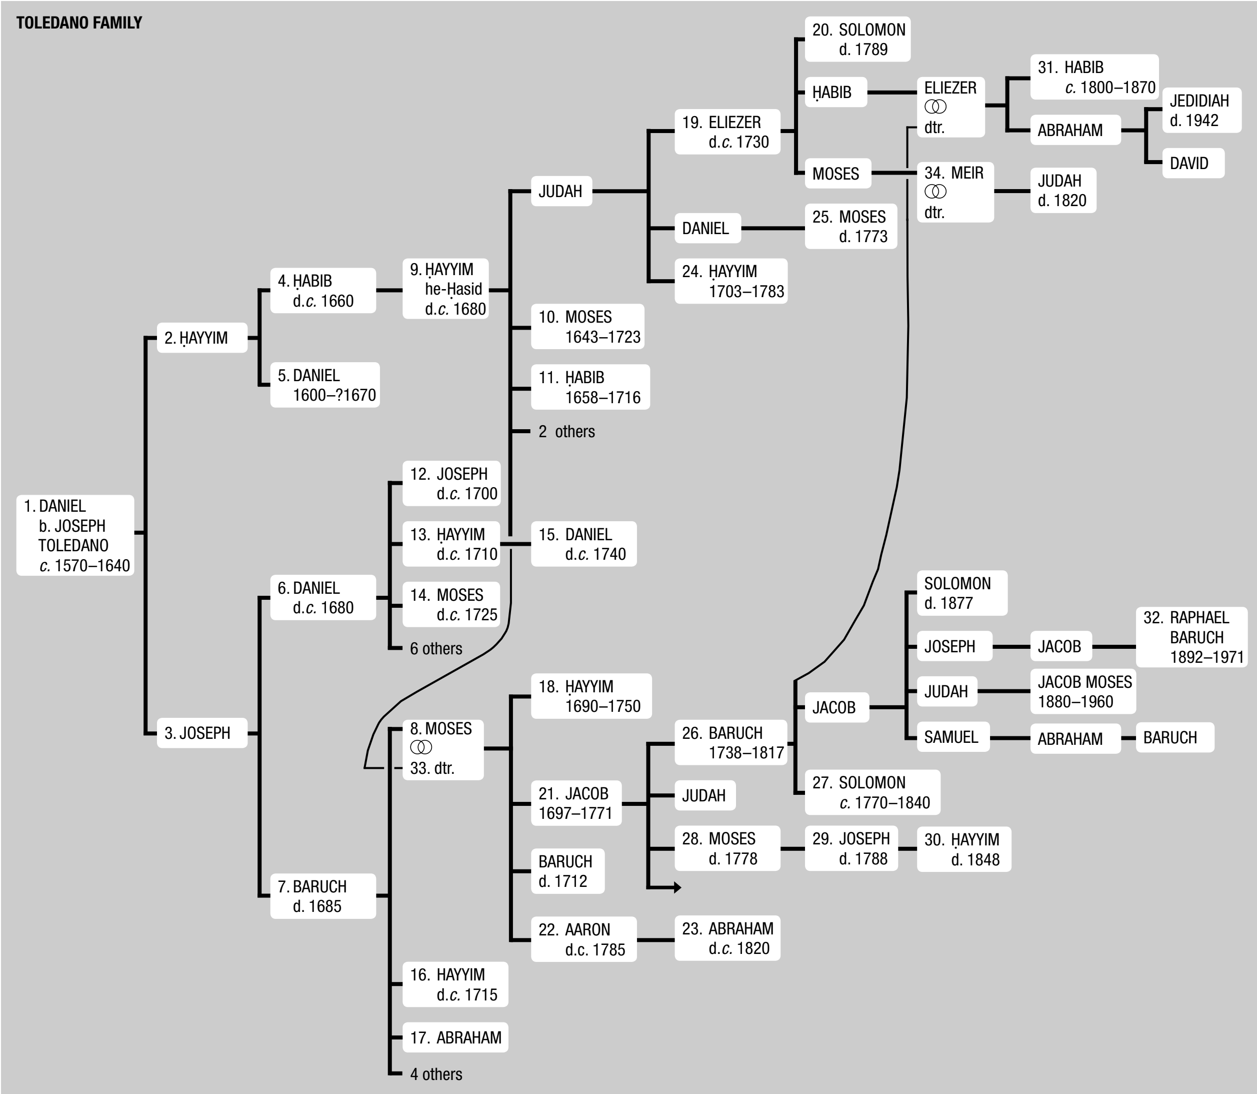
[Cecil Roth]

TOLANSKY, SAMUEL (1907–1973), English physicist and world authority on optics and spectroscopy. Tolansky was born in Newcastle-on-Tyne, England, to Russian parents. He received his education in Newcastle and at the Imperial College in London, where he was appointed assistant lecturer in physics in 1934. He subsequently held various appointments at Manchester University, where he conducted important research work in the field of atomic energy during World War II. He joined the Royal Holloway College of London University in 1947, becoming professor of physics. He became a fellow of the Royal Society in 1952.

Tolansky was a principal investigator for the American NASA lunar research project, and was one of the first group of scientists chosen to examine and evaluate the dust brought back by the Apollo moon astronauts. His prediction in 1969 that the moon is covered with glasslike marbles was verified a year later. Tolansky wrote a large number of works in his special field, many of which were translated into Russian, German, Japanese, and other languages. They include *Optical Illusions* (1964); *Curiosities of Light Rays and Light Waves* (1964); *Interference Microscopy for the Biologist* (1968); *The Strategic Diamond* (1968); *Microstructures of Surfaces* (1968); and *Revolution in Optics* (1968). He also published over 300 scientific papers.

Keenly interested in Jewish affairs, Tolansky was an active member of the academic advisory council of the cultural department of the World Jewish Congress, and was generally associated with Israeli scientific institutions. He was also a vice president of the British Technion society. He visited Israel on a number of occasions, delivering scientific lectures and advising on scientific affairs.

[Michael Wallach]



TOLEDANO, family of rabbis and *ḥakhamim* which originated in Toledo, *Spain. After the expulsion from Spain in 1492, the Toledanos were to be found in Safed, Salonika, and Morocco. According to a family tradition, they arrived in Fez during the 16th century from Salonika, and from there went to Meknès and became leaders of the community from the 16th century until the present day. They were prominent in the community in religious affairs, producing renowned rabbis and poets who enriched the literature of Moroccan Jewry with their works and greatly influenced the western communities, particularly those of Meknès, Salé, Tangier, and even Gibraltar; in political affairs, producing men who served as ministers and counselors to kings and were entrusted with diplomatic missions; and in economic affairs, producing outstanding merchants who developed and maintained varied commercial relations with European countries which contributed to the economic progress of Morocco.

(1) DANIEL BEN JOSEPH (c. 1570–1640) arrived in Fez from Salonika with his sons (2) ḤAYYIM and (3) JOSEPH, from whom the two principal lines of the family branched out. He is described in sources as the "head of the yeshivah of Fez" and as the "head of the Castilian scholars."

(2) Ḥayyim's sons were (4) ḤABIB (d. c. 1660) and (5) DANIEL (1600–1670?). The former was rabbi and *nagid* in Meknès and was referred to as *He-Ḥasid* ("the Pious"). He was a signatory to a *takkanah* of 1640, whose efficacy he strengthened by securing for it a royal order. The latter was a rabbi and legal authority in Meknès. (3) Joseph's sons were (6) DANIEL (d. c. 1680) and (7) BARUCH (d. 1685). The former was a rabbi and *dayyan* in Meknès and counselor of Moulay Ismāʾil together with his colleague Joseph *Maymeran. He fought Shabbateanism with R. Aaron ha-Sabʿuni and his son-in-law R. Jacob *Sasportas, and he signed legal decisions together with (9) R. Hayyim b. Habib (see below). Baruch (7) was a rabbi in Meknès, father of seven sons, including (8) MOSES, the father of four *ḥakhamim*. Among Baruch's other sons were (16) Ḥayyim and (17) Abraham, leading merchants who traded with the royal family.

(9) ḤAYYIM BEN ḤABIB HE-ḤASID (d. c. 1680), rabbi and kabbalist, copied kabbalistic and ethical works, including *Yeraḥ Yakar* of R. Abraham Galanté which was brought to him by the emissary Elisha Ashkenazi – the father of Nathan of Gaza – and *Shaʿarei Ḥokhmah* of an Ashkenazi author, thus contributing to their circulation in the West. It is almost certain that he fought the Shabbatean movement, as did his relative Daniel, with whom he shared the position of *dayyan*. He maintained contact with R. Aaron ha-Sabʿuni and copied the marginal notes of the latter's copy of the Shulḥan Arukh. One of his daughters married R. Abraham Berdugo and was the mother of R. Moses Berdugo ("ha-MaSHBIR"), and the other married R. (8) Moses b. Baruch (see above) and gave birth to R. (18) Ḥayyim ("MaHaRḤaT") and R. (21) Jacob Toledano ("MaHaRIT"). Ḥayyim (9) signed legal decisions together with his relative Daniel. His son (10) MOSES (1643–1723) was the leading rabbi of Meknès and corresponded on halakhic questions with R. Menahem *Serero, R. Vidal ha-*Sarfati, and others. Some of his responsa and legal decisions were published in the works of Moroccan *ḥakhamim*. He held rabbinical office together with his brother (11) ḤABIB (1658–1716). The latter corresponded extensively with the *ḥakhamim* of Fez. R. Judah (1660–1729), a scholar of Meknès, was known as a great talmudist.

(12) JOSEPH TOLEDANO BEN DANIEL (b) (d. c. 1700) was also a counselor of the Moroccan king Moulay Ismāʾil, who sought to develop foreign trade and exchange Christian captives for arms as well as for other goods. He sent Joseph to the Netherlands to conduct negotiations which would lead to a peace treaty and a commercial agreement between the two countries. His mission was successful and the treaty was ratified in 1683. In 1688 Joseph presented his credentials as Moroccan ambassador to the States General. The presence in Holland of his brother-in-law Jacob Sasportas obviously assisted him in the fulfillment of his mission. His brother (13) ḤAYYIM TOLEDANO (d. c. 1710), also a royal counselor, accompanied him on the mission. Once the treaty was ratified in the Netherlands, he returned to Meknès and together with the *nagid* Abraham Maymeran convinced the king to accept its conditions

and sign. In 1690, when a crisis between the two countries appeared imminent, he traveled to the Netherlands and succeeded in renewing the treaty, afterward convincing the king to accept the conditions of the treaty. (14) MOSES TOLEDANO (d. c. 1725) was one of the favorites at the court. Together with the *nagid* Abraham Maymeran, he traded with the European countries, especially in firearms. In 1699 he traveled to the Netherlands and submitted complaints to the States General concerning his dealings with them. He won his suit and was awarded considerable compensation.

(15) DANIEL TOLEDANO (d. c. 1740), son of (13) Ḥayyim, traded, together with his father, in the Netherlands and other European countries. He dealt mainly in wax and was known as "one of the country's magnates." In about 1720, after the death of his father, he was arrested by the king. The king confiscated his family's belongings in payment for his debt, including (18) R. Ḥayyim Toledano's property, thus bankrupting him. (16) ḤAYYIM TOLEDANO BEN BARUCH (d. c. 1715), a wealthy merchant, was associated with his brother (17) ABRAHAM in various business transactions and was a favorite of the royal family. He died childless and bequeathed his estate to (18) R. Ḥayyim (MaHaRḤaT; see below), the son of his brother (8) Moses. (19) ELIEZER TOLEDANO BEN R. JUDAH (d. c. 1730) was among the wealthiest Moroccan merchants and a member of the circle of *negidim* which included Abraham Maymeran and Moses ibn Attar. Together with Maimon Toledano, he leased the meat tax of the community. He was the father of (20) R. Solomon (MaHaRshaT; see below). (18) ḤAYYIM TOLEDANO BEN MOSES BEN BARUCH (MaHaRḤaT; 1690–1750), rabbi in Meknès, became wealthy after he inherited his uncle Ḥayyim's fortune. He wrote some legal decisions which were published in Fez under the title *Ḥok u-Mishpat* ("Law and Judgment," 1931).

His brother (21) R. JACOB TOLEDANO (MaHaRIT; 1697–1771) was a prominent rabbi in Meknès and a disciple of R. Moses Berdugo, holding rabbinical office for 50 years. He was

the most important halakhic authority in the Maghreb during the second half of the 18th century and played a central role in the leadership of his community. A crisis occurred in the relations between himself and his community in 1764, but the difficulties were settled and he continued to serve the community. He wrote a commentary on the Torah, a commentary to Rashi on the Torah, a work on the Shulḥan Arukh, novellae on the Talmud, legal decisions, some of which were published in the works of Moroccan *ḥakhamim*, and sermons. Another brother, (22) AARON TOLEDANO (d. c. 1785), was rabbi in Meknès. Toward the end of his life he left for Tangier, where he was appointed rabbi. His son (23) R. ABRAHAM TOLEDANO (d. c. 1820) was rabbi in Tangier after his father's death.

(24) R. ḤAYYIM BEN R. JUDAH (1703–1783), renowned for his piety, was rabbi in Salé. He was a disciple of R. Moses Berdugo and wrote legal decisions (*Teshuvot MaHaRḤat shel Salé*), *kinot*, and *piyyutim*. His nephew (20) R. SOLOMON BEN ELIEZER (MaHaRShaT; d. 1809) was a leading rabbi in Meknès and a member of the *bet din* of (21) R. Jacob b. Moses (MaHaRIT). He is said to have performed miracles, and to the present day the sick prostrate themselves and pray at his tomb. He wrote a work of legal decisions entitled *Piskei MaHaRShat*. His cousin (25) MOSES BEN DANIEL (d. 1773) was a disciple of the brothers (18) R. Ḥayyim and (21) R. Jacob Toledano (see above). From 1769 he was a member of the *bet din* of the MaHaRIT (21). He left many works on the Torah which his son-in-law (34) R. MEIR TOLEDANO edited, summarized, and published as *Melekhet ha-Kodesh* (Leghorn, 1803). His legal decisions were published as *Ha-Shamayim ha-Ḥadashim*.

(26) R. BARUCH TOLEDANO (1738–1817), son of MaHaRIT, was appointed *dayyan* after the death of his father. The opponent of R. Raphael Berdugo he wrote legal decisions and responsa. His son (?), (27) R. SOLOMON TOLEDANO (c. 1770–1840), was rabbi in Meknès. Many of his legal decisions were published in the work *Shufrei de-Ya'akov* of R. Jacob Berdugo. (28) R. MOSES TOLEDANO (d. 1778), son of MaHaRIT, was rabbi in Meknès. He wrote *Meginnei Shelomo*, on Rashi's commentary to the Torah, as well as sermons. His son (29), R. JOSEPH, collected, arranged, and copied the writings of his grandfather (MaHaRIT). (30) R. ḤAYYIM BEN R. JOSEPH (d. 1848), rabbi in Meknès, was very active in the community's administration. In Iyyar 5608 (1848) he was arrested by the sherif (ruler) – as a result of a denunciation – together with his colleague R. Joseph Berdugo and ten of the community's leaders. About two months later he died in the prison of Fez. He wrote a brief commentary on the Torah, legal decisions, responsa, a work on the *Tur* Shulḥan Arukh, a commentary on the *Haggadah*, and a collection of letters and writings.

(31) R. ḤABIB TOLEDANO BEN ELIEZER (c. 1800–1870) was brought up in Meknès. Prior to 1825 he traveled to Gibraltar, where he collected funds to save the members of his community from the famine which then ravaged Morocco. From there he went to Tunis and Italy, where he published his commentary on the *Haggadah, Peh Yesharim* (Leghorn, 1834), and *Terumat ha-Kodesh* (Leghorn, 1842). R. JACOB TOLEDANO BEN MOSES (d. c. 1928) was a rabbinical authority in Meknès and a poet. His *piyyutim* and poems were published as *Yagel Ya'akov* (in: *Yismaḥ Yisrael*, 1931). (32) R. RAPHAEL BARUCH BEN JACOB (1892–1971) was rabbi in Meknès. After his father's death he was appointed to the *bet din*, and from about 1940 he was *av bet din* of Meknès. He was very active in community affairs, and founded yeshivot. He immigrated to Israel in 1965. Toledano wrote a summarized version of the complete Shulḥan Arukh (1966), as well as a number of poems and *piyyutim*, some of which are recited by Oriental communities and Sephardim. Rabbi Jacob Moses *Toledano was also a member of the family.

[Haim Bentov]

TOLEDANO, JACOB MOSES (1880–1960), rabbi and scholar. Toledano's father Judah had immigrated to Ereẓ Israel from Morocco. Jacob was born, educated, and ordained in Tiberias. During 1899–1909, his first articles appeared in the Jerusalem Hebrew paper *Ḥavaẓẓelet*, under the title *Ḥiddushei Torah*. They were written in elegant Hebrew and in a scholarly style. Toledano was also interested in ancient manuscripts preserved in the libraries and yeshivot of Oriental countries. He conceived the idea of founding a society to publish them and with this aim in mind entered into correspondence with scholars in western countries who encouraged him to implement the project. As a result of the cholera epidemic in Tiberias in 1903, he and his family left the town and settled in Peki'in. During the seven years he lived there he devoted himself to the study of the history of Oriental Jewry and its personalities, as well as to the affairs of the Peki'in community, and published his *Ner ha-Ma'arav*. At the beginning of World War I, together with 700 "French" Jews (of North African descent) from Galilee, he was exiled from Ereẓ Israel to Corsica because of his French citizenship. As the representative of the Alliance Israélite Universelle and the French government, he headed the committee of exiles and worked for their material and spiritual benefit. In 1920 he returned to Tiberias and took part in activities to revive communal life in the town; he represented it in 1921 at the rabbinical conference held in Jerusalem to establish the chief rabbinate of Ereẓ Israel. In 1926 he was appointed a member of the Tangier rabbinate, and in 1929 *av bet din* and deputy chief rabbi of Cairo. In 1933 he was appointed to the similar office in Alexandria, as well as deputy head of the rabbinical court of appeals in Cairo, and in 1937 he became chief rabbi of Alexandria. In 1942 he was elected Sephardi chief rabbi of Tel Aviv-Jaffa, succeeding Ben Zion *Ouziel. In 1958, when the religious parties had left the government coalition, he was appointed minister of religious affairs.

His *Ner ha-Ma'arav* (1911), the history of the Jews in Morocco from the commencement of their settlement and the biographies of its great rabbis, is a basic work for research into the origins of Jewry in North Africa. His other books included *Appiryon* (Jerusalem, 1905), a bibliography of the supercommentators to Rashi's commentary to the Pentateuch; *Yedei Moshe* (Safed, 1915), a commentary on the Mishnah *Pesaḥim* by Maimonides from a manuscript; *Yam ha-Gadol* (Cairo, 1931), responsa; *Sarid u-Falit* (Tel Aviv, 1945), giving passages from manuscripts on ancient works dealing with the Talmud, Jewish scholarship, the history of the settlement in Ereẓ Israel, and bibliography; and *Oẓar Genazim* (1960), a collection of letters on the history of Ereẓ Israel from ancient manuscripts, with introductions and notes.

BIBLIOGRAPHY: M.D. Gaon, *Yehudei ha-Mizraḥ be-Ereẓ Yisrael*, 2 (1938), 268–72; Tidhar, 3 (1958^2), 1322–24.

[Itzhak Goldshlag]

TOLEDO, city in Castile, central *Spain; capital of Castile until 1561.

Early Jewish Settlement and Visigothic Period

There is no substantive information available on the beginnings of the Jewish settlement in Toledo, which was only a small village in the period of Roman rule over Spain. According to a Jewish tradition dating from the period of Muslim rule, the Jewish settlement in Toledo was the most ancient in the Iberian peninsula. This tradition was accepted by Isaac *Abrabanel who states (in his commentary to the Book of Kings, at the end, and to Obadiah 20) that the first settlers were exiles from the tribes of Judah and Benjamin, who had arrived there after the destruction of the First Temple, and were associated with a legend concerning Pirus and Hispan who took part in the siege of Jerusalem. Hence the name "Tuletula" (Lat. *Toletum* = Toledo) has been explained as deriving from their wanderings (Heb. *taltelah*) when they were expelled from their land.

Jews probably established themselves there when the town became the capital of the Visigoths, or during the preceding fourth to fifth centuries C.E. The Jewish settlement was, however, inconsiderable, the Jews then being mainly concentrated in the towns on the east coast. Once the Visigoths became converted to Christianity, the *Church councils held in Toledo, particularly from the reign of Sisenand onward, directed many decrees against them, which the Visigothic kings strictly applied. The legislation indicates that there were Jewish settlements in Toledo and the vicinity mainly engaged in agriculture. When the danger of a Muslim invasion seemed imminent, the 17th Church Council, held in Toledo in 694, accused the Jews of plotting, in collaboration with their coreligionists living across the straits, to destroy the Christian kingdom. There is, however, no foundation to the accusation that the Jews delivered the town to the Muslims at the time of its capture (c. 712). Information on the conquest and the presence of Jews in the town is extant from a later period: during the 13th century, Ibn al-Adhari wrote that there had been only a few Jews in the town at the time of its conquest.

[Haim Beinart]

The Jewish Quarter

The first sources referring to the Jewish quarter of Toledo are from the 12th century. At that time its size was much smaller and was in the district of San Martín. The Jewish population of Toledo increased considerably and with it the size of the Jewish quarter, which expanded as far as San Tomé and later reached San Román. The Jewish quarter in Toledo was situated in the western part of the town, where it remained throughout the existence of the Jewish settlement. Its location has been always known in the city. The documents related to the Jews of Toledo published by León Tello make it possible to define with a great degree of precision the boundaries of the quarter. In this area, a number of streets bear names recalling the magnificent past of the community: Samuel ha-Levi, Travesía de la Judería. The quarter spread as far as the gate known today as Cambrón, formerly named "Gate of the Jews." The principal artery of the Jewish quarter, at present known as Calle del Angel, was formerly named Calle de la Judería. This street led to a spacious square which was presumably the center of the quarter. The wall which surrounded the quarter was built as early as 820. There was also a fortress in the quarter for the protection of the Jewish population. Because of the form of its construction, the quarter constituted a kind of independent town which could provide support and assistance to the king when necessary. The Jewish quarter reached the peak of its development and size in the middle of the 14th century. A mistaken reading of one of the sources misled some scholars into thinking that there was a second, smaller quarter near the Cathedral.

The Jewish quarter of Toledo was not exclusively inhabited by Jews. Several well-known Christian noblemen had houses in the precincts of the Jewish quarter. The size of the Jewish population of Toledo cannot be estimated from the area of the Jewish quarter. Baer estimates that the community consisted of 350 families during the 14th century, including those who lived in villages in the vicinity. The historian Ayala concluded that 1,200 Jewish men, women, and children of Toledo died in the persecutions of 1355, in the Alcana quarter only, though Baer does not consider that there were so many Jews living here. In 1368, during the siege of Henry of Trastamara against the town, 8,000 Jews including adults and children died in Toledo, showing the magnitude of their numbers at that time. The community of Toledo was one of the largest in the Iberian peninsula, and at the height of its prosperity the Jews probably formed one third of the city's population, which was then over 40,000.

Jewish Edifices and Ancient Remnants

Toledo is one of the few towns of Spain where remnants of Jewish edifices have been preserved. Toward the close of the 15th century the sources (see Cantera, in bibliography) mention

ten synagogues and a further five *battei midrash*. The synagogues included the Great Synagogue situated in the old quarter, which was destroyed by fire in 1250; the Old Synagogue, renovated in 1107, an event which Judah Halevi immortalized in a poem; the Ben-Ziza Synagogue, and many others, some of whose names have not been recorded. In addition, there was a synagogue founded by Joseph Abu 'Omar *Ibn Shoshan in 1203, converted into a church named Santa Maria la Blanca in 1411 by Vicente *Ferrer (see below). Another synagogue was built by Don Samuel Halevi in c. 1357; transferred to the Order of the Knights of Calatrava in 1494, it later belonged to the priory of San Benito and is at present named El Transito. These two synagogues, still standing, are built in pronounced Mudéjar style and are distinguished for the beauty of their arches and general appearance. They were evidently built by Moorish craftsmen, and underwent structural alterations to adapt them to church requirements. Both were declared national monuments toward the middle of the 19th century. Repairs have been carried out in the Samuel Halevi Synagogue, and the women's gallery and other parts have been restored. In 1964 it was decided to transform the synagogue into the Sephardi Museum. The museum contains very important Jewish tombstones and various articles of great historical value. The synagogue is decorated with passages from the Psalms and beautiful dedicatory inscriptions to the benefactor and builder of the synagogue and King Pedro, during whose reign it was erected. The house of Samuel Halevi, still standing, was for a while inhabited by the painter El Greco.

Toledo also has many remnants of Jewish tombstones, some of which are preserved in the archaeological museum of the town and others in the Sephardi Museum. Copying of the inscriptions on these tombstones was begun from the end of the 16th century; many of the tombstones have since been lost. During the 19th century these reproductions were seen by S.D. *Luzzatto, who published them (*Avnei Zikkaron*). A scholarly edition of these inscriptions was published by Cantera and Míllas with the addition of inscriptions and findings discovered after Luzzatto's publication. Of the tombstones whose inscriptions were published, noteworthy are those of Joseph Abu 'Omar ibn Shoshan (builder of the synagogue mentioned above) who died in 1205; several members of the *Abulafia family; *Jonah b. Abraham of Gerona (d. 1264); David b. Gedaliah ibn Yaḥya of Portugal (d. 1325); *Jacob b. Asher, author of the *Turim* (d. 1340), son of *Asher b. Jehiel (see below); his brother, *Judah b. Asher, and members of his family who died in the Black Death in 1349; the woman Sitbona (a unique tombstone preserved in the archaeological museum of Toledo); and R. Menahem b. Zerah author of *Ẓeidah la-Derekh* (d. 1385).

Other findings include a pillar with the inscription "Blessed be thy coming and blessed be thy going," with an Arabic version of a blessing, which belonged to one of the synagogues of the town; its architectural form indicates that it dates from the late 12th or early 13th century. The bath house of the Jews of the town was handed over to the San Clemente monastery in 1131 by Alfonso VII but its location is unknown. This abundance of findings is exceptional in Spain, where few Jewish remains have been preserved. All the efforts in looking for a *mikveh* or ritual bath have led to no concrete or certain results. Of special interest is a fresco in one of the exits of the Cathedral describing the blood libel leveled against the Jews, accused of murdering a child of La Guardia.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

Period of Muslim Rule

During the 11th century, when Toledo was ruled by the Berber Ibn Danun dynasty, it had a large Jewish population of about 4,000, divided into separate communities generally according to place of origin (e.g., the Cordobans, Barcelonese, etc.), and a group to which was attributed *Khazar descent. Toledo was also the center of the *Karaites in Spain. Jewish occupations included textile manufacture, tanning, and dyeing, military professions, and commerce. Jews in the villages near Toledo were known for their skill in agriculture and viticulture. A wealthy class of Jewish merchants, bankers, and agents for foreign Christian rulers lived in Toledo. Toledo became a center of Jewish scholarship, translation, and science; the astronomer Zarkal (Abu Ishaq Ibrahim b. Yaḥya) lived there for a time in the mid-11th century, and the biblical commentator Judah b. Samuel *Ibn Bal'am was born and educated in Toledo in this period.

Toledo under Christian Rule

The situation of the Jews in Toledo remained unchanged after the town was conquered by Alfonso VI in 1085. During the 12th century it continued as a center of learning and Jews and apostates were among those who translated works of mathematics, astronomy, and other subjects from Arabic into the spoken vernacular and from that language into Latin. The capitulation terms of the town show that Alfonso promised the Muslims that they could retain their mosques and would only transfer to him the fortified places. There is, however, no information available on the terms affecting the Jews although the fortress situated in their quarter remained in their possession. At this time and throughout the reign of Alfonso, Don Joseph *Ferrizuel (Cidellus) held office in the royal court and was particularly active in favor of his coreligionists.

From then on, the community developed until it became the most prominent in the Kingdom of Castile and one of the most important in Spain. In 1101 Alfonso granted the Arabized Christian population a privilege establishing that the fines they might pay should amount to only one-fifth of those paid by others, excepting in the case of murder or robbery of a Jew or Moor. When Alfonso VI died in 1109, the inhabitants of the town rebelled and attacked the Jews. Alfonso VII, the crown prince, reached a compromise with the townsmen and issued a series of laws discriminating against the Jews, and laid down that lawsuits between Jews and Christians were to be brought before a Christian judge. In 1118 he actually reintroduced the Visigothic law of the fourth council of Toledo in 633, which excluded "those of Jewish origin" from all public positions.

During this period some of the most distinguished personalities of their time lived in Toledo: Isaac *Ibn Ezra who apparently left the town in 1119; Moses *Ibn Ezra who stayed there; and Joseph ibn Kamaniel, the physician, one of the wealthiest members of the community who was entrusted with an important diplomatic mission to the king of Portugal. There were also the families of Shoshan, Al-Fakhar, Halevi, Abulafia, Zadok (who were given land in a village near Toledo in 1132), and Ferrizuel. Because of their importance, the last regarded themselves as descendants of the House of David and as being of noble birth: they assumed the title of *nasi* and thus became a kind of oligarchy within the Jewish community. This family produced the leading tax lessees in the city, in the surrounding area, and in the whole kingdom, as well as other courtiers almost throughout the community's existence. During the reign of Sancho III (1157–58), the position of *almoxarife* in Toledo was held by Judah Joseph ibn Ezra (referred to as Bonjuda in documents); the king granted him lands and exempted him from the payment of tithes on these estates and taxes. R. Judah is known for his energetic activity to remove Karaism from Castile. During the reign of Alfonso VIII (1158–1214), when Toledo was again threatened by the *Almohads, the Christian soldiers maltreated the Jews, although these had actively participated in the defense of the town. Joseph Al-Fakhar and his son Abraham, originally from Granada, then acted as *almoxarifes* in Toledo, as did also members of the Ibn Ezra family and Joseph Abu Omar ibn Shoshan.

The language spoken by the Jews of Toledo and employed in their documents during the 11th to 13th centuries was partly Arabic; they customarily wrote their documents in Arabic with Hebrew characters. These sources reveal a well-developed economic life. Jews of Toledo are recorded as having sold or purchased land, as lenders and borrowers, and are also found in partnerships with Christians in real estate transactions and in commerce. The documents show that the Jews of Toledo did not turn to the non-Jewish tribunals, as was customary in other communities, in matters which involved both Christians and Jews. The Jews owned fields and vineyards and occasionally leased land and pastures in partnership with Christians; they maintained slaves, owned shops, and engaged in every kind of craft. In conjunction with Christians they even occasionally leased the revenues of churches and monasteries. The documents also indicate the status of several of their signatories within the framework of the community. Some of them bear the title of *sofer* or *ḥazzan*, as well as honorifics such as *al-ḥakim* and *al-vazir*. Apparently until the close of the 12th century, the community's style of life resembled that of a Jewish community under Muslim rule. It was only in the course of the 13th century that the prevailing Arab titles lost their luster. By the beginning of the 14th century, use of Arabic in deeds and documents was abandoned.

The administrative organization of the community does not appear to have changed throughout its existence. There is no information on the administrative organization during Muslim rule, but a responsum attributed to R. Joseph ibn Migash mentions the existence, in the early 12th century, of an organization headed by seven notables and elders and a *bet din*. During that period there were also administrative leaders in the community. Gonzalez Palencia has shown that these positions were held by members of distinguished families. From the 13th century the community was administered by ten **muqaddimūn*. Under the influence of Don Joseph ibn Wakar, changes were introduced into the procedure for the election of the community leaders: two arbitrators were elected to choose the *muqaddimūn*. After the expulsion of the Jews from Spain the regulations of Toledo became a model for the organization of the communities of Spanish refugees who settled in North Africa and throughout the territories of the Ottoman Empire.

The decisions of the Fourth *Lateran Council of 1215 influenced the relationship between the Church and the Jews of the town. Rodrigo, the archbishop of Toledo, reached an agreement with the Jews of the archdiocese according to which every Jew aged over 20 would pay one sixth of a gold coin to him as an annual tax; it was laid down that doubtful cases were to be decided by four elders, the *muqaddimūn* of the community, and two Jews chosen by the archbishop; the Jews of Toledo would be exempted from all tithe payments as decided by the Lateran Council, and any property sold by a Jew to a Christian throughout the archdiocese would be exempted from tithe payment. The archbishop undertook to protect the Jews, and the elders of the community were responsible for observance of the agreement by the Jews. Ferdinand III ratified this agreement.

In the 13th century, under the auspices of Alfonso X, the Wise, Jews were involved in translating scientific, philosophical, and medical works from Arabic into Castilian. Out of the 12 translators engaged in the program 5 were Jewish, and they translated 40 percent of all the works.

A period of crisis occurred at the time of the revolt of Crown Prince Sancho against his father (1280–81). A contemporary author relates that the community of Toledo was shaken "as Sodom and Gomorrah." Alfonso X ordered the imprisonment of the Jews in their synagogues, from which they were not to be released until the community paid him a special tax. Notables of the community remained in prison for many months. Attempts were even made there to convert them and several were executed. The distinguished poet Todros b. Judah Ha-Levi was among the prisoners, who after some self-examination decided to repent. He called on the community to amend its evil ways in transactions and commerce, and to separate from non-Jewish women, among other practices. The community accepted his appeal, and a *ḥerem* ("ban") was proclaimed in the synagogue against anyone committing these offenses. This was an act of repentance on the part of a whole community. One of the scholars of Toledo, Jacob b. Crisp, turned to Solomon b. Abraham *Adret (Rashba) and requested his opinion and sanction for the administration of "this province and the penalization of offenders." The latter advised that the same rule could not be applied to everyone: at first a gentle

manner should be adopted, but if this proved of no avail, then the strict letter of the law was to be applied.

The same conditions prevailed within the community of Toledo during the reigns of Alfonso and Sancho. The main figure among the Jewish courtiers was Don Abraham El Barchillon, a native of Toledo, first mentioned in state documents as having leased the minting of coins in the kingdom. Others included Don Abraham ibn Shoshan who had already risen to importance during the reign of Alfonso x, and was the *almoxarife* of the queen. The poet Todros ha-Levi Abulafia also resumed his public activities and for a period headed a group of personalities who leased the state revenues: the port customs duties, payments to the royal office, and others.

During his own lifetime, Maimonides was challenged in Toledo by a notable adversary, Meir b. Todros ha-Levi Abulafia, whose opinions were shared by the physician Judah b. Joseph al-Fakhar, and Joseph b. Todros Ha-Levi, the brother of R. Meir. They regarded the writings of Maimonides to be dangerous in that they could undermine faith. The controversy over the study of the writings of Maimonides (see *Maimonidean controversy) received particular impetus in Toledo in 1304–05, at the time of the publication of the correspondence between Solomon b. Adret and Abba Mari *Astruc on the subject of the *ḥerem* issued against the study of the *Guide of the Perplexed*. The correspondence was published by Samson b. Meir, who went to Toledo to obtain the signatures of the community leaders to this *ḥerem* and the support of R. Asher b. Jehiel (Rosh), who from the beginning of the 14th century occupied the rabbinical seat in Toledo. During his lifetime and that of his son R. Judah, Torah learning flourished in Toledo; another of his sons, R. *Jacob b. Asher, wrote the *Turim* there. Israel b. Joseph *al-Nakawa, author of *Menorat ha-Ma'or*, was also active there.

At the beginning of the 14th century, an attempt was made by the clergy in Toledo to compel the Jews to cease from engaging in moneylending; they also compelled the Jews to return the interest which they had taken and to cancel the obligations of payment which Christians had undertaken. Ferdinand iv notified the clergy that he would bring them to account if they continued to impose a boycott on the Jews or sought to prosecute them before the Church tribunals. Nevertheless in a number of cases the king accepted the arguments of the clergy, and Jewish moneylenders of Toledo were arrested, tried before Christian judges, and condemned to lengthy terms of imprisonment. During that period there were wealthy Jews who earned their livelihood by renting houses to other Jews, a practice until then unknown. Toledo was also one of the rare places where Jews owned Muslim slaves. The reign of Alfonso xi (1312–50) was favorable to the community. Don Joseph ha-Levi b. Ephraim (identified with Don Yuçaf de Ecija) and Samuel ibn Wakar, the king's physician who in 1320 leased the minting of coins in the kingdom, were then active at court. They competed for influence there and for the leasing of the revenues of the kingdom. Don Moses *Abzardiel (or Zardiel) was a third personality of importance; as *dayyan* in Toledo and scribe of the king, his signature in Latin is found on deeds and documents concerning taxes and financial affairs, and on privileges issued to bishops, monasteries, noblemen, and towns during the 1330s.

The *Black Death (1348) took a heavy toll among the community of Toledo. During the reign of Pedro the Cruel (1350–60), Don Samuel b. Meir ha-Levi *Abulafia acted as chief agent and treasurer of the king. It was presumably he who built the synagogue in 1357 which bears his name (see above). In 1358 he left for Portugal to negotiate a political agreement, and he was signatory to several royal edicts. He was suddenly arrested in 1360 (or 1361) upon the order of King Pedro, and removed to Seville, where he died at the hands of his torturers. Other Jews after him were lessees and courtiers, more particularly members of the ha-Levi and *Benveniste families of Burgos.

In 1355, when the king entered Toledo, Christians and Muslims attacked the Jewish quarters. The Alcana quarter, near the cathedral, suffered heavily. During the civil war between Pedro and Henry (1366–69), the town changed hands several times; when Pedro once more besieged the city, in 1368–69, 8,000 Jews perished. In June 1369 he ordered that the Jews of Toledo and their belongings be sold to raise 1,000,000 gold coins. The community was ruined, and every object which could find a buyer was sold. By 1367, however, the Christian congregations had already complained that they had sunk into debts to the Jews and called for a moratorium on their debts and reduction to half of their value. Henry had remitted their debts for two years and reduced them to one third.

The Persecutions of 1391

While the Toledo community was still endeavoring to recover from the effects of the civil war, it was overtaken by the persecutions which swept Spain in 1391 and brought down upon it ruin and destruction. The riots against the Jews in Toledo broke out on 17 Tammuz (June 20) or, according to Christian sources, on August 5. Among the many who were martyred were the grandchildren of R. Asher, his disciples, and numerous distinguished members of the community. Almost all the synagogues were destroyed or set on fire, and the *battei midrash* became mounds of ruins. Many abandoned Judaism at that time, and Toledo became filled with Conversos (see below). The impoverishment of the community is also evident from the order of Henry iii, according to which certain incomes totaling 48,400 maravedis were handed over to the New Kings Church of Toledo in 1397 instead of the income provided for it by his father and grandfather from the annual tax of the Jews, which could not be collected as a result of the destruction of the community. During that year Jewish houses were also auctioned. There were, however, still Jews of Toledo who held important leases. In 1395 the archbishop of Toledo appointed his physician Pedro, who was an apostate, chief justice of the communities of his archdiocese. This was a

unique case in which an apostate became a judge to dispense Jewish law. Don Abraham ibn Shoshan protested to the crown against this appointment.

The community of Toledo did not recover throughout the 15th century. In 1408 John II transferred several revenues to the chief *adelantado* of the kingdom of Castile to replace his revenues formerly derived from the communities of Toledo, Madrid, and Alcalá de Henares which had been destroyed and were so impoverished that all income from them had disappeared. Vicente Ferrer visited Toledo in 1411. He entered the Jewish quarter with an armed escort and converted the Ibn Shoshan Synagogue into a church. There is reason to believe that a number of Jews converted to Christianity as a result of the sermons he delivered. The annual taxes of Jewish Toledo amounted to only 7,000 maravedis in 1439. There were, however, still a number of Jews who held leases in the town and outside it, survivors of the old families: Don Isaac Abudraham in the archdeaconry of Alcaraz near Toledo (1439); Don Ephraim ibn Shoshan who leased taxes in Toledo in 1442 and continued to do so after the attacks on the Conversos in 1452 and 1454. When Isabella ascended the throne and the country became united with the kingdom of Aragon, Jews of Toledo again held important positions in the kingdom as lessees and courtiers. Don David Abudraham leased the tax on meat and fish in Toledo between 1481 and 1484. Don Moses ibn Shoshan leased the taxes of Molina. During that year Don Abraham *Seneor of Segovia leased the taxes of Toledo. While in Toledo in 1480, the Catholic monarchs *Ferdinand and Isabella decided on their anti-Jewish policy and the Cortes convened there adopted a series of decrees.

The Jews of Toledo were expelled with the other Jews of Spain in 1492, and the last exiles left Toledo on the seventh of Av. They left behind them the debts owed to them by Christians, and the government determined the procedure for their collection. Luis de Alcalá and Fernando Nuñez (Abraham Seneor) Coronel were entrusted with this task. At that time 40 houses in their ancient quarter were owned by Jews, who apparently were not sufficiently numerous to occupy all of them so that some were inhabited by Christians. No information is available about the destinations of the exiles, but as the regulations of the Toledo community are found in Fez and other places in North Africa they obviously settled there. Jews from Toledo settled in Turkey and also reestablished communities in Ereẓ Israel. In Toledo in 1494 Rodrigo de Marcado, the king's representative, proclaimed that the property of the community would be transferred to the crown. This included communal property, the debts owed to Jews, real estate, butchers' shops, and the lands and consecrated properties which the Jews of the town had entrusted to the municipal council or handed over to several of its citizens.

The Conversos of Toledo

Jews were living in Toledo as forced converts (see also **Anusim*) during two periods. The first was under the Visigoths, and the second period of religious persecution and forced apostasy was from the end of the 14th century. The Conversos of Toledo continued to live in the quarters they had formerly occupied as Jews, until the 1480s, when the residential area of the Jewish quarter was greatly reduced, while the Conversos were dispersed among the Christian parishes of the town.

The revolt of Pedro *Sarmiento against John II in 1449, and the attempt by the crown to have taxes collected from the inhabitants of the town by Conversos, resulted in attacks on the latter. These were followed by a trial of 12 Conversos which gave impetus to the publication in Castile of a widespread literature on the subject, as part of a public campaign both for and against the Conversos, concerning their place within Christian society. Many pamphlets of satire which ridiculed the Conversos were composed, while forged letters were circulated of a supposed correspondence between Chamorro, the "head" of the community of Toledo, with Yusuf, the "head" of the Jews of Constantinople, concerning a project to destroy Christianity.

Attempts to conduct inquiries in Toledo against suspected heresy, in *Inquisition style, were inspired by the monk *Alfonso de Espina during the 1460s. *Alfonso de Oropesa, head of the Order of St. Jerome, was appointed by the archbishop to investigate heresy in Toledo. During a whole year he interrogated Conversos and penalized them, but the overwhelming majority evidently returned to the fold of the Church. On July 19, 1467 riots again broke out against the Conversos in the Magdalena quarter, and there was again an open conflict between Conversos and Christians in various quarters of the town. When the Christians gained the upper hand, many Conversos hid in the houses of the Jews. Several of the Converso leaders were arrested and executed.

In 1485 the rabbis of Toledo were ordered to proclaim a *ḥerem* against Jews who refused to testify before the Inquisition if they knew of Conversos who observed the Jewish precepts. In 1486 and the beginning of 1487, 4,000 of the inhabitants of the town and the vicinity were involved in five autos-da-fé; some of them returned to the fold of the Church and others were burned at the stake on the site known as Sucodovar. However, the files of only 85 executions are extant for the period between 1485 and the 1660s. The Conversos sentenced in Toledo belonged to two categories: the cultured persons, holders of public office, and the ordinary craftsmen. Among the intellectuals sentenced were Alvaro de Montalbán, father-in-law of the poet Fernando de Rojas, author of the *Celestina*; and Martín de Lucena, to whom R. Solomon ibn Verga refers as a scholar. His son Juan de Lucena was one of the first in Spain to print Hebrew works and diffuse them outside the country. Juan de Pineda, a commander of the Order of Santiago and the delegate of the Order at the papal court, was also among those tried. Craftsmen tried by the Inquisition included cobblers, shoemakers, tailors, and blacksmiths. Many merchants and women were also executed. Attempts were also made to implicate the Conversos of Toledo in the *La Guardia blood libel.

TOLEDO, city in Ohio, U.S. The estimated population (2005) was 315,000, with the Jewish population somewhat less than 4,000 (5,900 in the metropolitan area), approximately 6,000 fewer than cited in the 1972 *Encyclopaedia Judaica*. Local legend has it that the name of the city, borrowed from the Spanish city, was suggested by the Jewish citizens as it derives from the Hebrew *toledot* which connotes history and continuity.

The history of the development of the Toledo Jewish community began with a handful of German and Dutch Jews who arrived via Cincinnati. They were joined by several Hungarian Jews. In 1837 when the city was chartered there were several Jewish families. Toledo and Cincinnati were connected by a series of canals and the local Jews were largely in commerce with goods that were ferried from Cincinnati. Happily, there was no need for a Jewish cemetery until 1867 when the Hebrew Benevolent and Cemetery Association was founded. The first cemetery was interdenominational. Since then, the three congregations have created separate burial grounds for their members. There is a *ḥevra kaddisha* that serves all the Jews of the community.

Among the first Jewish families were the Marx brothers. Emil, Guido, and Joseph published the *Ohio Staatszeitung* intended for the largely German-speaking population of the area. Emil was an early volunteer at the beginning of the Civil War. Joseph was appointed U.S. consul to Amsterdam by President Abraham Lincoln in 1864.

The first settlers were staunchly individualistic free thinking or atheistic Jews who were bound to the community through a network of family business and shared capital. Attempts to form synagogues were spasmodic and short lived.

The first mention of the observance of High Holidays was in 1865 but it wasn't until 1867 that Congregation B'nai Israel, now affiliated with the Conservative movement, was founded. It has been served by Rabbis Halper, Glazer, Herowitz, Epstein, Lichtenstein, Goldberg, Perlmutter, Bienstock, Ungar, Kaiman, and Leff.

Eight years later Reform Congregation Shomer Emunim ("keeper of faithfulness"; Isaiah 26:2) was founded. The name was suggested by Isaac Mayer Wise, the initiator and organizer of the then incipient Reform movement in the United States. It was assumed that a Jewish community in such a remote section of the mid-west United States deserved a name affirming its faithfulness. It appears to be the only synagogal congregation in the world with that name. The rabbis of the congregation have been Schanfarber, Meier, Freund, Alexander, Coffee, Harris, Kornfeld, Feuer, Sokobin, and Weinstein.

Congregation Etz Chaim was founded by the merger of smaller Orthodox congregations. Its rabbis have been Katz and Garsek.

Several of the rabbis of Toledo have had contributory positions in Toledo to the nation and national Jewish organizations. Following World War II when Israel was struggling to create its independence Rabbi Leon *Feuer was the chief lobbyist in Washington seeking American political support for the establishment of a Jewish State. He later became president of the Central Conference of American Rabbis. Rabbi Morton Goldberg served as both president of the Toledo Public School System and the Toledo Library system. Rabbi J.S. *Kornfeld was ambassador to Persia and Rabbi Alan Sokobin was chair of studies of the educational system as well as the court and justice systems of the City of Toledo. Both Rabbi Feuer and Rabbi Sokobin taught at the University of Toledo.

In response to the large number of Jews arriving in Toledo the need to organize led to the establishment of the Toledo Federation of Jewish Charities in 1907. The Jewish Banner Boys Club had previously been organized to assist 12 and 13 year olds integrate into the community. A Banner Club for girls was formed and the boys and girls met together on a weekly basis for a discussion group. The many social and

cultural activities thrived and the need for a building was becoming apparent. In 1911 the Council of Jewish Women was given permission to solicit funds for a building. In 1912 a building was erected by the Jewish Educational League for the programs directed at children and newcomers to the area. The purpose of the league had the lofty goal "to develop and maintain a high standard of American citizenship among the Jewish Residents of Toledo."

In 1936 the Jewish Educational League, the Jewish Family Service, and the Transient Service became a part of the Jewish Community Center. Since that time the Jewish community of Toledo has been exceedingly well represented in national Jewish organizations. There are active chapters of Hadassah, ORT, and B'nai B'rith as well as chapters of Young Judea and Synagogue Youth. The United Jewish Council is the governance body for the Toledo Board of Jewish Education that maintains a Jewish day school as well as an afternoon Hebrew program serving the Orthodox and Conservative congregations. In 2004 the athletic programs of the Jewish Community Center were combined with those of the Toledo YMCA.

Jews have become an integral part of the general Toledo community. There are Jews who have been elected to important judicial as well as legislative posts. While the community began largely with merchants, today the majority of Toledo Jewry is engaged in the professions. Like many Ohio communities, elderly Jews have migrated toward the sunbelt and younger Jews have left for college and not returned home.

[Alan Sokobin (2nd ed.)]

TOLEDO, MOSES DE (fl. first part of 17th century), Jerusalem *ḥakham* and emissary. In 1628 Toledo traveled through the Greek islands, reaching the island of Corfu at the beginning of winter. He was one of the numerous emissaries who were sent out from Jerusalem after the brutalities of the governor, Muhammad ibn Farukh, in 1625. The latter impoverished the Jews, who lost all of their possessions, and as a result of his extortions he even enslaved them to the Muslims for many years. The community of Corfu was generous with all the emissaries, but since Toledo was the third emissary from Jerusalem within a brief period, the community in a special letter to Jerusalem requested that no more emissaries be sent. Furthermore, it stated that the Corfu community would send its contributions directly to Jerusalem by the safest method available, in order to save the commissioning of an emissary and his expenses.

[Avraham Yaari]

TOLEDOT HA-ARI (Heb. תּוֹלְדוֹת הָאֲרִ"י), a legendary biography of Isaac *Luria of *Safed. It is one of the most detailed and richest hagiographies written in Hebrew.

Found in many manuscripts, it seems to have been a popular work, was translated into Ladino (printed 1766), and even adapted into the story genre having a single plot (e.g., a Yemenite story based on it). It first appeared in print under the title *Kavvanot u-Ma'aseh Nissim* (Istanbul, 1720). The relationship between this work and the *Shivḥei ha-Ari*, another collection of stories about Luria (first printed in Joseph *Delmedigo's *Ta'alumot Ḥokhmah*, Basle, 1629–31, and again in a different version in *Emek ha-Melekh* by Naphtali *Bacharach, Amsterdam, 1648) is a point of discussion in modern scholarship. Benayahu maintains that the letters constituting *Shivḥei ha-Ari* (the letters of Solomon Shlumil of Dresnitz) were written in Safed in the first decade of the 17th century, and were taken from *Toledot ha-Ari* which, according to him, already existed then as a collection of stories. However, the first manuscripts of *Toledot ha-Ari* were written in the second half of the 17th century, decades after R. Shlumil's letters.

Toledot ha-Ari is a more fantastical, romantic, and imaginative work than *Shivḥei ha-Ari*. It includes, for example, a version of "The Story of the Jerusalemite," a 13th-century tale about the marriage between a man and a demon, adapted to serve as a vehicle to demonstrate Luria's greatness. The famous story of the **dibbuk* (a spirit which entered a girl's body) which appears in *Shivḥei ha-Ari* as an addendum, and is not among Shlumil's original letters, is an integral part of *Toledot ha-Ari*. The supernatural tales found in *Toledot ha-Ari* are also not in *Shivḥei ha-Ari*. In *Toledot ha-Ari*, Luria is sometimes portrayed as a famous rabbi and judge, respected in Safed and all over the Jewish East. This is not a historical fact, and nothing of the sort is mentioned in Shlumil's letters. It may therefore be inferred that *Shivḥei ha-Ari* is a compilation of intimate accounts told by Luria's pupils, whereas *Toledot ha-Ari* is a collection of fantastical and imaginary hagiographies which were associated with Luria by later admirers, after his fame had spread all over the Jewish world. At the same time, there is little doubt that *Toledot ha-Ari* also includes some true stories about Luria which Shlumil either did not know, or did not include in his extant letters. It must therefore be considered also as a source on Luria's life and works. It served as an example for later Jewish compilers of hagiographies, and, undoubtedly, influenced *Shivḥei ha-Besht* (Berdichev, 1815), the hagiographies of the founder of Ḥasidism, and other similar works.

[Joseph Dan]

TOLEDOT YESHU (Heb. "The Life of Jesus"), medieval pseudo-history of the life of *Jesus. The inherent nature of the Christian version of the birth, life, and death of Jesus called forth a "Jewish" view. Beginnings to an approach can be found in the talmudic tractates *Sotah* (47a) and *Sanhedrin* (43a; 67a; 107b). When confronted by Christian critics and censors, however, Jewish scholars explained that these references were to another Jesus who had lived 200 years before the Christian era. From the geonic period at the latest, and throughout the Middle Ages, many versions on the life of Jesus were written and compiled by Jews. The authors used as sources talmudic

sayings and Christian stories. The different writings merged into a single narrative of which nearly a dozen versions are extant. Most of these were printed by Samuel *Krauss, whose *Das Leben Jesu nach juedischen Quellen* (1902) includes a detailed study of nine versions of the story, and has remained the main scholarly work in the field.

The complete narrative, which could not have been written before the tenth century, used earlier sources, some of which have been preserved in the Cairo **Genizah* documents. A chronological examination of the various fragments and versions reveals the development of the narrative. The complete medieval story has versions which are so different from each other in attitude and in detail that it is impossible that one author could have written it. Undoubtedly, several storytellers wove their separate tales out of the same early material; these were then compiled. In all the versions, Miriam (Mary), Jesus' mother, is described in a favorable light. She is of a good family and marries a nobleman whose ancestry goes back to the House of David. According to the narrative, Jesus' father, a neighbor of the household, was a bad man. Some versions state that he raped Miriam, others relate that he succeeded in pretending to be Miriam's husband. The names of the husband and the villain vary in the different versions. If the husband is Joseph, the villain is Johanan, and in those which name Johanan as the husband, Joseph is the villain. All versions concur that when it became known that Mary was raped, the husband ran away, and the infant was born to his lonely mother.

The narrative in all its versions treats Jesus as an exceptional person who from his youth demonstrated unusual wit and wisdom, but disrespect toward his elders and the sages of the age. This part of the story bears some similarities to Ben Sira's youth described in *Alphabet of *Ben Sira*, leading some scholars to believe that the latter was also an anti-Christian satirical medieval work. The narrative does not deny that Jesus had supernatural powers; these, however, he obtained when he stole a holy name from the Temple. After a long struggle, in which conflicting magical powers contested for preeminence, Jesus' magic was rendered powerless by one of the sages. Naturally, the narrative intends to divest Christian tradition of any spiritual meaning. Some of the miracles, therefore, like the disappearance of Jesus' body after death, are explained either as acts of deception or as natural phenomena. In the more developed versions of the narrative, the hatred toward Jesus and his followers is not the only motif in the story. Many unnecessary details were added, secondary characters were developed, and the story became a romance about the tragic fate of a young man mistaken in his ways.

Wolfson); H.G. Enelow, *A Jewish View of Jesus* (1931^2); G. Brandes, *Jesus a Myth* (1926); W. Fischel, *Eine juedisch-persische "Toledoth Jeschu"-Handschrift* (offprint from MGWJ, vol. 78, 1934).

[Joseph Dan]

TOLERANZPATENT, edict of tolerance issued by Emperor Joseph II on Jan. 2, 1782 for Vienna and Lower Austria (and subsequently for other provinces of the empire). It was one of a series of patents granted to the major, non-Catholic denominations of Austria, guaranteeing existing rights and obligations and laying down additional ones. The final version was less liberal than Joseph II's original drafts. The *Toleranzpatent* confirmed existing restrictions against any increase in the number of tolerated Jews; however, they were encouraged to engage in large-scale business, to set up factories, and to learn trades (although becoming master craftsmen remained prohibited); to establish schools and attend universities. Upper-class Jews were encouraged to integrate socially. The concluding article exhorted the Jews to be thankful and not to misuse their privileges, particularly not to offend Christianity in public, an offense which would result in expulsion. At the same time insult or violence done to a Jew would be punished.

With its leitmotif of making the Jews useful to society and the state through education and the abolishment of economic restrictions, the *Toleranzpatent* influenced much contemporary legislation in Germany. Although welcomed by N.H. *Wessely and other luminaries of the *Haskalah, it was viewed with misgiving in conservative Jewish circles, in particular by Ezekiel *Landau, who characterized it as a *gezerah* ("a disaster"); he was especially troubled by the order that within two years no document in Hebrew would be legally valid. Even Moses *Mendelssohn expressed misgivings over the new type of Christian enticement. Nonetheless, the edict was a significant milestone on the road to full emancipation.

TOLKOWSKY, SHEMUEL (1886–1965), agronomist and Israel diplomat. Born in Antwerp, Belgium, Tolkowsky settled in Ereẓ Israel in 1911. In 1916–18 he served under Chaim *Weizmann in London as member of the Zionist Political Committee, which negotiated the *Balfour Declaration, and was an advisor on political matters. In 1918–19 he was the secretary of the Zionist delegation in the Versailles Peace Conference. Tolkowsky was active in various economic and public fields in Tel Aviv. In 1949–56 he was consul general and later minister of Israel in Berne, Switzerland. His books include *The Gateway to Palestine – History of Jaffa* (1924); *Hesperides, A History of the Culture and Use of Citrus Fruits* (1938); and *They Look to the Sea* (1964). His son DAN (1921–), born in Tel Aviv, was a mechanical engineer, and served in the British Royal Air Force as a flight lieutenant during World War II. From 1948 he served in the Israel air force and from 1953 until 1958 was its commander, attaining the rank of *alluf.*

[Benjamin Jaffe]

TOLLER, ERNST (1893–1939), German playwright and revolutionary. Born in Samotschin, Prussia, Toller was raised in an assimilated Jewish family which prided itself on being representative of German culture in a region heavily populated by

Poles. He volunteered for the army at the outbreak of World War I and after 13 months in the trenches at Verdun, was released as unfit for service. Toller's war experiences converted him from ultranationalism to pacifistic socialism. In Berlin he met Kurt *Eisner, and joined him in Munich as a member of the Independent Socialist Party (USPD), participating in strikes and anti-war agitation, as a result of which he was briefly imprisoned. Toller was a leader of the short-lived Bavarian Soviet Republic of 1919 and he succeeded Eisner after the latter's murder. Later he headed the Red Guard, but opposed needless violence. In June 1919, when the revolution collapsed, he was hounded by the authorities and spent five years in prison. It was while he was in jail that Toller wrote his celebrated expressionistic dramas: *Masse-Mensch* (1921; *Masses and Man*, 1923), *Die Maschinenstuermer* (1922; *The Machine-Wreckers*, 1923), *Hinkemann* (1924; *Brokenbrow*, 1926), and *Der entfesselte Wotan* (1923), which called for a new and more humane society and for man's liberation from the tyranny of the machine. The verse collection, *Das Schwalbenbuch* (1923; *The Swallow-Book*, 1924), contains some of the best poetry written during his imprisonment. After his release, Toller visited the U.S.S.R. (1926) and the U.S. (1929), shedding some of his utopian ideas. His later plays, such as *Hoppla wir leben*! (1927; *Hoppla*, 1928), and *Feuer aus den Kesseln* (1930; *Draw the Fires*, 1935), were less successful. Another drama, *Wunder in Amerika* (1931), was written in collaboration with Hermann *Kesten. Hitler's rise to power drove Toller into exile. His autobiography, *Eine Jugend in Deutschland* (1933; *I Was a German*, 1934), vividly depicted the hopes and frustrations of his generation. Toller continued the struggle against the Nazis, who regarded him with special hatred, throughout his years of exile, first in Switzerland, then in France, England, and finally, from 1936, in the U.S. He was engaged in unremitting efforts to help the cause of Spanish democracy but the fall of Republican Madrid to Franco's troops brought him a feeling of increased isolation and despair which led him to commit suicide in New York. Toller's last works include *No More Peace* (1937) and *Pastor Hall* (in English only, 1939).

TOLSTOYE (Pol. **Tłuste**), town in Tarnopol district, W. Ukraine. Jews first settled in Tolstoye in the late 17th century. In the mid-1720s *Israel b. Eliezer, Ba'al Shem Tov, came to settle with his family and from there he started to preach his doctrine (1736). The gravestone of his mother was in the old local cemetery until World War II. From the first partition of Poland in 1772 until 1918, Tolstoye was under Austrian rule. In the 19th century the Jews traded in agricultural produce, timber, cloth, and beverages. They numbered 2,157 (67% of the total population) in 1880; 2,172 (59%) in 1900; and 1,196 (46%) in 1921. Ḥasidism was preponderant in Tolstoye; the wealthy members of the community (estate owners, contractors, and merchants of forest produce and hides) were followers of the *ẓaddik* of Chortkov, whereas shopkeepers, grain merchants, brokers, and scholars adhered to Viznitsa Ḥasidism, and the artisans were followers of the *ẓaddik* of Kopychintsy. In 1914 and 1916 the Jews suffered at the hands of the Russian army. Between the two world wars, in independent Poland, all the Zionist parties were active in the town and there was a *Tarbut Hebrew school.

[Shimshon Leib Kirshboim]

Holocaust Period

With the outbreak of war between Germany and the U.S.S.R. (June 22, 1941), groups of Jewish youth attempted to escape to the Soviet Union with the retreating Soviet army, but only a few succeeded. The city was captured by the Hungarian army, which was an ally of Germany. The Ukrainians attacked the Jews and looted their property, and Jews were drafted into work camps and agricultural farms in the area. In March 1942 the remnants of the Jewish communities of the entire area were concentrated in Tolstoye. In July 1942, 200 people were arrested and sent off in an "unknown direction." On Oct. 5, 1942, about 1,000 people were transported to the *Belzec death camp and about 150 were killed on the spot. On May 27, 1943, about 3,000 people were concentrated in the market square and were taken from there to the Jewish cemetery, where they were killed. About 1,000 people remained in the city, and they were murdered in an *Aktion* on June 6, 1943. The last 80 Jews were transported to Czortkow and found their deaths there. Many of the Jews who had fled to the forests fell into the hands of the fanatic Ukrainian Bandera gangs, but some of them joined partisan units. The remnants of the Tolstoye community were liberated from the camps in the area in March 1944. They soon immigrated to Palestine and the West. Jewish life was not reconstituted in Tolstoye after the war.

TOLUSH (pseudonym of **Iser Muselevitsh**; 1887–1962), Yiddish writer, born in Dvinsk, Latvia. Orphaned at an early age, he was virtually self-educated. Upon arriving in the U.S. in 1920, he shifted from writing in Russian to Yiddish. He worked at numerous occupations and wandered across much of Europe, Palestine, and the U.S. The designation Tolush (Heb. "detached" / "displaced") was given him by Z. *Shneour to characterize his itinerant life. His writing, influenced by Gorky and reflecting his wandering, introduced into Yiddish literature bohemian and unusual characters and settings. His works include *Der Yam Roysht* ("The Sea Roars," 1921), *A Zump* ("A Swamp," 1922), *Voglenish* ("Wandering," 1938), *Yidishe Shrayber* ("Yiddish Authors," 1953), and *Mayn Tatns Nign* ("My Father's Melody," 1957).

[Leonard Prager / Jerold C. Frakes (2nd ed.)]

TOMA, A. (originally **Moscovici**; 1875–1954), Romanian poet. Toma contributed to Romania's socialist and Jewish press and one of his poems, "Sion" ("Zion"), was often recited at Zionist gatherings. His verse collections include *Poezii* (1926, 1930²) and *Cîntul vietii* (1950); a volume of children's poems, *Piuici si fratii lui mici* ("Piuici and his Little Brothers"), also appeared in English (1956). A member of the Romanian Academy after World War II, he was a prolific translator and gained many awards.

TOMAR (formerly **Thomar**), city in central Portugal. The earliest record of Tomar Jews, a tombstone of a rabbi, Joseph of Thomar, dated 1315, is found in *Faro's Jewish cemetery. A magnificent 15th-century synagogue on Rua de Joaquin Jacinto, referred to in an old document as "Rua Nova que foi judaria," reveals that there was a dynamic Jewish community in Tomar prior to the forced baptisms of 1497. The residents of the *judaria*, called *gente da naçao* or "people of the nation," were generally upper-class citizens. An *Inquisition tribunal was established at Tomar in 1540, and the first *auto-da-fé was held on May 6, 1543. After a second *auto-da-fé*, on June 20, 1544, the tribunal was suspended, owing perhaps to the discovery of administrative abuses. It was closed altogether with the publication on July 10, 1548 of a bull of pardon directing the release of all persons then held by the Inquisition.

On July 29, 1921, Tomar's historic synagogue building – which had been confiscated and used by a Christian order throughout the Inquisition period – was declared a national monument by the Portuguese government. In 1922 the antiquarian Samuel *Schwarz took title to the building, establishing there a museum for Judeo-Portuguese artifacts and inscriptions. Named Museu Luso-Hebraico Abraham Zacuto, it contains a good collection of inscriptions from early synagogues, including the notable stone from *Belmonte's 13th-century synagogue inscribed "And the Lord is in His holy Temple, be still before Him all the land," where the Divine Name is represented by three dots, in a manner also found in the *Dead Sea Scrolls.

[Aaron Lichtenstein]

TOMASHPOL, town in Vinnitsa district, Ukraine; before the 1917 Revolution in the administrative province of Podolia. In 1847 there were 1,875 Jews living in Tomashpol. The town developed extensively as a result of the sugar industry and trade there. Between 1883 and 1918 Judah Leib *Levin (Yahalal) lived there, employed as an accountant in the factory owned by the *Brodski family. There were 4,518 Jews (over 90% of the total population) in the town in 1897. During the civil war many Jews in Tomashpol fell victims of the pogroms perpetrated by the armies of *Denikin in February 1920. By 1926 the number of Jews in the town had decreased to 3,252 (54.3%).

After the German occupation of Tomashpol in 1941, the Jews who remained there were murdered.

In the late 1960s the Jewish population was estimated at 1,000. There was no synagogue, the last remaining synagogue having been confiscated in 1956 and converted into a tailoring workshop.

[Yehuda Slutsky]

TOMASZOW LUBELSKI, town in Lublin province, E. Poland; from 1772 to 1809 under Austria, and from 1815 within Congress Poland. An organized Jewish community existed in Tomaszow Lubelski from the 1630s, but it was almost entirely annihilated in the *Chmielnicki massacres of 1648. The community was reorganized in the late 1650s. Its members earned their livelihood from trade in agricultural produce, the fur trade, tailoring, and inn keeping. The *parnas* of the community, Jacob Levi Safra, was its delegate at the Council of Four Lands (see *Councils of Lands) in 1667. In the 1670s the rabbi of the town was Isaac Shapira; he was succeeded by Judah b. Nisan. R. Phinehas bar Meir of Tomaszow was martyred in Lublin in 1677. There were 806 Jews in the town and its surroundings who paid the poll-tax in 1765. From the beginning of the 19th century the community was increasingly influenced by Ḥasidism. The Jewish population numbered 1,156 (43% of the total) in 1827; 2,090 (57%) in 1857; and 3,646 (59%) in 1897. At the close of the 19th century the Jews of Tomaszow Lubelski, among whom were many laborers, engaged in the operation of flour-mills, processing wood, weaving, tailoring, baking, and tanning. Between the two world wars, the Jewish population increased from 4,643 (65%) in 1921 to 5,669 in 1931. A library and Jewish sports club were established; branches of all the Jewish parties were active.

[Arthur Cygielman]

Holocaust Period

On the outbreak of World War II there were about 6,000 Jews in Tomaszow. On Sept. 6, 1939, the Jewish quarter suffered heavy German bombardment. The local synagogue was burned down, and about 500 houses inhabited by Jews were destroyed. The German army entered Tomaszow on Sept. 13, 1939, but withdrew within two weeks, and the Soviet army entered, only to return the town to the Germans after a few days. Many Jews (over 75%) seized the opportunity of leaving the town with the withdrawing Soviet army, and only 1,500 remained when the Germans returned. On Feb. 25, 1942, most of them were deported to the forced-labor camp in Cieszanow, where almost all died. Many Jews fled into the surrounding forests and attempted to hide there. A group of young Jews under Mendel Heler and Meir Kalichmacher organized a Jewish partisan unit, which fought the Germans for some time, but was betrayed by local Poles and annihilated.

The Jewish community was not reconstituted in Tomaszow Lubelski after the war.

[Stefan Krakowski]

TOMASZOW MAZOWIECKI (also called **Tomaszow Rawski**), city in Lodz province, central Poland. The owner of Tomaszow Mazowiecki, Count Antoni Adam Ostrowski, invited Jewish weavers and entrepreneurs to settle there in the 1820s. Jacob Steinman from Ujazd acted as the count's agent in charge of the area. Jewish merchants who came to settle received building plots. They soon organized trade in local textile products. On the initiative of the manufacturer Leib Zilber a Jewish community was officially founded in 1831, and was granted sites for a synagogue, *mikveh*, hospital, and cemetery. The first dozen Jewish families in the city earned their livelihood as hired workers in the local weaving mills; later several became managers and owners of various textile plants. After the defeat of the Polish uprising of 1831, the Russian government of Nicholas I confiscated the Ostrowski estates, including Tomaszow Mazowiecki. Antoni Ostrowski went into exile in France, where he published *Pomysfy o potrzebie reformy towarzyskiej* ("Thoughts on the Necessity of Social Change," 1834), in which he formulated a plan for improving the conditions of the Jews in Poland.

The town grew from the early 1850s. The 1,879 Jews who lived there in 1857 comprised 37% of the population. By 1897 the number of Jews had grown to 9,320 (47% of the population); it increased to 10,070 in 1921 and 11,310 in 1931. The great synagogue was built between 1864 and 1878. In 1889 a *kasher* kitchen was built to cater for 120 Jewish soldiers serving in the Russian army who were stationed in the area. The manufacturer and community leader A. Landsberg paid for the building of a community center and donated another building to house the city's first Jewish high school. The community's first rabbi was Abraham Altschuler; Jacob Wieliczkier served there from 1857 to 1888 and Hersh Aaron Israelewicz from 1890 to 1916. In the 1880s David Bornstein founded a textile mill to employ Jewish workers, thus assuring their Sabbath observance. Besides weaving and spinning, the Jews engaged in carpentry, dyeing, and construction; many were employed as bookkeepers and foremen. In the early 20th century a Jewish workers' movement was organized. Between the world wars all the Jewish political parties were active in the city, especially the *Bund, *Po'alei Zion, and *Agudat Israel. Ludwik Frucht served as deputy mayor from 1926. In 1921 two schools merged to form the Hebrew high school. A Yiddish weekly, *Tomashover Vokhenblat*, appeared between 1925 and 1939. Samuel ha-Levi Brot, a Mizrachi leader in Poland, officiated as rabbi between 1928 and 1936. In the 1930s the Jews were damaged economically by the growing antisemitism. Natives of Tomaszow Mazowiecki include Leon *Pinsker, whose father taught in the city, the writer Moshe Dolzenovsky, and the chess champion Samuel *Reshevsky. The mathematician Ḥayyim Selig *Slonimski lived there between 1846 and 1858.

[Arthur Cygielman]

Holocaust Period

On the outbreak of World War II there were 13,000 Jews in the town. In December 1940 a closed ghetto composed of three isolated parts was established there. On March 11, 1941 the Jews from Plock were forced to settle there, so that the town's Jewish population grew to over 15,000. On April 27, 1942 about 100 people, including many members of the local underground, were arrested and shot. About 7,000 Jews were deported to the *Treblinka death camp and murdered on Oct. 31, 1942. Three days later another 7,000 Tomaszow Jews met their death in Treblinka. Only about 1,000 were left in the ghetto, which became a forced-labor camp. In May 1943 the ghetto was liquidated and its inmates transferred to the forced-labor camps in Blizyna and Starachowice, where almost all of them perished. No Jewish community was reconstituted in Tomaszow Mazowiecki.

TOMBS AND TOMBSTONES. Regular burial of the dead in tombs was customary even in prehistoric times as a manifestation of the beginnings of religious ritual, both among nomads and among settled peoples. In the Neolithic period, deceased tribal heads were regarded as family or tribal totems as attested by clay skulls, with human features, found at Jericho (Kenyon, in bibl.). In the Chalcolithic period it was customary to bury the bones in dry ossuaries after the flesh had disintegrated. There were various forms of ossuaries. Sometimes human features were engraved on the front of the ossuary. *Cemeteries of ossuaries were found mainly on the coastal strip of Ereẓ Israel. Death was viewed as a transition to a different world, where life was continued. The dead and their departed spirits were thought of as powerful, incomprehensible forces threatening the living with a limitless capacity for harm or for good. It was thus customary to place offerings of food and drink in special vessels, which were then buried in the tomb together with the corpse. For example, a platter with a lamb's head upon it has been found in a tomb at Afulah. Gifts given to the dead, either for their use or to propitiate them, were the items most highly prized by the person during his lifetime. Thus, during the Middle Canaanite period it was customary to "kill" the sword of the deceased after its owner's death by bending it and making it useless. During the Late Canaanite period, a man's war horse and chariot were symbolic of his noble status. It was therefore customary to bury a nobleman's weapons and horse with him. In a number of graves at Beth-Eglaim (Tell-ʿAjūl) horses are buried with their rid-

ers (Petrie, in bibl.). Burial customs were the most important aspect of the early Egyptian cultic practices. These customs accompanied the death of the king-gods, nobles, and upper classes. The monumental architecture of the Egyptian burial cities, the mummification of the kings, and the embalming of sacred animals, all developed around the Egyptian burial cult (Dawson, in bibl.). Such practices were employed in the great, powerful, and stable kingdoms and in Mesopotamia, though they were not found among the tribes who arrived in Palestine with the wave of ethnic wanderings, during the patriarchal period of the second millennium B.C.E. These wandering tribes did, however, continue the practice of burying various offerings together with their dead, as was customary from the Early Canaanite period on.

During the time of the Patriarchs, when there was a change from tribal wanderings to permanent settlement, a new element was added to the burial customs. A permanent grave site was purchased in the vicinity of the settlement which was a significant indication of permanent settlement. Herein lies the importance of Abraham's purchase of a family tomb (Gen. 23:4). Jacob's request that he be buried at this place rather than in Egypt may be understood against this background (Gen. 47:29). Joseph's burial in Shechem in the land of his ancestors (Josh. 24:32) must be seen as part of the process of Exodus from Egypt and the conquest and settlement of Palestine. This identification of the patriarchal tomb with the Promised Land may be discerned in Nehemiah's remark to the Persian king from whom he requested permission to go to Palestine to rebuild its ruins: "… the place of my father's sepulchers lies waste…" (Neh. 2:3). For a long period of time, from the Patriarchs until the establishment of the monarchy, it was customary to bury the dead in a family plot (Heb. *bet ʾavotam*) in an effort to maintain contact with the place (e.g., Judg. 2:9; I Sam. 25:1).

During the period of the kingdoms of Judah and Israel, sepulchers for kings and nobles were established: "and they buried him [Uzziah] with his fathers in the burial field which belonged to the kings" (II Chron. 26:23). Special mention should be made of the discovery of an engraved tablet bearing the name of Uzziah king of Judah. The tablet cannot be the original one which marked the grave, since its script and its general form are of the Second Temple period. It appears that for various reasons the king's bones were transferred during this period. Noblemen and officers also merited lavish burial. The prophet, fighting the corrupt nobility, denigrates the elegant tombs, hewn out of the rocks (Isa. 22:16). The carving of tombs in elevated places is reminiscent of the grave sites above the Kidron Brook in Jerusalem (Avigad, in bibl.). A number of hewn graves dating to the period of the kings have been found at this location. The most striking of them is a hewn tomb, upon whose lintel appears a dedication to some person who held an administrative position: "…who was over the household." The name of this person ends with the syllable *yhw*. Conceivably, it may be the same Shebna (Shebaniahu) mentioned in Isaiah 22:16 [15]. Another tomb from the same period is the one called "the grave of Pharaoh's daughter." This tomb is cut from rock into the shape of a cube. It has a small entrance and contains the remains of a striking structure, perhaps pyramidal, on its roof. During certain periods grave markers or tombstones were part of the grave itself (Gen. 35:20). The most luxurious graves from this period found, for example, at Achzib, are hewn according to Phoenician design. The burial cave has a vaulted ceiling, cut as much as 10 m. (33 ft.) deep into the rock. At its end is a catafalque hewn out of rock, upon which the corpse was placed. In order to elevate the head of the corpse, a stone was placed beneath it, or a projection shaped like a raised pillow was left on the catafalque. As a result of the custom of burying items of value from the deceased's lifetime along with him, there arose a class of grave robbers in the Ancient East. To prevent such incursions, complicated grave sealing techniques were developed, along with difficult entrance and exit passages from the interior of the tombs. In many instances it was customary to warn grave robbers against entering. The tomb of "…*yhw* who was over the household" (mentioned above) contains the inscription: "Cursed be he who opens this." This is similar to the inscriptions common in the Second Temple Period, which contained the name of the deceased and a warning not to open the grave.

Thousands of tombs have been unearthed and investigated during the years of archaeological activities in Israel. Several characteristic grave types have been found:

(1) A communal grave within a cave from the Middle Canaanite period, like one found at Jericho. Dozens of skeletons were found in the cave as well as the offerings buried there (Garstang, in bibl.). In this case, a household or family used a natural cave, which served it for several generations. This type of mausoleum, consisting of some land and a cave, was no doubt the kind acquired by Abraham from Ephron the Hittite near Hebron, when he came to settle permanently in Palestine. The patriarchal sepulcher remained traditional among the people even as late as Herod's time. Among his massive building projects throughout the land, he constructed a Roman-style monument over the patriarchal tomb in Hebron. This monument was intended as an architectural marker of the site and its sanctity.

(2) During the same Middle Canaanite period pit burials were common. For this purpose either natural caves were used or circular or rectangular pits were dug out of the earth to a depth of one to 2 m. (3–6 ft.). The walls of the pit contained the burial niches into which were placed the bodies and the offerings. Each niche would be sealed with a single large stone, and the central pit would be filled in up to ground level, thus preventing any approach to the graves themselves.

(3) In addition to family graves, individual tombs have been found. These too contain gifts to accompany the deceased to his new life. Generally, these gifts were eating and drinking utensils, jewelry, personal seals, etc. The finds from tombs are many and variegated, and by their nature are better preserved than finds from the usual, exposed ancient sites.

(4) Among the graves unearthed from the Late Canaanite period are pit tombs, of the style of the prior period, both of family as well as of individual types and simple inhumations. Graves from this period have been found at Tell Abu Hawām (Hamilton, in bibl.), Achzib, and elsewhere. Special attention was given to the manner in which the body was placed in the grave. Generally, the hands were folded and the legs stretched out. The custom of burying gifts with the dead continued into the Late Canaanite period. Offerings in these graves are either local or imported implements.

(5) At the end of this period another form of burial appears. The corpse is placed into two large ossuaries, or jugs, whose necks have been removed, so that the bodies of the jugs enclose the corpse from the feet up and from the head down. These graves, too, contain offerings and weapons that served the deceased during his lifetime.

(6) At the end of the second millennium B.C.E., with the advent of the Philistines in the land, sites with Philistine population, such as Beth-Shean, exhibit different burial methods. The corpse was provided with a clay coffin, longer than the body. The coffin had a cover near the head, decorated with human features. Such decoration was intended to symbolize the personality of the deceased. The engraved hats and diadems resemble the headdress of the Philistines portrayed on ancient Egyptian monuments (Dothan, in bibl.).

(7) A large quantity of graves, including pit tombs, burial caves, rock-hewn tombs, and individual grave sites, from the Israelite period, have been found at Megiddo, Hazor, Beth-Shean, and other sites. The offerings placed in these graves are usually pottery vessels, such as jars and flasks, some of them imported, as well as jewelry and seals.

(8) The Israelite II and the Persian periods reveal tombs hewn into caves with ledges provided for the corpses, known mainly from the Shephelah and the coastal strip. Tombs of Phoenician style are especially to be found in the Athlit area (Hamilton, in bibl.). These are in the shape of a four-sided pit hewn into the hard rock, with ladderlike sockets for hands and feet, to be used in climbing down the pit. At the bottom of the pit there are one or more hewn openings to the burial niches themselves. These are sealed with large stones. The entrance pit itself is filled with earth and stones to block off the entrance to the graves.

(9) With the close of the Persian period and the beginning of the Hellenistic, the most common form of grave consisted of rock tombs, with raised shelves or ledges, or troughs resembling coffins, near the walls. The typical cave ceiling of this period is in the form of a large camel hump, as in the case of a grave found at Marissah. The walls and ceiling of this grave are decorated with drawings. A tomb of similar design has been found at Nazareth.

[Ze'ev Yeivin]

Tombstones

The first tombstone mentioned in the Bible is the *maẓẓevah* ("monument") which Jacob set up over the grave of Rachel (Gen. 35:20; see Tomb of *Rachel). The custom continued during the First Temple period as is clear from II Kings 23:17, where King Josiah saw the *ẓiyyun* over the grave of the prophet who had prophesied that Josiah would undertake the religious reformation (cf. I Kings 13). Ezekiel (39:15) also uses *ẓiyyun* for a sign placed over the grave. The custom continued during the period of the Second Temple and the Talmud. I Maccabees 13:27–29 describes the ornate tombstone and monument which Simeon the Hasmonean erected over the grave of his father and brothers at Modi'in, of which Josephus (Ant. 13:211) also gives a detailed description. However, apart from a vague reference in the Talmud stating that one of the things which adversely affects one's study is "the reading of an inscription on a grave" (Hor. 13b), there is no evidence that these tombstones bore inscriptions either in the biblical or early Second Temple periods (but see below). In the later period their main purpose seems to have been to indicate the position of a grave in order to obviate the fear of a kohen becoming ritually unclean by being in its vicinity (cf. Tosef. Oholot 17:4). The custom of erecting these tombstones was widespread. R. Nathan ha-Bavli ruled that a surplus of the money provided for the burial of the dead was to be applied to erecting a memorial over the grave (Shek. 2:5), and the 15th of Adar was selected as the day of the year when graves were marked (Shek. 1:1) by daubing them with lime (Ma'as. Sh. 5:1). In addition to those *ẓiyyunim* which were apparently simple markers there were two kinds of more ornate tombstones (called *nefesh*, literally, "a soul"). One was a solid structure over the grave without any entrance (Er. 55b); the other had an entrance to which a dwelling chamber, probably for the watchman, was attached (Er. 5:1).

During the later Hasmonean period, under Greek and Roman influence, there developed the custom of erecting ornate monumental tombstones for the nobility, notable examples being the Yad Avshalom (Monument of Absalom), the sepulcher of Zechariah, and that of the Sons of Hezir in the Kidron Valley. The last bears the inscription "this is the grave and the *nefesh* ["soul"] of," giving the names of the members of the family buried there. For many years this was the only known inscription on a tombstone of the Second Temple period, but recent excavations have revealed a large number, including the Tomb of Jason in Reḥavyah in Jerusalem and that of Simeon the builder of the Sanctuary, among others (see *Epitaphs, and the reproductions in *Sefer Yerushalayim*, 1957, pp. 220–321 and 352–3). It has been suggested that it was this ostentation, so foreign to the spirit of Judaism, and the desire to abolish it which caused Rabbah Simeon b. Gamaliel to declare that "one does not erect *nefashot* to the righteous, for their words are their memorial" (Gen. R. 82:10; TJ, Shek. 2:7, 47a).

In view of the extensive discovery of such inscriptions, the suggestion can no longer be upheld that it was only outside Ereẓ Israel that the Jews adopted the custom from the Greeks and Romans of adding inscriptions to tombstones in addition to Jewish symbols (see below on tombstone art), and the

custom is to be regarded as common from at least the second century B.C.E. Jacob Moellin (the Maharil) states that in Mainz he discovered a fragment of a tombstone over a thousand years old (i.e., of the fourth century) bearing the Hebrew inscription "a designated bondmaid" (cf. Lev. 19:20; *Likkutei Maharil* at the end of his book of that name). The earliest known tombstones bearing the inscription *shalom al Yisrael* ("Peace upon Israel"), dated 668, was found at Narbonne, one at Brindisi dates from 832, and one at Lyons from 1101. Maimonides (Yad, Avel 4:4) adopts the abovementioned view of Simeon b. Gamaliel that tombstones are not erected over the graves of the righteous. Solomon b. Abraham Adret, however (Resp. 375), regards the tombstone as a mark of honor for the dead, while Isaac Luria (*Sha'ar ha-Mitzvot, Va-Yeḥi*) even regards it as contributing to the *tikkun ha-nefesh* ("the perfecting of the soul") of the deceased. It is forbidden to derive material benefit from a tombstone (Sh. Ar. YD 364:1). At the present day it is the universal custom to erect tombstones, and a special order of service for the consecration of the tombstone has been drawn up. In Israel its main content is the reading of those portions of the alphabetical 119th Psalm which constitute the name of the deceased and the letters of the word *neshamah* ("soul"); in Western countries it consists of a selection of appropriate Psalms and biblical passages; and in both cases it concludes with a memorial prayer and **Kaddish* by the mourners. In the Diaspora it is the custom to erect and consecrate the tombstone during the 12th month after death; in Israel on the 30th day. Ashkenazi tombstones are usually vertical; among the Sephardim they lie flat (for inscriptions on tombstones see *Epitaphs; see also *Burial; *Catacombs; *Cemetery).

The tombstones of many ancient communities have been published.

Art

A desire for originality allied to an emphasis on tradition is characteristic of the tombstones in Jewish cemeteries. Here the anonymous Jewish craftsman succeeded perhaps better than in most other fields of art in establishing an individual style. There are few branches of Jewish art which are distinguished by such richness of decoration, and by such a variety of symbolism, as tombstone art. Thus a study of Jewish tombstones is a rich source of material for the study of Jewish art from ancient times to the present. The artistic and traditional development of the tombstone and of its individual style is based on two factors: (a) the desire for perpetuation; (b) artistic expression and the participation of the various branches of the plastic arts in its creation. Hence the great value of the tombstone not only lies in the study of epitaphs, but also in its ornamentation.

TOMBSTONE ART IN THE ANCIENT WORLD. The oldest graveyards are found in Ereẓ Israel. Here the original form of the cemetery, consisting of rock vaults intended for a group of graves, has been preserved. The so-called Tombs of the Sanhedrin in Jerusalem, dating from the first and second centuries C.E., are outstanding for the ornamentation at the lintel to the graves. Similar ornamentation exists at the entry to the burial chamber of the royal line of Adiabene in Jerusalem, traditionally known as the "Tomb of the Kings." At the same period, under the influence of Egyptian and Greek art, individual monuments were erected to mark graves. Examples are the monuments known as "Absalom's Tomb," "The Tomb of Zechariah," and others, all in the Valley of Kidron in Jerusalem. In Galilee, the *Bet She'arim necropolis has a wealth of ornamentation, both Jewish and mythological. In the Roman catacombs of the classical period the Jewish tomb was recognizable by symbols such as the **shofar* or the *menorah*. A very few Roman sarcophagi have been preserved which combine this Jewish symbolism with classical motifs – e.g., the *menorah* supported by putti in pure pagan style, found in the Catacomb of Vigna Randanini. The early tombstones erected over graves in the western world after the classical period were on the whole severely plain, sometimes merely embodying (in Spain and Italy) a crudely engraved *menorah* whether as a symbol of Jewish allegiance or of eternal light. In the Middle Ages, even this slight ornamentation disappeared, and the decorative element was entirely provided by the engraved Hebrew characters. In most cases, however, the inscriptions were crudely carved by inexpert hands. There now developed a tendency for the tombstones in Germany and the lands of Ashkenazi civilization to be upright, those in Spain and the Sephardi world to be sometimes horizontal, sometimes built up in the form of altar-tombs.

LATER SEPHARDI TOMBSTONES. A more elaborate form of tombstone began to emerge in the Renaissance period. While in North Africa and the Orient the utmost simplicity continued to prevail, in some of the Sephardi communities of Northern Europe (especially Amsterdam, though not London) and of the West Indies (especially Curaçao) an elaborate Jewish funerary art developed. In these places the recumbent tombstones were often decorated with scenes in relief depicting events connected with the biblical character whose name was borne by the deceased (the sacrifice of Isaac or the call of Samuel), and in Curaçao sometimes even with the actual deathbed scene. In Italy, the vertical tombstone was often surmounted by the family badge, and in the case of families of Marrano descent with the knightly helm or with armorial bearings.

ASHKENAZI TOMBSTONES. The Ashkenazim, on the other hand, used symbols which illustrated the deceased's religious status, his virtues or his trade. These then were special symbols to denote a rabbi, a kohen, a levite; an alms-box would be shown on the tombstone of a philanthropist; and a pair of scissors on that of a tailor. The depiction of the human figure is unknown on Ashkenazi tombstones, and allegorical figures are very rarely found. As in medieval Spain, Ashkenazi Jewry in Bohemia and in parts of Poland sometimes used vertical and horizontal stones together to form a sarcophagus. This sarcophagus monument was usually intended for important

personages. Another type of tombstone intended for an important person, a **ẓaddik* or an **admor*, is to be found in Polish cemeteries, and in neighboring Ashkenazi countries. This was in the form of an *ohel* ("tent" or "tabernacle"). These tabernacles generally had no artistic or architectural distinction; they were built in the form of a small stone or wooden house, or of a simple hut standing on four posts, inside which the tombstone itself was placed. Sometimes the tabernacle was encircled by a wrought iron fence. But the most common form of tombstone among Ashkenazi Jewry is the vertical, rectangular stone. A few cast-iron tombstones are known, and in small, poor communities, particularly in Eastern Europe, there are wooden tombstones. The tombstones in Prague, Worms (Germany) and Lublin (Poland), dating from the mid-15th and early 16th centuries, have no special ornamentation. Most of them are in the form of square stone tablets, and were seldom topped with a semicircular or triangular decoration. From the mid-16th century onward, tombstones have more elaborate decoration, particularly in the ornamentation of the frame for the epitaph. The most common designs resemble those of the ark curtains in the synagogue, with two columns flanking the tombstone and enclosing the text. It is in this period that flora and fauna make their first appearance, mostly around the frame, while the epitaph is engraved on the main part of the stone, below the two-columned portico. Nevertheless, with its beautiful lettering the epitaph constitutes the main decoration of the tombstone. From the early 17th century, the tombstone of Eastern European Jewry developed a definite style of ornamentation. There is a clear post-Renaissance influence in the form of the tombstone and the ornamentation. In the design of this ornamentation, and the manner in which it is placed on the tombstone, there are the beginnings of the rich Jewish decoration, baroque in essence, which is characteristic of the century in Eastern Europe, and particularly in Poland. This decoration is reminiscent in both subject matter and execution of the wall-paintings of the wooden synagogues, which in fact were first built during this same period. This similarity is particularly apparent after the 1648–49 massacres in Poland. The number of Jewish motifs on tombstones was increased and more honorific descriptions of the deceased taken from the Holy Scriptures or the Talmud were added to the epitaph. Other new decorations included anagrams at the beginning and end of the text The late 17th and early 18th century tombstones, though still outstanding for their floral decoration – full-blown roses, and baskets or bowls filled with ripe fruit – have lost their Jewishness and are lacking in originality. Some of the common symbols used on the Jewish tombstone continued to appear in most Jewish communities. These were the hands of the priest in an attitude of blessing. This marked the grave of a kohen, while an ewer and basin or a musical instrument marked the grave of a levite. In Bohemia and Poland they still used occupational symbols such as chains on the grave of a goldsmith, a parchment with a goosefeather on the grave of a Torah scribe, an open book or a row of books with engraved titles on the grave of a learned rabbi or author. Apart from this, there were also animal, bird or fish motifs representing the name of the deceased, such as a lion on the grave of a man named Leib, a deer on the grave of a man named Hirsch, a bird in memory of Jonah (dove), and a fish on the tombstone of Fischel. The engraver occasionally emphasized the decorative and sculptural aspect by the addition of colors. The anonymous tombstone artists who worked in Jewish communities were excellent craftsmen, sometimes inheriting their craft from their fathers. Their work has a primitive charm and occasionally even a certain degree of professionalism. Some were gifted sculptors, whose work showed sensitivity and a poetic quality. All the religious and philosophical ideas connected with death, the phenomenon of death itself, man's mortality, his ways on earth and his relationship with God and eternity, were given artistic expression in stone. Sometimes death was depicted as a flickering flame, as a shipwrecked vessel, an overturned and extinguished lamp, or a flock without a shepherd. The fear of death was sometimes symbolized by fledglings nestling under their mother's wing. Heraldic designs were also used on tombstones, particularly in Eastern Europe. They took the form of a pair of lions, deer or even sea-horses holding the crowns of the Torah. Other animals also appeared occasionally, such as bears, hares, squirrels and ravens – the raven being the harbinger of disaster. One particular tombstone is of such exceptional beauty that it merits special mention. It is that of Dov Baer Shmulovicz, the son of Samuel Zbitkower, the founder of the Bergsohn family in Warsaw. The tombstone was made by the Jewish artist, David Friedlaender. The main decoration is two bas-reliefs, one on each side of the stone. One depicts a landscape with a river and cargo boats signifying the trade of the deceased and a walled city with towers, houses, including a synagogue, **bet midrash* and windmill, while on the horizon is a palace, which the ancestors of the deceased received as a gift from the last king of Poland, Stanislaus Augustus. The other bas-relief shows the tower (of Babylon) and a grove of trees, on whose branches are hung musical instruments, recalling the passage from Psalm 137, "By the waters of Babylon…."

In recent years there has been a tendency, at least among the orthodox, for tombstones to be increasingly simple, notwithstanding an occasional exuberance of architectural forms. In Eastern Europe they are without exception severely plain.

TOMSK, main city of Tomsk district (Siberia), Russia. Before the October Revolution the district of Tomsk was beyond the *Pale of Settlement and no Jewish settlement was allowed there until the cancellation of the Pale enactment. A Jewish community was nevertheless established in Tomsk in the first half of the 19th century by exiled prisoners and Jewish soldiers who served there (among them several Jewish *Cantonists who were brought to a Cantonist institute there). A number of these soldiers settled in Tomsk after their release from the army. In the second half of the 19th century, Jews of all professions who were allowed now to reside beyond the Pale began to settle in Tomsk. In 1897 the number of Jews in the entire district of Tomsk was 7,900, of whom 3,214 (6.4% of the total population) lived in the town of Tomsk proper. In October 1905 there were in Tomsk organized attacks on Jews and members of the Russian intelligentsia, fomented by the local administration. At the end of 1969 the Jewish population was estimated at about 5,000. The last synagogue was closed down by the authorities in 1959. After the mass exodus of the 1990s fewer than 1,000 Jews remained in the entire Tomsk district. However, Jewish life was revived, including an active community center and officiating rabbi.

°TONNA, CHARLOTTE ELIZABETH (1790–1846), British philosemitic writer and editor. Born Charlotte Browne in Norwich, England, the daughter of an Anglican vicar, she became an extreme Protestant Evangelical writer and edited *The Christian Lady's Magazine* from 1834 until 1846 as well as other religious journals. Tonna was an outspoken philosemite who, most unusually, discarded the normal aim among Evangelicals of converting the Jews, instead adopting the position that Jews remain a Covenant people and that Judaism represented a valid alternative means of attaining salvation. Her magazine reproduced articles on Judaism by Jacob *Franklin, the editor of the Jewish newspaper *The Voice of Jacob*, and she supported the efforts of British Jews to assist persecuted Jews overseas. Tonna also believed that Protestants should themselves practice the Jewish rites, including circumcision. In contrast, she was an outspoken opponent of Roman Catholicism. Well known in her day – a collection of her works was published in 1845 with an introduction by Harriet Beecher Stowe – she was largely forgotten until recently, when her remarkable views attracted renewed interest.

[William D. Rubinstein (2nd ed.)]

TOPARCHY (τοπαρχία), the basic administrative district in Palestine during the major part of the Second Temple period. Under the Ptolemies the division of Palestine was fashioned after that of Egypt, although the names given to each administrative district were not always identical. Thus, whereas in Egypt the largest unit was the *nomos* (νομός) which was divided into smaller districts called *topos* (τόπος), the major unit in Palestine under the Ptolemies was the *hyparchia*, subdivided into smaller units called toparchies (cf., however, I Macc. 10:30; 11:57, where the larger units of Palestine are also called *nomos*). At times the toparchy was in effect the combined territory of a number of neighboring villages, and each toparchy had a capital city or town which was probably the seat of the local governor, known as *strategos toparchos* or simply *strategos*. Under Herod Jewish Palestine was divided into approximately 21 toparchies. As for Judea, two lists are given. Pliny (Natural History 5:70) lists ten toparchies, whereas Josephus enumerates 13 (Wars, 3:54–5), including two toparchies of Idumea. Perea was probably divided into three toparchies and Lower Galilee into four, while Upper Galilee was considered a separate unit.

TOPLPUNKT: FERTLYOR-SHRIFT FAR LITERATUR, KUNST UN GEZELSCHAFTLEKHE FRAGES (Yid. "Colon: Quarterly of Literature, Art and Social Questions"), Yiddish literary journal published since 2000 in Tel Aviv by Der Natsyonaler Instants far Yidisher Kultur ("The National Instance for Yiddish Culture"). Nos. 1–5 were edited by Yankev Beser and co-edited by Yisroel Rudnitski, the latter becoming editor with no. 6 (Winter 2003). The closing down of the journal **Di Goldene Keyt* in 1995 created a vacuum in international Yiddish literary culture. Many of the participants in *Toplpunkt* would have been – or would have aspired to become – contributors to *Di Goldene Keyt*. *Toplpunkt* partly fills a void left by that prestigious journal's surcease and can also lay claim to a character of its own – a greater emphasis on graphic design and on a fruitful exchange between older and younger Yiddish writers. *Toplpunkt* is a serious magazine that radiates a certain vitality: two-thirds of its material is original Yiddish work, while the other third comprises translations from

Hebrew and major European languages. Of the 60–70 Yiddish-writing participants, almost a third are relatively young (mainly late-wave immigrants from former Soviet lands). The folio-size journal is visually attractive, each number featuring work by a particular artist. Those represented in issues 1–9 are among Israel's major artists: Yosl Bergner, Menashe Kadishman, Yossef Zaritsky, Arye Arokh, Tsiona Tagger, Mula Ben-Khayim, Mordecai Ardon, Reuven Rubin, Moshe Rozentalis (in that order). Each issue contains more than 100 pages of a lively variety of genres. Some readers may sense a "last Mohican" strain in this 21st-century subsidized international Yiddish literary periodical.

[Leonard Prager (2nd ed.)]

TOPOL, CHAIM (1935–), Israeli actor, who won international fame as the Shalom Aleichem character, Tevye in the musical *Fiddler on the Roof*. Born in Tel Aviv, Topol began to appear on the stage during his period of army service. He first gained a reputation at the Haifa Municipal Theater, which he co-founded and where he appeared in the Hebrew versions of Ionesco's *Rhinoceros*, Shakespeare's *Taming of the Shrew*, Brecht's *Caucasian Chalk Circle*, and the Japanese *Rashomon*. In Tel Aviv he appeared in the Hebrew production of *Fiddler on the Roof*. This led to his starring in the London West End production in English (1967), which brought him wide acclaim and the lead in the movie (1971). His films made in Israel include *Sallah Shabbati* (1964) and *Ervinka* (1967). He also appeared in *Galileo* (1975), *The House on Garibaldi Street* (1979), *Flash Gordon* (1980), and *For Your Eyes Only* (1981). He also appeared in the TV versions of Herman Wouk's *Winds of War* (1983) and *War and Remembrance* (1988). His autobiography, *Topol by Topol*, was published in London. He has illustrated 20 books.

[Dora Leah Sowden]

TOPOLCANY (Slovak **Topolčany**; Hung. **Nagytapolcsány**), town in Slovakia. The first documentary evidence of the Jewish appearance in Topolcany is from the 14th century. In the following centuries Topolcany was not a pleasant place to live because of the many wars and battles in the area.

The first Jews arrived in Topolcany from Moravia and Uhersky Brod in 1649 and established families. The anti-Jewish legislation of Emperor Charles VI (1711–1780) and of his daughter Maria Theresa (1740–1780) encouraged further settlement of Moravian Jews in upper Hungary. Jews in the city engaged in trade, including international trade. Attempts to expel Jews in 1727 and in 1755 failed. Jewish community life expanded and by 1755 there were a cemetery, a synagogue, and a *ḥevra kaddisha*. In the census of 1735, there were 50 Jews in Topolcany. The "*Toleranzpatent*" (1782) of Emperor Joseph II (1780–90) permitted further settlement of Jews and commerce. By the end of the 18th century a yeshivah was established, under the supervision and instruction of Rabbis Asher Anshel Roth (Ruta) and Abraham Ullmann.

The community grew quickly. In 1830 there were 561 Jews in Topolcany; in 1840 there were 618; and in 1850 there were 760. In 1880 there were 1,119 Jews and in 1910 there were 1,934. The 1930 census records 2,991. On the eve of World War II the number was 2,700. Toward 1942, the number reached 3,000, which included Jews from surrounding villages who moved there, concerned for their safety.

Jews lived a quiet life in Topolcany in the 19th century; but in 1848 during the Spring of Nations, Jews were attacked and robbed. In 1918–19 pogroms took place and Jewish property was looted and destroyed.

After the 1868 Congress of Hungarian Jewry, the Topolcany congregation chose the Orthodox stream. Zionist activity centered on the youth movements, and the Maccabi sports movement organized the young people. A Jewish school, a *talmud torah*, an old-age home, and women's associations extended the social life of the congregation. The Communist Party was also active, particularly among the youth. The Jewish political party clashed with parties representing the Orthodox (mainly the Agrarian Party).

About 80% of the retail trade was in Jewish hands, largely in the horse and cattle trade, wood, food and beverages, and construction material.

In 1938 Hlinka's nationalistic fascist Slovak People's Party gained supreme power in the country. On March 14, 1939, it proclaimed the Slovak state with Nazi support. Jews were the primary target. The Hlinka Guard, with a storm trooper unit, cast a dark shadow on social and political life. Under the guise of "Aryanization," the Jews lost their property and livelihoods. In 1942 the Slovak authorities began to deport the Jews to the extermination camps in Poland. The local population took the opportunity to pillage and divide up Jewish property left in the apartments and stores and grabbed Jewish real estate.

When the deportations stopped in fall 1942 about 2,500 Jews had been deported. Only several hundred Jews were left in the town. They were joined in the spring of 1944 by several dozen Jewish families transferred from eastern Slovakia when the Soviet army closed in. By August 1944 an anti-Nazi uprising spread in parts of Slovakia. Jews from Topolcany in labor camps were liberated and returned home. Thus before German troops arrived to quell the uprising, 1,000 Jews gathered in the city. A few days later, the Germans sent all the Jews to Auschwitz. Fifty who hid were found by the Slovak inhabitants and were shot by the Nazis in a field in nearby Nemcice.

In 1947, there were 320 survivors living in Topolcany. A memorial to the Holocaust victims was erected in the Jewish cemetery. One of the synagogues was restored. Antisemitism continued to plague the Jews. The gentiles who had stolen Jewish property were resentful of the Jews' demands to return their belongings. In September 1945 rumors spread that a Jewish doctor was poisoning children and that Jewish teachers were replacing nuns. A pogrom swept the town. Jewish property was pillaged and destroyed, and 47

people were injured. An army unit sent to disperse the rioters joined the mob. In 1945–49 most of the surviving Jews emigrated. The Great Synagogue was turned into a warehouse.

TOPOLEVSKY, GREGORIO (1907–1986), Argentine politician and physician. Born in Grodno, Russia, Topolevsky immigrated to Argentina as a child and became a physician specializing in otorhinolaryngology. Between 1933 and 1945, he was frequently arrested for political agitation against the dictatorial governments in Argentina and was again imprisoned in 1951. In 1937 he fought on the republican side in the Spanish Civil War. After World War II he was a member of the Unión Civica Radical del Pueblo party and was appointed Argentine ambassador to Israel (1955–58). Later, during the presidency of Arturo Illia, Topolevsky was appointed director general of social welfare in the Ministry of Communications. Active in Jewish communal affairs, he was chairman of a number of local Jewish organizations, among them the Instituto de Intercambio Cultural Argentino Israelí.

[Israel Drapkin-Senderey]

TOPOLSKI, FELIKS (1907–1989), pictorial chronicler and muralist. Topolski, the son of Edward Topolski, a well-known actor, was born in Warsaw and studied art at the Warsaw Academy, and also studied at the Officers' School of Artillery. He later traveled in Italy and France, studying the old masters, before he settled in England in 1935. He developed an outstanding reputation as a draughtsman, writer, muralist, and portrait painter, and also worked in the theater. Appointed an official war artist during World War II, he recorded the British and Allied forces in Russia, the Middle East, the Far East, and Europe. His drawings were used widely in the press and have appeared in a series of books he published on these wartime experiences. Topolski also excelled as a mural painter, for which he received commissions all over the world. His most famous murals are *Cavalcade of Commonwealth*, 60 × 20 feet, painted in 1951 for the Festival of Britain, and *Coronation of Elizabeth II*, 100 × 4 feet, painted between 1958 and 1960 at the request of Prince Philip, which is now in Buckingham Palace, London. Another important commission was for 20 portraits of English writers in 1961, from the University of Texas. Topolski illustrated numerous books, notably the plays of George Bernard Shaw, as well as his own 20 works, including *Was Paris Lost* (1973). From 1953 he published *Topolski's Chronicle*, a hand-printed, pictorial broadsheet on current events. In 1969 he made a television film *Topolski's Moscow* and his environmental painting, *Memoir of the Century,* in London's South Bank Arts Centre was begun in 1977. He was elected to the Royal Academy in the year of his death. Topolski wrote an autobiography, *Fourteen Letters* (1988).

[Charles Samuel Spencer]

TORAH (Heb. תּוֹרָה).

The Term

Torah is derived from the root ירה which in the *hifil* conjugation means "to teach" (cf. Lev. 10:11). The meaning of the word is therefore "teaching," "doctrine," or "instruction"; the commonly accepted "law" gives a wrong impression. The word is used in different ways but the underlying idea of "teaching" is common to all.

In the Pentateuch it is used for all the body of laws referring to a specific subject, e.g., "the *torah* of the meal offering" (Lev. 6:7), of the guilt offering (7:1), and of the Nazirite (Num. 6:21), and especially as a summation of all the separate *torot* (cf. Lev. 7:37–38; 14:54–56). In verses, however, such as Deuteronomy 4:44, "and this is the Torah which Moses set before the children of Israel" and *ibid.* 33:4, "Moses commanded us a Torah, an inheritance of the congregation of Jacob" and the references in the Bible to "the Torah of Moses" (cf. Josh. 1:7; Ezra 3:2; 7:6; 8:1, 8; Mal. 3:22), it refers particularly to the Pentateuch as distinct from the rest of the Bible. In later literature the whole Bible was referred to as *Tanakh*, the initial letters of Torah (Pentateuch), *Nevi'im* (Prophets), and *Ketuvim* (Hagiographia), a meaning it retained in halakhic literature to differentiate between the laws which are of biblical origin (in its Aramaic form, *de-Oraita*, "from the Torah") and those of rabbinic provenance *(de-rabbanan)*. The term is, however, also used loosely to designate the Bible as a whole.

A further extension of the term came with the distinction made between the Written Torah (Torah *she-bi-khetav*) and the Oral Torah (Torah *she-be-al peh*). The use of the plural *Torot* (e.g., Gen. 26:5) was taken to refer to those two branches of divine revelation which were traditionally regarded as having been given to Moses on Mount Sinai (Yoma 28b, and see *Oral Law). Justification was found in the verse of Exodus 34:27, which can be translated literally as "Write thou these words for by the mouth of these words I have made a covenant." The word "write" (*ketav*) was regarded as the authority for the Written Law (hence Torah *she-bi-khetav*, i.e., the Torah included in the word *ketav*) while "by the mouth" (*al pi*) was taken to refer to the Torah *she-be-al peh* (i.e., the Torah referred to in the phrase *al pi*; cf. Git. 60b). Lastly, the word is used for the whole corpus of Jewish traditional law from the Bible to the latest development of the *halakhah*. In modern Hebrew the word is used to designate the system of a thinker or scholar, e.g., "the *torah* of Spinoza."

[Louis Isaac Rabinowitz]

Origin and Preexistence

"Moses received the Torah from Sinai" (Avot 1:1). Yet there is an ancient tradition that the Torah existed in heaven not only before God revealed it to Moses, but even before the world was created. The apocryphal book The Wisdom of Ben Sira identified the Torah with preexistent personified wisdom (1:1–5, 26; 15:1; 24:1ff.; 34:8; cf. Prov. 8:22–31). In rabbinic literature, it was taught that the Torah was one of the six or seven things created prior to the creation of the world (Gen. R. 1:4; Pes. 54a, et al.). Of these preexistent things, it was said that only the Torah and the throne of glory were actually created, while the others were only conceived, and that the Torah preceded the throne of glory (Gen. R. 1:4). According to Eliezer ben Yose the Galilean, for 974 generations before the creation of the world, the Torah lay in God's bosom and joined the ministering angels in song (ARN[1] 31, p. 91; cf. Gen. R. 28:4, et al.). Simeon ben Lakish taught that the Torah preceded the world by 2,000 years (Lev. R. 19:1, et al.) and was written in black fire upon white fire (TJ, Shek. 6:1, 49d, et al.). Akiva called the Torah "the precious instrument by which the world was created" (Avot 3:14). Rav *Hoshaiah, explicitly identifying the Torah with the preexistent wisdom of Proverbs, said that God created the world by looking into the Torah as an architect builds a palace by looking into blueprints. He also took the first word of Genesis not in the sense of "In the beginning," but in that of "By means of the beginning," and he taught that "beginning" (probably in the philosophic sense of the Greek *archē*) designates Torah, since it is written of wisdom (= Torah), "The Lord made me the beginning of His way" (Prov. 8:22; Gen. R. 1:1). It was also taught that God took council with the Torah before He created the world (Tanḥ. B. 2, et al.). The concept of the preexistence of the Torah is perhaps implicit in the philosophy of Philo, who wrote of the preexistence and role in creation of the Word of God (*logos*; e.g., Op. 20, 25, 36; Cher. 127) and identified the Word of God with the Torah (Mig. 130; cf. Op. and II Mos.).

*Saadiah Gaon rejected the literal belief in preexistent things on the grounds that it contradicts the principle of creation ex nihilo. In his view, Proverbs 8:22, the verse cited by Rav Hoshaiah, means no more than that God created the world in a wise manner (*Beliefs and Opinions* 1:3; cf. Saadiah's commentary on Proverbs, ad loc.).

*Judah b. Barzillai of Barcelona raised the problem of place. Where could God have kept a preexistent Torah? While allowing that God could conceivably have provided an antemundane place for a corporeal Torah, he preferred the interpretation that the Torah preexisted only as a thought in the divine mind. Ultimately, however, he expressed the opinion that the Torah's preexistence is a rabbinic metaphor, spoken out of love for the Torah and those who study it, and teaching that the Torah is worthy to have been created before the world (commentary on *Sefer Yeẓirah*, pp. 88–89; cf. Solomon b. Abraham Adret, *Perushei Aggadot*).

Abraham *Ibn Ezra raised the problem of time. He wrote that it is impossible for the Torah to have preceded the world by 2,000 years or even by one moment, since time is an accident of motion, and there was no motion before God created the celestial spheres; rather, he concluded, the teaching about the Torah's preexistence must be a metaphoric riddle (cf. Commentary on the Torah, introd., "the fourth method" (both versions); cf. also Judah Hadassi, *Eshkol ha-Kofer*, 25b–26a; and cf. Abraham Shalom, *Neveh Shalom*, 10:8).

*Judah Halevi explained that the Torah precedes the world in terms of teleology; God created the world for the purpose of revealing the Torah; therefore, since, as the philosophers say, "the first of thought is the end of the work," the Torah is said to have existed before the world (*Kuzari* 3:73).

*Maimonides discussed the origin of the Torah from the standpoint of the epistemology of the unique prophecy of Moses (*Guide of the Perplexed* 2:35; 3:51; et al.; cf. Yad, introd.). The tradition of the preexistence of the Torah was not discussed in the *Guide of the Perplexed*; however, the closely related tradition of the preexistence of the throne of glory was (2:26, 30, et al.). The discussions of Moses' prophecy and of the throne of glory are esoteric and controversial, and each reader will interpret them according to his own views, perhaps inferring Maimonides' position concerning the origin of the Torah.

Within the framework of his Neoplatonic ontology, Isaac ibn Latif suggested that the Torah precedes the world not in time, but in rank. He cited the aggadic statements that the Torah and the throne of glory preceded the world, and that the Torah preceded the throne of glory, and he intimated that the Torah is the upper world (wisdom or intellect) which ontologically precedes the middle world (the celestial spheres, the throne of glory) which, in turn, ontologically precedes the lower world (our world of changing elements; *Sha'ar ha-Shamayim*).

While the tradition of the preexistence of the Torah was being ignored or explained away by most philosophers, it became fundamental in the Kabbalah. Like Ibn Latif, the kabbalists of Spain held that the Torah precedes the world ontologically. Some kabbalists identified the primordial Torah with *Ḥokhmah* (God's wisdom), the second of the ten *Sefirot* in emanation. Others identified the Written Torah with the sixth *Sefirah, Tiferet* (God's beauty), and the Oral Torah with the tenth *Sefirah, Malkhut* (God's kingdom). Emanational precedence signifies creative power; and it was with the Torah that God created the angels and the worlds, and with the Torah He sustains all (Zohar 3, 152a; Num. 9:1).

Ḥasdai *Crescas, who in the course of his revolutionary critique of Aristotelian physics had rejected the dependence of time on motion, was able to take preexistence literally as chronological. He interpreted the proposition about the preexistence of the Torah as a metonymy, referring actually to the purpose of the Torah. Since, according to him, the purpose of the Torah and the purpose of the world are the same, namely, love, and since the purpose or final cause of an object

chronologically precedes it, it follows that the purpose of the Torah (i.e., love) chronologically preceded the world. As its final cause, love (= the purpose of the Torah) is a necessary condition of the world; and this is the meaning of the talmudic statement, "Were it not for the Torah [i.e., the purpose of the Torah, or love], heaven and earth would not have come into existence" (Pes. 68b; *Or Adonai* 2:6, 4; cf. Nissim b. Reuben Gerondi, Commentary on Ned. 39b).

Joseph *Albo also interpreted the preexistence of the Torah in terms of final causality, but his position was essentially that of Judah Halevi, and not that of his teacher, Crescas. He reasoned that man exists for the sake of the Torah; everything in the world of generation and corruption exists for the sake of man; therefore, the Torah preceded the world in the Aristotelian sense that the final cause in (the mind of) the agent necessarily precedes the other three causes (*Sefer ha-Ikkarim* 3:12; cf. Jacob b. Solomon ibn Ḥabib, *Ein Ya'akov*, introd.; Joseph Solomon Delmedigo, *Novelot Ḥokhmah*, 1).

The theory, based on the statement of Rav Hoshaiah, that the Torah was the preexistent blueprint of creation, was elaborated by Isaac Arama, Isaac Abrabanel, Moses Alshekh, Judah Loew b. Bezalel, and others.

In modern Jewish philosophical literature, Nachman *Krochmal analyzed the interpretation of the Torah's preexistence by the author of *Sha'ar ha-Shamayim* (Ibn Latif and not, as Krochmal supposed, Ibn Ezra), and his analysis bears implications for his own idealistic concept of the metaphysical and epistemological precedence of the spiritual (*Moreh Nevukhei ha-Zeman*, 17; cf. 12, 16).

Franz Rosenzweig, in his existentalist reaction to the intellectualist interpretation of the Torah by German rabbis, appealed to the *aggadah* of the preexistence of the Torah in an attempt to show the absurdity of trying to base the claim of the Torah merely on a juridical or historical reason: "No doubt the Torah, both Written and Oral, was given to Moses on Sinai, but was it not created before the creation of the world? Written against a background of shining fire in letters of somber flame? And was not the world created for its sake?" ("The Builders," in: N. Glatzer (ed.), *On Jewish Learning* (1955), 78).

Nature and Purpose

In the Bible, the Torah is referred to as the Torah of the Lord (Ex. 13:9, et al.) and of Moses (Josh. 8:31, et al.), and is said to be given as an inheritance to the congregation of Jacob (Deut. 33:4). Its purpose seems to be to make Israel "a kingdom of priests and a holy nation" (Ex. 19:6). It was said that "the commandment is a lamp and the Torah is light" (Prov. 6:23). The Torah was called "perfect," its ordinances "sweeter than honey and the flow of honeycombs" (Ps. 19:8, 11; cf. 119:103; Prov. 16:24). Psalm 119, containing 176 verses, is a song of love for the Torah whose precepts give peace and understanding.

In the apocryphal book The Wisdom of Ben Sira, the Torah is identified with wisdom (see above). In another apocryphal work, the laws of the Torah are said to be drawn up "with a view to truth and the indication of right reason" (Arist. 161). The Septuagint rendered the Hebrew *torah* by the Greek *nomos* ("law"), probably in the sense of a living network of traditions and customs of a people. The designation of the Torah by *nomos*, and by its Latin successor *lex* (whence, "the Law"), has historically given rise to the sad misunderstanding that Torah means legalism.

It was one of the very few real dogmas of rabbinic theology that the Torah is from heaven (Heb. *Torah min ha-shamayim*; Sanh. 10:1, et al.; cf. Ex. 20:22 [19]; Deut. 4:36); i.e., the Torah in its entirety was revealed by God. According to the *aggadah*, Moses ascended into heaven to capture the Torah from the angels (Shab. 89a, et al.). In one of the oldest mishnaic statements, Simeon the Just taught that (the study of the) Torah is one of the three things by which the world is sustained (Avot 1:2). Eleazar ben Shammua said: "Were it not for the Torah, heaven and earth would not continue to exist" (Pes. 68b; Ned. 32a; cf. Crescas' interpretation above). It was calculated that "the whole world in its entirety is only $1/3,200$ of the Torah" (Er. 21a; cf. TJ, Pe'ah 1:1, 15d). God Himself was said to study the Torah daily (Av. Zar. 3b, et al.).

The Torah was often compared to fire, water, wine, oil, milk, honey, drugs, manna, the tree of life, and many other things; it was considered the source of freedom, goodness, and life (e.g., Avot 6:2, 3, 7); it was identified both with wisdom and with love (e.g., Mid. Ps. to 1:18). Hillel summarized the entire Torah in one sentence: "What is hateful to you, do not to your fellow" (Shab. 31a). Akiva said: "The fundamental principle of the Torah is the commandment, 'Love thy neighbor as thyself'" (Lev. 19:18). His disciple Simeon ben Azzai said that its fundamental principle is the verse (Gen. 5:1) which teaches that all human beings are descended from the same man, and created by God in His image (Sifra, Kedoshim 4:12; TJ, Ned. 9:3, 41c; Gen. R. 24:7).

Often the Torah was personified. Not only did God take council with the Torah before He created the world (see above), but according to one interpretation, the plural in "Let us make man" (Gen. 1:26) refers to God and the Torah (Tanḥ. Pekudei, 3). The Torah appears as the daughter of God and the bride of Israel (PR 20; 95a, et al.). On occasion, the Torah is obliged to plead the case of Israel before God (e.g., Ex. R. 29:4).

The message of the Torah is for all mankind. Before giving the Torah to Israel, God offered it to the other nations, but they refused it; and when He did give the Torah to Israel, He revealed it in the extraterritorial desert and simultaneously in all the 70 languages, so that men of all nations would have a right to it (Mekh., Yitro, 5; Sif. Deut. 343; Shab. 88b; Ex. R. 5:9; 27:9; cf. Av. Zar. 3a: "a pagan who studies the Torah is like a high priest"). Alongside this universalism, the rabbis taught the inseparability of Israel and the Torah. One rabbi held that the concept of Israel existed in God's mind even before He created the Torah (Gen. R. 1:4). Yet, were it not for its accept-

ing the Torah, Israel would not be "chosen," nor would it be different from all the idolatrous nations (Num. 14:10; Ex. R. 47:3, et al.).

In the Hellenistic literature contemporaneous with the early rabbinic teachings, Philo considered the Torah the ideal law of the philosophers, and Moses the perfect lawgiver and prophet and the philosopher-ruler of Plato's *Republic* (II Mos. 2). His concept of the relationship of the Torah to nature and man was Stoic: "The world is in harmony with the Torah and the Torah with the world, and the man who observes the Torah is constituted thereby a loyal citizen of the world" (Op. 3). He wrote that the laws of the Torah are "stamped with the seals of nature," and are "the most perfect picture of the cosmic polity" (II Mos. 14, 51). Josephus, in his *Against Apion*, discoursed on the moral and universalistic nature of the Torah, emphasizing that it promotes piety, friendship, humanity toward the world at large, justice, charity, and endurance under persecution. Both Philo and Josephus wrote that principles of the Torah, e.g., the Sabbath, have been imitated by all nations.

Saadiah Gaon expounded a rationalist theory according to which the ethical and religious-intellectual beliefs imparted by the Torah are all attainable by human reason. He held that the Torah is divisible into

(1) commandments which, in addition to being revealed, are demanded by reason (e.g., prohibitions of murder, fornication, theft, lying); and

(2) commandments whose authority is revelation alone (e.g., Sabbath and dietary laws), but which generally are understandable in terms of some personal or social benefit attained by their performance. Revelation of the Torah was needed because while reason makes general demands, it does not dictate particular laws; and while the matters of religious belief revealed in the Torah are attainable by philosophy, they are only attained by it after some time or, in the case of many, not at all. He taught that the purpose of the Torah is the bestowal of eternal bliss (*Beliefs and Opinions*, introd. 6, ch. 3). He held that Israel is a nation only by virtue of the Torah (see below).

In the period between Saadiah and Maimonides, most Jewish writers who speculated on the nature of the Torah continued in the rationalist tradition established by Saadiah. These included Baḥya ibn Paquda, Joseph ibn Ẓaddik, Abraham Ibn Ezra, and Abraham ibn Daud. Judah Halevi, however, opposed the rationalist interpretation. He allowed that the Torah contains rational and political laws, but considered them preliminary to the specifically divine laws and teachings which cannot be comprehended by reason, e.g., the laws of the Sabbath which teach the omnipotence of God and the creation of the world (*Kuzari* 2:48, 50). The Torah makes it possible to approach God by awe, love, and joy (2:50). It is the essence of wisdom, and the outcome of the will of God to reveal His kingdom on earth as it is in heaven (3:17). While Judah Halevi held that Israel was created to fulfill the Torah, he wrote that there would be no Torah were there no Israel (2:56; 3:73).

Maimonides emphasized that the Torah is the product of the unique prophecy of Moses. He maintained that the Torah has two purposes; first, the welfare of the body and, ultimately, the welfare of the soul (intellect). The first purpose, which is a prerequisite of the ultimate purpose, is political, and "consists in the governance of the city and the well-being of the state of all its people according to their capacity." The ultimate purpose consists in the true perfection of man, his acquisition of immortality through intellection of the highest things. The Torah is similar to other laws in its concern with the welfare of the body; but its divine nature is reflected in its concern for the welfare of the soul (*Guide of the Perplexed*, 3:27). Maimonides saw the Torah as a rationalizing force, warring against superstition, imagination, appetite, and idolatry. He cited the rabbinic dictum, "Everyone who disbelieves in idolatry professes the Torah in its entirety" (Sif. Num. 110; Guide 3:29; Yad, Ovedei Kokhavim 2:4), and taught that the foundation of the Torah and the pivot around which it turns consists in the effacement of idolatry. He held that the Torah must be interpreted in the light of reason.

Of the Jewish philosophers who flourished in the 13th and early 14th centuries, most endorsed Maimonides' position that the Torah has as its purpose both political and spiritual welfare. Some, like Samuel ibn Tibbon and Isaac *Albalag, argued that its purpose consists only or chiefly in political welfare. Others emphasized its spiritual purpose, like Levi b. Gershom, who taught that the purpose of the Torah is to guide man – the masses as well as the intellectual elite – toward human perfection, that is, the acquisition of true knowledge and, thereby, an immortal intellect.

While Maimonides and the Maimonideans generally restricted their analyses of the nature of the Torah to questions of its educational, moral, or political value, the Spanish kabbalists engaged in bold metaphysical speculation concerning its essence. The kabbalists taught that the Torah is a living organism. Some said the entire Torah consists of the names of God set in succession (cf. Naḥmanides, *Perushei ha-Torah*, Preface) or interwoven into a fabric (cf. Joseph Gikatilla, *Sha'arei Orah*). Others said that the Torah is itself the name of God. The Torah was identified with various *Sefirot* in the divine body (see above). Ultimately, it was said that the Torah is God (Menahem Recanati, *Ta'amei ha-Mitzvot*, 3a; Zohar 2, 60a [Ex. 15:22]). This identification of the Torah and God was understood to refer to the Torah in its true primordial essence, and not to its manifestation in the world of creation.

The first Jewish philosopher to construct a metaphysics in which the Torah plays an integral role was Ḥasdai Crescas, who, notwithstanding his distinguished work in natural science, was more sympathetic to the Kabbalah than to Aristotle. He taught that the purpose of the Torah is to effect the purpose of the universe. By guiding man toward corporeal happiness, moral and intellectual excellence, and felicity of soul, the Torah leads him to the love of neighbor and, finally, the eternal love of God [*devekut*], which is the purpose of all

creation (*Or Adonai*, 2:6). Like Judah Halevi, he took an ultimately anti-intellectualist position, and maintained, in opposition to the Maimonideans, that the very definition of the Torah as the communication of God to man implies beliefs about the nature of God and His relation to man which cannot, and need not, be proved by philosophy.

Joseph Albo, developing some Maimonidean ideas, taught that the Torah, as divine law, is superior to natural law and conventional-positive law in that it not only promotes political security and good behavior, but also guides man toward eternal spiritual happiness (*Sefer ha-Ikkarim*, 1:7).

In the writings of Isaac Arama, Isaac Abrabanel, Moses Alshekh, Judah Loew b. Beẓalel, and other late medievals, the conflicting approaches to the Torah of Maimonideanism and the Kabbalah converged to give expression to the theme, already adumbrated in Philo, that the Torah exists in the mind of God as the plan and order of the universe (Arama, *Akedat Yiẓḥak*, 1; Abrabanel, *Mifalot Elohim*, 1:2; Alshekh, *Torat Moshe* to Genesis 1:1; Judah Loew, *Netivot Olam*, 1:1; *Tiferet Yisrael*, 25; cf. above). In Italy, *Judah b. Jehiel (Messer Leon), influenced by the Renaissance emphasis on the art of rhetoric, composed the *Nofet Ẓufim*, in which he analyzed the language of the Bible and, in effect, presented the first aesthetic interpretation of the Torah (cf. Judah Abrabanel, *Dialoghi di Amore*).

Influenced by Maimonides, Baruch *Spinoza took the position taken by some early Maimonideans that the Torah is an exclusively political law. However, he broke radically with those Maimonideans and with all rabbinic tradition by denying its divine nature, by making it an object of historical-critical investigation, and by maintaining that it was not written by Moses alone but by various authors living at different times. Moreover, he considered the Torah primitive, unscientific, and particularistic, and thus subversive to progress, reason, and universal morality. By portraying the Torah as a product of the Jewish people, he reversed the traditional opinion (but cf. Judah Halevi) according to which the Jewish people are a product of the Torah.

Like Spinoza, Moses *Mendelssohn considered the Torah a political law, but he affirmed its divine nature. Taking a position similar to Saadiah's, he explained that the Torah does not intend to reveal new ideas about deism and morality, but rather, through its laws and institutions, to arouse men to be mindful of the true ideas attainable by all men through reason. By identifying the beliefs of the Torah with the truths of reason, Mendelssohn affirmed both its scientific respectability and its universalistic nature. By defining the Torah as a political law given to Israel by God, he preserved the traditional view that Israel is a product of the Torah, and not, as Spinoza claimed, vice versa.

With the rise of the science of Judaism (*Wissenschaft des Judentums*) in the 19th century, and the advance of the historical-critical approach to the Torah, many Jewish intellectuals, including ideologists of Reform like Abraham *Geiger, followed Spinoza in seeing the Torah, at least in part, as a product of the primitive history of the Jewish nation. Nachman Krochmal, in his rationalist-idealist philosophy, attempted to synthesize the historical-critical thesis that the Torah is a product of Jewish history, with the traditional thesis that the entire Torah is divinely revealed. He maintained that, from the days of Abraham and Isaac, the Hebrew nation has contained the Absolute Spiritual, and this Absolute Spiritual was the source of the laws given to Moses on Mt. Sinai, whose purpose is to perfect the individual and the group, and to prevent the nation's extinction. The Oral Torah, which is, in effect, the history of the evolution of the Jewish spirit, is inseparable from the Written Torah, and is its clarification and conceptual refinement; which is to say, the true science of the Torah, which is the vocation of the Jewish spirit, is the conceptualization of the Absolute Spiritual (*Moreh Nevukhei ha-Zeman*, esp. 6–8, 13).

The increasing intellectualization of the Torah was opposed by Samuel David *Luzzatto and Salomon Ludwig *Steinheim, two men who had little in common but their fideism. They contended – as Crescas had against the Maimonideans – that the belief that God revealed the Torah is the starting point of Judaism, and that this belief, with its momentous implications concerning the nature of God and His relation to man, cannot be attained by philosophy. Luzzatto held that the foundation of the whole Torah is compassion. Steinheim, profoundly opposing Mendelssohn, held that the Torah comes to reveal truths about God and His work.

While Spinoza and Mendelssohn had emphasized the political nature of the Torah, many rationalists of the late 19th and early 20th centuries emphasized its moral nature. Moritz *Lazarus identified the Torah with the moral law, and interpreted the rabbinical statement, "Were it not for the Torah, heaven and earth would not continue to exist" (see above), as corresponding to the Kantian teaching that it is the moral law that gives value to existence. Hermann *Cohen condemned Spinoza as a willful falsifier and a traitor to the Jewish people for his claim that the Torah is subversive to universalistic morality. He held that the Torah, with its monotheistic ethics, far from being subversive to universalism, prepares a Jew to participate fully and excellently in general culture (in this connection, he opposed Zionism and developed his controversial theory of "Germanism and Judaism"). He maintained that in its promulgation of commandments affecting all realms of human action, the Torah moves toward overcoming the distinction between holy and profane through teaching all men to become holy by always performing holy actions, i.e., by always acting in accordance with the moral law.

In their German translation of the Bible, Martin *Buber and Franz Rosenzweig translated *torah* as *Weisung* or *Unterweisung* ("Instruction") and not as *Gesetz* ("Law"). In general, they agreed on the purpose of the Torah: to convert the universe and God from It to Thou. Yet they differed on several points concerning its nature. Buber saw the Torah as the past dialogue between Israel and God, and the present

dialogue between the individual reader, the I, and God, the Thou. He concluded that while one must open himself to the entire teaching of the Torah, he need only accept a particular law of the Torah if he feels that it is being spoken now to him. Rosenzweig objected to this personalist and antinomian position of Buber's. Taking an existentialist position, he maintained that the laws of the Torah are commandments to do, and as such become comprehensible only in the experience of doing, and, therefore, a Jew must not, as Buber did, reject a law of the Torah that "does not speak to me," but must always open himself to the new experience which may make it comprehensible. Like Cohen – and also like the Ḥasidim – he marveled that the law of the Torah is universal in range. He contended that it erases the barrier between this world and the world to come by encompassing, vitalizing, and thereby redeeming everything in this world.

The secular Zionism of the late 19th and early 20th centuries gave religious thinkers new cause to define the relationship between the Torah and the Jewish nation. Some defined the Torah in terms of the nation. Thus, Mordecai *Kaplan translated *Aḥad Ha-Am's sociological theory of the evolution of Jewish civilization into a religious, though naturalistic, theory of the Torah as the "religious civilization of the Jews." Others, like Buber and Rosenzweig, considering secular nationalism dangerous, tried to "interdefine" the Torah and the nation. Whereas Buber saw the Torah as the product of a dialogue between the nation and God, he held that the spirit of the nation was transfigured by that dialogue. Rosenzweig, whose position here resembles Judah Halevi's, stated both that the nation's chosenness is prior to the Torah, and that the acceptance of the Torah is an experiential precondition of its chosenness. Other thinkers defined the nation in terms of the Torah. Thus, Abraham Isaac *Kook, whose thought was influenced by the Kabbalah, taught that the purpose of the Torah is to reveal the living light of the universe, the suprarational spiritual, to Israel and, through Israel, to all mankind. While the Written Torah, which reveals the light in the highest channel of our soul, is the product of God alone, the Oral Torah, which is inseparable from the Written Torah, and which reveals the light in a second channel of our soul, proximate to the life of deeds, derives its personality from the spirit of the nation. The Oral Torah can live in its fullness only when Israel lives in its fullness – in peace and independence in the Land of Israel. Thus, according to Kook, modern Zionism, whatever the intent of its secular ideologists, has universal religious significance, for it is acting in service of the Torah (see esp. *Orot ha-Torah*).

In the State of Israel, most writers and educators have maintained the secularist position of the early Zionists, namely, that the Torah was not revealed by God, in the traditional sense, but is the product of the national life of ancient Israel. Those who have discussed the Torah and its relation to the state from a religious point of view have mostly followed Kook or Buber and Rosenzweig. However, a radically rationalist approach to the nature of the Torah has been taught by Yeshayahu Leibowitz who, in the Maimonidean tradition, emphasizes that the Torah is a law for the worship of God and for the consequent obliteration of the worship of men and things; in this connection, he condemns the subordination of the Torah to nationalism or to religious sentimentalism or to any ideology or institution. Outside the State of Israel, a similarly iconoclastic position has been taken by the French phenomenologist Emmanuel *Levinas, who has gone further and written that the love for the Torah should take precedence even over the love for God Himself, for only through the Torah – that knowledge of the Other which is the condition of all ethics – can man relate to a personal God against Whom he can rebel and for Whom he can die.

ETERNITY (OR NONABROGABILITY). In the Bible there is no text unanimously understood to affirm explicitly the eternity or nonabrogability of the Torah; however, many laws of the Torah are accompanied by phrases such as, "an everlasting injunction through your generations" (Lev. 3:17, et al.).

The doctrine that the Torah is eternal appears several times in the pre-tannaitic apocryphal literature; e.g., Ben Sira 24:9 ("the memorial of me shall never cease") and Jubilees 33:16 ("an everlasting law for everlasting generations").

Whereas the rabbis understood the preexistence of the Torah in terms of its prerevelation existence in heaven, they understood the eternity or nonabrogability of the Torah in terms of its postrevelation existence, not in heaven; i.e., the whole Torah was given to Moses and no part of it remained in heaven (Deut. 8:6, et al.). When Eliezer ben Hyrcanus and Joshua ben Hananiah were debating a point of Torah and a voice from heaven dramatically announced that Eliezer's position was correct, Joshua refused to recognize its testimony, for the Torah "is not in heaven" (Deut. 30:12), and must be interpreted by men, unaided by the supernatural (BM 59b). It was a principle that "a prophet is henceforth not permitted to innovate a thing" (Sifra, Be-Ḥukkotai 13:7; Tem. 16a; but he was permitted to suspend a law temporarily (Sif. Deut. 175)). The rabbis taught that the Torah would continue to exist in the world to come (e.g., Eccles. R. 2:1), although some of them were of the opinion that innovations would be made in the messianic era (e.g., Gen. R. 98:9; Lev. R. 9:7).

Philo saw the eternity of the Torah as a metaphysical principle, following from the Torah's accord with nature. He believed that the laws and enactments of the Torah "will remain for all future ages as though immortal, so long as the sun and the moon and the whole heaven and universe exist" (II Mos. 14; cf. Jer. 31:32–35). The belief in the eternity of the Torah appears also in the later apocryphal works (e.g., I Bar. 4:1; Ps. of Sol. 10:5) and in Josephus (Apion, 2:277).

With the rise to political power of Christianity and Islam, two religions which sought to convert Jews and which argued that particular injunctions of the Torah had been abrogated, the question of the eternity or "nonabrogability" of the Torah became urgent.

Saadiah Gaon stated that the children of Israel have a clear tradition from the prophets that the laws of the Torah

are not subject to abrogation. Presenting scriptural corroboration for this tradition, he appealed to phrases appended to certain commandments, e.g., "throughout their generations, for a perpetual covenant" (Ex. 31:16). According to one novel argument of his, the Jewish nation is a nation only by virtue of its laws, namely, the Torah; God has stated that the Jewish nation will endure as long as the heaven and earth (Jer. 31:35–36); therefore, the Torah will last as long as heaven and earth (cf. Philo, above). He interpreted the verses, "Remember ye the Torah of Moses… Behold, I will send you Elijah…" (Mal. 3:22–23), as teaching that the Torah will hold valid until the prophet Elijah returns to herald the resurrection (*Beliefs and Opinions* 3:7).

Maimonides listed the belief in the eternity of the Torah as the ninth of his 13 principles of Judaism, and connected it with the belief that no prophet will surpass Moses, the only man to give people laws through prophecy. He contended that the eternity of the Torah is stated clearly in the Bible, particularly in Deuteronomy 13:1 ("thou shalt not add thereto, nor diminish from it") and Deuteronomy 29:28 ("the things that are revealed belong unto us and to our children for ever, that we may do all the words of this Torah"). He also cited the rabbinic principle: "A prophet is henceforth not permitted to innovate a thing" (see above). He offered the following explanation of the Torah's eternity, based on its perfection and on the theory of the mean: "The Torah of the Lord is perfect" (Ps. 19:8) in that its statutes are just, i.e., that they are equibalanced between the burdensome and the indulgent; and "when a thing is perfect as it is possible to be within its species, it is impossible that within that species there should be found another thing that does not fall short of the perfection either because of excess or deficiency." Also, he mentioned the argument that the prophesied eternity of the name of Israel ("For as the new heavens and the new earth, which I will make, shall remain before Me… so shall your seed and your name"; Isa. 66:22) entails the eternity of the Torah (cf. Saadiah above). He held that there will be no change in the Torah after the coming of the Messiah (commentary on Mishnah, Sanh. 10; Yad, Yesodei ha-Torah 9; cf. *Sefer ha-Mitzvot; Guide of the Perplexed* 2:29, 39; Abraham ibn Daud, *Emunah Ramah*).

Ḥasdai Crescas listed the eternity of the Torah as a nonfundamental true belief, i.e., required by Judaism, but not essential to the concept of Torah. Unlike Saadiah and Maimonides, he did not try to found this belief directly on a biblical text (but cf. his *Bittul Ikkarei ha-Noẓerim*, 9), but solely on the rabbinic dictum: "A prophet is henceforth not permitted to innovate a thing" (see above). To elucidate the belief from the point of view of speculation, he presented an argument from the perfection of the Torah, which differed markedly from its Maimonidean precursor. The argument proceeds as follows: The Torah is perfect, for it perfectly guides men toward the ultimate human happiness, love. If God were to abrogate the Torah, He would surely replace it, for it is impossible that He would forsake His purpose to maximize love. Since the Torah is perfect, it could be replaced only by an equal or an inferior; but if inferior, God would not be achieving His purpose of maximizing love; and if equal, He would be acting futilely. Therefore, He will not abrogate the Torah. Against the argument that replacement of the Torah by an equal but different law would make sense if there were an appreciable change – for better or worse – in the people who received it, he retorted characteristically that the Torah is the excellent guide for all, including both the intellectuals and the backward (*Or Adonai*, 3, pt. 1, 5:1–2).

Joseph Albo criticized Maimonides for listing the belief in the eternity of the Torah as an independent fundamental belief of Judaism. In a long discussion, which in many places constitutes an elaboration of arguments found in Crescas, he contended that nonabrogation is not a fundamental principle of the Torah, and that moreover, no text can be found in the Bible to establish it. Ironically, his ultimate position turned out to be closer to Maimonides' than to Crescas'; for he concluded that the belief in the nonabrogation of the Torah is a branch of the doctrine that no prophet will surpass the excellence of Moses (*Sefer ha-Ikkarim*, 3:13–23).

After Albo, the question of the eternity of the Torah became routine in Jewish philosophical literature (e.g., Abraham Shalom, *Neveh Shalom* 10:3–4; Isaac Abrabanel, *Rosh Amanah*, 13). However, in the Kabbalah it was never routine. In the 13th-century *Sefer ha-Temunah* a doctrine of cosmic cycles (or *shemittot*; cf. Deut. 15) was expounded, according to which creation is renewed every 7,000 years, at which times the letters of the Torah reassemble, and the Torah enters the new cycle bearing different words and meanings. Thus, while eternal in its unrevealed state, the Torah, in its manifestation in creation, is destined to be abrogated. This doctrine became popular in later kabbalistic and ḥasidic literature, and was exploited by the heretic Shabbetai Ẓevi and his followers, who claimed that a new cycle had begun, and in consequence he was able to teach that "the abrogation of the Torah is its fulfillment!"

Like his contemporary Shabbetai Ẓevi, but for much different reasons (see above), Spinoza committed the heresy of advocating the abrogation of the Torah. Subsequently, in the 19th century, Reform ideologists held that the abrogation of parts of the traditional Torah was not a heresy at all but was necessary for the progress of the Jewish religion. Similarly, many intellectuals and nationalists held that it was necessary for the progress of the Jewish nation. Aḥad Ha-Am called for the Torah in the Heart to replace the Torah of Moses and of the rabbis, which having been written down, had, in his opinion, become rigid and ossified in the process of time.

Jewish philosophers of modern times have not concentrated on the question of the eternity or nonabrogability of the Torah. Nevertheless, it is not entirely untenable that the main distinction between Orthodox Judaism and non-Orthodox Judaism is that the latter rejects the literal interpretation of the ninth principle of Maimonides' Creed that there will be no change in the Torah.

TORAH, READING OF.

History

The practice of reading the Pentateuch (Torah) in public is undoubtedly ancient. The sources, however, do not permit the definite tracing of the historical development of the custom. The command to assemble the people at the end of every seven years to read the law "in their hearing" (Deut. 31:10–13) is the earliest reference to a public Torah reading. A second mention is made in the time of *Ezra when he read the Torah to all the people, both men and women, from early morning until midday, on the first day of the seventh month (Neh. 8:1–8). These two occasions are isolated instances, and do not help to establish when the custom of regular Torah readings arose.

Moses' command that the Israelites should read the Torah on the Sabbath, on festivals, and on new moons, and Ezra's that it should be read on Mondays, on Thursdays, and on Sabbath afternoons (TJ, Meg. 4:1, 75a; BK 82a) are not historical statements in themselves; they point, however, to an early date for the introduction of regular readings. It may be assumed that the custom dates from about the first half of the third century B.C.E., since the Septuagint was apparently compiled for the purpose of public reading in the synagogue. Josephus (Apion, 2:175) and Philo (II Som. 127) refer to public Torah readings as an ancient practice. This contention is supported by evidence in the New Testament: "For Moses of old time hath in every city them that preach him, being read in the synagogue every Sabbath day" (Acts 15:21). Elbogen is of the opinion that originally the Torah was read only on the festivals and on certain Sabbath days before the festivals; the reading was to instruct the people as to the significance of these days. If this is correct, the original Torah reading was didactic rather than liturgical.

The Mishnah shows that by the end of the second century C.E. there were regular Torah readings on Mondays, on Thursdays, and on Sabbaths; special readings for the Sabbaths during the period from before the month of Adar to before Passover; and special readings for the festivals, including those of Ḥanukkah and Purim, and for fast days (Meg. 3, 4–6). The length of the reading, however, seems not to have been fixed by that time. R. *Meir states, for instance, that the practice was to read a short portion on Sabbath mornings, the portion that followed on Sabbath afternoon, and further portions on Monday and Thursday, beginning on the following Sabbath morning from the end of the Thursday portion. According to R. Judah, the procedure was to begin the reading each Sabbath morning service where it had ended on the morning of the previous Sabbath (Meg. 31b).

The passage in the Babylonian Talmud (Meg. 29b) is the earliest reference to a fixed cycle of consecutive readings. It states that "in the West" (Palestine), they completed the reading of the Torah in three years. The old division of the Pentateuch into 153, 155, or 167 *sedarim* ("divisions") is based on this triennial cycle. Buechler, with great ingenuity, attempted to reconstruct the weekly portions of the *triennial cycle, assuming the cycle to have begun on the first day of Nisan. On the basis of his reconstruction, he proceeds to explain various traditions regarding events of the past (e.g., that Moses died on the seventh day of Adar and that Sarah was "remembered" on the first day of Tishri). Buechler contends that since the portions describing these events were read once every three years at these times, the tradition grew that the events themselves had taken place then.

In Babylon and other communities outside Palestine, an annual cycle was followed according to which the Pentateuch was divided into 54 *sedarim* (sing. *sidrah*, i.e., *parashah*). This became the universal Jewish practice, except for certain isolated instances. In Palestine, the triennial cycle was also superseded by the annual, possibly under the influence of Babylonian immigrants. However, the eminent traveler *Benjamin of Tudela writes about the community of Cairo (c. 1170): "Two large synagogues are there, one belonging to the land of Israel and one belonging to the men of the land of Babylon… Their usage with regard to the portions and sections of the law is not alike; for the men of Babylon are accustomed to read a portion every week, as is done in Spain, and is our custom, and to finish the law each year; while the men of Palestine do not do so but divide each portion into three sections and finish the law at the end of three years. The two communities, however, have an established custom to unite and pray together on the day of the Rejoicing of the Law, and on the day of the Giving of the Law" (M.N. Adler (ed.), *The Itinerary of Benjamin of Tudela* (1907), 70). Similarly, in the 12th century Maimonides (Yad, Tefillah 13:1) writes that the universal custom was to follow the annual cycle; he states, however, that the triennial cycle was nevertheless followed in some places.

The Mishnah rules that three persons read the Torah on Sabbath afternoons, on Mondays, and on Thursdays; four on *ḥol ha-mo'ed* of the festivals and on the new moon; five on a festival; six on the Day of Atonement; and seven on a Sabbath morning (Meg. 4:1–2). The privilege of reading the first portion of the day was given to a priest, the second to a levite, and the others to Israelites (Git. 5:8). Originally, each person read his own portion. In time, with the deterioration of Torah learning among the lay people, a special official of the synagogue read the portion while the person called to the reading recited the benedictions. At an early period, it was customary to translate the Hebrew text into the vernacular at the time of the reading (e.g., in Palestine and Babylon the translation was into Aramaic). The *targum* ("translation") was done by a special synagogue official, called the *meturgeman* (Meg. 4:4–10). Eventually, the practice of translating into the vernacular was discontinued.

Table of Scriptural Readings on Sabbaths

PENTATEUCH		PROPHETS
GENESIS		
Bereshit	1:1–6:8	Isa. 42:5–43:11 (42:5–21)[1]
No'aḥ	6:9–11:32	Isa. 54:1–55:5 (54:1–10)
Lekh Lekha	12:1–17:27	Isa. 40:27–41:16
Va-Yera	18:1–22:24	II Kings 4:1–37 (4:1–23)
Ḥayyei Sarah	23:1–25:18	I Kings 1:1–31
Toledot	25:19–28:9	Mal. 1:1–2:7
Va-Yeẓe	28:10–32:3	Hos. 12:13–14:10 (11:7–12:12)
Va-Yishlaḥ	32:4–36:43	Hos. 11:7–12:12 (Obad. 1:1–21)
Va-Yeshev	37:1–40:23	Amos 2:6–3:8
Mi-Keẓ	41:1–44:17	I Kings 3:15–4:1
Va-Yiggash	44:18–47:27	Ezek. 37:15–28
Va-Yeḥi	47:28–50:26	I Kings 2:1–12
EXODUS		
Shemot	1:1–6:1	Isa. 27:6–28:13; 29:22, 23 (Jer. 1:1–2:3)
Va-Era	6:2–9:35	Ezek. 28:25–29:21
Bo	10:1–13:16	Jer. 46:13–28
Be-Shallaḥ	13:17–17:16	Judg. 4:4–5:31 (5:1–31)
Yitro	18:1–20:23	Isa. 6:1–7:6 ; 9:5 (6:1–13)
Mishpatim	21:1–24:18	Jer. 34:8–22; 33:25, 26
[2] { Terumah	25:1–27:19	I Kings 5:26–6:13
{ Teẓavveh	27:20–30:10	Ezek. 43:10–27
Ki Tissa	30:11–34:35	I Kings 18:1–39 (18:20–39)
{ Va-Yakhel	35:1–38:20	I Kings 7:40–50 (7:13–26)
{ Pekudei	38:21–40:38	I Kings 7:51–8:21 (7:40–50)
LEVITICUS		
Va-Yikra	1:1–5:26	Isa. 43:21–44:23
Ẓav	6:1–8:36	Jer. 7:21–8:3; 9:22, 23
Shemini	9:1–11:47	II Sam. 6:1–7:17 (6:1–19)
[2] { Tazri'a	12:1–13:59	II Kings 4:42–5:19
{ Meẓora	14:1–15:33	II Kings 7:3–20
{ Aḥarei Mot	16:1–18:30	Ezek. 22:1–19 (22:1–16)
{ Kedoshim	19:1–20:27	Amos 9:7–15 (Ezek. 20:2–20)
Emor	21:1–24:23	Ezek. 44:15–31
{ Be-Har	25:1–26:2	Jer. 32:6–27
{ Be-Ḥukkotai	26:3–27:34	Jer. 16:19–17:14
NUMBERS		
Be-Midbar	1:1–4:20	Hos. 2:1–22
Naso	4:21–7:89	Judg. 13:2–25
Be-Ha'alotkha	8:1–12:16	Zech. 2:14–4:7
Shelaḥ Lekha	13:1–15:41	Josh. 2:1–24
Koraḥ	16:1–18:32	I Sam. 11:14–12:22
Ḥukkat	19:1–22:1	Judg. 11:1–33
Balak	22:2–25:9	Micah 5:6–6:8
Pinḥas	25:10–30:1	I Kings 18:46–19:21
{ Mattot	30:2–32:42	Jer. 1:1–2:3
{ Masei	33:1–36:13	Jer. 2:4–28; 3:4 (2:4–28; 4:1, 2)
DEUTERONOMY		
Devarim	1:1–3:22	Isa. 1:1–27
Va-Ethannan	3:23–7:11	Isa. 40:1–26
Ekev	7:12–11:25	Isa. 49:14–51:3
Re'eh	11:26–16:17	Isa. 54:11–55:5
Shofetim	16:18–21:9	Isa. 51:12–52:12
Ki Teẓe	21:10–25:19	Isa. 54:1–10
Ki Tavo	26:1–29:8	Isa. 60:1–22
{ Niẓẓavim	29:9–30:20	Isa. 61:10–63:9
{ Va-Yelekh	31:1–30	Isa. 55:6–56:8
Ha'azinu	32:1–52	II Sam. 22:1–51
Ve-Zot ha-Berakhah[3]	33:1–34:12	Josh. 1:1–18 (1:1–9)

[1] Parentheses indicate Sephardi ritual. [2] Brackets indicate portions that are sometimes combined. [3] This portion is not read on Sabbath but on Simḥat Torah.

Table of Holiday Scriptural Readings for the Diaspora and for Ereẓ Israel

	PENTATEUCH	PROPHETS
Rosh Ha-Shanah		
1st Day	Gen. 21:1–34; Num. 29:1–6	I Sam. 1:1–2:10
2nd Day	Gen. 22:1–24; Num. 29–1–6	Jer. 31:2–20
Shabbat Shuvah	Weekly portion	Hos. 14:2–10; Micah 7:18–20 or Hos. 14:2–10; Joel 2:15–17 (Hos. 14:2–10; Micah 7:18–20[1])
Day of Atonement		
Morning	Lev. 16:1–34; num. 29:7–11	Isa. 57:14–58:14
Afternoon	Lev. 18:1–30	The Book of Jonah; Micah 7:18–20
Sukkot		
1st Day	Lev. 22:26–23:44; Num. 29:12–16	Zech. 14:1–21
2nd Day	Lev. 22:26–23:44; Num. 29:12–16 [Num. 29:17–19][2,4]	I Kings 8:2–21 [none]
3rd Day	Num. 29:17–22 [29:20–22][2,4]	
4th Day	Num. 29:20–28 [29:23–25][2,4]	
5th Day	Num. 29:23–31 [29:26–28][2,4]	
6th Day	Num. 29:26–34 [29:29–31][2,4]	
7th Day	Num. 29:26–34 [29:32–34][2,4]	
Shabbat during the Intermediate Days	Ex. 33:12–34:26; Daily portion from Num. 29	Ezek. 38:18–39:16
Shemini Aẓeret 8th Day	Deut. 14:22–16:17; Num. 29:35–30:1 [as for Simḥat Torah]	I Kings 8:54–66 [as for Simḥat Torah]
Simḥat Torah 9th day	Deut. 33:1–34:12; Gen. 1:1–2:3; Num. 29:35–30:1 [none]	Josh. 1:1–18 (1:1–9) [none]
Ḥanukkah		
1st Day	Num. 7:1–17	
2nd Day	Num. 7:18–29 [7:18–23][5]	
3rd Day	Num. 7:24–35 [7:24–29][5]	
4th Day	Num. 7:30–41 [7:30–35][5]	
5th Day	Num. 7:36–47 [7:36–41][5]	
6th Day	Num. 7:42–53 [7:42–47][5]	
7th Day	Num. 7:48–59 [7:48–53][5]	
8th Day	Num. 7:54–8:4	
First Shabbat Ḥanukkah	Weekly Ḥanukkah portions as for Ereẓ Israel	Zech. 2:14–4:4:7
Second Shabbat Ḥanukkah	Weekly Ḥanukkah portions as for Ereẓ Israel	I Kings 7:40–50
Rosh Ḥodesh during Ḥanukkah	Weekly Ḥanukkah portions as for Ereẓ Israel and Num. 28:1–15	
Rosh Ḥodesh and Shabbat Ḥanukkah	Weekly Rosh Ḥodesh, and Ḥanukkah portions as for Ereẓ Israel	Isa. 66:1–24
Shekalim	Weekly portion; Ex. 30:11–16	II Kings 12:1–17
Zakhor	Weekly portion; Deut. 25:17–19	I Sam. 15:2–34 (15:1–34)
Purim	Ex. 17:8–16	
Parah	Weekly portion; Num. 19:1–22	Ezek. 36:16–38 (36:16–36)
Ha-Ḥodesh	Weekly portion; Ex. 12:1–20	Ezek. 45:16–46:18 (45:18–46:5)
Shabbat Ha-Gadol	Weekly portion	Mal. 3:4–24
Passover		
1st Day	Ex. 12:21–51; Num. 28:19–25	Josh. 5:2–6:1
2nd Day	Lev. 22:26–23:44; Num. 28–19:25	II Kings 23:1–9; 21–25 [none]
3rd Day	Ex. 13:1–16; Num. 28:19–25	
4th Day	Ex. 22:24–23:19; Num. 28:19–25	
5th Day	Ex. 33:12–34:26; Num. 28:19–25	
6th Day	Num. 9:1–14; 28:19–25	
Intermediate Shabbat	The order to allow for the reading as on the 5th day above	Ezek. 36:37–37:14 (37:1–14)
7th Day	Ex. 13:17–15:26; Num. 28:19–25	II Sam. 22:1–51
8th Day	Deut. 15:19–16:17[3]; Num. 28:19–25 [none]	Isa. 10:32–12:6 [none]
Shavuot		
1st Day	Ex. 19:1–20:23; Num. 28:26–31	Ezek. 1:1–28; 3:12
2nd Day	Deut. 15:19–16:17[3]; Num. 28:26–31 [none]	Num. 3:1–19 (2:20–3:19)

[1] Parenthesis indicate Sephardi custom. [2] Square brackets indicate Ereẓ Israel custom. [3] On Shabbat, 14:22–16:17.
[4] Ereẓ Israel portion read four times. [5] Ereẓ Israel portion read three times.

Table of Holiday Scriptural Readings for the Diaspora and for Ereẓ Israel (cont.)

	PENTATEUCH	PROPHETS
Ninth of Av		
Morning	Deut. 4:25–40	Jer. 8:13–9:23
Afternoon	Ex. 32:11–14; 34:1–10	Isa. 55:6–56:8 (Hos. 14:2–10; Micah [7:18–20]
Other Fasts		
Morning and afternoon	Ex. 32:11–14; 34:1–10	Isa. 55:6–56:8
Rosh Ḥodesh	Num. 28:1–15	
Shabbat and Rosh Ḥodesh	Weekly portion; Num. 28:9–15	Isa. 66:1–24
Shabbat immediately preceding Rosh Ḥodesh	Weekly portion	I Sam. 20:18–12

The practice of "completing" the Torah reading with a passage from one of the prophetic books, the **haftarah* ("completion"), is mentioned in the Mishnah (Meg. 4:1–2); the origins of the custom, however, are obscure. The custom is referred to as early as the New Testament period (Luke 4:17; Acts 13:15). The particular chosen prophetic passage accorded in theme with the day's Torah reading (see Meg. 29b). There is evidence that in some communities, selections from the Hagiographa were also read. This explains the frequent quotations from this part of the Bible found in the various midrashic passages which comment on Pentateuchal themes. The saying of R. *Akiva (Sanh. 10:1) that one who reads the external books has no share in the world to come refers, in all probability, to the public readings of such books as those of the Apocrypha.

The Reading of the Torah Today

The Pentateuch is divided into 54 portions; one is to be read each Sabbath. Two such portions are sometimes read on a single Sabbath; otherwise the cycle could not be completed in one year. (See Table: Scriptural Readings on Sabbaths.) On festivals, a special portion dealing with the theme of that festival is read from one scroll and the relevant portion of Numbers 28:16–29:39 from the second scroll. (See Table: Holiday Scriptural Readings.) The regular portion is not read on a Sabbath coinciding with a festival. Each weekly portion is divided into seven smaller ones; the actual point of division, however, varies in the different rites. The Ashkenazi and Sephardi Jews do not read the same *haftarot* on certain Sabbaths. There are also occasions when different portions are read in Israel and the Diaspora (as a consequence of the observance of second days of festivals outside Israel). The cycle of readings begins on the Sabbath after *Sukkot and is completed on the last day of this festival (Simḥat Torah). Since the early part of the 19th century, various attempts have been made to reintroduce the triennial cycle; Buechler, in reply to a query by an Anglo-Jewish congregation, observed: "If you ask me about the *din* ("law"), I have to answer that it is against our codified law from the 12th century onward, and even much earlier in Babylon whence our law proceeded. If you introduce the triennial cycle, you separate yourself from the main body of Judaism" (London, New West End Synagogue, *Report on the Sabbath Reading of the Scriptures in a Triennial Cycle* (1913), 9). Many contemporary Reform and Conservative congregations follow the practice of reading about a third of the portion for the week from the portions of the annual cycle. In some of these congregations, women are called to the reading of the Torah; the practice is substantiated by some traditional sources (see A.B. Blumenthal in *Rabbinical Assembly America, Proceedings*, 19 (1956), 168–81). In a few synagogues, it is customary to read the *haftarah* from a handwritten scroll of the prophets but in most communities, the *haftarah* is read from a printed book. The *haftarah* reading, therefore, requires less expertise and it is customary that it is read by a member of the congregation, and not a special official. In modern communities, the old practice of selling the *aliyyot* (from a root meaning "to ascend" i.e., the platform from which the Torah is read) has been discontinued.

The Laws and Customs of Reading the Torah

The Torah scroll is taken from the ark and carried in procession around the synagogue before and after the reading; the congregation stands during the procession. According to rabbinic authorities, Leviticus 19:32 "Thou shalt rise up before the hoary head and honor the face of the old man, and thou shalt fear thy God: l am the Lord," means that one must rise when a Torah scholar, as well as an old man, passes by. The argument is developed that if one must rise before those who study the Torah, how much more before the Torah itself (Kid. 33b). It has become customary for the congregation to gather around the scroll and kiss it as it passes.

The reader must prepare himself well by rehearsing the portion he is to read. He must stand erect while reading and must enunciate the words clearly but not excessively. If he reads a word incorrectly, so that its meaning is changed, he must repeat it. The Torah can only be read if at least a *minyan* ("ten adult males") are present. Although it is permitted to add to the number of persons called to the reading on the Sabbath, no less than three verses are to be read for each person. The portions are frequently subdivided for this purpose, but care must be taken not to end a passage with an unfavorable topic. A person is called to the reading by his Hebrew

name and that of his father. If he is a rabbi, he is called by this title (*morenu ha-rav*). He ascends the *bimah* (raised platform from which the Torah is read) by the shortest route and descends by the longest, thus demonstrating his eagerness to be called and his reluctance to leave. If he is seated in the middle of the synagogue, so that both routes are equidistant, he should ascend to the right and descend to the left. Both before and after the reading, he recites special benedictions (see **Birkat ha-Torah*).

The kabbalists consider the reading of the Torah a dramatic re-enactment of the theophany at Sinai; the reader is in place of the Almighty, the person called to the reading represents the people to whom the Torah was given, and the *segan* ("the congregational leader who apportions the *aliyyot* and stands at the side of the reader") has the role of Moses. Others, for whom the Torah reading is also this dramatic re-enactment, consider the *segan* in place of the Almighty and the reader in place of Moses. R. Simeon said: "When the scroll of the Torah is taken out in public to be read therefrom the heavenly gates of mercy are opened and the love from above is awakened. A man should then say: 'Blessed be the name…'" (Zohar Ex. 206a). This mystical prayer, *Berikh Shemei*, is found in most prayer books and is recited in many congregations.

There are seven *aliyyot* on a Sabbath, of which the first goes to a kohen, the second to a levite, and five to Israelites. If no levite is present, the kohen is called again to the regular levite portion. If no kohen is present, either a levite or an Israelite is called to the kohen portion and a levite is not then called to the second portion, but an Israelite. A kohen or levite may not be called to any of the five Israelite portions. However, since it is permitted to add to these he may be called to the last additional portion. A father and son, or two brothers, may not be called consecutively to the Torah reading, for fear of the "evil eye" or to prevent near relatives from testifying together which is forbidden by Jewish law. (The calling up to the Torah is to attest its truth.) The following persons take precedence in being called to the Torah:

(1) a bridegroom who is to be married during the following week or was married that week;

(2) a boy who has reached his religious majority (bar mitzvah);

(3) a man whose wife has borne him a child;

(4) a man commemorating the death of a parent (*yahrzeit*);

(5) a man rising from mourning (*shivah*).

On the Sabbath it is considered an honor to receive the highly valued third and sixth *aliyyot*. It is customary to allot them to men of special learning or piety. The same applies to the last *aliyah*, particularly when the reading is from one of the concluding portions of the five books. Other valued portions are the Song of Moses (Ex. 15:1–21) and the Ten Commandments (Ex. 20:1–14 and Deut. 5:6–18). The congregation stands while these portions are being read. The portions Exodus 32:1–33:6; Leviticus 26:14–43; Numbers 11; and Deuteronomy 28:15–68 are read softly because they deal with Israel's backsliding. The last few verses of the *maftir* ("final portion") of the *sidrah* are repeated for the person called to read the *haftarah*. This can be given to a kohen or a levite and, unlike the others, also to a minor.

The Torah reading is cantillated in a specific way which is distinct from that of the *haftarah*. The Ashkenazi and the Sephardi rites have different cantillations for the reading. There are also special cantillations for the Book of Esther, the Book of Lamentations, and for the Books of Ruth, Ecclesiastes, and Song of Songs. It is considered wrong to substitute one cantillation for another. The verse: "You shall not move your neighbor's landmarks, set up by previous generations" (Deut. 19:14) is cited when such a change is attempted. The reader does not have to repeat words read with an incorrect cantillation (for the musical aspects see *Masoretic Accents, Musical Rendition). In Sephardi congregations, the open scroll is lifted (*hagbahah*) and shown to the congregation before the reading; in Ashkenazi congregations this ceremony is performed after the reading. When the scroll is raised, the congregation chants: "This is the law which Moses set before the children of Israel" (Deut. 4:44). After the reading, the scroll is rolled together again (*gelilah*) and its ornaments are replaced.

The Torah may only be read from a scroll that is *kasher* ("fit for use"), and not from one rendered *pasul* ("unfit") because it had been incorrectly written or its words or letters have been obliterated. A scroll is unfit for use, even if only one letter has been omitted. The scroll must be unpointed; it should have no other signs than the consonants. If the vowel signs or the notes for cantillation have been written in the scroll, it is unfit for use. If during the reading it is discovered that the scroll is unfit, it should be returned to the ark and another scroll taken out. The reading from the second scroll is continued from the place where the mistake was discovered. Should this occur on a Sabbath, the required number of seven persons must be called up to the reading of the second scroll, even if some have already been called up to the reading of the first.

Most Reform temples in the United States have shortened or abandoned the traditional Torah readings and a number of Conservative temples have substituted the old triennial cycle of readings. In non-Orthodox congregations where women are counted as part of the *minyan*, they may also receive an *aliyah* and girls may celebrate their bat mitzvah like boys with a reading from their portion.

TORAH ORNAMENTS. The sacred and ceremonial objects in the synagogue revolve around the Torah scroll. These objects differ from one place to another and not every object exists in every community.

Storage of the Torah Scroll

The length of cloth known in Hebrew as the *mitpaḥat* (plural *mitpaḥot*) is the earliest known means for storage of the Torah scroll. The *mitpahḥat*, also known in the sources as *mappah*, is mentioned in the Mishnah and in the Tosefta and later in the Jerusalem and Babylonian Talmuds (Mishnah, Kel. 28:4, Meg. 4:1, Kil. 9:3; Tosef. BM 9:5; TJ, Ber. 6:4; TB, Meg. 26b, etc.). It is known from these sources that in ancient times woolen or linen *mitpaḥot* were used, sometimes with colorful stripes woven in; some were provided with bells. It is also known from Greek and Latin literature that in the ancient Middle East important scrolls were regularly wrapped in cloth. In time, the Jewish communities of the East Mediterranean Basin, as well as the Eastern communities, began to keep their Torah scrolls in special cases. Such cases were common in the classical world; they are referred to as *theca* in Greek or *capsa* in Latin. Archaeological finds from all parts of the Roman Empire attest to the shape of the case: a cylindrical or prism-shaped container used to carry various objects, including scrolls. Used in the Jewish world to carry Torah scrolls, such cases eventually became the main permanent receptacle for Torah scrolls in the communities of the East and the East Mediterranean Basin.

Torah Case and Mitpaḥat

The case is a small wooden cabinet, either cylindrical or prism-shaped with eight, ten, or twelve faces in two parts that open lengthwise. There are three main types of case: the flat-topped case used in Yemen, Cochin, Eastern Iran, and Afghanistan; the case with a circular or onion-shaped crown used in the Babylonian communities, i.e., Iraq and Western Iran; and the case with a coronet used in Libya, Tunisia, and the Greek Romaniot communities. The ornamentation of the case differs from one community to another. Cases may be adorned with colorful drawings or covered with leather, fabric, or beaten silver plates. In some communities, such as Yemen, Tunisia, and Libya, the case is usually wrapped in a rich fabric. The Torah cases generally have inscriptions around the edges, on the front, or inside. Two types of inscription are characteristic: biblical verses extolling the Torah, mainly from the books of Proverbs and Psalms, and personal information about the donor.

Our knowledge of Torah cases and *mitpaḥot* in pre-modern times is meager; the process whereby the case evolved from a mere receptacle for carrying the Torah into a sacred artifact can at most be conjectured. It may be assumed that in the first stage, when the case was used only for storage, the scroll was wrapped in a *mitpaḥat* when placed in the case. However, it was difficult to handle the Torah scroll wrapped in the *mitpaḥat* in its case, and most communities therefore removed it from the case. Only the Jews of Yemen continued to wrap the Torah in two or three *mitpaḥot*, and until they came to Israel they used colorful, geometrically patterned, cotton-print *mitpaḥot* of Indian manufacture. There, the *mitpaḥat* is used to cover the text adjacent to the text being read, thus preventing its unnecessary exposure. In other communities, the *mitpaḥat* is used only to cover the scroll during pauses in the reading, when it is placed on the case and not on the Torah scroll itself.

Wrapper, Binder, and Mantle

Two textile objects developed from the *mitpaḥat* in European communities. One, found only in Italy and in communities of the Sephardi Diaspora, is a wrapper (Hebrew *yeriʿah*), of height equal to that of the parchment sheets from which the Torah scroll is made and rolled up together with the scroll, a custom which is gradually disappearing. Another textile object wound around the Torah scroll in Ashkenazi communities, in Italy, and in the Sephardi Diaspora is the binder. The binder is a long narrow strip of cloth with which the Torah is bound, either on top of the wrapper or directly on the parchment. Its purpose is to keep the scroll securely bound when not in use.

In Italy and in the Sephardi communities, the binder is known as a *fascia*; it is made of a costly material or of linen embroidered in silk thread. From the 16th century it became customary in Northern Italy for girls and young women to embroider binders with biblical verses or original personal dedicatory inscriptions. In Germany it became customary in the second half of the 16th century to prepare a binder for the Torah scroll on the occasion of the birth of a son. This binder, called a *mappah* or *wimpel*, was fashioned from a piece of square linen cloth which was placed near the infant during the circumcision ceremony. The infant's name, his father's, name and his date of birth were embroidered or written on the cloth, as well as the blessing recited during the ceremony: "May he enter into the Torah, the nuptial canopy, and into good deeds." By the 17th century, binders often had pictures illustrating the three elements of "Torah, the nuptial canopy and good deeds."

The Torah mantle is as it were the clothing of the Torah scroll. In Sephardi communities, Italy, and Germany, and in halakhic literature, it was indeed occasionally known as *beged*, "garment," or *mappah*, but later the term *meʿil* became standard in most communities. The earliest attestation to the shape of the mantle appears in the 14th-century *Sarajevo Haggadah*, created in Spain. The mantles shown there are made of a costly material, probably not embroidered. This tradition is still common today in Sephardi communities, with the exception of Morocco and Algeria, where Torah mantles are made of velvet with elaborately embroidered patterns and dedicatory inscriptions. Common motifs on these mantles are the Tree of Life (in Morocco) and a gate (in Algeria). The shapes of the mantle differ from community to community – some are wide and open in the front (Italy and the Spanish Diaspora), others have a small cape atop the robe, still others are of simple rectangular length with material gathered at the upper borders (Algeria).

The earliest German mantles are depicted in 15th-century manuscripts. This Torah mantle is generally narrower and smaller than the Sephardi mantle, while the robe-like part is

made of two rectangular lengths of material sewn together. Two openings at the upper end of the mantle enable the staves to protrude. The designs on Torah mantles in Germany and Central Europe are influenced by the ornamentation of the Torah Ark curtain, with such motifs as a pair of columns, lions, and the Torah crown most frequent.

Torah Crown

The earliest Torah ornaments are the Torah crown and the finials mounted on the Torah case or on the staves of the Torah scroll. We first hear of a Torah crown in the 11th century, in a responsum of *Hai Gaon concerning the use of a crown for a Torah scroll on *Simḥat Torah. The use of the Torah crown is linked in this responsum to the custom of crowning the so-called "*Bridegrooms of the Law," i.e., the persons called up on Simḥat Torah to complete the annual cycle of the Torah reading and to initiate the new cycle. At the time, the Torah crown was an *ad hoc* object made from various decorative items, such as plants and jewelry. About a hundred years later, fixed crowns, made of silver and used regularly to decorate Torah scrolls in the synagogue, are mentioned in a document from the Cairo **Genizah*. Their earliest depiction is in the 14th-century Spanish *Sarajevo Haggadah*.

Torah crowns are used in almost all communities (the exceptions are Morocco and Yemen), their design being influenced in each locality by local tradition. The onion-shaped or conical crown of the Iraqi-Persian Torah case follows the tradition of the crowns of the Sassanid kings, the last Persian dynasty prior to the Muslim conquest. In Cochin, India, and in Aden, the independent port of Yemen, a tapering dome-like crown developed through which protrude finials mounted on the staves on which the Torah scroll is wound; the crown is not fixed to the case. By the 20th century, the Torah crown in Cochin showed distinct European features. In Eastern Iran, where the Torah had a small crown, the outer sides of the crown lost their spherical shape and became flat dedicatory plaques. Today this crown looks like a pair of flat finials, and only their designation as "crowns" hints at their origin in the Torah crown. The circlet or coronet on the Mediterranean case, which became an integral part of the case, was based on a local medieval crown tradition typified by floral patterns. The European crown is shaped like a floral coronet with arms closing over it. In Eastern Europe a two- or three-tiered crown developed, inspired by the crown motif on the Torah Ark in this region. In Italy, on the other hand, the Torah crown was a coronet, known in Hebrew as the *atarah*.

Torah Finials

The finials evolved from knobs at the upper end of the staves (*eẓei ḥayyim*) on which the Torah scroll is wound. Since the shape of the spherical finial recalled that of a fruit, it was called a *tappu'aḥ*, "apple," among the Jews of Spain and in the Sephardi Diaspora, and a *rimmon*, "pomegranate," in all other communities.

The earliest known reference to Torah finials occurs in a document from 1159, found in the Cairo *Genizah*, from which we learn that by the 12th century finials were already being made of silver and had bells. Around the same time, *Maimonides mentions finials in the *Mishneh Torah* (Hilkhot Sefer Torah 10:4). Despite the variations on the spherical shape which developed over the centuries and the addition of small bells around the main body of the finial, the spherical, fruit-like form was the basic model for the design of finials in Oriental and European communities.

A most significant variation appeared in 15th-century Spain, Italy, and Germany, where the shape of finials was influenced by that of various objects of church ritual, whose design often incorporated architectural motifs, The resulting tower-like structure, which seems to have appeared around the same time in different parts of Europe, became the main type of finial in 18th-century Germany and Italy, as well as Morocco, brought there by Jews expelled from Spain.

Breastplates and Metal Shields Hung in Front of the Torah Scroll

Breastplates – ornamental metal plates or shields hung in front of the Torah scroll – are found in all Ashkenazi communities, as well as Italy and Turkey, but designed differently in each community. In most cases the breastplate is made of silver or silver-plated metal. In Italy the breastplate is shaped like a half-coronet and known as the *keter*, "crown." In Turkey, the breastplate is called a *tass*, and assumes a variety of shapes – circular, triangular, oval, or even the Star of David. In Western, Central, and Eastern Europe the breastplate is called either *tass* or *ẓiẓ*; its function there is not merely ornamental: it designates which Torah scroll is to be used for the Torah reading on any particular occasion, with interchangeable plaques. The most notable early breastplates, from 17th-century Germany and Holland, were either square or rectangular, but over time they became rounded and decorative, and bells or small dedicatory plaques were suspended from its lower edge. During this period, the design of breastplates was influenced by that of the Torah Ark and the **parokhet* (curtain) concealing it, featuring various architectural motifs, the **menorah* (the seven-branched candelabrum), Moses and Aaron, lions, or Torah crowns.

Objects Used in the Torah Reading

TORAH POINTER. The pointer used by the Torah reader to keep the place is known in European communities as the **yad*, "hand," or the *eẓba*, "finger," and in Sephardi and Eastern communities as the *moreh*, "pointer," or *kulmus*, "quill," the former because of its function and the latter because of its shape. Halakhic sources also use the terms *moreh* or *kulmus*. The pointer was originally a narrow rod, tapered at the pointing end, usually with a hole at the other end through which a ring or chain could be passed to hang the pointer on the Torah scroll.

The original form of the pointer was preserved in Eastern communities, the differences from one community to another being mainly in length and ornamentation. In certain communities a hand with a pointing finger was added, and

accordingly the pointer came to be known as a *yad*, "hand," or *eẓba*, "finger." Pointers are made for the most part of silver or silver-plated brass, but in a few European communities they used to be made of wood. In such cases the pointers were carved in the local folk-art style.

TORAH UMESORAH (National Society for Hebrew Day Schools). The largest national body serving 700 Orthodox day schools in North America, the Torah Umesorah was founded in 1944 by Rabbi Shraga Feivel Mendlowitz. From 1946 its national director was Joseph Kaminetsky, who was succeeded by Rabbi Joshua Fishman in 1982. Policy is officially dictated by a rabbinical board. Among its other activities, Torah Umesorah sponsors a teacher training institute called AishDos and represents its membership schools to the U.S. Department of Education. In the past, Torah Umesorah published the children's magazine *Olomeinu* as well as *The Jewish Parent*; and *Hamenahel,* a periodical for school principals. In 2004 they began publishing an educational magazine called *Rayanos.* Torah Umesorah organizes two yearly conferences, the National Conference of Yeshiva Principals and the National Leadership Convention, the latter of which is geared toward anyone involved in Torah education.

TORAH VA-AVODAH (Heb. "Torah and Labor"), description of the ideology of the Zionist religious pioneering movement, as well as the name of the world confederation of pioneer and youth groups of the *Mizrachi movement established in Vienna in 1925 at a conference of delegates from various countries (representing Mizrachi youth, religious *He-Ḥalutz groups, and *Ha-Po'el ha-Mizrachi). The ideology was based on the unity of the Torah, the people, and the land of Israel, as well as on the postulate that only a man who lives by his own labor can be certain that he does not exploit and abuse his neighbor. This concept, coupled with the demand for social justice, induced the movement into establishing cooperative collective pioneering settlements in Ereẓ Israel.

TORBERG (Kantorberg), FRIEDRICH (1908–1979), Austrian novelist, journalist, and editor. Torberg, who was born in Vienna, won acclaim with his first novel, *Der Schueler Gerber hat absolviert* (1930). He worked for the *Prager Tagblatt* and the *Selbstwehr* during the 1930s. In 1938 he fled from Prague to Switzerland and fought in a Czech brigade with the French army until the collapse of France. With the help of the "Emergency Rescue Committee," he escaped to the U.S. in 1940 as a persecuted writer. There he lived first as a scriptwriter in Los Angeles and later in New York. Torberg returned to Vienna

in 1951, where he was for many years the editor of *Forum*, a literary and cultural monthly.

His novella *Mein ist die Rache* (1943) and his novel *Hier bin ich, mein Vater* (1948) dealt with the fate of Jews under Nazi rule. His other novels include *Abschied* (1937) and *Die zweite Begegnung* (1950). He published two collections of verse, *Der ewige Refrain* (1929) and *Lebenslied* (1958). Among his further works are *Das fuenfte Rad am Thespiskarren* (1967), *Golems Wiederkehr* (1968), *Suesskind von Trimberg* (1972), and two collection of anecdotes on Jewish life in the Habsburg monarchy, *Die Tante Jolesch* (1977) and *Die Erben der Tante Jolesch* (1978). Torberg's collected works, including his extensive correspondence, appeared in 19 volumes (1962–91). In addition to his extensive literary output, Torberg also worked as a German translator of Ephraim *Kishon's novels.

TORCHIN (Pol. **Torczyn**), town in S. Volyn district, Ukraine; passed to Russia in 1795. In 1648–49 the Jews suffered at the hands of the Cossacks under *Chmielnicki. Because of their economic plight, the Council of the Four Lands (see *Councils of the Lands) granted the community a reduction in tax in 1726. The Jewish population numbered about 640 in 1765. During the 19th century various branches of crafts were developed whose products were sold on the Russian markets. In 1890 there were 21 tanneries and 66 shops in the town, most of them owned by Jews. The Jewish population numbered 1,748 in 1847, 2,629 (58% of total population) in 1897, and 1,480 (46%) in 1921. Between the two world wars, in independent Poland, all the Jewish parties were active in the town, as well as a branch of He-Ḥalutz, a sport association, and a library.

Holocaust Period

Before the outbreak of World War II there were about 1,600 Jews in Torczyn. In September 1939 the Red Army entered the town and a Soviet administration was established there until the outbreak of the German-Soviet war in June 1941. The Germans occupied the town on June 24, 1941. In January 1942 the Jews from Torczyn and its vicinity were concentrated in a closed ghetto in the town. The ghetto was liquidated at the end of August 1942 and most of the Jews were shot in the Jewish cemetery. During this *Aktion* some Jews succeeded in hiding and another group in escaping and joining a partisan unit that operated in the vicinity. After the war, the Jewish community of Torczyn was not reconstituted.

[Shimon Leib Kirshenboim]

TORCZYNER, JACQUES (1914–), U.S. Zionist leader. Torczyner was born in Antwerp, Belgium, where his father had been president of the Belgian Zionist Federation. He identified himself with Zionist activity in Belgium and was editor of the official publications of the Zionist Federation from 1937 until the outbreak of World War II. In 1940 he immigrated to the United States and became one of the leaders of the Zionist Organization of America and was closely associated with Abba Hillel *Silver. Torczyner served as president of the Zionist Organization of America for five consecutive terms and was appointed chairman of the Administrative Board of the ZOA. He is also president of the World Union of General Zionists. He has written extensively on problems connected with Zionist ideology and the future of American Jewry.

TORGOV, MORLEY (1927–), Canadian author. Morley Torgov was born and raised in Sault Ste. Marie, Ontario, where his family was part of the city's small Jewish community. A full-time lawyer with a practice in Toronto, he wrote in his leisure time.

Torgov published a memoir and five novels, each of which explores Jewish themes with humor and irony that are gentler than in either Mordecai *Richler or Philip *Roth, with whom he is often compared. *A Good Place to Come From* (1974) won the Leacock Medal for Humour and was adapted as a mini-series for television and for the stage in Canada and the United States. A series of vignettes, it describes Torgov's experience of growing up Jewish in the predominantly gentile world of Sault Ste. Marie. *The Abramsky Variations* (1977), written in three parts and set in Toronto and France, concerns three generations of the Abramsky (later Brahms) family: father Louis, son Hershel, and grandson Bart (né Kevin). Each character struggles to reconcile Jewish tradition with secular ambition, and all are more strongly attracted to fantasizing about people they want to emulate than to facing reality. Torgov's second novel, *The Outside Chance of Maximilian Glick* (1982), which also won the Leacock Medal, was first written as a children's story. It takes a comic look at 12-year-old Maximilian, so named because his parents thought it would look impressive on the door of a law office. It is the story of a boy raised in a tiny Jewish community in Steelton, northern Ontario. Maximilian seeks to escape the suffocating love of his parents and grandparents, who envision him making a career as a surgeon, judge, or scientist. With the help of Rabbi Kalman Teitelman, who replaces Steelton's former rabbi and with whom Maximilian forms a relationship, he eventually releases himself from the stifling expectations of others. *St. Farb's Day* (1990) concerns Isadore Farb, an honest, respectable lawyer

on Toronto's Bay Street. As Farb struggles with an ethical dilemma – he finds himself involved in a conflict of interest with several clients – he confronts larger moral issues linked to his Jewish identity. *The War to End All Wars* (1998) brings together two former soldiers who had fought opposite one another in World War I. In the mid-1920s, Ellio Pines and Karl Sternberg are living in the small town of Oreville, Michigan, where they compete as businessmen and as suitors. *Stickler and Me* (2002) is a novel for young adults.

[Ruth Panofsky (2nd ed.)]

TORME, MEL (**Melvin Howard**; 1925–1999) U.S. singer, drummer, pianist, composer, arranger, actor, author. Although he was known as "the Velvet Fog," a nickname he loathed, and most people thought of him in terms of his creamy vocal tones, Mel Torme was a protean figure whose range of talents encompassed not only jazz and pop music but writing and acting as well. The son of Russian Jewish immigrants (the family name, Torma, was changed by an immigration official at Ellis Island), Torme was a child performer of note, singing with the Coon-Sanders Nighthawks Orchestra at four and appearing on numerous national radio programs including *Jack Armstrong, the All-American Boy* when he was nine. Trained as a pianist and drummer, he also began his songwriting career very early, with the Harry James band performing his "Lament of Love" when Torme was 15. By 1943, the teenager was touring with the Chico Marx band as a singer, drummer, and arranger. That was the year in which he also made his film debut in *Higher and Higher* alongside another newcomer, Frank Sinatra.

Sinatra's success with the Pied Pipers vocal group inspired Torme to form his own backup aggregation, the Mel-Tones, and it was his recordings with them in the mid-1940s that inspired New York disk jockey Fred Robbins to gift Torme with his famous sobriquet. (Torme eventually came to accept the nickname, sporting license plates that read LE FOG and EL PHOG.) His career continued in the ascendant with a commercial peak in the 1947 MGM musical *Good News*, which triggered a very brief enthusiasm for Torme among the bobbysoxers. But he was outgrowing this music and by the early 1950s hooked up with nascent Bethlehem Records where he became a jazz artist in earnest. The timing was probably unfortunate, as Torme's musical maturing coincided with the rise of rock 'n' roll and the ebbing of jazz as a commercial vehicle.

Torme, however, was a man of many interests and talents, and survived by broadening his horizons to include writing for television, several books of non-fiction including an autobiography (*It Wasn't All Velvet*, 1988) and a biography of his close friend and fellow Jewish child prodigy, Buddy Rich (*Traps: The Drum Wonder*, 1991). His most famous composition, "The Christmas Song," was not only a huge hit for Nat Cole but is among the most frequently recorded holiday songs in the modern repertoire. Torme continued performing and recording until a serious stroke felled him in 1996; the lingering effects of that stroke would kill him three years later.

[George Robinson (2nd ed.)]

TORONTO, city in Canada, with a population of approximately 2.5 million people; located on the north shore of Lake Ontario. The city is the capital of the province of Ontario and at the heart of a larger urban expanse officially known as the Greater Toronto Area (GTA), home to an additional 2.7 million people. Toronto is also one of the largest Jewish Diaspora centers. In 2001 there were approximately 114,000 Jews in the city of Toronto and another 65,000 in the surrounding GTA municipalities. That population continues to grow.

History

Many of Toronto's Jews remain clustered along what is likely the longest Jewish neighborhood in the Diaspora. It begins downtown and extends up either side of one street, Bathurst Street, for about 15 miles (24 km.). While there are no fixed boundaries along this lengthy north/south artery, it is possible to divide the Toronto Jewish community into a landscape of three connected neighborhoods.

The downtown and most southerly neighborhood is the oldest. Toronto, originally named York, was founded as a British garrison town on Lake Ontario in the late 18th century. As surrounding agricultural settlement gradually expanded, so did the town, which served as a local market and commercial center. By the late 1840s and early 1850s Toronto was home to a small number of Jews, mostly merchants active in the jewelry, clothing, and dry goods business. Many of these Jews were originally from England or Germany and retained close economic and kinship ties to Jewish merchant families in Montreal, New York, or London. As Toronto continued to grow, Jewish-owned enterprises successfully expanded to include financial services, land speculation, and manufacturing.

While few in number and generally well integrated into the larger community, the tiny Toronto Jewish community came together to found a burial society and organize High Holiday services. Confident that their numbers would gradually grow, in 1856 a group of 18 men founded Toronto's Holy Blossom Congregation. For the next decade and a half, there was slow but steady growth in the community. In the early 1880s the Toronto Jewish community stood just short of 600 members. They were not ready for the explosion in Jewish population numbers that came with the great westward migration of Jews out of Russian Poland, Lithuania, and the Ukraine that began in the early 1880s. As this migration reached Toronto the city's Jewish population expanded by more than 200 percent to almost 1,400 Jews in 1891. During the next 20 years it grew by more than one thousand percent to exceed 18,000 in 1911. In the next ten years the size of the Jewish community of Toronto doubled yet again.

The small and generally well-integrated older Jewish community offered the new immigrants what assistance it could, but it was soon overwhelmed by so many new arrivals who were so different from themselves. In turn, the new arrivals, Yiddish-speaking and largely working-class, often felt at a distance from the prosperous and largely English-speaking Jews they found in Toronto. Many of the recent immigrants first clustered in poorer inner-city neighborhoods where they found employment in the growing garment industry or struggled to make a living as peddlers and petty merchants. They built an institutional infrastructure that echoed the East European world from which they had recently arrived. Synagogues and *Landsmannschaften* were established, often tied to country or region of origin. Secular organizations of many different political stripes, left and right, Zionist and non-Zionist, also took root.

Even as Jewish immigrants to Toronto and their children struggled to secure an economic foothold for themselves in this new urban world while tenaciously holding onto their identities as Jews, they were subject to assimilationist pressures from Toronto's urban gatekeepers – school teachers, Protestant missionaries, social workers, and politicians – all preaching a vision of Toronto as an orderly outpost of British values in North America and believing it their duty to remake these "foreigners" in their own image. Some, tinged with antisemitism and fearing that Jews could not or would not assimilate, began to pressure the government for severe restrictions on immigration. As the anti-immigrant movement grew through the mid-1920s, the government responded with tough immigration barriers. Even though these regulations cut off the flow of East European immigration into Canada, antisemitism in housing, in the workplace, and in areas of social contact continued. Tensions exploded in the 1933 Christie Pits riot, where Jewish and Italian youths fought anti-immigrant gangs who had been harassing Jews.

World War II was a watershed in Toronto Jewish life. The outbreak of war in 1939 brought not only distress to the heavily Polish-Jewish population of Toronto fearful for the fate of family still in Poland, it also brought a return of economic growth, full employment, and a sense of shared contribution to the national cause. With many Canadian Jews serving with the military and contributing on the home front, Jews were increasingly unwilling to tolerate further anti-Jewish discrimination. Even as the organized Toronto Jewish community, led by the Canadian Jewish Congress, organized in support of the war effort it also began a campaign to combat antisemitism and to lobby for legally enforced human rights protections. In part as a result of this effort, in 1944 Ontario passed the first human rights legislation in Canada, barring discrimination on the basis of race or religion. In 1962 the Ontario Human Rights Code was proclaimed and the Ontario Human Rights Commission established to ensure the Code was followed. Changing attitudes can be seen in the election, back-to-back, of two Jewish mayors, Nathan *Phillips (1955–62) and Philip *Givens (1962–66). Givens, at the time he was mayor, was also president of the Canadian Zionist Federation.

In addition to a growing spirit of openness, Toronto also emerged from the war a prosperous center of commerce and industry. Continuing demand for labor in and around Toronto drew migrants from within Canada and quickly forced a reopening of immigration. Toronto continued to thrive through the rest of the 20th century. Manufacturing declined, but the government and service sectors expanded. The city grew through large-scale suburban expansion. Like most North American Jews, Toronto Jews left crowded, aging housing downtown for the second of Toronto's Jewish neighborhoods, the near suburbs – now considered the central region of Jewish Toronto – above the core along Bathurst St. The near suburbs developed as an uptown version of the dense Jewish community that had been downtown. Continued immigration as well as suburbanization brought Jews to this area. Tens of thousands of Displaced Persons, including many Holocaust survivors, settled in Toronto in the 1950s as Canada became second only to Israel in the proportion of survivors in its Jewish population. North African Jews and Hungarian Jews arrived in Toronto in the 1960s. In addition, small-town Ontario Jews seeking a more Jewish environment for themselves and their children also moved to Toronto as did many young people from Montreal who moved out of fear of separatism in Quebec during the 1970s and 1980s. Toronto also attracted immigrants from the United States, including Vietnam draft resistors, and many from the former Soviet Union, South Africa, and Israel. Each group brought its own Jewish traditions, creating a unique Jewish community pluralism that found expression in new congregations, schools, bookstores, newspapers, bakeries, restaurants, clubs, and cultural associations. By 1991, the Jewish population of greater Toronto had risen to 163,000, up from 67,000 in 1951.

Education

The near suburbs developed as population expanded from the 1950s through the 1980s. Dozens of congregations of all branches are found in the near suburbs. Forest Hill, which was the subject of an early study of suburbia, *Crestwood Heights*, is the home of Holy Blossom Temple, Canada's largest Reform congregation, and of Beth Tzedec, Canada's – and North America's – largest Conservative congregation. Toronto's extensive network of Jewish schools, which began downtown in the first wave of migration, flourished in the near suburbs. The Toronto Jewish Federation decided in the early 1970s to place considerable community resources into day school education. But instead of funding schools directly, the Federation started subsidizing tuition according to need. Day school enrollment steadily increased, reaching parity with Jewish supplementary school enrollment in the 1970s. Congregationally based supplementary schools remain the setting in which many Toronto Jews have their Jewish education, but the enrollments at Jewish day schools are now larger. And as day school enrollment grew, so did the range of day school

options. Orthodox day schools were joined by secular Zionist, Conservative, and Reform day schools and others with distinctive pedagogical approaches. Orthodox schools on the yeshivah model are also late 20th century additions to the Toronto Jewish school system.

As the day schools grew at the elementary level, Federation leaders planned for a high school which would be an alternative to the public high schools that prepare students to do well at university. The Community Hebrew Academy of Toronto, which opened in the 1960s, has had continually increasing enrollment, to over 1,400 students in 2004–5. In contrast to the expansion of the day school system, there are still many school-age Jewish children who do not receive any formal Jewish education. As in other North American Jewish communities, there is support for a model of lifelong learning in summer camps, campus programs, and adult education. Both the University of Toronto downtown and suburban York University have well-staffed and well-enrolled programs in Jewish Studies and many congregations have active adult education programs.

Community Organization

The Toronto UJA Federation, which was created by the merger of the Ontario branch of the *Canadian Jewish Congress with the Toronto Jewish Welfare Fund in the 1970s, acts as the central agency of the community. By the end of the 20th century the Federation's UJA campaign in Toronto was annually raising about $50 million. It allocates funds to a wide diversity of needs. About one-third of the annual UJA income goes overseas and almost 10 percent to Canada-wide Jewish organizations. Of the part that remains in Toronto about 40 percent is allocated to Jewish education and identity. Of that amount, two-thirds is used for subsidy of Jewish day school tuition. Significant Federation allocations support a range of social services often in conjunction with funding from different levels of government. The Jewish Family and Child Service is the leading agency in this area. The Federation acquired responsibility for the two Jewish community centers in the 1990s. The Toronto Jewish community has also developed a wide range of services for the elderly. The Baycrest Centre for Geriatric Care is one of the world's outstanding facilities. In addition to the support from Federation, Jewish schools, social services, and other organizations do their own fundraising. The Orthodox community is also organized for its particular needs, sponsoring a *bet din* and maintaining a well-organized Va'ad Hakashrut, which uses the COR label.

York Region and Downtown Toronto

Jewish population expanded along Bathurst Street beyond the near suburbs into York Region, north of the city of Toronto. This area is today the third distinctive Toronto Jewish neighborhood. The first step was the intentional creation of a Jewish neighborhood in the 1980s and this set the stage for a later transformation of this previous farming landscape into dense automobile-dependent suburbs. The developer of a large tract along Bathurst Street set aside a plot for a large Orthodox synagogue and encouraged Jewish day schools to build. The area soon became an affluent, largely Orthodox neighborhood from its inception. In addition to the synagogues and schools, the local shopping center contains a large grocery chain extensively stocked with kosher items, a Jewish bookstore, and kosher restaurants. Jews, not all Orthodox, have continued to move northward in York Region, attracted by large modern housing developments, Jewish schools, and the perception of the region as the "new neighborhood." By 2001, York Region accounted for 33 percent of the Jewish population of the GTA, and with so many younger Jewish families it was home to 40 percent of Jewish children and tightly packed with hockey clubs, music lessons, and carpooling.

UJA Federation has begun building a York Region campus that will include Federation offices, a Jewish community center, and several different day schools. Synagogues, while present, are less visible parts of the area landscape than they are in the near suburbs, since a number of existing day school buildings have space in which congregations can meet. Socially, the neighborhood is also distinctive. It has a large percentage of recent immigrants from Israel and the former Soviet Union. Street life, characteristic of Toronto Jewry two generations ago and still common downtown and in parts of the near suburbs, is much reduced, shifting to the malls that dot Bathurst Street in York Region which provide the setting for the leisure-time spending on entertainment, snacks, and consumer goods.

In counterpoint to the development in York Region, downtown Toronto has also seen a rapid revival in Jewish population growth. Much of downtown Toronto was gentrified in the latter 20th century. This urban transformation brought thousands of Jewish professionals and business people into renovated homes. With its combination of safe streets, public transportation, pedestrian street culture, and access to jobs and the arts, central Toronto is considered a very desirable place to live. Some areas with competitive house prices remain, but much of the increase in the Jewish population is occurring due to extensive recent condominium construction, which is adding hundreds of thousands of residential units to the central city. Recently formed Jewish congregations have joined several historic ones. New schools were founded in the 1970s and have grown since. The downtown Jewish Community Centre was renovated in the early 2000s and the Hillel at the University of Toronto's downtown campus constructed a new center at the same time. The Ashkenaz Festival of "new Jewish culture," which grew out of the *klezmer* revival, is held over Labor Day weekend every second year at Harbourfront, an urban park on the Lake Ontario waterfront.

Multiculturalism

Toronto is today a city where immigrants from all over the world and the children of immigrants constitute a large majority of the population. This multicultural reality is celebrated by city boosters and Toronto Jews as a vital part of that urban context. The ability of people from a pluralism of origins to

live together in Toronto without overt racial tensions and the widely held view that new immigrants enrich the local culture and economy are seen as measures of the city's tolerance. Multiculturalism also continues Canada's older tradition of seeing itself as a mosaic society. The separate tiles of a mosaic touch and form a richer larger whole, but they do remain separate. While there are social settings where persons of different backgrounds meet, and a growing segment of Toronto society where friendships and families are drawn from more than one group, social segmentation continues. This is aided by new technologies which allow extensive and low-cost contact with the old country. Modern transportation also encourages more travel back and forth than was possible for previous waves of migration. This applies to Toronto Jews as well as the general population. Toronto Jews, for example, maintain a strong attachment with Israel. Many Toronto Jews have family in Israel, whom they visit and stay in contact with. Others who do not have family have visited and many have friends and professional contacts there. As well, many Israelis have moved to Toronto, some temporarily and others permanently.

Multiculturalism is also associated with the clustering of Toronto Jews in their own neighborhoods. Many older downtown neighborhoods still have ethnic labels, although the residents of these neighborhoods are now quite mixed. Clustering in ethnic neighborhoods is also common in the new suburbs. A large concentration of Italian Canadians is found west of the Jewish neighborhood in York Region, and the largest Chinese urban diaspora in the world, a product of recent and continuing immigration, is to its east. Other immigrant groups, including growing Muslim and Arab populations, are residentially concentrated elsewhere in the central city and suburbs of the GTA. Multiculturalism is also associated with the willingness to respect the public show of distinctive lifestyles. Accordingly, not only is Toronto a good place to be a secular, Reform, Reconstructionist, or Conservative Jew, but it is also a good place to be an Orthodox Jew. The value placed on diversity can sometimes engender unlikely alliances. In the 1990s, supporters of Toronto Jewish day schools, and the Ontario Region of the Canadian Jewish Congress acting on their behalf, joined Conservative Christian and Muslim private school supporters in a multifaith coalition. The coalition unsuccessfully urged the Ontario government to follow a policy similar to that of other provinces, which allocate public funds to private religious schools.

Toronto, which is now by far Canada's largest city, has developed into a major world center, a node in a global network of communications, commercial, and population flows. Greater Toronto's Jewish population topped 179,000 Jews in 2001 and now accounts for approximately half of all Jews in Canada. And that population is projected to grow. Jews play important roles in sustaining and developing Toronto's social and economic network, not unlike the role Jews play in other world cities. The Jews of Toronto, as in other world cities, are also continually challenged to creatively and productively blend the separate identities fostered by multiculturalism with the cosmopolitanism of an interconnected global society.

[Stuart Schoenfeld and Harold Troper (2nd ed.)]

°**TORQUEMADA, TOMÁS DE** (1420?–1498), first head of the Spanish *Inquisition. Probably born in Valladolid, he entered the *Dominican Order at the age of 14, and soon took his place among the strictest members of the monastery. At the age of 32 he became prior of the monastery of Segovia. Torquemada first came in contact with Queen Isabella around 1469; he became her confessor and some time later also her husband King Ferdinand's. His influence on the royal couple, especially on the queen, made him a powerful factor in Spanish politics. In conjunction with Cardinal Mendoza he drafted a petition to the Pope requesting authorization of the establishment of a unified national Spanish Inquisition. This was given in 1478. Torquemada was among the 12 clerics whose names were submitted to the pope in 1482 for inquisitorial appointments. At that time he was already known for his extreme views on the eradication of Judaism among the *Conversos and the question of the Jews in the united Spanish kingdom. After confirmation of his appointment he started to prepare the organization of the Inquisition, and founded its general supreme council, which became one of the councils of state and a key power in the internal affairs of the united kingdom. As head of the council, Torquemada was accorded the title inquisitor general (1483).

Torquemada established a system of regional inquisitional tribunals, at first in smaller towns near centers of Converso influence where opposition from the local population to the inquisitorial methods was manifest. Later, tribunals were also set up in larger towns. Torquemada initiated conventions of inquisitors (the first was held in Seville in 1484) to discuss the activities of the tribunals. He also drew up permanent instructions for the tribunals on working methods, as well as judicial procedures. In addition to the trials held by the Inquisition, the first results of Torquemada's activities concerning Conversos and Jews were the orders of expulsion from Andalusia (1483) and Albarracín (1486). In particular, there was the libel of *Host desecration and alleged crucifixion of a Christian child involving a group of Conversos at *La Guardia (1490–91).

In the sphere of general politics Torquemada pressed for resumption of the war of Reconquest against the kingdom of *Granada. After Granada's conquest he was instrumental in obtaining the general decree of expulsion of the Jews from Spain (1492). A widely related legend – probably without historical foundation – tells of negotiations between a Jewish delegation headed by Don Isaac *Abrabanel and the king: the king was offered the sum of 30,000 dinars for abolition of the

expulsion decree, but Torquemada, who was listening to the talks from an adjacent room, broke into the king's room, put a crucifix on the table, and reminded him of Judah Iscariot who had betrayed Jesus for 30 pieces of silver. Influenced by Torquemada's appearance, the king rejected the Jewish offer.

In 1494 additional inquisitors were appointed, who were allocated many of Torquemada's former competencies. The appointments were evidently made because of Torquemada's failing health, not because of a decline in his influence. In the early 1490s he proceeded severely against bishops and clerics suspected of requesting the pope's support against his methods and policy, the essence of which were to turn Spain into a country of "one flock with one shepherd."

Torquemada had already become a legend in his lifetime, and various assessments – often contradictory – have been made of his personality by writers and scholars. He became a symbol of religious and ideological fanaticism, of persecution, investigation and interrogation, and probing into the souls of men.

[Haim Beinart]

TORRE, ALFONSO DE LA (1421–1461), Spanish Converso author. Torre, a humanist, is known principally for his *Vysyon Delectable de la Philosophia y artes liberales*, a kind of universal encyclopedia presented in the form of a series of dialogues which he wrote c. 1450. It quoted *Maimonides extensively and was in its turn frequently cited by Solomon ibn Verga in his *Shevet Yehudah*. The sixth chapter of the work, dealing with arithmetic, includes a detailed discussion of the numerological aspects of the Kabbalah.

The *Vysyon* has been termed a link between the Judeo-Arabic thinkers of the Middle Ages and *Spinoza, and it enjoyed great influence in its own day and for the subsequent two centuries. First published in Burgos in 1485, it was one of the few non-Hebrew books printed by Abraham *Usque, who produced an Italian version in Ferrara in 1554. The Italian text was ultimately retranslated into Spanish by the Marrano Francisco (Joseph) de *Caceres (Frankfurt, 1623^1, 1663^2), who was probably unaware that its original author was himself a Spaniard and a Converso.

[Kenneth R. Scholberg]

TORRÈS, HENRY (1891–1966), French lawyer and politician. Born in Les Andelys, Torrès practiced law in Bordeaux and in 1919 moved to Paris. A communist in his youth, he published *Histoire d'un complot* (1921) protesting against the arrest of militant communists after World War I but later joined the Socialist Party and was a radical socialist deputy from 1932 to 1936. He became famous for the fiery eloquence of his advocacy as a defense counsel. His reputation reached its peak in 1926 with his successful defense of Shalom *Schwarzbard, who assassinated the Ukrainian leader Simon *Petlyura. By using the evidence of the pogroms initiated by Petlyura against the Ukrainian Jews, Torrès obtained Schwarzbard's acquittal. After the Nazi invasion of France, Torrès fled to the United States. In America he campaigned against the Pétain regime in France, publishing *La France trahie: Pierre Laval* (1941; Eng. tr., 1941) and *La Machine infernale* (1942; *Campaign of Treachery,* 1942) and edited *La Voix de France* from 1942 to 1943, a political journal for French refugees in New York. After World War II, Torrès returned to France and from 1948 to 1958 was a Gaullist senator for the Seine department. Vice president of the High Court of Justice from 1956 to 1958, he was also president of the French broadcasting authority (RTF).

Torrès was the author of several political and historical works, among them *Le Procès des Pogromes* (1927) describing his defense of Schwarzbard, and *France, terre de liberté* (1940). He also wrote plays with a legal background including French versions of the *Trial of Mary Dugan* by Bayard Veiller (1928), and *Witness for the Prosecution* by Agatha Christie (1956).

[Shulamith Catane]

TORRES, LUIS DE (15^{th}–16^{th} cent.), Spanish interpreter to Christopher *Columbus on his first voyage of discovery in 1492. Contrary to what was formerly believed, he was the only person of Jewish birth who was among the companions of Christopher Columbus on his first voyage, having been baptized shortly before the expedition sailed. He knew Hebrew, Aramaic, and some Arabic. When Columbus landed in Cuba, convinced it was the mainland, he took possession of it for Spain and dispatched Torres with a party into the interior to see if they could find gold. Torres reported back that the natives were friendly, that he had found no gold but that he had seen men putting thin rolls of dried leaves called tobacco into their mouths, lighting them and blowing out clouds of smoke. Torres settled in Cuba and won the friendship of the Indian ruler who gave him land and slaves. He soon set up his own small empire. As an independent ruler of Spanish territory, he received an annual allowance from the Spanish royal family.

°**TORREY, CHARLES CUTLER** (1863–1956), U.S. Bible scholar and Semitist. Born in East Hardwick, Vermont, Torrey taught Latin at Bowdoin College (1885–86), and Semitics, Bible, and Hebraica at Andover Theological Seminary (1892–1900) and at Yale University (1900–34). He was one of the founders of the American School of Archaeology in Jerusalem. Subsequent archaeological finds and advances in Semitic linguistics and in lower and higher biblical criticism have been damaging to many of Torrey's contributions in the estimation of present-day scholarship. He developed an independent exegesis of the period of Ezra and Nehemiah in *The Composition and Historical Value of Ezra-Nehemiah* (1896), *Ezra Studies* (1910; 1970), and *Chronicler's History of Israel* (1954). Following E.

Koenig's commentary on Isaiah, he argued in *Second Isaiah* (1928) for the unity of Isaiah 40–66, and assigned Isaiah 34–35 as the introduction to this corpus. In his articles on Ezekiel in the *Journal of Biblical Literature* and in *Pseudo-Ezekiel and the Original Prophecy* (1930; 1970^4), he expounded his theory regarding the nature and composition of the Book of Ezekiel. His thesis was that the bulk of the prophecy contained in the canonical Book of Ezekiel was pseudepigraphic, composed around 230 B.C.E. but purporting to date from the period of Manasseh (692–639 B.C.E.), and later in 200 B.C.E. edited so as to appear to be an exilic work. It provoked, however, a bitter attack by S. Spiegel, who advocated caution in the critical analyses and wanton emendations of Ezekiel.

His often cited theory that the Synoptic Gospels, John, and Revelations, as they have been handed down are for the most part straightforward translations of Aramaic originals, was developed in a number of publications including *Translations Made from the Original Aramaic Gospels* (1912), *Four Gospels: A New Translation* (1934), *Our Translated Gospels* (1936), *Documents of the Primitive Church* (1941), and the posthumous *Apocalypse of John* (1958). How deeply the koranic tradition is steeped in the Hebraic culture is documented in *Jewish Foundation of Islam* (1933; 1967). His other Islamic studies are *Mohammedan Conquest of Egypt and North Africa* (1901) by Ibn Abd al-Ḥakām, edited with notes and selections of the writings of Al-Buḥāa (1948; 1969). In the area of numismatics he investigated the Aramaic graffiti on coins buried in 318 B.C.E. and belonging to Jews of Egypt (1937), and he wrote on the rare coinage of the Khans of Khokand and Bukhārā *Gold Coins of Kokhand and Bukhārā* (1950). His other publications include a treatise on the composition of Acts *The Composition and Date of Acts* (1926); and an introduction to the apocryphal literature (*Apocryphal Literature; A Brief Introduction*, 1945).

[Zev Garber]

TORTOISE (Mod. Heb. צָב), a reptile. In Israel there are several species of both land and water tortoises; the latter lives in both sweet and salt water. Some commentators identify the צָב (*ẓav*), enumerated among the unclean reptiles (Lev. 11:29), with the tortoise, and on this basis it is so called in modern Hebrew. According to rabbinical sources, however, the *ẓav* is a species of *lizard. Thus the expression "the *ẓav* after its kind" is explained as including the salamander and other reptiles which bear no resemblance to the tortoise (see Sifra 6:5). Similarly a resemblance between the *ẓav* and the snake is mentioned (Ḥul. 127a), and the *ḥardon*, a species of lizard of the family of *Agamidae* (TJ, Ber. 8:6, 12b). From this last source it is apparent that "the *ẓav* after its kind" includes the *Agamidae* family, of which six species are found in Israel, the largest of which is the *Uromastix aegyptius* called in Arabic *dabb*. It is found in the Negev and the Arabah and is herbivorous. The Bedouin hunt it and regard its flesh as a great delicacy.

[Jehuda Feliks]

TORTOSA, city in Tarragona provinces, N.E. Spain; it had one of the oldest Jewish communities in the Iberian Peninsula. A tombstone inscribed in three languages (Hebrew, Latin, and Greek) belonging to the first centuries of the Christian era (opinions conflict as to its exact date) attests the early existence of Jews in the city. The Jewish quarter was situated in the northern part of the town, now slightly north of the district known as Remolinos; the Jewish cemetery (from which only a few tombstones have survived) was situated to the east of the city wall. The existence of the quarter is commemorated by the names of such streets as Jerusalem Alley and Jerusalem Street.

Muslim Period

During the Muslim period many Tortosa Jews engaged in agriculture and in the flourishing maritime trade, maintaining commercial ties with Jews of Barcelona and southern France. The city was also a center of Jewish learning as is shown by 10th- and 11th-century responsa which indicate a high level of talmudic knowledge and devout religious observance. The poet, grammarian, and lexicographer *Menahem b. Jacob ibn Saruq (mid-10th century) was a native of Tortosa and returned to his birthplace after losing the patronage of *Ḥisdai Ibn Shaprut of Córdoba. Another native of Tortosa, the physician and geographer *Ibrahim b. Yaqub, Menahem's contemporary, was sent by Caliph al-Ḥakam II to travel and survey Western and Central Europe. The Hebrew liturgical poet Levi b. Isaac ibn Mar Saul lived in Tortosa in the early 11th century. Ashtor (see bibliography) estimates Tortosa's Jewish population in the 11th century at about 30 families.

Under Christian Rule

Ramon Berenguer IV, count of Barcelona, captured Tortosa from the Muslims in 1148. The treaty of capitulation was similar to that of *Tudela, but the article which prohibited the appointment of Jewish officials with rights of jurisdiction over Muslims was omitted. It appears that the Jewish community was destroyed during this war of conquest and Ramon Berenguer attempted to restore it. He set aside a plot of land between the coast and the R. Ebro, which was then fortified and surrounded with towers, on which 60 residential houses were built. Berenguer also granted the Jews vineyards and gardens which had formerly belonged to Muslims, so that the cultivation of these became the principal occupation of the Jews, in addition to crafts and maritime trade. He also promised land to any Jew who would settle in Tortosa, and Jews were exempted from the payment of taxes for four years. Even after this period, they were not required to do any "work, cus-

tomary tasks or duties for the count or the other lords of the land, unless of their own free will." The ruler decreed that no Muslim should exercise authority over Jews; lawsuits between Jews and Christians were to be adjudicated under the privileges enjoyed by the community of Barcelona. These conditions were an exceptional opportunity for the development of the Jewish community.

However, the hopes which Berenguer had placed in the Jews did not materialize because of the division between the various lords of the town who challenged his authority over it and severely oppressed the Jewish population. In February 1181, Alfonso II of Aragon granted the Jews of Tortosa a privilege, with the consent of Raimundo de Moncada (who held the right of jurisdiction over the Jews of the town) according to which they were authorized to present one of the town's lords with a gift without incurring the obligation of giving gifts to the others. Pledges were not to be taken from them for their debts, they were not to be confined to their houses, and if they were condemned to imprisonment, they were to be detained in the fortress (see Rashba (Solomon b. Abraham *Adret), Responsa, IV, 260). The sum which was paid in taxes in 1271 – 6,000 sólidos – testifies to the strength and wealth of the community. Tortosa and Alcañez then formed a single entity, for tax purposes.

Pedro III granted the Jews of Tortosa the right of sitting as judges in the local tribunals, though with a lower rank than the Christian judges. During the 13th century Jews were employed as bailiffs by the Moncada family and by the Templars.

At the beginning of the 14th century, the community of Tortosa addressed a complaint to James II against the moratorium on debts which he had granted to the Christian inhabitants of the town, claiming that oral promises that the debts owed to them would be repaid could not be relied upon.

Result of the Persecutions of 1391

The community of Tortosa suffered during the persecutions of the Jews in Spain in 1391. On July 24, John I wrote to the municipal council, requiring them not only to protect the Jews but also to rehabilitate the community. At the end of the month the Jews were still concealed in the fortress, but from the beginning of August they were taken away individually to the houses of the townsmen in order to be baptized, by force if necessary. Christian townsmen and Jewish apostates collaborated in these acts, the latter compelling the conversion of their wives, parents, and children. On August 14 disorders broke out against both the Jews and the municipal authorities who were accused of giving the Jews assistance and support. By arresting the instigator of the disorders, the municipal leaders succeeded in suppressing the riots; many Jews, however, abandoned their religion during these events. After more than a month (on Sept. 2), the king wrote to the municipal leaders of Tortosa requesting information concerning the heirless property of the Jews who had died as martyrs. In April 1392 he authorized the impoverished Jews who were then living in the fortress to remain there and ordered the bailiff to protect them. Turning his attention to the relations between Jews and *Conversos, the king issued a decree (Aug. 18, 1393) in which he prohibited Jews and Conversos to live in the same quarter, to eat or to pray together. Upon the instructions of the bishop, the Conversos were obliged to attend church, listen to missionary sermons, adhere to Christian observances, and immediately separate themselves from the Jews. The Jews were compelled to wear a distinctive *badge and garb, and sexual relations between Jews and Christians (obviously referring to Conversos) were punishable by burning at the stake. It nevertheless appears that toward the close of the century (1397) a number of laws favorable to both the Jews and the Moors of Tortosa were issued.

Disputation of Tortosa

In 1412 Tortosa became the focus of events which the Jews of Aragon regarded with trepidation, and that proved a turning point in their history, namely, the Disputation of Tortosa (see *Tortosa, Disputation of). The community of Tortosa itself was represented by the poet Solomon b. Reuben *Bonafed who gives a description of the tense atmosphere which pervaded throughout the kingdom in general, and in Tortosa in particular, during the disputation.

The disputation began on Feb. 7, 1413, and was continued, with interruptions until Nov. 1414.

In 1417 the community of Tortosa began to recover. Alfonso V exempted Jews who came to live there from payment of taxes for five years. There is also some information on the community from the reign of Ferdinand II, who in 1480 issued a decree in which he instructed the community of Tortosa on the procedure for electing community leaders, trustees, and *muqaddimūn*. In October 1481 he issued further instructions concerning the swearing-in of officials, and also authorized the election of relatives (e.g., father, son, brothers, father-in-law and son-in-law) to serve in the community – a practice forbidden by the regulations of the Spanish communities. Ferdinand II ordered the election of Benveniste Barzilai as the leader of the community.

An indication of the atmosphere in Tortosa on the eve of the expulsion of the Jews from Spain in 1492 can be deduced from the fine imposed on Abraham Toledano of Tortosa, who made a wager, with a number of Christians that the Catholic Monarchs would not capture Loja and Málaga from the Muslims. Tortosa, like neighboring Barcelona and Tarragona, was also a port of departure for Jewish refugees from Spain.

[Haim Beinart]

TORTOSA, DISPUTATION OF, disputation held in Tortosa, in 1413–14, the most important and longest of the Christian-Jewish *disputations which were forced upon the Jews during the Middle Ages. It was apparently prompted by Gerónimo de Santa Fé (the apostate Joshua *Lorki) in which he claimed to prove the authenticity of the messianism of Jesus from Jewish sources. In 1412 the anti-pope *Benedict XIII, who was recognized as pope in Spain, ordered the communities of Aragon and Catalonia to send delegates for a discussion in his presence on the claims of Gerónimo. The disputation was drawn out over some 20 months, and 69 sessions were held; it was presided over by the pope, who also actively participated in it. From the outset, the disputation did not assume the form of a free discussion between two parties but that of a propagandist missionary attack accompanied by psychological pressure – to the point of intimidation and threats – by the Christian side against Jews, in order to compel them to accept the arguments of their adversaries. The principal Hebrew source for the history of the disputation is *Shevet Yehudah* by Solomon *Ibn Verga. The Jewish sources mention about 20 participants on the Jewish side; some of these actively participated, while others were advisers and observers. A neutral Christian account of the debate is also extant. In the disputation, the most prominent personalities were rabbis *Zerahiah ha-Levi, Astruc ha-Levi, Joseph *Albo, and Mattathias ha-Yiẓhari.

Immediately upon the first encounter, the pope announced – contrary to the promises which he had previously given to the Jews – that it was not intended to hold a discussion between two equal parties, but to prove the truth of Christianity and its principles, as it emerges from the Talmud. Gerónimo opened the disputation with a veiled threat against the obstinate Jews, and during the disputation he passed to open threats. To the arguments presented by the Jews, he retorted by accusing them of heresy against their own religion, for which they would be tried by the Inquisition. In this heavy atmosphere, the Jewish delegates were overtaken by fear and confusion and occasionally did not dare – or did not succeed – in answering correctly, especially because those replies which did not please the pope aroused vulgar rebukes on his part which only intensified their fears and anxieties. During the disputation new participants appeared on the Jewish side, and their arguments were not always coordinated with the former; besides, the last word was always granted to Gerónimo, so that the impression could be formed that he had the upper hand.

During the first part of the disputation (until March 1414), the discussion revolved around the Messiah and his nature (as in the Disputation of *Barcelona). Its second part concerned the "errors, the heresy, the villainy, and the abuse against the Christian religion in the Talmud," according to the definition of the initiators of the disputation, and resembled the disputation of Paris, initiated by Nicholas *Donin. The Jews were requested to answer the claims of Gerónimo which appeared in his work that was being used as the basis of the disputation, and to explain various Midrashim which had been collected by Raymond *Martini. After a while, 12 questions were presented to the Jews on the subjects of Jesus, Original Sin, and the causes of the Exile. The discussions on these subjects were prolonged over several months. It was at this stage that some of the most brilliant answers ever given to questions of this type in similar disputations of the Middle Ages were offered.

At the beginning of 1414 Pope Benedict entered the disputation himself and demanded that the procedure be shortened and practical conclusions arrived at. Most of the Jews sought to withdraw from the disputation because during their prolonged absence from home and as a result of the mental strain prevailing among their communities, faith was being undermined and there was rising despair, while the missionary preachings of the monks had succeeded in bringing many Jews to baptism. Zerahiah ha-Levi, Mattathias ha-Yiẓhari, and Astruc ha-Levi, however, presented memoranda in which they refuted all the arguments drawn from *aggadot* and Midrashim. R. Astruc even dared to point out the injustice inhering in the actual conditions of the disputation. The delegates of the communities were away from their homes for about a year; they became impoverished and tremendous harm was caused to their communities; this may also be regarded as a reason for the failure of the Jews to reply successfully. Gerónimo reacted with words of contempt against the Talmud and the Jews who denied the validity of the *aggadah*, he argued that they ought to be tried according to their own laws as unbelievers of the principles of their faith.

The second part of the disputation opened in April 1414. Its details are not entirely known, but it is clearly evident that at first the Jews chose to remain silent. When Gerónimo brought a list of sayings which were to be effaced from the Talmud as impugning the honor of Christianity, the Jews replied that they themselves were unable to answer, although it was certain that the sages of the Talmud in their time would have been able to reply, and that consequently the value of the Talmud could not be deduced from their own weakness; they once more requested to be freed from the disputation. Gerónimo summarized his arguments and demanded of the pope that the delegates be brought to justice. The latter, with the exception of Zerahiah ha-Levi and Joseph Albo, claimed that they failed to understand the meaning of Gerónimo's citations. On November 12, the memorandum of R. Astruc was presented as the last Jewish memorandum, and on the following day the disputation was concluded with the issue of a bull on the subject by the pope, and the Jews returned to their homes.

Consequences of the Disputation

Throughout the period of the disputation, Jews continually arrived in Tortosa, where they converted to Christianity. The authorities, on their part, intensified their persecutions, and ordered that everything which had been disqualified by Gerónimo should be obliterated from the Talmud. The disputation in itself acted as an incentive for anti-Jewish incite-

ment, and in several towns the inhabitants adopted severe measures in order to force the Jews to convert. Many broke down and accepted baptism. Three works were written after the Disputation of Tortosa in an attempt at soul-searching: *Sefer ha-Ikkarim* ("Book of Principles") of R. Joseph Albo, in which the author clarified the religious fundamentals discussed at the disputation; *Sefer ha-Emunot* ("Book of Beliefs") by R. *Shem Tov, who regarded the cultivation of philosophy as the cause of conversion; and *Iggeret Musar* ("Letter of Ethics") by R. Solomon *Alami, who considered that disrespect toward religion and ethics was the cause of the destruction of Spanish Jewry.

[Haim Beinart]

TORTS.

The Principal Categories of Torts

The liability of various tortfeasors is discussed in relative detail in the Torah. Four principal cases are considered:

(1) where someone opens a pit into which an animal falls and dies (Ex. 21:33–4);

(2) where cattle trespass into the fields of others and do damage (Ex. 22:4);

(3) where someone lights a fire which spreads to neighboring fields (Ex. 22:5);

(4) where an ox gores man or beast (Ex. 21:28–32, 35–6). To those has to be added the case where a man injures his fellow or damages his property (Ex. 21:18–19, 22–5; Lev. 24:18–20). The Talmud calls the cases contained in the Torah primary categories of damage (**Avot Nezikin*) and these serve as archetypes for similar groups of torts. The principal categories of animal torts are *shen* (tooth) – where the animal causes damage by consuming; *regel* (foot) – where the animal causes damage by walking in its normal manner; and *keren* (horn) – where the animal causes damage by goring with the intention of doing harm or does any other kind of unusual damage. The other principal categories of damage are *bor* (pit) – any nuisance which ipso facto causes damage; *esh* (fire) – anything which causes damage when spread by the wind; and direct damage by man to another's person or property. These principal categories and their derivative rules were expanded to form a complete and homogeneous legal system embracing many other factual situations. As a result they were capable of dealing with any case of tortious liability which might arise.

The Basis of Liability – Negligence

The Talmud states that a man could be held liable only for damage caused by his negligence (*peshi'ah*), and not for damage through an accident (*ones*). Negligence is defined as conduct which the tortfeasor should have foreseen would cause damage (BK 21b; 52a/b; 99b), since this would be the normal result of such conduct. Thus liability would be incurred for a fire which spread in an ordinary wind (BK 56a) or for fencing a courtyard with thorns in a place frequented by the public who habitually lean against this fence (BK 29b).

The rabbis ruled that negligence was to be determined objectively. A man is liable for conduct which people would normally foresee as likely to cause damage (see R. Ulla's statement, BK 27b; Tosef. BK 10:29). On the other hand, if his conduct was such that most people would not normally foresee it as likely to cause damage, the damage is considered a mishap and not a consequence of his act and he is not liable (see Rif, *Halakhot* on BK 61b). Even if the defendant was of above-average intelligence and foresaw that damage would occur, he could not be held liable for conduct causing damage if most people would not have foreseen damage as resulting from such conduct. In such circumstances no liability would be incurred under human law for even willful damage (see Ra'ah and Meiri in *Shitah Mekubbeẓet*, BK 56a, beginning *U-le-Rav Ashi*) unless the damage claimed was depredation (BK 27a). However, rabbinical enactments created liability for deliberate acts in certain cases in the interests of public policy (Git. 53a; Tosef. Git. 4 (3):6). The objective criterion of negligence was also applied where the tortfeasor was of below-average intelligence and incapable of foreseeing the possibility of damage. However, the deaf-mute, idiot, and minor are not liable for the damage they cause, since they have no understanding and cannot be expected to foresee the consequences of their actions. Indeed, since they frequently do cause damage, those encountering them should take suitable precautions, and if they fail to do so would themselves be liable for the resulting damage. In this respect damage caused by the deaf-mute, idiot, and minor can be compared to damage by cattle on public ground for which the owners are not liable since the injured party himself is bound to take precautions.

This test of negligence was applied to all the principal categories of damage mentioned in the Torah (see BK 55b and *Rashi* beginning *ke-ein*). Thus, if an animal was injured by falling into an inadequately covered pit, the owner of the pit was liable. On the other hand, if the pit were properly covered but the cover became decayed, he would not be liable (BK 52a). Similarly, the owner of the pit would be liable if a young ox, incapable of looking after itself, fell into an open pit, but not if the ox were fully grown and fell into the pit during the daytime (*Milḥamot ha-Shem* 52b ad finem). Likewise, liability would be incurred for a fire which spread in a normal wind but not where it spread in an unusual wind (BK 56a); and the owner of cattle which consumed and trampled on crops in another's field would be liable for the damage only if the control he exercised over his cattle was insufficient to prevent this kind of damage (BK 55b, 56a).

As to damage done by man directly, the Mishnah states: he is always *Mu'ad* (forewarned, and therefore liable for the consequences), whether he acted intentionally or inadver-

tently, "whether he was awake or asleep" (BK 26a). Nevertheless, many cases are mentioned where the man who did the damage was not liable and Tosafot (BK 27b) tried to solve the contradiction by distinguishing between cases of absolute "*ones*," and qualified "*ones*." Only in the latter case would liability be incurred. There is no hint of this distinction in the sources and the better view seems to be that a tortfeasor is liable only if he caused damage by *ones* (compulsion) which could have been foreseen by him, as putting himself in the hands of robbers who forced him to do damage, or lying down to sleep next to objects which he should have foreseen he might break in his sleep, aliter, if the vessels were placed next to him after he went to sleep. Likewise a person who caused damage through his lack of expertise could only be held liable where he should have foreseen that expertise was required. However, a person who caused proprietary damage to his neighbor in order to save himself is not exempt because of *ones*, as he chose to act in a way which would damage his neighbor's property and did foresee the damage.

No Liability Where No Negligence Exists

Cases where the defendant is entirely exempt from liability because he was in no way negligent are of two kinds:

(1) the plaintiff himself was negligent because he should have foreseen the possibility of damage i.e., where the defendant acted in the usual way and the plaintiff acted in an unusual way and the damage was therefore unforeseeable;

(2) neither party could have foreseen the possibility of damage and therefore neither was negligent. An instance of the second kind is where an animal, kept under sufficient control, escaped in an unusual manner and did damage, and no liability would be incurred (BK 55b). Similarly, where an animal managed to start a fire or dig a pit which caused damage, no liability would be incurred since such an unusual eventuality could not have been foreseen (see the Ravad in the *Shitah Mekubbeẓet*, BK 48a beginning "*Mat*"; BK 22a). The Talmud cites examples where no liability would be incurred, such as where an animal fell into a pit whose covering was originally adequate but which later became decayed (BK 52a); where a wall or tree unexpectedly fell onto the highway (BK 6b); where a fire spread further than could have been anticipated (BK 61b); where a burning coal was given to a deaf-mute, idiot, or minor who set fire to something (BK 59b); or experts such as physicians who acted in the usual professional manner and caused damage (Tosef. BK 9:11). As instances of the first kind the Talmud cites the case where a person running along the street collided with and was injured by another walking along the street; here the former alone would be liable since his conduct was unusual (BK 32a). Similarly, if a man broke his vessel against a beam carried by the man walking in front of him, the owner of the beam would not be liable. Aliter, however, if the owner of the beam stopped unexpectedly, thereby causing the vessel to strike the beam and break (loc. cit.). Likewise, a person who places his objects on public ground where they are damaged by animals walking or grazing in a normal manner has no claim against the owner of the animals, since animals are to be expected on public ground (BK 19b, 20a). However, the presence of a pit, fire, or a goring ox on public ground would cause liability for damage since they are not normally present and people do not expect them and take no precautions (BK 27b). It would also be unusual behavior and therefore negligence to enter another's premises or bring chattels or livestock therein, without permission. Since his presence was unexpected the owner of the premises would not be liable for damage caused to the trespasser or his property, but the trespasser would be liable for damage caused to the owner or his property (BK 47a–b, 48a).

Sometimes a person is injured even though both parties behaved in the usual manner, e.g., when both walk in the street or if one enters the premises of another with permission. In these cases the tortfeasor is not liable because the other party should have taken precautions as he ought to have foreseen the normal behavior of the tortfeasor. Likewise, damage may occur when both parties behave in an unusual manner as where both were running along the street or where both entered the premises of a third party without permission (*ibid.*, 32a; 48a/b); in these cases too, the tortfeasor is exempt, since the fact that he was behaving abnormally should have made him foresee that others may behave abnormally too (Tos. BK 48b, s.v. "*Sheneihem*").

If without negligence a man creates a situation which is likely to cause damage, he will not be liable for damage caused before he had a reasonable opportunity to know about the situation and remove it. An objective test was laid down as to when a man should have known of the existence of the nuisance and acted to remove it. If he adequately covered his pit and through no fault of his own the pit was uncovered he would not be liable for damage during the period that most people would not have known that the pit had become open and required covering (BK 52a). Similarly, if his animal escaped from his courtyard through no fault of his own, and caused damage during the period in which he could not have been expected to realize that the animal had escaped and to recapture it, he would not be liable (see BK 58a and Meiri in the *Shitah Mekubbeẓet* on 55b beginning "*nifreẓah*"). Similarly if a man's vessels broke non-negligently on the highway and, without intending to abandon them, he left them there, he is liable, except for damage caused by them before they could have been removed (BK 29a). Similarly, the owner of a wall or a tree which fell onto the highway and caused damage would be liable only if he knew that they were in a bad condition or was warned that they might fall (BK 6b).

The foreseeability test as the basis of liability for damage led the rabbis to conclude that even where negligent the tortfeasor would only be liable for damage that he could foresee. He is not liable for additional or other damage, or damage greater than that foreseeable. Thus where a fire spread in an ordinary wind the tortfeasor would be liable for whatever could be seen to be within the path of the fire but not for what was hidden, unless, according to R. Judah, he should have con-

templated the existence of hidden objects (BK 61b). Similarly, if a man dug a pit and did not cover it he would be liable for injury to a young animal or to an animal who fell into it at night but would not be liable for injury to a grown animal who fell into it in daylight (BK 54b), or for a human being who fell into the pit (BK 28b). If the pit was less than ten handbreadths deep, he would be liable for injury only, since animals do not normally die when falling into such a small pit (BK 3a). Likewise, liability for injury is restricted to the extent of its original gravity. If the injury becomes worse than was originally estimated the tortfeasor is not liable for additional damage (BK 91a). However, where the degree of damage was foreseen but the way in which the damage occurred was unexpected the rabbis disagreed as to whether the defendant should be held liable, some arguing that the defendant was liable in negligence while others holding that the defendant could not be liable for what he could not foresee. This situation is known in the Talmud as *Teḥilato bi-Feshi'ah ve-Sofo be-Ones* (negligent conduct leading to accidental damage). Thus, if a man put his dog on a roof and the dog fell off and broke nearby objects (BK 21b), he would be liable in negligence for putting his dog on the roof (since a dog could be expected to jump off a roof) but not for the mode of damage, since he could not have foreseen that the dog would fall.

Indirect Damage

The foreseeability test would appear to determine liability for indirect damage (**gerama*) where the damage is the ultimate consequence of the defendant's act. Only if the defendant should have foreseen the damage occurring would he be held liable for indirect damage.

Unusual Damage by Cattle

Unusual animal torts, such as goring, lie between liability in negligence for foreseeable damage and exemption for accidental damage. In such cases the animal's owners are liable for half-damages (BK 14a). But if the animal was a habitual gorer, having gored three times, the owner would be liable for full damage, since the damage was neither unusual nor unforeseeable. On the other hand, the owner would be completely exempt if he was not negligent at all. Thus, if the defendant's animal gored the plaintiff on the defendant's premises, no liability would normally be incurred since the defendant could not have foreseen that the plaintiff would enter his premises.

Defenses to Negligence

A person who negligently causes damage is not liable for damages in three situations:

(1) where he received permission from the plaintiff to cause damage (BK 92a, 93a), e.g., was allowed to feed his cattle in the plaintiff's field;

(2) where the defendant, in his capacity as a court official was given permission by a court to harm the plaintiff, e.g., by administering punishment (Tosef. BK 9:11);

(3) where the damage inflicted was nonphysical, e.g., distress and sorrow (where there is no physical pain), or economic or commercial damage (BK 98a); for liability for damage is restricted to physical damage.

Damage Committed by the Person and by His Property

A distinction is found in several places in the Talmud between damage by a person and damage by his property (BK 4a; 4b). The difference is that liability for damage by the person is confined to negligent acts of commission whereas liability for damage by his property can also be incurred by negligent acts of omission. Thus, a man who spilt another's wine must pay for the damage, whereas if he saw the other's wine spill and did nothing to help him recover it, he would not be liable. On the other hand, the defendant whose ox grazed in the plaintiff's field would be liable for damage caused by the animal either because he put the ox there or because he did not adequately prevent its escape. Similarly, a man who did nothing to prevent a stray fire from spreading onto the highway would not be liable even though he was able to prevent the fire's spreading. He would be liable, however, if he caused the fire negligently or if he did not prevent the spread of a fire from his own premises, even though he did not start it.

Joint Tortfeasors

Where damage was caused by the negligence of two or more persons, the parties are liable in equal proportions. If the plaintiff and the defendant were equally negligent, the plaintiff recovers half damages from the defendant and loses the remainder (see Tos. BK 23a, s.v. "*U-Leḥayyev*"). The negligence of each tortfeasor is one of two types:

(1) where he should have foreseen that his negligence alone would cause damage;

(2) where he should have foreseen that damage would result from his conduct, coupled with that of the other tortfeasor, even though his conduct alone would not be expected to lead to damage.

Thus if two men dug a pit together, they would both be held liable in negligence for damage caused by the pit (BK 51a). However, if only one of them was negligent, he alone is liable. Thus, a man who concealed sharp pieces of glass in his neighbor's dilapidated wall which the latter was about to pull down onto public ground would be liable in negligence to anyone injured by the glass pieces, whereas the neighbor would incur no liability since he could not have anticipated the presence of glass pieces in his wall (BK 30a). Similarly, someone who put objects by the side of a man sleeping would be solely liable if the latter broke the objects in his sleep (TJ. BK 2:8, 3a).

Where damage was caused by two tortfeasors, the first leading the second to perform the act, the rabbis were divided as to the liability of the party performing the damage. Examples of such cases, which are known as *Garme* (see **Gerama* and **Garme*), include informing about another's property which leads to its seizure (BK 117a) and the hiring of false witnesses (BK 55b). In each case the party performing the damage had a choice as to whether to act tortiously or not. If he had no choice in the matter because of lack of intelligence or the required expertise, he is no more than a tool in the hand of

the first tortfeasor and the latter is liable for all the damages. Thus a man who puts an idiot or minor in charge of fire and thorns is liable for all the damage if his neighbor's house is burnt down (BK 59b); and the defendant who tells his neighbor to bring him his animal from the premises of a third party is solely liable if it transpires that the animal does not belong to the defendant at all and that the latter attempted to steal it (Tos. *ibid.*, 79a).

Israel Law

The Israel law of torts is covered by the Civil Wrongs Ordinance (1944, new version 1968), originally enacted by the British Mandatory authorities, which came into force in 1947, and several amendments enacted by the Knesset. The ordinance is modeled on English law and section 2 explicitly refers to English law for explanations of, and supplements to, the ordinance.

[Shalom Albeck]

NEGLIGENT MISREPRESENTATION AS GROUNDS FOR ACTION IN TORTS. In the *Amidar* case (CA 86/76 *Amidar National Company for Immigrant Housing in Israel Ltd. v. Avraham Aharon*, 32 (2) PD 337, 348) Israeli Supreme Court, Justice, Menachem Elon implemented the talmudic principle regarding damage caused by negligence in providing information. He noted that in Jewish law a person is liable for damages caused as a result of negligently conveying incorrect information, through which damage is caused (*ibid.*, 350). A person who negligently conveys incorrect information to another, even in good faith, is responsible for the damage caused to the other person as a result of his acting upon that information. It makes no difference if the information was conveyed in writing or orally; in business negotiations or otherwise; by a professional or by someone with no special qualifications in the field. On the contrary, in certain cases a layman's responsibility may be even greater than that of a professional because, in addition to conveying incorrect information, the very fact that he agreed to advise and provide information in a field in which he has no professional expertise, is an act of negligence. The essential and central condition for liability is that the provider of the information knew, or should have known, under the circumstances, that the person receiving the information intended to rely on his words and to act accordingly. Liability for damages exists when the provider of the information acted negligently and without the reasonable measure of caution with which a reasonable person ought to have acted.

PAYMENT OF COMPENSATION FOR DAMAGE BEYOND THE REQUIREMENTS OF THE LAW (LI-FENIM MI-SHURAT HA-DIN). Justice Elon stressed in his decisions that under certain circumstances the tortfeasor, may be exempt from liability for damages due to various reasons, such as the absence of a causal connection between the negligence and the damage that was caused. However, he may be obliged to compensate the victim by force of his duty to act in a manner which is *li-fenim mi-shurat ha-din* – beyond the requirements of the law. The duty of behaving more generously toward others, in a manner that is beyond the requirements of the law is an established principle and binding legal norm in Jewish law, and was the basis of his ruling in the *Kitan* case (CA 350/77 *Kitan Ltd. v. Sarah Weiss*, 33 (2) 809–811). In that case Justice Elon ruled that even where a person is exempt from liability for damages according to the laws of torts, he is liable, under certain circumstances, to pay compensation for damage incurred in order to "fulfill his duty in the sight of heaven" (*laẓeit yedei shamayim*) (see, e.g., BK 55b). It is therefore appropriate that the Court inform the litigants of the obligation incumbent upon them in this sphere (see CA 842/79 *Ness v. Golda*, PD 36 (1) 220–221; and see at length: *Damages).

THE LIABILITY OF A RECALCITRANT SPOUSE. The wife or husband of a recalcitrant spouse, who refuses to give or receive a Jewish bill of divorce (*get*) is entitled to sue the spouse in the Family Matters Court for his or her losses and agony as a result of being forced to wait for a valid divorce bill (*get*), when the refusal is unjustified. Subject to conditions stipulated by Jewish divorce law, the wife or husband of the recalcitrant spouse may be entitled to damages under two grounds of action recognized in Israeli law: negligence, and breach of statutory duty.

Coercive measures, including an obligation to pay money, intended to pressure the husband or wife to give or receive a get, are occasionally considered by Jewish Law as unlawful duress that invalidates the writ of divorce. However, in other circumstances such coercive measures do not invalidate the *get*. As a result, the principles of Jewish law concerning coerced divorce (*get me'useh*) are important regarding the scope of civil liability of the recalcitrant spouse. The wife's attempts to secure her *get* by way of a damages action against the recalcitrant husband may have negative ramifications in future divorce proceedings in the rabbinical court. For example, a rabbinical court may refuse to hear an action for divorce until the woman abandons her tort action, or waives her right of action in torts, or signs over to her husband any sum obtained through a tort action. It may even refuse to arrange a *get,* on the grounds that a *get* granted by the husband or received by the wife after being obligated to pay compensation for the damage that was caused the recalcitrant spouse may be deemed unlawfully coerced (*me'useh*), and therefore invalid. Accordingly, it has been suggested that the Israeli legislator should intervene in an attempt to avoid these undesirable consequences.

Scholars have suggested a model of legislation that may, to a certain extent, alleviate the suffering of a woman or man awaiting a *get* and which would induce the recalcitrant spouse to give or receive the desired *get*. And of equal importance – such legislation would similarly ensure the validity of the *get* when actually given, so that the woman's or man's fundamental will is realized. This legislation will enable the Family Matters Courts to grant the aforementioned compensation in torts only when the rabbinical court has ruled that the husband or wife: (1) may be compelled (*kofin*) to give or

receive a *get*, or (2) is obligated (*ḥiyyuv*) to render or receive a *get*. Other relevant limitations, stemming from principles of Jewish law, are also taken into consideration (see Kaplan & Perry, Bibliography).

TORUN (Ger. **Thorn**), port on the R. Vistula, N. central Poland; founded by the Teutonic Order in the 13th century, and incorporated into Poland in 1454. Jews first visited Torun on *market days only; in 1766 six Jewish families were permitted to settle there, as in the 18th century there was a great demand for Jewish merchants who traded in cloth manufactured in Torun. In the second half of the 18th century some were attacked by members of the guilds because, in conjunction with the guildmasters, they lent money for interest to the craftsmen.

Torun passed to Prussia in 1793–1806. When included in the principality of Warsaw in 1806–14 it had a larger number of Jewish inhabitants. It reverted to Prussia from 1814 to 1920, when the Jewish population increased. It numbered 248 in 1828; 1,371 (5% of the total population) in 1890; 1,100 (2.3%) in 1905. Culturally, the Jews were closest to German Jewry. A Jewish primary school was founded in 1862. In 1891 a literary and cultural association was founded (Litteratur und Culturverein zu Thorn) with the objective of broadening knowledge of Jewish history and literature, without political or religious implications. A Jewish Women's Association (Israelitischer Frauenverein) to aid sick and needy women was founded in 1868. The increase of antisemitism in Pomerania and the regression in the economy of Torun at the end of the 19th century led to a decrease in the number of Jews living there. After Torun reverted to Poland in 1920, the local Jewish population became one of the smallest in Polish towns of that size, numbering 354 (0.9% of the total) in 1925.

[Jacob Goldberg]

Holocaust Period

On the outbreak of World War II there were about 1,000 Jews in Torun. The community was liquidated in the autumn of 1939, when the Jews were expelled to the territory of the General Government. After the war the community was not reconstituted.

TOSAFOT (Heb. תּוֹסָפוֹת; lit. "additions"), collections of comments on the Talmud arranged according to the order of the talmudic tractates. In general the point of departure of the *tosafot* is not the Talmud itself but the comments on it by the earlier authorities, principally *Rashi. Where and when the *tosafot* were compiled, their types, and their historical and literary development are among the most fundamental and difficult problems in the study of rabbinic literature. The concept of the *tosafot* was originally bound up with the method of study characteristic of the schools of Germany and France in the 12th–14th centuries. Their beginnings go back to the generation of Rashi's pupils and descendants, who undertook to expand, elaborate, and develop their teacher's commentary on the Talmud (**Kunteres*) by making it the foundation of talmudic studies in the schools which they headed. In fact Rashi's commentary is a concise summary, arrived at through precise sifting and literary adaptation, of the tradition of studying the Oral Law prevalent in the principal French and German schools where he had studied for many years. By a careful perusal of his commentary those who followed him were able to acquire for the first time a profound and harmonious comprehension of the Talmud. Through questioning Rashi's statements – on the basis of the talmudic theme under discussion, or of one found elsewhere, or of Rashi's own comments on some other passage, the tosafists sought to answer their questions by pointing to differences and distinctions between one case and another or between one source and another. In this way they produced new halakhic deductions and conclusions, which in turn became themselves subjects for discussion, to be refuted or substantiated in the later *tosafot*.

The terms *ve-im tomar* ("and if you were to say") and *ve-yesh lomar* ("and then one may answer") – almost exclusively characteristic of this literary genre – are the most commonly used in the *tosafot* and more than anything else typify their essential character. This vast work was produced entirely within the yeshivot in the form of oral, animated discussions between the heads of the yeshivot and their pupils. In these discussions, views were often put forward which, either in principle or in detail, differed from Rashi's. Such views abound in the *tosafot*, both in the names of their authors and anonymously. After Rashi's death, the teaching and study methods of Isaac *Alfasi, *Hananel b. Ḥushi'el, and *Nathan b. Jehiel of Rome, which represented a tradition of learning basically different from the local one, began to penetrate into France and Germany. The tosafists took every occasion to quote these novel views and

compare them with their own traditions. Simultaneously, a large number of new versions of the Talmud also reached the tosafists, giving them almost unlimited opportunities for argumentation and for advancing new interpretations by incorporating the Babylonian-North African tradition into their own. Another novel feature was the extensive use by the *tosafot* of the Jerusalem Talmud. While this resulted from the tosafists' critical comparative method of learning itself, a contributing factor was undoubtedly their acquaintance with the teachings of Hananel b. Ḥushi'el, who had a particular predilection for the Jerusalem Talmud.

Originally and formally the *tosafot* were written as "additions" to Rashi's comments. From these modest beginnings almost nothing of which has been preserved and whose most notable representative is apparently Isaac b. Nathan, Rashi's son-in-law, a movement developed – and it was undoubtedly a movement with all the spiritual implications of the word. Within a few years this movement became the dominant force that for centuries shaped the method of learning the Torah, first in Germany and France (including Provence), and, from the days of *Naḥmanides, also in Spain. The spirit of the tosafists is already apparent in *Samuel b. Meir, Rashi's grandson. He and his brothers Jacob *Tam and *Isaac b. Meir were not only the first but the most important tosafists in France. The chief architect of the *tosafot*, and the driving force behind them for many generations, was Jacob Tam. It was he who laid down their pattern and final form. He was followed by his nephew *Isaac b. Samuel of Dampierre. These two overshadow not only the scores of tosafists, their pupils, who are known by name from collections of *tosafot*, but also the hundreds of others whose names have not been preserved. Samuel b. Meir's older contemporary, *Isaac b. Asher ha-Levi, who had studied under Rashi at Troyes and then later returned to Germany, was the first tosafist in Germany in his new yeshivah at Speyer. In the history of Torah study there was no essential difference in the 12^{th}–13^{th} centuries between France and Germany, for it was a common occurrence for pupils to move from one territory to the other, the subdivision of the Carolingian Empire having no relevance in the cultural life of the Jews. Nevertheless, for the sake of convenience, a distinction is made between the two when describing the successive generations of the tosafists in these centuries.

The *tosafot* were written down as "*shitot*," interpretations which the pupils of the yeshivot committed to writing under the auspices of their teachers. In these notes the pupils recorded the substance of the halakhic discussions which had taken place in the yeshivah, incorporating their teacher's views as well as the arguments for and against them, and adding their own opinions. The teachers reviewed their pupils' notes, correcting and improving them, thus giving them their personal stamp. Very little remains of the original language of Tam's statements, which are quoted everywhere in the *tosafot*, and the text of his *Sefer ha-Yashar*, too, went through many hands. The same is true of the original notes of Isaac b. Samuel ha-Zaken of Dampierre; he is cited on almost every page of the *tosafot*, but only isolated phrases of his actual wording have been preserved. These notes by the foremost pupils, which had received the approbation of their teachers, passed from one yeshivah to another between France and Germany, and in the process various additions were made to them. However, several substantial works are extant which were written by the leading tosafists themselves, such as *Sefer Yere'im* by *Eliezer b. Samuel of Metz, *Sefer Mitzvot Gadol* by *Moses of Coucy, *Sefer Mitzvot Katan* by *Isaac of Corbeil, *Sefer ha-Terumah* by *Baruch b. Isaac of Worms, *Sefer ha-Roke'aḥ* by *Eleazer b. Judah of Worms, and others. Later editions abstracted from these works statements which they incorporated in the *tosafot*.

Although the *tosafot* are characterized by keen thought and great originality, it is impossible to distinguish any individual style or approach among the many tosafists, about a hundred of whom are known by name. It was the special method of learning that determined the approach and set the intellectual standard which all the tosafists had to meet. Some of them surpassed others by reason of their eminent halakhic authority and the many pupils who spread their teachings; some produced more novellae and interpretations than others; but these are quantitative differences, and any qualitative distinctions there may have been are not reflected in their teachings. Moreover, theirs was teamwork in the full sense of the word, and a novel view quoted in the name of an individual scholar was frequently the result of an involved discussion among many, each one of whom contributed something to the final outcome.

A general account of the historical development of the tosafists movement is reliably and accurately given in E.E. Urbach's voluminous and monumental *Ba'alei ha-Tosafot* (1955), which deals in chronological order with all the important tosafists and their literary work. They lived in scores of clustered cities in France and Germany. Many are known by their own and their fathers' names, although their identification is not always certain. Sometimes the same scholar is mentioned with considerable differences in various sources. Yet a minute knowledge of this history contributes little to a better understanding of the *tosafot* themselves. For although there was undoubtedly a certain continuity and a clear link between teacher and pupil, the functional structure of the *tosafot* was based on freedom in learning and teaching, which permitted a pupil to disagree with his teacher in the theoretical apprehension and frequently even in the practical significance of the talmudic themes.

In the vast ocean of the *tosafot* a distinction is made between several "types" or rather "collections" of *tosafot*, which are the outcome of different editings, and are distinguished from one another by the contents of their argumentation but not in their methodology. This systemization is important for a historical account of the various *tosafot* and for an understanding of what is known as "our *tosafot*" – i.e., those included in the present-day printed editions of the Talmud – and also for a comprehension of the way in which the *tosafot*

penetrated into Jewish cultural spheres beyond the confines of France and Germany. Generally, there are many passages among these various types of *tosafot*, which are parallel materially (in the preference for one answer to a problem over another, etc.), although not in their actual phraseology. The first important collection of *tosafot* is the *tosafot* of Sens of *Samson of Sens, whose literary heritage is greater than that of most tosafists. Portions of them are extant in the author's own words. When contemporary German scholars quoted from "French *tosafot*" they generally referred to him. Written on the whole Talmud and modeled on the French tradition which Samson had learned from Isaac b. Samuel of Dampierre, the *tosafot* of Sens served as the basis of most subsequent collections, their influence being clearly discernible in "our *tosafot*" to many tractates. Though the *tosafot* of Evreux of the brothers Samuel, Moses, and Isaac of Evreux have not yet been fully investigated with reference to their literary identity, character, and influence, it is evident that they too were influenced by the *tosafot* of Sens. Although the *tosafot* of *Meir of Rothenburg and *Perez b. Elijah, who were almost contemporaries, enjoyed great renown in earlier times, they are no longer extant, except for remnants of varying length. Some *tosafot* of theirs, and especially of Meir of Rothenburg, exist in manuscript. Particularly well known are the *tosafot* of Touques composed by *Eliezer of Touques and based on those of Sens, which he adapted, abbreviated, and expanded by including new interpretations of later dates. These new interpretations were written as marginal notes to the *tosafot* themselves, and the quotations from the *gilyonot* ("marginal notes") found largely in *Shitah Mekubbeẓet* are generally his. The *tosafot* of Touques were included by the earliest printers in their editions of the Talmud (from 1484 onward), thereby establishing a tradition generally followed up to the present, so that the printed *tosafot* in more than ten large tractates are those of Touques. Quantitatively they comprise the largest part of "our *tosafot*" so called in contrast to collections of *tosafot* in manuscript and to those later printed in the margin of the Talmud or in separate works, which are referred to as *tosafot yeshanim* ("old *tosafot*"). There are two further types, the "*tosafot* Rosh" of *Asher b. Jehiel, which were widely studied chiefly in Spain and the *tosafot* Rid of *Isaiah b. Mali di Trani of Italy, which present a difficult literary problem. Asher b. Jehiel's *tosafot* contain few original interpretations, some of which are mainly based on the *tosafot* of Sens, with "Spanish" additions. Most of them are in print. The *tosafot* of the scholars in England before the expulsion (1290) are in the process of being published from a recently identified manuscript.

The techniques and style of *tosafot* literature were not limited specifically to the Talmud, there being an extensive literature of *tosafot* on the Pentateuch. These have Rashi as their starting point also, but they go far beyond him by propounding questions and answers to them, by curtailing and expanding, in the exact manner of the *tosafot* to the Talmud. Like the latter, they are divided into German and French *tosafot*, the German "style" being generally recognizable by its numerous **gematriot*, which were used as a significant exegetical principle. Usually the same scholars are mentioned in the *tosafot* both to the Talmud and to the Pentateuch. Some scholars, however, devoted themselves exclusively to biblical exegesis, such as Joseph *Bekhor Shor, Joseph *Kara, and others of whom almost nothing except their names is known, and who were apparently mainly aggadists. The chief characteristic of the tosafists to the Pentateuch is their halakhic approach. On the basis of the talmudic *halakhah*, the actions of each biblical figure, whether righteous or evil, are weighed and explained. Thus this literature created a unique fusion between the argumentation characteristic of the talmudic *halakhah* and biblical exegesis that, in its own way, aimed at arriving at the literal interpretation.

Samuel b. Meir wrote "*tosafot*" to Alfasi's *halakhot* – although they are not *tosafot* in the usual sense of the word and are more in the nature of glosses; only a few extracts from them have been preserved. *Moses b. Yom Tov, an English tosafist, also wrote *tosafot* on Alfasi. However there is no evidence that *tosafot* were regularly written on Alfasi, although the earlier authorities studied him extensively. The same happened once again in Germany in the 15th century when following on persecutions and the resultant lowering in the status of learning there, there was a move away from the study of the Talmud to that of Alfasi.

From France and Germany the *tosafot* penetrated first to Spain, where the earliest scholar to quote the tosafist literature, although in a very limited form, was Meir ha-Levi *Abulafia. But it is evident that this literature was still a novelty for him and it is clear from his works that he preferred the Spanish tradition of learning, which differed completely from the tosafists' method of study. The latter was introduced into Spain by two scholars related to one another, Jonah *Gerondi and Naḥmanides, who had either studied in France or with teachers from there. Naḥmanides' novellae on the Talmud incorporate the best of the *tosafot*, adopting their views and comparing them with those of the earlier Spanish scholars. While assigning almost the same value to both, he preferred the superior Spanish talmudic texts and its links with the teachings of the Babylonian *geonim*. Naḥmanides was undoubtedly the first to introduce the study of the *tosafot* into Spain, and his pupils and their pupils after them, Solomon b. Abraham *Adret and *Yom Tov b. Abraham Ishbili, established the study of the *tosafot* there. Among these scholars and their contemporaries, who were the heads of large yeshivot and wrote many works on the entire Talmud, the tosafistic element increasingly predominated over that of the early "Spanish" element, so that from their time on the method of the *tosafot* was adopted in Spain both in theory and in practice. A contemporary of these two scholars, *Asher b. Jehiel, who had come from Germany to Spain with his sons, was the second scholar to bring the study of the *tosafot* to Spain, thereby encouraging and advancing the process already flourishing there. His chief contribution was to reinforce and consolidate this process by writing *tosafot* on most of the tractates of the Talmud. These were based on

those of Sens in many places and incorporated the local Spanish teachings. In Spain Asher b. Jehiel's version of the *tosafot* was regarded as the more accurate, in contrast to the French *tosafot*, which had been current until then among the scholars there. Thus while Naḥmanides and his *bet midrash* introduced the tosafists' method of study and most of their teachings into Spain, the text of the *tosafot* was laid down by Asher b. Jehiel, whose *tosafot* subsequently became the only ones officially studied in all the Spanish yeshivot.

The influence which the *tosafot* have had on the entire history of learning among the Jewish people up to present times is inestimable. A "page of *Gemara*" invariably refers to the text itself, Rashi's commentary (called *perush*), and the *tosafot*, and is called Ga-Pa-T, the initial letters of *Gemara, perush* and *tosafot*. That the early printers included the *tosafot* as the companion commentary to Rashi's in their editions was not fortuitous, but because this was the customary combination. Wishing to enhance the value of their product, they accordingly printed the *tosafot* at the side of the page. In later times, from the expulsion from Spain (1492) onward, an extensive literature was produced whose object was to answer the questions raised in the *tosafot* which conflicted with Rashi, and in any event to attain a deeper comprehension of the principles underlying both. Among the most notable of these works are *Sefer ha-Maharsha* of Samuel Edels, *Ḥiddushei ha-Maharam* of Meir b. Gedaliah of Lublin, *Meginnei Shelomo* of Joshua Falk I, *Ḥiddushei Maharam Schiff* of Meir Schiff of Fulda, *Hora'at Sha'ah* of Solomon and Isaac Heilprin, and others. For greater convenience some of these works, which were highly esteemed by scholars, have been printed at the end of the editions of the Talmud. This type of literature also appeared among Jews in the East, later Spain, Egypt, etc., where an accurate and systematic methodology was produced of the principles of Rashi and the *tosafot* so that their divergent views could be better understood. The most outstanding of these works is *Darkhei ha-Gemara* by Isaac Canpanton.

On the other hand, some leading scholars considered the combined study of the Talmud and the *tosafot* at an early age as pedagogically wrong, in that it did not permit young students to arrive at an independent, straightforward, and correct comprehension of the Talmud and its themes. Instead it imposed on them from the outset the methods of **pilpul* and of *ḥillukim* (forms of talmudic casuistry), which from the beginning of the 15th century were associated with the study of the *tosafot* in Poland and Germany. In the early days of their appearance the *tosafot* were already criticized, and there were scholars in the 14th century who considered studying them a waste of time. But the criticism began to gather force only with the development of the casuistic method of *ḥillukim* which was intrinsically associated with the *tosafot*.

[Israel Moses Ta-Shma]

TOSEFTA (Aram. תּוֹסֶפְתָּא, Heb. תּוֹסֶפֶת), literally an "additional" or "supplementary" halakhic or aggadic tradition, i.e., one not included in the *Mishnah of R. *Judah ha-Nasi. Originally the term was used to designate any individual additional or supplementary tannaitic tradition, and so was virtually synonymous with the later Babylonian term **baraita*. In the later Babylonian tradition the term "tosefta" was used to designate a particular body of such *baraitot* (Kid. 49b; Meg. 28b; Shav. 41b), and eventually it came to denote a particular literary work, "the Tosefta" – a collection of halakhic and aggadic *baraitot*, organized according to the order of the Mishnah, and serving as a companion volume to it. Though there may once have been other such collections of tannaitic *halakhot* and *aggadot*, the Tosefta is the only such collection to have come down to us, and together with the extant **Midrashei Halakhah*, it provides the student with direct access to a large body of ancient tannaitic sources, without the mediation of later amoraic and post-amoraic talmudic tradition.

In most respects, the Tosefta is identical to the Mishnah. Its Hebrew language is similar in all essential points to the language of the Mishnah, and seems unaffected by later dialects of amoraic Hebrew. The content, terminology, and formal structures of the *halakhah* in the Tosefta are the same as those in the Mishnah. The *tannaim* mentioned in the Tosefta are the same as those mentioned in the Mishnah, with the exception that the Tosefta also mentions scholars from the two following generations – almost all either direct descendents of the *tannaim* mentioned in the Mishnah, or otherwise associated closely with the circle or the family of R. Judah Ha-Nasi. From all of this it would seem clear that the Tosefta which we possess today was redacted in the same circles in which the Mishnah was redacted – the school of R. Judah ha-Nasi – some 40 or 50 years later, and by his own disciples. Since the last prominent scholar to be mentioned in the Tosefta (twice only) is none other than R. Ḥiyya – a close relative and prime disciple of R. Judah ha-Nasi – it is not surprising that tradition has ascribed to R. Ḥiyya the redaction of the Tosefta, though there is no solid historical evidence which can confirm this suggestion.

In addition to containing two additional layers of tannaitic traditions, there are two primary differences between the Mishnah and the Tosefta. First, the Tosefta is some three to four times larger than the Mishnah. Second, the overall order of the units of tradition found in the Tosefta is largely dictated, not by internal criteria, but rather by the external standard of the order of the Mishnah. It would therefore be fair to say that the Tosefta as a whole represents a kind of proto-talmud to the Mishnah – a large collection of tannaitic traditions whose purpose is to supplement, to complement,

and in various other ways to expand upon the Mishnah of R. Judah Ha-Nasi (see: *Talmud, Babylonian – The Four Stages of Talmudic Tradition).

Both the critical examination of the Tosefta itself and the comparison of the Tosefta to parallel tannaitic collections (Mishnah and *Midrashei Halakhah*) point toward one simple conclusion – the Tosefta which we possess today was collected and redacted in Ereẓ Israel shortly after the redaction of the Mishnah and in the same scholarly circles. Nevertheless one of the greatest talmudic scholars, Ḥ. Albeck, rejected this conclusion. His rejection of this conclusion was not, however, based either on an examination of the internal evidence of the Tosefta itself, or on a comparison of the Tosefta to other tannaitic collections. Rather it was founded primarily on a comparison of the Tosefta to the *baraitot* found in the Babylonian Talmud and the Jerusalem Talmud. The talmudic *baraitot* are in many ways very similar to the parallel traditions found in our extent tannaitic collections. On the other hand there are also significant differences between them. Assuming that the *amoraim* would not have dared to add, omit, or in any other way intentionally change the ancient tannaitic traditions which they had received (see *Mishnah, The Redaction of the Mishnah), Albeck concluded that the *baraitot* in the *talmudim* could not have derived from the tannaitic collections which we today possess – the Tosefta and the extant *Midrashei Halakhah* – but rather must have been drawn from other collections of *baraitot* which have not survived in independent form. Consistent with this view, he also ascribed the redaction of our Tosefta to the end of the fourth century (at the very earliest), i.e., after the main body of amoraic talmudic literature had already largely taken shape. Since Albeck's assumptions concerning the nature of the talmudic *baraitot* are highly speculative at best, his views concerning the redaction of the Tosefta cannot be maintained in the face of all the internal evidence of the tannaitic sources to the contrary.

Broadly speaking the relationship between the traditions found in the Tosefta to the parallel traditions found in the Mishnah are of three kinds, the two relatively familiar and well known, the third less so. First, a tradition in the Tosefta can presuppose the exact text of our Mishnah, and comment directly upon it. Alternatively the Tosefta can transmit a different version of the same *halakhah*, either reporting the same opinion in different language, or reporting other opinions concerning the same issue. There is however, a third possibility: the Tosefta can transmit the *halakhah* of the Mishnah in an earlier and more original version. In this third case, the Tosefta may have preserved the "raw" material out of which R. Judah ha-Nasi composed the version of the *halakhah* which is included in his Mishnah. This third possibility has provided the focal point for some of the most fruitful and creative recent scholarship on the Tosefta (Friedman, *Tosefta Atiqta*). In addition to this parallel material, the Tosefta also includes additional independent tannaitic traditions which are either related topically to the halakhic or aggadic content of the Mishnah, or associatively – attaching themselves to some hint or reference which may have been mentioned in passing in the Mishnah.

With the exception of *Avot*, *Tamid, Middot*, and *Kinnim*, every tractate in the Mishnah has a parallel tractate in the Tosefta, though the precise character of the content of the Tosefta tractate and its relationship to the material found in the Mishnah can vary radically. Some have claimed that **Avot de-Rabbi Nathan*, once considered a late tannaitic work, serves as a kind of "Tosefta" to Mishnah *Avot*. Recent research, however, has shown that ARN is actually a rather late aggadic work with no substantial connection to the Tosefta.

The Tosefta and R. Nehemiah

The Babylonian Talmud (Sanh. 86a) ascribes to R. Johanan the statement that "*Setam Tosefta Rabbi Neḥemiah*" – "Anonymous statements in the Tosefta are to be attributed to R. Nehemiah." Both the precise sense of this statement and its historical authenticity require clarification. The full text of this statement in the Babylonian Talmud runs as follows: "R. Johanan said: Anonymous statements in the Mishnah are to be attributed to R. Meir; anonymous statements in the Tosefta are to be attributed to R. Nehemiah; anonymous statements in the *Sifra* are to be attributed to R. Judah; anonymous statements in the *Sifre* are to be attributed to R. Simeon – and all of them represent the views of R. Akiva." The first element in this statement is almost certainly the literary and historical kernel of this tradition, since it is the topic of a controversy between R. Johanan and R. Simeon ben Lakish in the Jerusalem Talmud (Yev. 4:11, 6b): "R. Johanan said: Any place where [Rabbi] taught an anonymous Mishnah, that [anonymous Mishnah] is [presumed to represent] the majority position, until one receives explicit information from one's teacher [to the contrary]; R. Simeon ben Lakish said: Any anonymous Mishnah is [presumed to represent the position] of R. Meir, until one receives explicit information from one's teacher [to the contrary]." On the one hand, the Jerusalem Talmud ascribes the view that anonymous statements in the Mishnah are R. Meir to R. Simeon ben Lakish, and not to R. Johanan. On the other hand the Jerusalem Talmud goes on to state that "R. Simeon ben Lakish does not actually disagree with R. Johanan; he just observed that most anonymous *mishnayot* happen to reflect the view of R. Meir." It seems fairly clear that the primary intent of R. Johanan's statement in the Jerusalem Talmud was not historical, but rather legal. It asserts that one may presume that an anonymous Mishnah reflects the position of the majority of sages, and hence is to be assumed to reflect the normative *halakhah*. On the basis of this understanding R. Johanan's words were summarized and transmitted in the Babylonian Talmud (cf. the list in the margin of Shab. 46a) in the following form: "R. Johanan said: The *halakhah* is in accordance with an anonymous Mishnah." Given this interpretation we may presume that the final comment of the Jerusalem Talmud represents a (perhaps somewhat artificial) conflation of the positions of these two sages: R. Simeon ben Lakish is understood to have made an empirical observation concern-

ing the provenance of most anonymous *mishnayot*, while R. Johanan has asserted a most significant halakhic determination – that anonymous *mishnayot* are to be accepted as normative *halakhah*, unless evidence is brought to the contrary. In the Babylonian Talmud this complex tradition was summarized and transmitted in the name of R. Johanan as follows: "Anonymous statements in the Mishnah are to be attributed to R. Meir – [but they do not reflect the individual opinions of R. Meir, but rather] represent the views of R. Akiva." The tradition in the Babylonian Talmud has been further expanded to include the other canonical tannaitic works familiar to and accepted by the Babylonian Talmud: *Sifra*, *Sifre*, and Tosefta (for the relation of these works to the extant tannaitic collections known by these names, see above). It is likely that the primary intention of this expanded tradition is to extend R. Johanan's halakhic judgment concerning the presumed authority of anonymous traditions found in the Mishnah, to anonymous traditions found in these other works, by ascribing them to other well-known disciples of R. Akiva, who are all presumed to have transmitted their master's views. On the other hand, the historical reliability and significance of the ascription of anonymous passages in the Tosefta to R. Nehemiah remain highly questionable.

Nevertheless, on the basis of this relatively late Babylonian tradition, some scholars have posited the existence of a proto-Tosefta already in the days of R. Akiva and his students. There is, however, no direct evidence for the existence of such a work in this early period. Moreover, the terms *tosefet*, *tosefta*, *baraita* appear only in the amoraic literary stratum of talmudic literature, after the acceptance and dissemination of the Mishnah of R. Judah ha-Nasi. Neither these terms nor any other comparable terms are mentioned anywhere in tannaitic literature. The phenomenon of multiple literary levels within the Mishnah, and the habit of later *tannaim* to "add" comments to the traditions which they received from their teachers, should not be confused with the distinction between an accepted and official canon of select and authoritative traditions (e.g., the Mishnah of R. Judah ha-Nasi) and an extra-canonical "supplementary" tradition (*tosefet*, *baraita*), or collection of traditions (Tosefta).

Editions and Commentaries

The Tosefta was first published together with the *halakhot* of Isaac Alfasi in Venice in 1521, and it can still be found at the end of most standard editions of the Babylonian Talmud after the *halakhot* of Alfasi. There are no commentaries to the Tosefta which derive from the early period of the **rishonim*, though many passages from the Tosefta are cited and explained in their other commentaries, e.g., Maimonides' commentary to the Mishnah, and especially the commentary of R. Samson ben Abraham to Mishnah *Tohorot*. During the period of the **aḥaronim* a number of commentaries were written, the most important of which is the comprehensive commentary covering all of the Tosefta, *Ḥasdei David*, composed by R. David Pardo in the 18th century. Two volumes (covering four orders of the Tosefta) were published in his lifetime – *Zera'im-Nashim* (Leghorn, 1777) and *Nezikin* (Leghorn, 1790). A third volume, containing his commentary to *Kodashim*, was published in Jerusalem in 1890, and the final volumes, containing his most important commentary to *Tohorot*, were only rediscovered and published in Jerusalem in 1970. The commentaries and emendations of Elijah Gaon of Vilna to Tosefta *Tohorot* are also very important. Toward the end of the 19th century, M.S. Zuckermandel published an edition (1881) of the Tosefta, based mainly on the Erfurt manuscript (which ends in *Zevaḥim*, the rest being based on the Vienna manuscript), and including variant readings. While this work constituted a great step forward at the time, it suffers from two problems. First, the transcription of the Erfurt manuscript is not always accurate. More significantly, however, is the choice of the Erfurt manuscript as the basis of his edition. The Erfurt manuscript of the Tosefta does not always transmit the text of the Tosefta in its original form; rather it often reflects medieval emendations of the Tosefta, in order to bring its text in line with parallel versions of a tradition found in the Babylonian Talmud, the Jerusalem Talmud, or even the *Midrashei Halakhah*. A new critical edition of the Tosefta based on the superior Vienna manuscript, including variae lectiones, notes, and a detailed commentary (*Tosefta ki-Feshuta*) – the pinnacle of modern Tosefta studies – covering over half the Tosefta was published by S. Lieberman (*Zera'im*, 1955; *Mo'ed*, 1961–2; *Nashim*, 1967, 1973; the first half of *Nezikin*, 1988). The complete texts of all known manuscripts and *Genizah* fragments of the Tosefta are available on the website of Bar-Ilan University (http://www.biu.ac.il/JS/tosefta/).

[Stephen G. Wald (2nd ed.)]

TOUATI, CHARLES (1925–2003), French rabbi, teacher. The scion of a rabbinical family, he studied at the University of Algiers, then in Paris at the Sorbonne, the École pratique des hautes études, the École Rabbinique, and later at Dropsie College, Philadelphia, under Solomon Zeitlin. He was for a few months the rabbi of the Ohel Avraham Community in Paris; later professor at the École Rabbinique until the beginning of the 1980s and at the École pratique des hautes études, section

des sciences religieuses (1967–71), as a "chargé de conferences," 1972–93, and as a "directeur d'études"; director of the *Revue des études juives* with Gérard Nahon (1981–1996). He was honored with the title of chief rabbi ("grand rabbin") but was hindered by poor health from succeeding Jacob *Kaplan as chief rabbi of France. A specialist on medieval Jewish theology and philosophy as well as talmudic literature, he is mainly known for his annotated translation of Gersonides, *Les Guerres du Seigneur. Livres III et IV* (1968); for the first thorough and momentous synthesis on *La pensée théologique et philosophique de Gersonide* (1973, repr. 1992); and for his French translation of the *Kuzari* of Judah ha-Levi (1994). Some of his articles were collected in *Prophètes, talmudistes, philosophes* (1990).

[Jean-Pierre Rothschild (2nd ed.)]

TOUL, city in the department Meurthe-et-Moselle in N.E. France. The earliest reference to the existence of Jews there is *The Life of St. Mansuy*, written in 974, in which the author mentions a Jewish physician in Toul. The tosafists *Eliezer of Toul, who died before 1234, and his brother Abraham, disciple of Isaac the Elder of Dampierre, lived in the town. From the Middle Ages until the French Revolution there is no evidence of Jews living there legally, although some Jews were in the region during various periods, and in 1711 a few even settled in the town temporarily. In 1791 an important community was formed and in 1808 one of its members was a delegate to the Napoleonic *Sanhedrin. The synagogue was built in 1819, and for a time after 1850, Toul was the seat of a rabbinate. In 1905 there were not more than 40–50 Jews in the community. In 1970 there were 15 Jews residing in the city.

TOULON, port in the Var department, S.E. France. In the second half of the 13th century the Jews made up an appreciable proportion of the population of Toulon: at a general municipal assembly held in 1285, 11 of the 155 participants were Jews. They shared the same rights and duties as the other citizens. The community came to a brutal end on the night of April 12/13, 1348 (Palm Sunday), when the Jewish street, "Carriera de la Juteria," was attacked, the houses pillaged, and 40 Jews slain; this attack was probably related to the *Black Death persecutions. Faced with an enquiry set up by a judge from Hyères, the assailants fled; however, they were soon pardoned. After this date, in addition to a few converted Jews, there were in Toulon only individual Jews who stayed for short periods; one such man was Vitalis of Marseilles, who was engaged as a town physician in 1440. The medieval Jewish street corresponded largely to the present Rue des Tombades. In 1760 the merchants' guild of Toulon successfully prevented the arrival of Jewish merchants. On being granted rights of citizenship, a Jew from *Avignon requested permission to settle in Toulon. The community formed in the 19th century remained small. At the beginning of World War II around 50 Jewish families lived in the town, two-thirds of them refugees from *Alsace. In 1971 there were some 2,000 Jews in Toulon, the majority being from North Africa. An estimated 2,000 Jewish families lived there at the outset of the 21st century. In 2004 the community center with its synagogue was firebombed in an antisemitic incident.

[Bernhard Blumenkranz]

TOULOUSE (Heb. טולושה), capital of the department of Haute-Garonne, in southern France. According to a legendary tradition, there were Jews in Toulouse as early as the eighth century, when as a result of their disloyalty to the ruling Franks, they were ordered to choose a member of the community every year to be publicly slapped in the face on Good Friday. This tradition also mentions a council held in Toulouse in 883 in the presence of the Jews to discuss their complaint against this custom. There is definite evidence of this practice, however, from 1020 onward. During the late 11th and early 12th centuries, the custom was waived on payment of a high fee. The Jews were also compelled to provide the cathedral with 44 pounds of wax and the bishop with incense. The Jewish quarter, whose center was the Rue Juzaygas or Joutx-Aigues, lay around the square of the Carmelites. The Jewish cemetery was at first situated near the Château Narbonnais. When the king took possession of it in 1281, the Jews acquired a field near the Porte de Montoulieu, on the site of the present Grand Rond, for a new cemetery. Communal institutions in this period included a hospital, which was destroyed in the war of the *Albigenses. The importance of the Jewish population can be deduced from the number of houses owned by the Jews. Commerce and moneylending are mentioned as the principal occupations of the Jews in Toulouse in this period. In 1209 they were excluded from holding public office, though they remained free to dispose of their real estate and often possessed the rights of ownership over land held by individuals or religious institutions, particularly the Templars. *Alphonse of Poitiers imposed a large tax on the Jews of Toulouse, as well as on the other Jews under his authority, its payment being enforced by coercive measures. Toward the end of the 13th century, there was debate between the royal officers and the count over the judicial and fiscal jurisdiction of many Jews.

At the time of the expulsion of the Jews from the kingdom of France in 1306, the community of Toulouse was still numerous and economically important, as shown by the number and value of the confiscated properties mentioned in the

extant auction documents. They included several "operatoria," perhaps workshops or commercial premises. The new community formed after the readmission of the Jews in 1315 also appears to have been of considerable size, and even attracted Jews from other localities who had not been among the exiles of 1306. There is mention of Baruch "the Teuton," for example, who came from Germany. In 1320, the Jews in Toulouse became victims of the *Pastoureaux persecutions, despite efforts by government authorities to protect them; the houses in the Jewish quarter were looted, and their inhabitants were massacred if they refused immediate baptism. The *Inquisition took precautions that these forced converts should not return to Judaism. As a result, the community practically ceased to exist well before the next expulsion of the Jews of the kingdom in 1322.

A new community was organized in Toulouse after the readmission of Jews in 1359. Only about 15 families settled in the city. Although they established themselves in the former Jewish quarter of Joutx-Aigues, their situation and economic activity had radically changed. They no longer owned land, rented the houses which they occupied, and generally limited themselves to moneylending. They were taken by surprise by the publication of the "final" expulsion order of 1394. A short time earlier, butchers' regulations had laid down the procedure for ritual slaughter with the assumption that the community would remain in Toulouse for a long time. There is no definite information available on medieval Jewish scholars in Toulouse.

During the 17th century a group of *Marranos attempted to establish themselves in Toulouse. They were tried by an Inquisition tribunal in 1685 and received severe penalties. From the end of the century, Jewish merchants, mainly from *Comtat Venaissin, were authorized to trade in Toulouse four times a year. Beginning in the second half of the 18th century, several of them endeavored to settle permanently in the city. There were about 80 Marranos in 1790. After the Reign of Terror, the municipality allowed them to use a former church (the Church of the Penitents) as a synagogue. They do not appear to have taken possession of it, however, because in 1806, they were still without a synagogue. At about that time, they obtained a concession for exclusive use of the cemetery, which until the Revolution had been used for the burial of both Protestants and Jews. There were then 105 Jews in Toulouse, and their numbers increased very slowly. However, from the beginning of the 20th century, many Jewish students from Poland and the Balkans were attracted by the opportunity to study at the University of Toulouse.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

Holocaust Period

With the flight of population from the northern zone in June 1940 after the Nazi defeat of France, many Jews settled in Toulouse. As a result, it rapidly became one of the principal centers for Jewish life and resistance in the unoccupied zone. Toulouse was in effect the capital of the southwest of France. Here a considerable number of Jews found refuge and a range of important organizations was set up, including children's homes and agricultural schools. Toulouse was also an important stopover for Jews seeking to escape to Spain. The Organisation Juive de Combat was created at Toulouse and its leaders would often meet there. In August 1942, when 1,525 foreign-born Jews from the region were "regrouped" for deportation, the archbishop of Toulouse, Msgr. Saliège, issued a vigorous protest, which was read publicly in all the churches of the diocese. Following the German occupation of all of France (November 1942), the area around Toulouse saw increased Jewish resistance, including acts of sabotage, the formation of fighting groups, the hiding of children and their transportation to safe havens, and stepped-up efforts to ferry Jews across the border to Spain en route to Palestine or England. Many men, women, and children fell victim to the Nazis and their French collaborators, however, and were tortured to death or deported to Auschwitz.

Contemporary Jewry

Many Holocaust survivors chose to remain in the city after the liberation. As a result, the postwar community gained greater importance than it had enjoyed prior to the war. In 1960 there were over 3,000 members of the community. Thanks largely to the arrival of Jews from North Africa, the Toulouse community became one of the most important Jewish centers in France. In 1987, it had a Jewish population of 12,000. The Jews of Toulouse maintain a full range of communal institutions, including three synagogues, kosher butchers and restaurants, and a community center. Toulouse is also the center for the regional consistory.

TOURAINE, former province of W. central France whose territory corresponded to the present department of Indre-et-Loire. The earliest information on the presence of Jews in Touraine is from about 570. Gregory of Tours mentions their presence in Civray and in Tours itself. Jews were subsequently to be found in several places in Touraine, more specifically in Loches, Amboise, and Chinon. During the second half of the 11th century, Philip I, king of France, held several rights in Touraine, including the right to one half of the tenure paid by the Jews of Tours. An agreement of 1215 between the Abbey of St. Martin of Tours and the squire of Loches stipulated that not a single Jew would be authorized to reside in the locality of Longueil. The common law of Touraine of

1246 declared that upon his request a Jew of the feudal lord or the king would be judged by that lord or the king because they were the actual owners of his belongings. In an entry for the year 1306 on the subject of the expulsion of the Jews from France, the "Abridged Chronicle of Touraine" relates that the Jews left Touraine on August 26. They returned in 1315, and in 1321 were among the first victims of the accusation that the Jews had poisoned the wells in collaboration with the lepers. It appears that with the next return of the Jews to France in 1359, none settled in Touraine.

TOUREL, JENNIE (1910–1973), mezzo-soprano. Born in Montreal, Canada, Jennie Tourel was educated in Russia, Switzerland, and France, where she studied with Anna El-Tour, whose name she transposed to form her own stage name. In 1933 she began her career in the Opéra Comique, Paris, and in 1940 settled in the United States. She made her U.S. debut with the New York Philharmonic under Toscanini. In 1944 she joined the Metropolitan Opera. Her best-known non-operatic performance was the rendition of the vocal solo in Leonard *Bernstein's *Jeremiah* symphony at its premiere performance (1944); she also became known through appearances in concerts and for recording. She gave annual courses at the Rubin Academy of Music, Jerusalem.

TOURO, JUDAH (1775–1854), U.S. philanthropist. Born in Newport, Rhode Island, to Isaac Touro (d. 1873), the *ḥazzan* of the Yeshuat Israel synagogue, and his wife Reyna, sister of the merchant Moses Michael Hays, Touro had a troubled childhood. The Revolutionary War shattered the prosperity and unity of the Jewish community of Newport. Isaac Touro, a Tory, went with the British to New York City where he lived on a military dole and, in 1782, to Jamaica, British West Indies, where he officiated for a brief time until his death the following year. Touro's widowed mother returned to New England with her four children and took up residence with her wealthy brother. Judah was trained in his uncle's mercantile business, and undertook a number of voyages in his uncle's interest.

In 1801 Touro left Boston for New Orleans. Legend attributes this departure to his uncle's refusal to permit him to marry a cousin, but there is no sure evidence of this. Touro's choice of New Orleans as a center of commercial operations was a fortunate one. Still in Spanish hands at the time of his arrival, the port was soon transferred to France and then sold by Napoleon to the United States as part of the Louisiana Purchase. The population and trade of the city grew in geometric proportions, and Touro and other early merchants prospered greatly. Touro served as a civilian volunteer in the American army at the Battle of New Orleans in 1815 and was severely wounded. His life was saved by his close friend, the Virginia merchant Rezin Shepherd, who was ultimately an executor and residual legatee of Touro's estate. After his recovery Touro took no part in the civic or social life of New Orleans, in contradistinction to an active interest during prior years; some reports indicate that the wound, which left him with a limp and damaged his sexual organs, was the reason for his withdrawal from social relations with any but a few close friends. His business activities continued unabated, however, and his holdings increased. He was a commission merchant who accepted shipments on consignment from firms in the North, which were then sold for the benefit of the owners. He also invested in steamships and other vessels. At no time, however, was he a major mercantile power in New Orleans. He accumulated his fortune through prudent investments in real estate and through his modest standard of living. He said to Rabbi Isaac *Leeser that he had "saved a fortune by strict economy, while others had spent one by their liberal expenditures." He was not a speculator like many of his New Orleans colleagues, and, as a result, easily weathered the periodic panics and depressions which drove many other New Orleans business houses into bankruptcy.

Touro, a reticent, shy, and even peculiar man, took no interest in Jewish matters until late in life; he made only a modest contribution to the first New Orleans congregation, which was founded in 1827, but did not join as a member. The first person with a sense of Jewish responsibility to penetrate his shell of indifference and reserve was Gershom Kursheedt, who arrived in New Orleans in 1839 or 1840, and ultimately succeeded in arousing Touro's feelings of Jewish loyalty. He, and possibly Rezin Shepherd, persuaded Touro to purchase an old Episcopal church for the benefit of a new congregation which Kursheedt organized, Nefutzoth Yehudah, and to pay for its conversion into a synagogue. Kursheedt was also responsible for Touro's bequests, in his famous will, to a host of Jewish institutions. Among these were $108,000 to congregations and societies in New Orleans, and to the Jewish hospital which Touro had founded and which has ever since carried his name; $10,000 for the upkeep of the synagogue and cemetery in Newport, his old home; $60,000 for the relief of the poor in Ereẓ Israel to be used at the discretion of Sir Moses Montefiore; a total of $143,000 to congregations, schools, and other Jewish institutions in 17 cities throughout the land. Gifts to non-Jewish institutions in New Orleans, Boston, and Newport totaled $153,000. No American Jew had ever given so much to so many agencies and causes; nor had any non-Jew done so much in such varied ways.

TOURO COLLEGE, one of the largest institutions of higher and professional education under Jewish sponsorship. Touro has grown from a small liberal arts college consisting of 35

freshmen in 1971, situated in midtown Manhattan, to an international university of over 23,000 students.

It was founded and was under the leadership of Dr. Bernard Lander. The guiding mission of the school can be noted from its being named for Judah and Isaac Touro, who both exemplified in colonial and early America a love for the democratic ethos and their Jewish heritage.

Touro's vision is to serve the larger community in keeping with the Judaic commitment to social justice, intellectual pursuit, and service to humanity.

Under Dr. Lander's guidance Touro's programs had a two-pronged thrust. One is to serve the Jewish community by developing a cadre of committed and concerned Jewish youth in the United States by giving them a higher and professional education with a curriculum based on Jewish values. Secondly, Touro's programs also serve the educational needs of the total society, non-sectarian as well as Jewish. One of Touro's mottos has been "where there is a need, Touro reaches out to help." Touro does not wait for the student to come to the school but brings the school to the student.

Touro College has satellites on three continents. In the United States Touro has several campuses in three states (New York, California, and Nevada), with another planned for Florida in 2006.

Based in New York are separate programs for men and women that meet on alternate days. The Lander College of Arts and Sciences offers a traditional yeshivah program combined with a full secular college curriculum, which is offered at the Men's Division in Kew Garden Hills, Queens. A Men's Division enabling yeshivah students from other institutions desiring to study for a college degree in secular studies was opened in the Flatbush section of Brooklyn in 1977. A Women's Division was initiated in Manhattan in 1974 with a dual Judaic and secular studies curriculum. A parallel Women's Division was opened in Flatbush in 1979. These programs offer broad appeal to Orthodox Jews and allow them to attend their respective religious institutions and earn a higher or professional degree simultaneously.

The Touro School of Lifelong Education (a mentoring program opened in 1988) provides an opportunity for ḥasidic and yeshivah students to be the first in their families to earn a higher and/or professional degree. An affiliate Machon LaParnassa allows students to earn an associates degree. A similar undergraduate program opened in Los Angeles in 2005 and one in Miami is scheduled for 2006.

Touro also has an affiliate full time yeshivah program, Ohr Hachaim (1984), and a yeshivah high school for boys, Yesodai Yeshurun in Queens (1994).

The Graduate School of Jewish Studies was opened in 1979 offering a master's degree.

Touro has opened several professional divisions. A division of Health Sciences was opened in 1972 offering a physicians assistant (PA) program, and added a medical records administration program in 1980. The Touro Center for Bio-Medical Education in Long Island offers a MS-MD degree in conjunction with the Technion Medical School in Israel (1983). A physical therapy (PT) program was added in 1984 and an occupational therapy (OT) program in 1996. A graduate program in speech language pathology began in 2000.

In 1997 Touro opened a Touro University College of Osteopathic Medicine, currently located in Vallejo, California, with a branch campus in Las Vegas in 2004. A similar school is planned for 2006 in New York State.

A school of nursing opened in 2005 in the Boro Park section of Brooklyn creating the opportunity for ḥasidic women to attain a career.

The Jacob D. Fuchsberg Law School was founded as a division of Touro in 1980 and is situated in Huntington, Long Island. In addition to the general law curriculum it has an Institute of Jewish Law.

Touro has also been a leader in innovative pedagogy establishing Touro University International based in Las Alamitos, California in 1999, offering graduate degrees in business over the Internet. The Graduate School of Education and Technology also offers many online courses as do the undergraduate departments in the Lander colleges.

Touro's international programs teach Jewish studies and business courses. Campus sites include Moscow, Berlin, and Jerusalem. Programs are planned for other sites, such as Rome and Budapest.

The Touro campus in Givat Shaul Jerusalem offers a program for Americans in Israel and an affiliate Machon Lander for Israelis. There is also a division of the Touro Graduate School for Jewish Studies in Israel.

The School for General Studies (1974) and the Division of New Americans (1985) began particularly to aid many refugees coming from the former Soviet Union. The latter division was renamed the School of Career and Applied Studies and was eventually merged with the School of General Studies. These divisions, which are community based and have several campuses in New York, have over 6,000 students from all ethnic backgrounds matriculating for the associate and bachelor's degrees.

[Ted Lauer (2nd ed.)]

TOUROFF, NISSAN (1877–1953), educator and author. Born in Nesvizh near Minsk, Touroff became principal of the Girls School in Jaffa in 1907 and later principal of the Levinsky Teachers Seminary for Girls. During World War I he headed the important Education Committee (Va'ad ha-Ḥinnukh) which was responsible for Jewish education in Palestine. He also edited, briefly, the pedagogical journal *Ha-Ḥinnukh* and the daily *Haaretz*. He immigrated to the United States in 1919 and worked in an editorial capacity for the Stybel Publishing Company. He was one of the founders of the Hebrew Teachers College (now Hebrew College) of Boston in 1921 and its first dean. He also founded the educational magazine *Shevilei ha-Ḥinnukh* in 1925. In 1926 he left Boston and became professor of education and Hebrew literature at the Jewish Institute of Religion in New York (1926–32). Touroff's major themes in

education were nationalism and Zionism, Hebrew language and literature, the utilization of modern psychological insights in teaching, and the attention to aesthetics in the life of the school. His main Hebrew works in the fields of education and psychology include *Ha-Psychologyah be-Yameinu* (2 vols., 1939–41), *Be-Yode'im u-ve-Lo Yode'im* (1946), a collection of essays on problems of culture and education under the title *Ha'arakhot* (1947), and *Be'ayot ha-Hitabbedut* (1953).

TOURS, city in the Indre-et-Loire department, central France. Jewish settlement in Tours dates from at least 570, one of the earliest recorded indications of Jewish life in France. In 1171 a notable of the community of Tours intervened in favor of the Jews of *Blois, who were persecuted following an accusation of ritual murder. A council held in Tours in 1236 forbade the Crusaders – as well as every other Christian – to conspire against the lives, health, and property of the Jews. Those found guilty of such a crime would be expelled from the ranks of the Crusaders. A subsequent Council of Tours (1239), however, excluded the Jews from testifying in lawsuits. During this period, Jews lived in a quarter known as the "Juiverie," which was situated between the old bridge and the Rue de la Caserne and consisted of at least 20 houses. They owned a synagogue and leased from the archbishop a plot of land in the Saint-Vincent parish (near the present Rue du Cygne and de Lucé) to use as a cemetery. The Jews of Tours were authorized to bury the Jewish dead, not only of their community, but of any other locality. In addition, a plot of agricultural land and a vineyard were worked by Jews. Expelled from France along with other Jews in 1306, individual Jews from Tours returned in 1315. They also suffered in the persecutions of 1321, which were later justified as punishment for their supposed collusion with the lepers. The community seems to have declined precipitously afterwards, for in 1359 the municipality ordered the final destruction of the Jewish cemetery. A number of scholars are known to have lived in Tours during the Middle Ages: an individual named Solomon corresponded with *Rashi; someone named David lived there toward the middle of the 13th century, as did a Joseph b. Elijah toward the close of the 13th century. Their works, however, have not survived. Before World War II there were fewer than 100 Jews in Tours. There is little information on the community during the Holocaust and in the immediate postwar period. In the early 1970s, as a result of the arrival of North African Jews, there were about 550 Jews. In the early 21st century, the community maintained a synagogue, a community center, and a *talmud torah*.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

°**TOUSSENEL, ALPHONSE** (1803–1885), French antisemitic publicist and disciple of *Fourier. From 1839 to 1843 Toussenel coedited *Phalange* and later participated in the foundation of the *Démocratie pacifique*, both Fourierist publications. His two-volume work, *Les Juifs, rois de l'époque; histoire de la féodalité financière*, was one of the most resounding attacks on the Jews published in France (1845) before the appearance of *Drumont's *La France Juive*. An even more virulent second edition of *Les Juifs*… was published in 1847 and reprinted in 1886 and 1888. To some degree Toussenel influenced Drumont. He also helped to inspire a conservative, rural antisemitism, which later found its political expression in *L'*Action Française*. Toussenel did not make a formal attack on the Jewish people as such, but tried rather to show what he believed was commonly meant by "Jew". He wrote, "I wish to point out to the reader that this word will generally be used here in the popular sense of Jew: banker, usurer."

Toussenel's antisemitism was not limited to his conception of a Jew-dominated 19th century. Reaching back into history, he affirmed his sympathy for the persecutions inflicted upon the Jews by the Romans, Christians, and Muslims. Adding another dimension to his antisemitism, Toussenel also declared, "Who says Jew says Protestant." Accordingly, the Protestant nations of Europe – the English, the Dutch, and the Swiss, in particular – were, like the Jews, "merchants and birds of prey." Toussenel's embittered antisemitic, anti-foreign, and anti-Protestant tirades later provided ample inspiration for the anti-Dreyfusards.

°**TOVEY, D'BLOISSIERS** (1692–1745), English clergyman. He wrote the first comprehensive history of the Jews of England, *Anglia Judaica or the History and Antiquities of the Jews in England, collected from all our historians, both printed and manuscript, as also from the records in the Tower, and other publick repositories* (1738). Though concentrating on the medieval period, the work contains a section on the resettlement and on the English Jews of his own day. It shows appreciation of the magnitude of royal exploitation of the Jews in the Middle Ages and a healthy skepticism of ritual murder charges. It is largely based on the *Short Demurrer*… (1656) of William *Prynne. Tovey estimated that in 1738 there were about 6,000 Jews in England and noted that, at the time, no settled Jewish communities existed outside of London.

TOWNE, CHARLES (1781–1854), English painter of animals and landscapes. Born in London, Towne's work such as *The Boat Builders* (1811) and *Cattle Fair* (1826) resemble the productions of the Norwich School and show a strong feeling for English country life of the period. From the year 1806 Towne exhibited at the Royal Academy. Another English painter of animals, who was not Jewish, was also named Charles Towne (or Town). He lived from 1763 to 1840, and is known as "Charles Towner the Elder" to distinguish him from this artist.

TOZ (abbr. from the initials of **Towarzystwo Ochrony Zdrowia Ludnośći Źydowskiej**, "Society for the Safeguarding of the Health of the Jewish Population"), Jewish welfare organization officially founded in Poland in 1921. It was connected with the *OZE society, established in St. Petersburg in 1912, which engaged in medical activities in the former territories of Russia and was later integrated into a common framework in Poland. TOZ began activities in a few regions only, but from 1923 it encompassed all areas in the state. World War I and its consequences, especially in the eastern regions, where the Jews had also suffered from pogroms, brought the society up against a number of urgent problems. It had to combat the contagious diseases which developed into epidemics and were responsible for a high death rate among the Jewish population in general and children in particular. On the other hand, the hostilities along the borders until the Peace of Riga (1921) brought chaos to the state and municipal medical services and prevented the impoverished Jewish masses from benefiting from the sick funds for organized workers.

Although TOZ considered its principal role in the sphere of preventive medicine, current needs compelled it to concentrate its main efforts in preventing the spread of skin and eye diseases (ringworm and trachoma) and tuberculosis by establishing clinics, X-ray departments, pharmacies, convalescent homes, etc. TOZ published three periodicals: *Folksgezund* (for the masses), *Gezund* (for schoolchildren), and *Sotsiale Meditisin* (a scientific journal). Among its many services the psycho-hygienic assistance which TOZ offered in treating the mentally retarded or those with physical afflictions was of great importance.

In addition to its institutions, TOZ also supported numbers of Jewish hospitals with its advisory services and assistance funds. In 1939 it was responsible for over 400 medical and sanitary institutions in 50 towns. Annual membership fees were paid by 15,000 supporters, and about 1,000 people, including doctors, nurses, dentists, teachers, and medical assistants, were on its employment roll. Additional incomes were derived from support by the *American Jewish Joint Distribution Committee and the funds raised by the OZE abroad. Throughout the existence of TOZ, its central committee was presided over by the physician and public worker Gershon *Lewin, formerly director of the Jewish hospital in Warsaw. Leon Wulman also played an outstanding role in the activities of the organization in his capacity of general secretary. During World War II the institutions of TOZ attempted to assist victims of famine and epidemics until 1942, when all its branches were closed down on the order of the German occupation authorities in Poland.

[Moshe Landau]

TRABOT (**Trabotto**), Italian family of French origin which flourished from the 14th to the 17th centuries. The name is most probably derived from Trévoux, once Trévou, a town located in Burgundy, from where the Jews were definitely expelled in 1488. The most important members of the family are PEREZ TRABOT (14th–15th centuries), also known as Zarfati or Catalani which seems to indicate that he went from France to Catalonia in 1395, then to Italy. He composed *Makrei Dardekei*, a Hebrew–French and Hebrew–Catalan dictionary (Naples, 1488). JEHIEL TRABOT, rabbi at Pesaro in the early 16th century, was a grandson of R. Joseph *Colon, whose own father was known as Solomon Trabot. Jehiel is mentioned in *Naḥalat Ya'akov*, Jacob Alpron's collection of responsa. His son AZRIEL (d. 1569), rabbi in Florence and Ascoli in the second half of the 16th century, was noted for his responsa. Following the bull of February 1569 of Pope *Pius V, decreeing that all Jews in the Papal States except Rome and Ancona should be driven out, the congregation of Ascoli, with Azriel at its head, found refuge at Pesaro. There Azriel was entrusted with the valuable Ark. He died in Pesaro in July of the same year. His son JEHIEL was rabbi at Pesaro and Ferrara. AZRIEL, son of Jehiel, was rabbi of Ascoli at the beginning of the 17th century. He composed a list of rabbis (cf. REJ, 4 (1882), 208–25) and several responsa. NETHANEL BEN BENJAMIN BEN AZRIEL (1576–1653), was rabbi of Modena. Several of his rulings are extant. Especially important is his responsum on reform of music in the synagogue. In 1711, RAFAEL TRABOTTO was given permission by the Austrian authorities to engage in moneylending in Mantua.

TRACHONITIS, a province of the area of *Bashan E. of the River Jordan and N. of the River Yarmuk. It was one of the three provinces into which the area was divided by the Ptolemies, the other two being Gaulonitis and Batanaea. As a result the Targum renders the name Argob as a region of Bashan and as "the province of Trachonitis" (*pelakh Terakhona*, cf. Deut. 3:4). The emperor Augustus awarded it to Herod, and it remained with his heirs until Agrippa (II; c. 100). In 106 C.E., together with all Bashan, it was annexed to the province of Arabia, the capital of which was Boẓrah and it is therefore called "Trachonitis of Boẓrah" in the Tosefta (see below). During Herod's stay in Rome, the inhabitants of Trachonitis

rebelled against him, and his commander *Zamaris cleared it of marauders; it is therefore also referred to as "Trachonitis of Zamaris" (*Terakhona de-Zimra*). For halakhic purposes Trachonitis was regarded as part of the territory of Ereẓ Israel, and therefore, the laws appertaining to the Sabbatical Year applied to it (Tosef., Shev. 4:11).

TRACHTENBERG, JOSHUA (1904–1959), U.S. Reform rabbi and scholar. Trachtenberg, born in London, was taken to the U.S. in 1907. He received rabbinic ordination at Hebrew Union College (1936) and served Congregation Covenant of Peace, Easton, Pennsylvania (1930–51), and Bergen County Reform Temple, Teaneck, New Jersey (1953–59). During 1951–52 he worked on a survey of religious conditions in Israel, sponsored by the Central Conference of American Rabbis and the Union of American Hebrew Congregations. His report, displaying great depth of feeling, appeared in the *Year Book* (1952) of the Central Conference of American Rabbis. Trachtenberg was active both in the fields of scholarship and community work. In Easton he was president of the Jewish Community Council (1939–46); an ardent Zionist, he was identified with the Labor Zionist movement. His scholarly work was conducted despite the handicap of a serious eye defect. *Jewish Magic and Superstition* (1939, repr. 1961) was his Ph.D. dissertation at Columbia University. An outgrowth of this study was *The Devil and the Jews* (1943, repr. 1966), which examines the relationship of the medieval conception of antisemitism to the modern variety. *Consider the Years* (1944) is a history of the Easton Jewish community.

TRADE AND COMMERCE.

In the Bible

The geopolitical location of Palestine, set as it is in the heart of the Fertile Crescent, made it a pivotal link in the commercial activities carried on by land and sea between, on the one hand, Egypt and the Arabian Peninsula in the south and, on the other, Phoenicia, Syria, Anatolia, and Mesopotamia in the north. Palestine also played a part in the maritime trade with the Mediterranean islands, as it did, too, in trade with the commercial centers on the Mediterranean littoral.

The special position enjoyed by Palestine among the ancient lands was due to the existence and activities of cities – harbor cities and others – which, being situated along the main arteries of communication, became important centers in the international and internal trade. The written sources in archaeological finds clearly show that trading was a favorite occupation by which a considerable proportion of the local population directly or indirectly earned a livelihood. A notable contribution to the development of economic relations in Palestine was made by the nomads who, roaming the border areas of the permanently populated regions and along the main highways, engaged in the transit trade (Gen. 37:25, 28).

Since it was poor in natural resources and raw materials, Palestine's own share in the export trade comprised agricultural products and other items, the production of which was associated with agriculture. Foreign sources (in particular those of Egypt, which imported the products of Palestine) and to some extent, too, the Bible, emphasize that Palestine sustained itself by exporting cereals and flour, oil and wine, as well as cosmetic and medicinal products extracted from plants (Gen. 43:11; Ezek. 27:17; Hos. 12:2) and, at a relatively later period, also ore and finished metal goods. In contrast to its limited exports the population of Palestine needed an unceasing stream of products, various luxury goods, and raw materials, such as timber, metal, and so on.

The destinations and composition of the commodities and the identity of the traders did not change with the conquest of Palestine by the Israelites. They did not actively participate in trade either because of the tribal structure of their autarchic society and economy or because access to the main arteries of commerce was obstructed by the autochthonous population. Thus the Bible contains no evidence of the pursuit of trade or finance (allied areas also in ancient times). Nor do the laws of the Torah make much reference to commerce, the exceptions being the laws enjoining just weights, measures, and balances (Lev. 19:36; Deut. 25:13ff.), and stringent warnings against exacting interest from Israelites, but these admonitions may reflect other spheres of economic activity and a later period when the land was being divided among the tribes. It is also probable that the sparse mention of trade is due in part to the negative attitude of the writers and redactors of the Bible and of prophetic circles to commerce and to the foreigners who engaged in it: "As the merchant [lit. Canaan] keeps balances of deceit, he loves to oppress" (Hos. 12:8). The expression "Canaanite" became a synonym for "a merchant" ("Who has devised this against Tyre, the crowning city, whose tradesmen are princes, whose merchants [Canaanites] are the honorable of the earth?" – Isa. 23:8; and see Prov. 31:24, et al.). Throughout the First Temple period (Isa. 23; Ezek. 27) and also in the early days of the Restoration (Neh. 13:16) their activities were considerable.

Israelite participation in international economic activities and commerce began with the inception of the United Kingdom. This participation was made possible by the establishment of a large kingdom whose needs were considerable and whose political ties were extensive. The control of lengthy sections of the important trade routes in Transjordan and in the coastal plain, along which commerce flowed, intensified the urge to profit from it. In the days of *David and particularly in those of *Solomon economic relations were developed with the kingdom of *Tyre, one of the most important economic powers at the time. To carry out its extensive construction projects both within and outside the confines of Jerusalem, Israel needed building materials, metal, and other commodities, which were supplied and transported to Jaffa by the Tyrians in exchange for agricultural products: "And we will cut whatever timber you need from Lebanon, and bring

it to you in rafts by sea to Jaffa, so that you may take it up to Jerusalem" (II Chron. 2:15 [16]; cf. I Kings 5:21ff.).

The chronicler of Solomon's activities lays great stress on the place occupied by the royal trade. Indeed, it seems that the monarchy in Israel exercised a monopoly in this economic sphere. Solomon's Tyrian allies undoubtedly benefited from the Israelite control of the arteries of communication along which flowed the trade with southern Arabia and Egypt, for Solomon could direct the caravans to such destinations in his own kingdom and in friendly countries as he wished. Thus he profited not only from barter with Tyre but also from the international transit trade. Moreover, the royal commercial apparatus in Israel was able to initiate independent trading activities. According to the sources, this independent trade was apparently maritime commerce in which Solomon's ships, built with Tyrian help in the port of *Ezion-Geber, took part. Yet these very sources make it possible for the opposite conclusion to be drawn, for it is probable that the Tyrians insisted on being made partners in such ventures in exchange for their technical assistance and for the participation of their men in these expeditions: "King Solomon built a fleet of ships at Ezion-Geber, which is near Eloth on the shore of the Red Sea, in the land of Edom. And Hiram sent with the fleet his servants, seamen who were familiar with the sea, together with the servants of Solomon" (I Kings 9:26–27; II Chron. 8:17–18). The ships sailed to, and traded with, the African and Arabian coasts (see *Ophir). On these voyages they brought with them precious metals and precious stones, as well as rare kinds of timber: "And they went to Ophir, and brought from there gold, to the amount of four hundred and twenty talents; and they brought it to King Solomon" (I Kings 9:28; II Chron. 8:18). "The fleet of Hiram, which brought gold from Ophir, brought from Ophir a very great amount of almug wood and precious stones" (I Kings 10:11; II Chron. 9:10). According to one theory, Israelite-Tyrian ships also voyaged in the Mediterranean Sea as far as Spain (if *Tarshish is explained as a place name). Another view however maintains that "the fleet of ships of Tarshish" was a type of ship suitable for transporting metal, and hence alludes to the nature of the Israelite exports and the goods received in exchange: "For the king had a fleet of ships of Tarshish at sea with the fleet of Hiram. Once every three years the fleet of ships of Tarshish used to come bringing gold, silver, ivory, apes, and peacocks" (I Kings 10:22; II Chron. 9:21).

Barter also occupied a place in Solomon's economic activities: the royal merchants purchased horses from *Que and chariots from Egypt, and marketed them as "a finished product" to the kings of Syria: "And Solomon's import of horses was from Egypt and Keveh [Que], and the king's traders received them from Keveh at a price. A chariot could be imported from Egypt for six hundred shekels of silver, and a horse for a hundred and fifty; and so through the king's traders they were exported to all the kings of the Hittites, and for the kings of Aram" (I Kings 10:28–29; II Chron. 9:28). The enigmatic reference to "the kings of the mingled people" (מַלְכֵי הָעֶרֶב, the reading in II Chron. is "the kings of Arabia" – מַלְכֵי עֲרָב) alongside "the governors of the land" as persons with whom Solomon had commercial relations either indicates that the United Kingdom traded directly with the Arabian Peninsula, or may refer to contacts with nomads who engaged extensively in transporting goods from the south to the north (I Kings 10:15; II Chron. 9:14). The well-known story of the Queen of *Sheba's visit to Jerusalem may reasonably be explained on the assumption that the queen of this South Arabian kingdom came to Jerusalem at the head of a trade delegation to establish closer relations with Israel (I Kings 10:1ff.; II Chron. 9:1–12).

The extensive space which the Bible devotes to Solomon is not accorded to the kings who reigned after him. This, however, does not warrant the conclusion that the commercial activities ceased after Solomon's time. The continuation of these activities is attested by the products of foreign lands dating from the days of the kingdoms of Israel and Judah which have been uncovered at various archaeological sites in the country. Under King *Jehoshaphat of Judah there was a renewed attempt to sail ships from Ezion-Geber which failed owing to the destructive forces of nature: "Jehoshaphat made ships of Tarshish to go to Ophir for gold; but they did not go, for the ships were wrecked at Ezion-Geber" (I Kings 22:49 [48]). This attempt is undoubtedly to be understood against the background of the relations which Jehoshaphat established with the dynasty of Omri in Israel and with the Kingdom of Tyre. He may have been assisted in the building of his navy by the Tyrians. The close ties maintained by *Omri and Ahab with the Tyrians are similarly to be regarded as indubitably commercial relations. Jehoshaphat apparently brought the kings of Israel into association with the activities of his navy in the Red Sea: "After this Jehoshaphat king of Judah joined [אֶתְחַבַּר] with Ahaziah king of Israel, who did wickedly. He joined him [וַיְחַבְּרֵהוּ] in building ships to go to Tarshish, and they built the ships in Ezion-Geber. Then Eliezer son of Dodavahu of Mareshah prophesied against Jehoshaphat, saying: 'Because you have joined [בְּהִתְחַבֶּרְךָ] with Ahaziah, the Lord will destroy what you have made.' And the ships were wrecked and were not able to go to Tarshish" (II Chron. 20:35–37). The use of the root *ḥbr*, "to join," is intended to indicate the significance of the relations between Jehoshaphat and Ahaziah. In several Semitic languages the use of *ḥbr* denotes a commercial partnership, particularly in a maritime connection. According to I Kings 22:50, Jehoshaphat rejected Ahaziah's offer to cooperate with him in maritime commerce.

Additional evidence of trade that was conditioned by political circumstances is the presence not only of Aramean commercial agencies in Samaria in the days of Omri and in part of those of Ahab, but also, after the latter's victory over Aram, of Israelite agencies in Damascus (I Kings 20:34). Furthermore the economic tendencies to develop trade in Israel and Judah, though not explicitly mentioned in the Bible, are evident in the expansionist ambitions of these kingdoms toward Transjordan and the west, the purpose of which was to gain control both of the trade routes in these areas and of the

centrally located ports that promoted trade with Phoenicia, Egypt, and other countries on the Mediterranean littoral.

The biblical references to internal trade are sparse. This trade was carried on in open places, in streets, squares, and marketplaces (Neh. 13:17–22), as also in open areas near gates (II Kings 7:1). It apparently took the form mainly of barter, in which farmers, artisans, and others who offered the products of their labors participated. Merchants and peddlers also displayed their wares. There is no information on the quality of the goods or on the organization of the internal retail trade. The Bible mentions trade in oil (II Kings 4:7), wine, grapes, and figs (Neh. 13:15–16), fish (13:16) and animals (II Sam. 12:3, et al.), in addition to products such as pottery (Jer. 19:1) and items of clothing (13:1–2). These individual mentions undoubtedly represent only a few of the potential articles of trade. The likely range of the retail trade may be inferred from the cultural and material standard of the population at various periods, and in particular from the fact that the economy of the Israelites ceased to be autarchic already at a late stage of the division of the land among the tribes, for as the standard of life rose among the inhabitants of the country, so undoubtedly did the articles of trade increase in quantity and diversity.

[Hanoch Reviv]

Post-Biblical

During the Babylonian Exile Jews became acquainted with old commercial traditions. The post-biblical, talmudic epoch shows Palestine again as an agrarian country, as is clear from the Talmud and Josephus. The growing Diaspora intensified the contacts with Phoenicians, Syrians, and Greeks, and especially Greek influence as is to be seen in the use of technical terms.

The consequence of those influences is especially notable where Jews met in an atmosphere of strong commercial activity, as in Alexandria and later in Delos and Ostia. In the late Roman Empire there were colonies of Jewish and Syrian merchants all over its realm who preserved their ethical and religious traditions. Such colonies were to be found from Britanny and Ireland as far as India and Turkestan. Hennig stressed the commerce of Jews with China which had already come into being. The superiority of the Jewish over the Syrian merchants must, according to Heichelheim, be seen in the fund of common traditions going back to Babylonia. The Talmud knows the "pragmateutes" and the "emporos" as specializations in trade in far distant lands, terms which point to their Hellenistic origins. In addition, the word "taggar" – known from Palmyra – is found, and is related to the Babylonian "tamkar." The taggar was the merchant who was occupied in local commerce. Many of these traditions passed, as pointed out by R.S. Lopez, from the late Roman Empire to the Byzantine Empire and from Sassanid Persia to the empire of the Caliphs. On the base of a widely autonomous economy, trade in the distant lands was limited to luxury goods.

Middle Ages to 18th Century

From the fifth to seventh centuries, Jews traded as far as Gaul where the ports of Provence, especially *Narbonne and *Marseilles, served them as transit places. They dealt in perfumes, glassware, textiles, and other luxury articles of the Orient. Procopius, Cassiodorus, and Pope Gregory I (the Great) mention Jewish merchants in Genoa, Naples, and Palermo. The system of trade in the *Byzantine Empire probably favored the expansion of these merchants toward the west where the vacuum created by the invasions of the Germans opened new routes for selling Oriental luxury goods. Clients of all ranks were to be found. Jewish merchants supplied kings as well as monasteries and high church dignitaries with *spices and all types of precious Oriental goods. The extent to which they obtained these wares directly from the Orient is not certain. Documentation on direct trading relations with the Orient exists only from the end of the eighth century. In 797 when *Charlemagne sent two ambassadors to the caliph Hārūn-al-Rashid from Aix-la-Chapelle the merchant *Isaac acted as a guide and interpreter, returning to Aix-la-Chapelle in 802.

At least from the seventh century, after the ports of Syria had been conquered by the Arabs, Jews were able to develop a far-flung trading network. According to Ibn Chordadbeh, the postmaster of the caliph of Baghdad (between 854 and 874), the *Radaniya traded between France and China along four routes, some of them touching at Byzantium on their return. It is not clear from where the Radaniya came, either from France or from a region east of the Tigris. These merchants brought swords, eunuchs, slaves, furs, and silks from the West, and musk, aloes, camphor, cinnamon, and other articles from the East. One of the most important spheres of trade seems to have been the *slave trade, especially in slaves from the countries of the Slavs, since the Council of Meaux in 845 (see *Church Councils) prohibited trade in Christian slaves. The chief market was the area in the Iberian Peninsula under Muslim rule. Commercial centers of the northern route were *Kiev, the valley of the Danube, where they had to pass the customs of Raffelstetten near *Passau, then *Regensburg and *Mainz.

From the tenth century, this northern route became the more important because of the rise of the Mediterranean rivalry of the Italian cities. Mainz and Regensburg then apparently became the most important starting points for trade expeditions to the East. Jews from the western regions traveled as far as Bulgar of Itil (see *Atil), the capital of the Jewish *Khazars on the Volga. Around 955 *Isaac b. Eleazar brought a letter from *Ḥisdai ibn Shaprut, when a minister in Córdoba, to the Khazar king *Joseph. The route passed through Prague and Cracow. In 965 Prague was visited by the Spanish geographer *Ibrahim ibn Yaqūb, who stressed the importance of this town for the trade with the East and mentions the role of the Jews. There he saw Jewish and Islamic merchants from the empire of the Khazars and *Crimea. At that time Italian Jews still had trading connections with Jerusalem. In particular Jews of Gaeta traded with Jaffa, and Jews of Capua with Egypt, until the rising cities of Amalfi, Bari, Venice, Genoa, and Pisa drove them from the Levantine trade. Venetian captains were forbidden to transport Jews and Jewish merchan-

dise. The activity of the Jews of Mainz in the East European trade led to a diplomatic correspondence by the doge Pietro of Venice and the patriarch of Grado with Emperor Henry I and the archbishop of Mainz concerning the duty to compel the Mainz Jews to become Christians or else prohibit them from trading in Oriental goods.

In this period, additional Jewish settlements grew in the Rhine region, the main part of the East Franconian Empire, the most important being Metz, Trier, Cologne, Worms, and Speyer. There they were allowed to trade freely, especially in wines, hides, and drugs, as well as in meat and secondhand goods, which was often combined with lending on pawn, while slaves and Oriental products were also important. From the tenth century a new route was opened through the Danube Valley to Hungary which became accessible after the inhabitants became converted to Christianity, *Esztergom (Gran) or Ofen-Pest serving as points of transit. From there the merchants often crossed the passes of the Carpathians, continuing to *Przemysl and Kiev, where there was an important Jewish settlement. Toward the end of the 11th century *Isaac b. Asher ha-Levi at Speyer was well informed on the role and importance of this East European trade. He relates that the merchants traveled in caravans, and that each caravan formed an association, buying the merchandise jointly and distributing it by lot. During the 12th century Regensburg Jews became the main entrepreneurs of this trade. *Pethahiah of Regensburg shows that Jews from there traveled as far as Crimea, the *Caucasus, *Baghdad, and *Mosul. Later, from the beginning of the 13th century, Prague and Vienna seem to have outrivaled Regensburg. In 1221 transit through Vienna was forbidden. After the Tatar invasions Kiev's importance waned and this eastern trade declined.

Regensburg especially was a center for the silver trade and the mint business. Meanwhile, for the slave trade another route from Magdeburg and Merseburg to the Rhine came into use. The customs regulations of Coblenz from 1104 record the passage of slaves on the Rhine for the last time, since after the adoption of Christianity by the Slav countries the slave trade there was prohibited.

Along the trade routes of the Indian Ocean, as well as the Mediterranean, in the 11th to 13th centuries, Jewish merchants combined in manifold far-distance trading activities as well as more limited coastal trading in most of this period. *Yemen served as a transit station for the trade between Egypt and the Far East. Scores of categories of articles, some of them in huge quantities, were transported by this Jewish trade mainly through Muslim ports. Jewish trading activity was based on a well-established organization of Jewish merchants at the ports.

Meanwhile, the interior market in Western Europe grew, the fairs of Cologne especially attracting Jews. They met there three times a year in order to sell and buy wool, hides, furs, jewels, and pearls. With the First Crusade an epoch of persecutions began in Western Europe (see *Crusades). Local restrictions and canon law compelled Jews to concentrate on *moneylending. However, as late as the 14th century *Alexander Sueslein ha-Kohen of Frankfurt states that Jews did business at the fairs of the Christians, and that on Sabbath non-Jewish debtors came with wagons of corn. The responsa of *Meir b. Baruch of Rothenburg show that Jewish merchants used the Rhine shipping route, trading in, among other items, salted fish, wool, skins, wines, grain, silver, and gold. After the decline of the Cologne fairs Jewish merchants were attracted by the fairs of Frankfurt and Friedberg. At the same time the courts of the princes offered a market for luxury goods. In this period Jews generally seem to have bought from far-distance traders in order to sell as retailers and *peddlers. How far there were trading relations for instance with southern France and Spain is hard to ascertain. By then the distant trade had mainly passed to Christian merchants. Generally members of a family joined in partnership and women took an active part.

In the persecutions, plunder, and massacre of the Jews occasioned by the *Black Death, the patricians were not the main adversaries of the Jews – many of whom being active in far-distance trade had commercial relations with them – but the artisans, who viewed the Jewish retailers and peddlers as bringing unfavorable competition. After the persecutions Jews were again active in trade and apparently had trade connections from the Rhineland not only with the Netherlands and France but also with parts of Spain, Switzerland, and probably Italy.

Meanwhile, a new series of anti-Jewish measures began. From the end of the 14th until the beginning of the 16th centuries Jews had to leave most of the German towns. They withdrew into the small domains of local lords or went to Eastern Europe where there were possibilities open in the service of the crown of Poland and the nobles. The wealthy Jews were attracted by privileges in connection with the colonization policies of Duke *Boleslav and King *Casimir III. Witold, grand duke of Lithuania, continued this policy. In an agrarian society Jews became important representatives of commercial activity. Not only the princes, but the nobles also had good relations with them. From Poland Jews, in the same way as Armenians, participated in the trade with the Black Sea regions, especially with Caffa (*Feodosiya), Khadzhibei, Cetatea-Alba (*Belgorod-Dnestrovski), and *Kiliya. *Vladimir-Volynski, *Lutsk, Lvov, Cracow, and later Lublin and Bratislava became the main trading links in Poland and Silesia. Meanwhile a Jewish colony grew up at Caffa, and later, after its decline, Jewish merchants in *Constantinople established direct commercial relations with Poland.

In *Apulia and *Sicily Jews were active in the silk trade, Emperor Frederick II granting them the monopoly for trade in raw silk. They also organized the commerce in dyed textiles. In southern France Jews played a main part in the trade of kermes. From the ports of Provence they took part in the Levantine trade and had connections with the Spanish littoral, Sicily, and southern Italy. This trade was organized, like that of the Italian merchants in Venice or Genoa, by the practice of *commenda*. Mardoché Joseph, whose register from 1374 has

been preserved, owned woods where the resin was extracted from the trees. In *Franche-Comté from 1300 to 1318 a Jewish company developed extensive trading activity in goods and money.

IBERIAN PENINSULA. On the Iberian Peninsula Jews could maintain far-reaching trading relations from the areas under Arab rule with Central Europe and the slave markets in Eastern Europe, as well as with North Africa and the Levant, their main centers being Córdoba and *Lucena. Following persecutions in the Moorish part of the peninsula, Jews settled in the areas with a Christian population, where they participated, among other commercial activities, in provisioning the soldiers who fought in the Christian Reconquest. Apart from the prohibition on the slave trade, their economic activity was unrestricted. Generally, more is known of their activity as lessees of revenues such as customs or rents than of their trading activities, but in *Toledo, the Jewish center in Castile, as well as in *Barcelona and *Saragossa, the centers in Catalonia and Aragon, some Jews must have been merchants, dealing for instance in cloth or bullion. Don Samuel ha-Levi, the richest Jew in Toledo in the 14th century, was a merchant, and the building of the synagogue of Toledo as well as that of Córdoba must have been made possible by wealth acquired by trade.

In Portugal the Abrabanel family and other Jewish cloth merchants had far-reaching trade connections. The persecutions of the Jews in Spain of 1391 resulted in major damage to Jewish workshops, to the cloth production in Aragon and Catalonia, the tanneries of Oscaña and Córdoba, the silks of Valencia, Seville, *Talavera de la Reina, and *Murcia, the carpets of Borja and Salamanca, the goldsmiths' wares of Toledo and Córdoba, and other precious articles of artisan production organized by Jewish manufacturers and merchants. At the same time there were fairs to which Jews imported silk from Persia and Damascus, leather from Tafilalet, and Arabian filigree. Records exist especially from Seville showing that even after the persecutions the production of Jewish swordsmiths, tailors, and manufacturers of embossed leather, and the activities of merchants continued. Meanwhile, the wave of conversions to Christianity among the Jews in Spain especially affected members of the upper class, including merchants. One group of them is expressly known to have continued its activity as merchants – the Villanova of Calatayud, the Maluenda, de Ribas, de Jassa from Tauste and Hijar, the Ortigas, Esprés, Vidal, and Esplugas from Saragossa. Don Alfonso of Aragon, a bastard of King John of Navarre, had three sons by Estenza, daughter of the rich cloth merchant Aviasa ha-Cohen or Coneso, and took the name of Aragon.

A last important role was played by Jewish merchants in Spain in the final phase of the Christian Reconquest. There were also trading relations with the Moorish regions, and one of the reasons for the restrictions ordered against them by the Cortes of Toledo in 1480 was that Jews were selling arms there. On the other side Abraham *Senior and Isaac Abravanel with a staff of Jewish merchants organized the supply of the troops that conquered Malaga, Baza, and finally Granada.

The edict of March 31, 1492, ordering the expulsion of the Jews from Spain was made even more severe since they had to sell their properties but were forbidden to take gold and silver away with them. In Aragon Jews sold textile workshops at Hijar, Barbastro, Huesca, Saragossa, Lerida, Manresa, Valencia, and Barcelona. One of the best-known textile manufacturers at Huesca was Solomon Abenaqua, and at Hijar, Samuel Auping.

MARRANO ACTIVITY. The exiles included many craftsmen, manufacturers, and merchants. The majority emigrated to Portugal, the nearest place of refuge. Those who preferred to stay in Spain had to accept baptism, though secretly most of them maintained their Jewish religious traditions and were regarded as a special group of New Christians (Marranos). The Spanish overseas expansion opened up new fields of activity for them, especially in the spice trade. Rui Mendes (de Brito), and subsequently Francisco and Diogo *Mendes, organized trading activities which spanned an area from the East Indies through Lisbon to Antwerp, and included not only spices, but precious stones, pearls, and other Oriental luxury goods. Additional Marrano families entered this trade. Later, toward the end of the 16th century, notably the Ximenes, the Rodrigues d'évora, Heitor Mendes, Duarte Furtado de Mendoza, Luis Gomes d'Elvas, and the Rodrigues Solis families participated in the East Indies trade.

Other fields of Marrano trading activity were the trade with Africa and Brazil which began with Fernão de Noronha, who organized the trade in Brazilian dyewood. Marrano merchants participated in the development of sugar production in Madeira, São Tomé, and Brazil. Diogo Fernandes and a group were owners of one of the five sugar plantations which existed in Brazil about 1550. Toward the end of the 16th century, as can be seen from the records of the Inquisition, among the outstanding businessmen accused of Judaizing were Bento Dias Santiago, João Nunes, and Heitor Antunes, who from localities in the northeast, especially Paraiba, Olinda, and Bahia, organized the export of sugar and other Brazilian goods as correspondents of the Marrano merchants at Lisbon and other places in Portugal, as well as of their relatives, who meanwhile had begun emigrating to Northern Europe. By maintaining commercial relations from Brazil to Buenos Aires, and from there through Córdoba to Lima and Potosi, they organized an important contraband trade for a market which, because of the monopolistic policy of the Spanish center, was underprovided. They exported textiles and other manufactured goods or slaves, and received bullion which they sent to Europe. "La complicidad grande," the large-scale investigation organized by the Inquisition, which alarmed Lima from 1635 to 1639, resulted in economic disaster; among 81 persons apprehended, 64 were "Judaizers," most of them merchants.

When the Dutch West India Company occupied part of Brazil, the Marranos and those who now openly confessed

their Jewish tradition took a remarkable part in the trade both in retail business, in financing, and in the export-import trade. When the Dutch were expelled from the northeast (the last from *Recife in 1654) some of the sugar traders settled in the West Indies, where, through their European market connections they contributed, at first in Barbados and Guyana, in developing sugar export to Europe. Later Curacao and São Tomé became the main centers of Jewish trade in the Antilles.

This was a factor that exercised great influence in the expansion of Jewish trade toward Africa after the expulsion from the Iberian Peninsula. At first Morocco, Salé, and *Safed afforded them trading possibilities, and with the rise of the slave trade to America they found chances to extend their influence to the main African slave markets on the coast of Guinea, the Cape Verde Islands, São Tomé, and Angola, since these regions belonged to the sphere of Portuguese dominance. The same circumstances operated in the infiltration by Marrano merchants into Spain, especially to Seville, in order to participate from there in the American trade. Among the early families engaged in this activity was the Jorge family whose participation in the slave trade is recorded from 1540. After their bankruptcy in 1567, other representatives were Francisco Nunes de Bejar and his son Antonio Nunes Caldeira. These Seville merchants had correspondents in the important centers in the Indies and West Africa as well as in Lisbon, and especially with the slave contractors of Africa, some of whom were Marranos. From 1587 the king of Spain as monarch of Portugal signed slavetrading agreements with Lisbon merchants for the provision of slaves in Angola and Cape Verde. This system lasted until the Portuguese restoration in 1640. Meanwhile Moroccan trading connections were intensified with the Netherlands, especially through the intervention of the important family of Palache.

Jewish trading connections also intensified with the Sephardi migration to the Mediterranean.

Under Muslim Rule

In the Arab world Jewish trade in the Middle Ages followed the same trends as in the Occident. At first Arab expansion contributed to the urbanization of the Jews and favored their trading activity, especially in the era under the *Fatimids. Yaʿqūb ibn Killis (c. 991), who later adopted *Islam and became a vizier, was a merchant in the wide area between North Africa and *Iraq, where *Baghdad with its important Jewish settlement remained the principal trading center. Under al-Mustanṣir (c. 1094) the brothers *Abu Saʿd al-Tustari and Abu Harun traded as merchants between *Egypt, *Syria, and Iraq, and were influential in the finances of Egypt. In the 12th century a decline began, connected with the rise of the Christian city states in the Mediterranean, the decline of the Fatimids, and the Crusades. The Karimi merchants then obtained a leading position.

With the emigration of Jews from the Occident to the Ottoman possessions they were able to integrate into the widespread network of international trade reaching as far as Cochin and Goa, where spices and jewels attracted them. The Danube principalities were also connected with this network. From the 17th century *Isfahan Jews organized silk export to *Aleppo.

REESTABLISHMENT IN THE WEST. From the end of the 16th century Leghorn, through the granting of important privileges to its inhabitants, became the most important trading link in the West, besides Venice. Jews compelled to emigrate from Milan in the 16th century were partially reintegrated into the network of Marrano trade, as in Naples, whereas in Rome and other central and northern Italian towns, some commerce remained a Jewish occupation, though generally not on a large scale.

In Provence, Jews lost their part in the Levantine trade after their expulsion at the end of the 15th century. Meanwhile émigré settlements of Marranos grew up at Antwerp, and also along the French Atlantic coast from St. Jean de Luz, *Bayonne, and Bordeaux to Nantes and Rouen and the Lower Elbe in Hamburg and Glueckstadt, as well as in the Netherlands, especially Amsterdam, and in London. Some of the Marranos remained Catholics, mainly in Antwerp, but along the Lower Elbe and at Amsterdam they openly returned to Judaism and established Sephardi communities. All the settlements played an important role in the trade between the Iberian Peninsula and Northwestern Europe.

Leading Marrano families throughout the 16th century were among the main contractors of the Portuguese spice trade. The jewel trade was an additional branch of the Antwerp colony, establishing connections with important trade centers in the interior such as Cologne (to which during the crisis in Antwerp they partly transferred their offices), with the Leipzig and the Frankfurt fairs, with Paris, with the fairs of Lyons, and with the trading centers of Italy. Meanwhile, they participated in the export-import trade between the Netherlands, England, Germany, and Italy. This included textiles, English cloth, Netherlands fabric, Italian fustian, and silk and grain, the latter being sent by sea. The main representatives of this trade were the Ximenes, the Rodrigues d'Evora, the Álvares Caldeira, and the Jorge families. The Hamburg colony, for some time, predominated in the import of sugar and spices and contributed to the modernization of trade usages.

Álvaro Dinis and Antônio Faleiro were merchants in Hamburg from the end of the 16th century. At Amsterdam Manuel Rodrigues Vega and others participated in the financing of *voorkompagnien* which opened up direct trade by the Dutch to the East Indies. The direct participation of the Amsterdam Portuguese in the Dutch East India Company was modest. But their international trading connections with the Mediterranean, as well as with the African and the Brazilian ports and the East Indies, contributed to the rise of the Dutch international trade, as well as to that of Hamburg, Scandinavia, and the Baltic.

The last act of the Dutch struggle with Spanish domination was helped by the contribution their merchants made to

the forces of the Portuguese restoration after 1640. Jeronimo Nunes da Costa at Amsterdam and his father Duarte Nunes da Costa at Hamburg were the main suppliers or agents to the Portuguese of military and naval stores. However, it was typical of the complicated situation within the communities that Lopo Ramires at Amsterdam, a brother of Duarte Nunes da Costa, and Manuel Bocarro (Jacob Rosales) at Hamburg assisted the Spaniards.

In the second half of the 17th century the Hamburg as well as the Amsterdam Portuguese increasingly retired from the trade with the Iberian Peninsula and its colonial settlements in consequence of the continuing hostility against suspected Marranos and Jews. Meanwhile new fields of commercial activity opened with the Baltic, Scandinavia, and various courts. Diogo (Diego) *Teixeira and his son Manuel, the outstanding representatives at Hamburg, traded in jewels and, with their relatives, the Nunes Henriques, at Amsterdam entered the Norwegian copper exploitation. With the emigration of the Teixeira group to the Netherlands, the Hamburg settlement soon lost its earlier importance. Closely connected with Hamburg were small colonies at Altona and Glueckstadt. The latter especially was designed by Christian IV of Denmark and his successors to be a rival of Hamburg, in particular in the overseas trade, but never fulfilled their hopes. Nevertheless, for a time some Iberian trade in the 1620s, and again some African and West Indian trade in the second half of the 17th century, was organized from Glueckstadt.

In the Netherlands Amsterdam had the largest community of Portuguese Jews. At the beginning of the 18th century these still took considerable part in the colonial trade but were more active in speculative trade in commodities and company shares. Meanwhile the Sephardi community of London also took a share in the overseas trade, especially with West Africa and the West Indies. In its eastern extremities, from the 16th century this trade system linked with the extensive trade system of the Jews in *Poland-Lithuania based on *arenda and a large and growing share in exports and imports, as well as in the transit trade of the kingdom. The memoirs of *Glueckel von Hameln, and the even more extensive activities of the *Court Jews and factors show the influence of both these systems in Central European Jewish economic activity.

ASHKENAZI TRADING ACTIVITY. For Ashkenazi Jews the 16th and 17th centuries were an epoch of repression in consequence of the Reformation and Counter-Reformation. In Germany they mostly lived in smaller settlements where they obtained licences (*Geleit*; equivalent to the Italian *condotta*) and traded in cattle, horses, *agricultural produce, or secondhand articles obtained from loans on pawn, were peddlers, or provided the mints with bullion. The brothers Oppenheim at Frankfurt and their companies dealt in silk goods and other textiles, and there already existed connections with some courts that afforded the possibility of providing them with luxury goods, and their armies with victuals and weapons. When the possibility of forming mints, especially in the Hamburg region where overseas trading connections guaranteed a steady silver market, opened, Jacob *Bassevi at Prague was an outstanding entrepreneur of mints. During the Thirty Years' War several Jews took the opportunity to organize provisions for the armies. With the rise of the absolutist state and the sumptuous baroque culture displayed at a large number of courts the presence of the Court Jew opened new paths for wide-ranging Jewish commercial activity. Partly as a consequence of the protection afforded by the princes, the Ashkenazi settlements at Frankfurt, Hamburg, Altona, Berlin, and then Vienna also became centers of Jewish trade. From Hamburg and Altona as well as from Copenhagen and Amsterdam Jews entered the overseas trade.

From the second half of the 17th and especially in the 18th century Jews of Hamburg and Amsterdam actively participated in the trade of the fairs of Frankfurt, Zurzach, Braunschweig, Naumburg, and Frankfurt on the Oder, and especially of Leipzig and Breslau. In Eastern Europe, since there was as yet no large stratum of long-distance traders, this favored the role of small traders who were mostly of Jewish origin and often traveled in caravans. Jews from Prague, Mikulov (Nikolsburg), Leczno (Lissa), Teplice, Cracow, Brody, and Lvov in particular were among those visitors, but they had rivals in the Armenians, Greeks, Wallachians, "Raitzen" (Russians), and Courlanders. In Poland many of these Jews administered the trade of the nobility. Lithuanian Jews preferred Koenigsberg, Memel, and Riga, and traveled as far as Moscow. Galician Jews traveled to the Danubian principalities and imported wines from Hungary. Jewish trade was mostly concentrated in the fairs of Lublin, Yaroslaw, Torun, Gniezno, Kopyl, Stolin, and Mir. During the 18th century Berdichev and Brody, a free city from 1779, became important. The growing Jewish population in Bohemia, Moravia, Poland, and White Russia, and their widespread artisan activity, opened up an interior market of growing importance.

19th and 20th Centuries

From the period of the Middle Ages Jewish commercial activity had undergone many changes. At first the trade in Oriental luxury goods predominated; then, with the overseas expansion and the rise of shipping, colonial and staple goods were added. The *emancipation of the Jews in consequence of the epoch of the Enlightenment, combined with the consequences of the French Revolution and the Napoleonic Wars, put the Jewish communities on a new basis. Most spectacular was the rise of Jewish banking and the activity of Jews in industrialization, whereas the part of Jews in commerce is more difficult to discern. The organization of trade, then the sector of large stores (Tietz, Wertheim, Karstadt), and the commodity trade, especially in metal, wood, grain, furs, textiles, shoes, and diamonds, remained the branches preferred by Jews. In Germany, their part in the trading sector from 1895 to 1933 declined from 5.7 to 2.5%. In 1925 in Prussia over 34% of those active in the sector of banking and stock exchange, 13.2% in brokerage, 10.8% in the real estate business, and 10.7% in the

commerce of merchandise and products, were Jews. On the whole, about 50% of the Jewish population were occupied in commerce. With the growing degree of social assimilation, however, this proportion declined as did the general participation of the Jews in economic life.

In general, it may be stated that the proportion of Jewish participation in commerce diminished in Germany and rose in the East European countries. In Hungary (1920) 44.1%, in Czechoslovakia (1921) 39.1%, in Poland (1913) 35.1%, and in Russia one-fifth (1926) of the total Jewish population were active in commerce. As Simon *Kuznets stressed, in the pre-World War II epoch in all countries excepting Poland and the Soviet Union the largest sector in the industrial structure of the gainfully occupied Jewish population remained trade and finance. They accounted for such a large proportion of the nonagricultural Jewish population because small-scale entrepreneurship was more readily accessible: it did not require heavy capital investment, and personal training was not necessary. Moreover, the conditions under which Jewish minorities had lived for centuries favored the acquisition of skills and the formation of connections useful for the pursuit of trade and finance.

[Hermann Kellenbenz]

In the U.S.

COLONIAL PERIOD TO 1820. Virtually from the mid-17th-century beginnings of their settlement in North America, the Jews tended to support themselves as small businessmen – general merchants and shopkeepers – in tidewater commercial and shipping centers like New York, Newport, Philadelphia, Charleston (South Carolina), Savannah, and Montreal. Their function, like that of the non-Jewish businessmen with whom they frequently formed partnerships of more or less limited duration, was to supply the local market with hardware, textiles, and other European produced consumer goods as well as commodities like rum, wines, spices, tea, and sugar. They attempted to balance their European and West Indian imports with exports of North American products like lumber, grain, fish, furs, and whale oil. Though specialization was not unknown, these tradesmen for the most part offered a wide range of wares.

Jews were represented in nearly every branch of early American enterprise apart from the export of tobacco and iron. Seldom, however, did they play a leading role: great coastal, Caribbean, and trans-Atlantic merchant-shippers like Aaron *Lopez of Newport, Nathan Simson and Jacob *Franks of New York, and Nathan *Levy of Philadelphia, substantial inland merchants, land speculators, and fur traders like Joseph Simon of Lancaster (Pennsylvania) and Samuel Jacobs of Canada, and important army purveyors like David Franks of Philadelphia were atypical – if not always for the character, certainly for the scale, of their dealings. Not infrequently 18th-century American Jewish businessmen acted as agents for European firms. The Levy-Franks clan of New York and Philadelphia, for example, constituted a branch of the family's commercial empire headquartered in London. Though rudimentary banking often fell within a merchant's sphere of activity – since without extending credit to his customer he could not have survived – Jewish financiers on the contemporary European scale were absent from the early American scene.

The colonial American economy was precarious, offering formidable hazards as well as attractive opportunities. Even well-established merchants not uncommonly owed their European suppliers huge sums, while bankruptcies and even imprisonment for debt occurred with considerable regularity.

Post-Revolutionary and Early National America gave rise to fledgling Jewish communities in Midwestern river ports like Cincinnati and Pittsburgh, while Jewish economic activity presented in many respects a more varied scene. Though shopkeeping and merchantry continued to be characteristic, the country's westward expansion and interest in developing its own resources generated many new enterprises involving Jews: land speculation, planting, shipping, banking, insurance, garment manufacturing, mining, and distilling. Jewish railroad directors prospered in South Carolina, and Jewish bank directors were active in South Carolina, New York, and Rhode Island. The Richmond (Virginia) firm of Cohen and Isaacs employed a frontiersman like Daniel Boone to survey land in Kentucky, and the Philadelphia *Gratzes became more important in the trans-Allegheny trade. The New York Hendrickses became prominent in the copper industry. Moses Seixas was among the Bank of Rhode Island's organizers in the 1790s, and Judah *Touro established an impressive mercantile reputation in New Orleans. Peddling, though usually no more than a transitional occupation, was far more common among Jews in early 19th-century America than it had ever been during the pre-Revolutionary period.

As the American economy burgeoned in the half-century following the Revolution, people skilled in trade, moneylending, the distribution of commodities, and the establishment of wholesale and retail outlets were needed with increasing frequency everywhere in the country. Jews found a wide gamut of opportunities in a developing America and took advantage of them to become well integrated into the country's business life.

[Stanley F. Chyet]

SINCE 1820. German Jewish immigrants to the U.S. who began arriving in large numbers about 1820 devoted themselves mainly to trade. The "Jew peddler" succeeded the "Yankee peddler" in the countryside as young Jews, securing their goods on credit mostly from Jewish wholesale houses in cities, peddled household and dry goods and small luxuries among isolated farmers throughout the Northeast, Middle West, and the South. With the opening of California in 1849 Jews became purveyors to its mining camps, a function they later performed in towns of the Rocky Mountains and the Southwest from the 1870s until the towns declined in the 1890s. The Jewish peddler's foreign accent, dauntlessness, and business skill won him a distinct, rather complimentary image in American folklore. Those who usually started by carrying their stock in a pack on the back came to own a horse and wagon;

later, when their success permitted, they quit itinerant trade to open a store. Partners and employees were usually drawn from members of the family. Jewish merchants during the middle and later 19th century established themselves not only in all large cities, but in many crossroads villages and in river towns the length of the Mississippi and Ohio rivers. During this period they played a major role in establishing a continentwide commercial network. In addition they were wheat and cotton brokers, and conspicuous in U.S. international trade. The migration of Jewish merchants from small places to booming metropolitan centers is noticeable after the 1880s. Their most conspicuous activity was the establishment of *department stores, among them some of the world's largest. A retail enterprise of particular importance was Sears Roebuck, under the ownership of Julius Rosenwald, which published huge catalogs for mail order service, thereby nearly eliminating the itinerant country peddler's market. Other merchants, notably clothiers, began to manufacture the goods they sold. A small but highly important group branched into banking from their mercantile operations (see *Banking).

East European Jews who settled mainly in large cities had few opportunities for rural peddling. Their commercial efforts were mainly urban. In the Middle West they were scrap metal merchants for the steel mills; throughout the United States they were petty shopkeepers when they did not follow proletarian occupations. The great majority of New York City's 25,000 pushcart peddlers in 1900 were Jews, as were half of its 4,000 meat retailers in 1888. The city's commercial life has been largely in Jewish hands to the present day. About 1920, only 3% of Los Angeles Jews were peddlers, but manufacturers, proprietors, and shopkeepers amounted to 20%. Jews were numerous in U.S. commerce, especially in such branches as import and export, department stores, general merchants in small cities, and after 1945 in inter-city chain and discount stores. The slow decline of small retail trade in the U.S. and the movement of Jews into white-collar occupations and the professions decreased the place of Jews in U.S. commerce, but roughly one-third of gainfully employed U.S. Jews still made their living in wholesale and retail trade.

TRADITION (Heb. מְסֹרֶת). The term tradition derives from the Latin *tradere*, which means "to transmit" or "to give over." Generally, it refers to beliefs, doctrines, customs, ethical and moral standards, and cultural values and attitudes which are transmitted orally or by personal example. Under this designation, the process of transmission itself is also included. Theologically, in Judaism, tradition is the name applied to the unwritten code of law given by God to Moses on Mount Sinai.

Terms

Masoret is the general name for tradition. It is found in Ezekiel 20:37 and means originally "bond" or "fetter." Tradition is the discipline which establishes the correct practice and interpretation of the *Torah and was therefore regarded as a hedge or fetter about the Law (Avot 3:14). Since this knowledge was handed down by successive generations, it was also associated with the Hebrew word *masor*, denoting "to give over." In the talmudic literature, the term *masoret* is used to include all forms of tradition, both those which relate to the Bible and those which concern custom, law, historical events, folkways, and other subjects. Different kinds of traditions were given special names. Traditions which specified the vocalization, punctuation, spelling, and correct form of the biblical text were called **masorah*. Those legal traditions which were revealed to Moses at Mount Sinai and were later preserved in writing, were known as **Halakhah le-Moshe mi-Sinai* ("law given to Moses on Sinai"). A legal tradition which was handed down by word of mouth, but did not necessarily emanate from Sinai, was called *shemu'ah* ("a report"). Religious and general traditions which became binding as result of long observance by successive generations were termed **minhag* ("custom"). Prophetic traditions described in the books of the prophets and Hagiographa were known as *Divrei Kabbalah* ("words of tradition"). Esoteric and mystical traditions concerning God and the world transmitted to the elect and then passed down through the ages were called *Kabbalah, from *kibbel* ("to receive").

Origin

Many statutes were committed to writing by Moses. However, the vast majority of laws were handed down orally by him (see Written and Oral *Law). The Written Law did not always detail the manner and form of practice, giving rise of necessity to tradition. An instance of this kind is the law relating to fish which meet the biblical dietary requirements. Leviticus 11:9 states that a fish that has a fin and a scale in the water can be eaten. However, the minimum number of fins and scales that a fish must have to be ritually edible is not specified. The traditions relating to the Bible and Mishnah taught that a fish needs at least one fin and two scales to satisfy the biblical dietary requirements (see Arukh, s.v. *Akunos*). Similarly, the Bible commands that a paschal lamb be slaughtered on the 14th day of Nisan. There is no mention in the Bible as to whether it is permissible to perform this act if the 14th day of Nisan occurs on the Sabbath when the slaughtering of animals is forbidden. In the year 31 B.C.E., the 14th of Nisan fell on the Sabbath. The Sons of Bathyra, the heads of the high court, forgot the precedent previously established. Hillel, a then unknown Babylonian, volunteered the information that he had heard from Shemaiah and Avtalyon, the foremost teachers of the age, that it was permissible to slaughter the paschal lamb on the Sabbath. This reported tradition of Hillel's mentors was readily accepted (TJ, Pes. 6:1, 33a), and it is mentioned that because of this display of erudition with regard to tradition, Hillel was appointed *nasi*. Tradition was also the vehicle of transmission for the rules of interpretation, of the Written Law, such as the laws of *hermeneutics. Since it was impossible within the confines of writing to record all the laws and their applications in all situations, a medium was needed to preserve

this information. Even today, with the availability of writing media, much of our culture is handed down orally. Tradition was the means whereby extant law was maintained and applied to life. Thus R. Joshua b. Levi declared that all teachings both of the Bible, Mishnah, Talmud, and *aggadah* and those that were initiated by veteran scholars were already given to Moses on Mount Sinai (see TJ, Pe'ah 2:6, 17a). Some traditions arose as a result of the common practice of the community. These practices were considered to emanate from eminent religious authorities and owed their binding character to having been handed down by previous generations, from father to son, a principle upheld by R. Johanan in the Talmud. The citizens of Beth-Shean complained to him that the custom of not going from Tyre to Sidon on the eve of the Sabbath was impossible for them to observe. R. Johanan replied, "Your fathers have already taken it (this custom) upon themselves" (Pes. 50b). As a result, this tradition could not be abrogated.

History

In rabbinic Judaism, tradition was binding and had the force of law. The divine revelation to Moses consisted of the Written Law and Oral Law with its implied exposition by the sages of Israel. *Berakhot* 5a tells that R. Levi b. Ḥama said in the name of R. Simeon b. Lakish: "What is the meaning of the verse, 'and I will give thee the tables of stone, and the law and the commandments, which I have written to teach them' [Ex. 24:12]. It means as follows: 'the tables of stone' are the Ten Commandments, 'the law' is the Pentateuch, 'the commandments' is the Mishnah, 'which I have written' are the prophets and the Hagiographa, 'to teach them' is the *Gemara*. This teaches us that all these things were given at Sinai." Originally, the Oral Law was handed down by word of mouth. When its transmission became difficult, it was set down in writing in the Mishnah and Talmud. The validity of the Oral Law was attacked by the *Sadducees, one of the early sects in Judaism. Josephus records that the Sadducees held that "only those observances are obligatory which are in the written word but that those which derived from the tradition of the forefathers need not be kept" (Ant. 13:297).

Talmudic Times

After the destruction of the Temple, the Sadducees disappeared. The body of tradition continued to grow as rites were introduced to replace the Temple ritual. *Megillah* 31b pictures the patriarch Abraham as concerned with how Israel could obtain forgiveness, once the Temple ceased to exist. God assures Abraham, "I have already ordained for them the order of the sacrifices. Every time that they read them, it is considered as if they offer up a sacrifice and I forgive them all their sins." After the destruction of the Temple, the system of public prayer was instituted to substitute for the Temple service. The liturgical traditions were handed down verbally, through the centuries, until they were compiled in the prayer book of Amram Gaon.

Medieval Times

At the end of the eighth century, rabbinic Judaism was again challenged by a new sect, the Karaites. They accepted the authority of the Bible but denied rabbinical tradition and law, which had developed further as the Mishnah and Talmud were elucidated and applied to life. Through its great exponents, Saadiah and Maimonides, rabbinic Judaism triumphed over the Karaites. The latter wrote his code of law, *Mishneh Torah* ("The Second Torah"), and showed the direct connection between the Written Law and its explanation in the Oral Law (Introd. Maim. Yad). As new situations arose, the talmudic, geonic, and post-geonic traditions were further amplified. They in turn were set down in writing in the responsa and codes. In the 16th century R. Joseph Caro produced his definitive code, the Shulḥan Arukh. With the addition of the glosses of R. Moses Isserles and later commentaries, it became the most comprehensive compendium of Jewish law and tradition to this day.

Modern Times

At the end of the 18th century rabbinic Judaism, which had maintained an unbroken chain of tradition from the days of Moses was again challenged. A *Reform movement began in Germany which sought to assimilate the Jews into the general culture by modifying Jewish traditions. Among the reforms instituted were sermons in the German vernacular, hymns and chorals in German, the use of the organ, and the confirmation of boys on the Feast of Pentecost instead of the traditional bar mitzvah. In the course of time, this movement established itself in America. Here it continued to propound its doctrine that Judaism was primarily a universalistic and moral religion. Only the moral law was binding. Ceremonial laws which could be adapted to the views of the modern environment were to be maintained. Other Mosaic and rabbinic laws which regulated diet, priestly purity, and dress could be discarded.

In reaction to the reformers' break with tradition, the *Conservative movement was formed in America. At the founding meeting of its congregational organization in 1913, it declared itself "a union of congregations for the promotion of traditional Judaism." Other aims were the furtherance of Sabbath observance and dietary laws, and the maintenance of the traditional liturgy with Hebrew as the language of prayer. As the complexion of American Jewry changed, the Conservative movement incorporated some Reform externals of worship such as family pews and the use of the organ in many congregations. However, it accepted the authority of rabbinic tradition, instituting changes advocated by its scholars, with regard for the attitude of the people and the place of the observance in Jewish tradition.

Transmitters of the Tradition

In rabbinic literature the chain of tradition is given as follows: Moses received the Torah on Sinai and delivered it to Joshua, who in turn delivered it to the elders, the elders to the prophets, and the prophets to the Men of the Great Synagogue

(Avot 1:1). According to rabbinic Judaism, the teaching of the great sages in every generation in keeping with the *halakhah* is binding (Deut. 17:88). Thus, the transmitters of tradition included the successors to the Men of the Great Synagogue down to modern times, namely: the scribes (*soferim*), the pairs (**zugot*), the *tannaim*, the *amoraim*, the *savoraim*, the *geonim*, the codifiers, the world famous Torah authorities of every era, and the *rashei ha-yeshivah* ("heads of the academies").

Significance

Tradition has given Judaism a continuity with its past and preserved its character as a unique faith with a distinct way of life. As the successor of rabbinic Judaism, Orthodoxy representing tradition harks back to the Sinaitic divine revelation and can only be changed within the framework of rabbinic law. In Conservative Judaism, tradition is a vital force capable of modification according to the historical evolution of Jewish law. Reform Judaism has recently displayed a greater appreciation of traditional practices but tradition remains voluntary in character (see **Masorah*).

[Leon J. Yagod]

TRAGACANTH (Heb. נְכֹאת, *nekhot*). The identification of tragacanth with *nekhot* is attested by its Arabic name *Rathirā'*. It was included in spices carried by the caravan of Ishmaelites from Gilead on their journey to Egypt (Gen. 37:25), as well as in the gift sent by Jacob to the ruler of Egypt (43:11). It is the aromatic sap of a species of *Astragalus* which is called τραγακανδα in Greek. These are plants of the family Papilionaceae, short prickly shrubs which exude a sap when the roots or stalks are split open. Tens of species of *Astragalus* grow in Israel but these do not exude the *nekhot*. This is obtained from the species that grow in east Asia and the mountains of Syria and Lebanon. In former times it was used as incense but today it is used for medicinal purposes.

°**TRAJAN (Traianus), MARCUS ULPIUS** (52/3–117), Roman emperor, ruled 98–117 C.E. In 114 C.E. Chosroes, king of Parthia, violated the arrangement between his country and Rome regarding Armenia. Trajan went to war immediately, conquered Armenia, and annexed it to his empire together with northern Mesopotamia, also including Adiabene. In 116 he captured Ctesiphon, the capital of the Parthians, and penetrated into Babylon. However, a violent uprising among the population of Mesopotamia in which the Jews of the country even earlier played an active role and the previous uprisings in Cyrenaica and Egypt (see below) compelled him to interrupt his campaign of conquest. Nothing definite is known about Trajan's attitude to the Jews. According to the papyrus *Alilot Kedoshei Alexandria* ("Deeds of the Martyrs of Alexandria"), Trajan and his wife Plotina preferred the Jews of Alexandria to its Greeks (see *Egypt). In 115, however, at the height of Trajan's war with the Parthians, a great revolt of Jews broke out in Cyrenaica that spread to Egypt and Cyprus the following year. Trajan ordered the disturbances put down with a strong hand. In the same year the revolt spread to Mesopotamia where it also involved the Jewish inhabitants of the country particularly. Trajan ordered Lusius *Quietus to subdue the Jews of Mesopotamia, and the order was carried out with savage cruelty. An allusion to this has been preserved in rabbinic literature which refers to the "war of Quietus" (Sot. 9:14 – according to the correct reading; *Seder Olam*), and also mentions the great destruction of Egyptian Jewry generally, and that of Alexandria in particular, with the crushing of the revolt (the destruction of its magnificent synagogue is ascribed to Trajan himself – TJ, Suk. 5:1, 55b).

There is an *aggadah* that Trajan attacked the Jews because, when his son was born on the Ninth of Av, the Jews were mourning, while on the death of another child which occurred on Ḥanukkah, they kindled lamps in joy (TJ, *ibid*.; Ta'an. 18b; Lam. R. 1:16 no. 45; et al.). Another *aggadah* states that before his death he decreed the death of *Pappus and Julianus in Laodicea. In rabbinic literature the name Trajan usually appears in a corrupt form: Trogianus, Tarkinus, etc.

TRAMER, MORITZ (1882–1963), pioneer of child psychiatry. Born in Czechoslovakia, Tramer began his career as an engineer and mathematician and is the coauthor of a textbook of higher mathematics for engineers, *Differential- und Integralrechnung* (1913). He then studied medicine and specialized in psychiatry. From 1924 to 1946 he was medical director of the Psychiatric Hospital in the Canton of Solothurn, Switzerland, and initiated the establishment in 1924 of the Observation Center "Gotthelf Haus" for emotionally disturbed children. He lectured on child and adolescent psychiatry at Berne University and in 1951 founded the Swiss Institute of Research and Information on Child Psychiatry. The designation of the specialty as "child psychiatry" owes its existence to Tramer. He was also the advocate of its recognition as a medical specialty in Switzerland in 1953.

Tramer was a prominent figure in national and international professional organizations and published numerous articles. His books include the monumental textbook *Lehrbuch der allgemeinen Kinderpsychiatrie* (1942, 1964⁴) and the well-

known monograph *Allgemeine Psychohygiene* (1960s). He was the founder and editor of the first journal of child psychiatry in 1934 later known as *Acta Paedopsychiatrica* which is the official organ of the International Association for Child Psychiatry and Allied Professions.

TRANI, seaport in Apulia, S. Italy. In the 12th century, when the town had become a port of embarkation for Crusaders and an important center of Eastern trade, it contained a flourishing Jewish community. When *Benjamin of Tudela visited Trani around 1159 he found 200 Jewish families there. Recognizing their economic usefulness the Norman kings in the 12th century and Emperor Frederick II in the first half of the 13th century granted the Jews a measure of protection. Thanks to this royal patronage they were given the right to control and distribute all the raw silk in Apulia and Calabria. Under Angevin rule toward the end of the 13th century, the position of the Jews deteriorated and they were subjected to severe persecution, fomented by Dominican friars. The houses in the Jewish quarter were repeatedly sacked; *blood libels were frequently raised against the heavily taxed Jews and a growing number was forced into baptism, causing heavy losses to the community. In 1290 four synagogues were converted into churches; two of them still stand. The position did not improve in the next century and many Jewish families left the town. In 1382 other synagogues were turned into churches and the Jewish cemetery was confiscated by the friars. In 1413, when King Ladislas of Naples issued certain dispositions regarding the communal administration of the city of Trani, he decreed that the community (universitas) would have the right to elect a governing body of 16 representatives consisting of 8 nobles, 6 commoners, and *Neofiti (baptized Jews). In all probability the need for this provision arose from the continuing existence of a convert population that retained a separate identity. In 1443 Trani still had 870 families of *Neofiti, and all the commercial activities of the town were said to be concentrated in their hands. After the 1492 expulsions from the Spanish kingdoms and Sicily, many exiles settled in Trani. Jews and Neofiti were expelled from Trani in 1510–11, along with the rest of the Jews in southern Italy. Sporadic persecutions of Neofiti continued for some time. The medieval Jewish settlement is still commemorated by street names such as Vicolo Giudecca, Via Scolanova, and Via la Giudea (renamed Via Mose (di Isaiah) di Trani).

[Arial Toaff / Nadia Zeldes (2nd ed.)]

TRANI, JOSEPH BEN MOSES (1568–1639), rabbi and halakhist. Trani, known as the "**Maharit**" (**M**orenu **ha**-**R**av Joseph **T**rani), was born in Safed, the youngest son of Moses b. Joseph *Trani. Joseph, 12 years old when his father died, was taken into the home of Solomon *Sagis, a Safed scholar, and became his pupil. In 1587, when Sagis died, Trani went to Egypt, where he attracted many pupils. After a short time he returned to Safed where he founded and taught in a yeshivah. Following the outbreak of a plague in Safed (1594), he went to Jerusalem, where he did research on the design and plan of the Temple. The resulting work, *Ẓurat ha-Bayit*, was lost, but many fragments and quotations from it have been preserved in *Derekh ha-Kodesh* by Ḥayyim *Alfandari (published in *Maggid mi-Reshit*, Constantinople, 1710). After some time Trani returned to Safed, where – as his father before him – he headed the Sephardi community. In 1599 he was sent by the Safed community to Constantinople, and in 1604 took up permanent residence there. Trani headed a large yeshivah in Constantinople which became a center of Torah for all Turkish Jewry and produced many of the great Turkish rabbis of the 17th century, including Ḥayyim b. Israel *Benveniste. Trani was eventually elected chief rabbi of Turkey, in which office he introduced *takkanot*, established societies, and became renowned for his many charitable acts. However, he took a severe attitude toward the *Karaites, who came under his authority according to the law.

In addition to *Ẓurat ha-Bayit*, the following works by Joseph have been published: Talmud novellae on the tractates of *Shabbat, Ketubbot*, and *Kiddushin* (Venice, 1645); *Ẓafenat Pane'aḥ* (*ibid.*, 1648), sermons; and responsa (Constantine, 1641; Venice, 1645). Most of his works, which encompassed all branches of Torah, have been lost, among them a supercommentary on Elijah *Mizraḥi's commentary on the Pentateuch and an abridgment of the *Arukh* of *Nathan b. Jehiel of Rome.

TRANI, MOSES BEN JOSEPH (Heb. acronym **Ha-Ma-bit**; 1500–1580), rabbi. His father emigrated from Italy to Salonika, where Moses was born, but the family was of Spanish origin. Orphaned at an early age, Moses went to Adrianople to live with his uncle Aaron, studying with him as well as at the yeshivah of R. Joseph Fasi. He later proceeded to Safed where he studied under Jacob *Berab, and was one of the four scholars ordained by him in his attempt to reintroduce ordination (**semikhah*). In 1525 Moses was appointed *marbiẓ Torah* of the

Bet Ya'akov congregation. In 1535 he visited Jerusalem. Moses devoted himself to a considerable extent to the agricultural laws which obtained in Ereẓ Israel, and in a *Sabbatical Year exempted from tithes produce that had grown in land belonging to a gentile, even though it had been stored by a Jew. This decision was disputed by Joseph *Caro and other Safed scholars. There were also spirited controversies between him and Caro on other matters. For some time he stayed in Damascus (1565). Moses was active as rabbi and *dayyan* for 54 years, but it was only after the death of Joseph Caro that he was appointed spiritual head of the whole community of Safed. Moses had two sons: Solomon, who was rabbi in Egypt, and Joseph *Trani (from his second marriage), who was rabbi in Safed and in Constantinople.

Moses' works are *Kiryat Sefer* on Maimonides (Venice, 1551); *Beit Elohim*, a moral and philosophical work with a commentary to *Perek Shirah* (Venice, 1576; Warsaw, 1872); *Iggeret Derekh ha-Shem*, a moral work (Venice, 1553); responsa (2 pts., Venice, 1629–30; Lvov, 1861).

[Hirsch Jacob Zimmels]

TRANSJORDAN (Heb. עֵבֶר הַיַּרְדֵּן). Geographically, Transjordan includes the area east of the Jordan River, extending from the sources of the Jordan near the *Hermon to the *Dead Sea. However, the area north of the Yarmuk River (the Golan and Bashan) are regarded as a separate entity, while the area east of the Dead Sea and the *Arabah, down to the Red Sea, is included in the region of Transjordan.

In its geographical configuration, Transjordan is composed of a series of three regions running from north to south: the eastern *Jordan Valley; the slopes descending to the valley, which face westward and are well provided with rainfall; and the mountains which slope gently eastward and merge with the desert steppe. The settled part of this area covers 6,840 sq. mi. (17,500 sq. km.), of which the Jordan-Dead Sea depression comprises 215 sq. mi. (550 sq. km.), the mountain and hill region 2,617 sq. mi. (6,700 sq. km.), the high plateau 2,051 sq. mi. (5,250 sq. km.), and the sandy southern regions approximately 1,953 sq. mi. (c. 5,000 sq. km.). Politically, in the Hashemite Kingdom of *Jordan, the region of Transjordan is considered to include 28,320 sq. mi. (72,500 sq. km.) of steppe and desert in a broad strip joining Iraq and dividing *Syria from *Saudi-Arabia.

The settled area is cut by confluents of the Jordan flowing from east to west, and by rivers emptying into the Dead Sea: the Yarmuk, forming the northern boundary of the region; the Jabbok, separating Gilead from Ammon and the Peraea; the Nimrīn, usually the northern boundary of Moab; the Arnon, at certain times the boundary of Moab; the Zered, separating Moab from Edom and the mountains of Seir. The mountain range parallel to the Jordan on the east varies in height: in the ʿAjlūn (Gilead), Tell ʿIbbīn is 3,940 ft. (1,182 m.) high, Umm al-Daraj is 4,203 ft. (1,261 m.) high, and Qalʿat Ilyās is 3,640 ft. (1,092 m.) high. South of the Jabbok, Nabī Yūshaʿ reaches to 3,710 ft. (1,113 m.) and Mount Nebo to 2,650 ft. (795 m.); south of the Arnon, Jebel Sīhān is 3,550 ft. (1,065 m.) high and Jebel al-Ḥasāʾ is 113 ft. (1,234 m.) high; the mountains of Seir reach to 5,776 ft. (1,733 m.). The greatest rainfall is in the ʿAjlūn (c. 27½ in.; 700 mm.) and in the mountains of Seir (c. 15¾ in.; 400 mm.). Most of the cultivable area receives about 8 in. (200 mm.) annually, with a rainfall of about 3 in. (80 mm.) in the desert. The mountains of Gilead are still wooded; in antiquity the area was much more thickly afforested, as is borne out by the story of Absalom. There is evidence that a large area under cultivation extended eastward. Iron was mined near Jerash and copper in the Arabah (see *Punon).

History

Paleolithic and Mesolithic remains, the earliest traces of occupation in Transjordan, have been found in the mountains of Seir and in Wadi Nimrīn. A pre-ceramic Neolithic settlement was discovered at al-Bayḍāʾ, southeast of the Dead Sea. Megalithic constructions were found at Alfa Safat and al-ʿUdayma in the Jordan Valley. Near the latter site is Tulaylāt al-Ghassūl, a Chalcolithic site of great importance, which gave its name to the Ghassulian culture. From the Early Bronze Age onward, a certain pattern of occupation can be noticed, mainly in the southern part of Transjordan, as a result of the archaeological survey undertaken by N. Glueck: periods of settlement varied with periods in which the area was abandoned to nomads.

The first period of settlement lasted from approximately the 23rd to the 19th century B.C.E. According to biblical tradition, the early populations included the Zuzims at Ham in northern Gilead, the Emims in Moab, and the Horites in Mount Seir (Gen. 14:5–6). Possibly as a result of the invasion described in this chapter, there was a decline in the settlement of Transjordan from the 19th to approximately the 14th century B.C.E. Egyptian texts do not mention any cities in Transjordan within this span of time, except for those in the Jordan Valley proper: Pehel (Pella; Execration Texts, Thutmosis III and Seti I), and perhaps Zaphon (Tell el-Amarna letters), Zarethan (Execration Texts), and Kiriath Anab (Tell al-Shihāb on the Yarmuk; Seti I, Papyrus Anastasi I). Only in the 13th century, in inscriptions of Ramses II, are cities in Moab, including Dibon, mentioned for the first time. The biblical definition of the Egyptian province of *Canaan (Num. 34) definitely excludes Transjordan, which was left to the Shasu nomads.

About a century before the Exodus, Transjordan was settled again by the Ammonites, Moabites, and Edomites, who formed a strong chain of kingdoms, with extensive areas under cultivation and a system of efficient border fortresses. Probably in the early 13th century, Moab was attacked from the north by Sihon, the Amorite king of Heshbon, who wrested the area north of the Arnon from it. The Israelites, coming from the wilderness, found it extremely difficult to cross Transjordan;

finally they passed east of the settled area of Moab and Edom; their victory over Sihon gave them the entire Jordan Valley, the Gilead, and part of Moab. This area was allotted to the tribes of Reuben (from the Arnon to the Nimrīn Valley), Gad (from southern Gilead to the Jabbok and the Jordan Valley), and half of Manasseh (from the Jabbok northward).

In the period of the Judges these tribes were subjected to the kings of Ammon and Moab, until David eventually conquered all of Transjordan down to the Red Sea. In the time of Solomon, Israelite-controlled Transjordan was organized into the three districts of Ramoth-Gilead, Mahanaim, and southern Gilead (Gad?; I Kings 4:13–14, 19). After the division of the kingdom, Ammon and Moab fell to Israel and Edom to Judah, but all three soon regained their independence. As is known from the *Mesha stele, Moab was reconquered by Omri; it revolted against Israel in the time of Ahab, finally gaining its independence in the days of Joram, the last of the Omrid kings (851–842 B.C.E.; cf. II Kings 3). In later times Israel never succeeded in subduing Moab, which under Mesha had enlarged its boundaries to the edge of the Jordan Valley. However, the kings of Judah succeeded in ruling large parts of Edom in the ninth century during the days of Jehoshaphat and Jehoram, and again in the eighth century in the days of Amaziah and Uzziah.

With the eighth century B.C.E., the settled area of Transjordan began once more to shrink, a process which lasted until the Hellenistic period. The Assyrian king Tiglath-Pileser III deported part of the Israelite population from Gilead in 732 B.C.E. The Ammonites maintained their independence, and the Edomites threw off Judean rule in the time of Ahaz (743–727 B.C.E.). After the fall of Jerusalem and the deportation of its population by Nebuchadnezzar in 586 B.C.E., the Edomites moved into southern Judea and their place was gradually taken over by the Nabateans, a people known for outstanding achievements in agriculture, architecture, and art. Their kingdom was composed of sections of Transjordan, Palestine, and Syria, and Petra was their capital (fourth century B.C.E.). In the Persian period, Ammon was ruled by the Jewish family of *Tobiads, whose roots in Gilead dated back to the time of the Israelite monarchy.

In Hellenistic times, a new period of prosperity began for Transjordan, lasting until the Arab conquest. The Ptolemies or Seleucids founded a number of cities in the northern part: Gadara and Abila to the north, followed by Pella and Gerasa. Rabbath-Ammon became the city of Philadelphia and was separated from the area of the Tobiads, who ruled the region populated by Jews between Philadelphia and the Jordan (the Peraea). Transjordan passed temporarily from Ptolemaic to Seleucid rule in 218 B.C.E. and permanently in 198 B.C.E. In the course of Hasmonean expansion, large areas of Transjordan were conquered by Jonathan (the Peraea), John Hyrcanus (Madaba and Heshbon), and Alexander Yannai (Moab to the Zered, Gerasa, Pella, and Gadara). In 63 B.C.E. Pompey restored the autonomy of the Greek cities, leaving only Peraea to the Jews. In order to strengthen the Greek element under Roman rule, he formed the Decapolis league, which included Philadelphia. For a time, Herod ruled Gadara, which was restored to Syria after his death. In the First Jewish War, the Peraea was conquered by the Romans (68 C.E.), but its Jewish population remained. In 97 the city of Capitolias was founded at Belt al-Rās near Pella. In 106 Trajan annexed the Nabatean kingdom; the cities of Madaba, Esbus (Heshbon), Areopolis (Rabbath-Moab), Charachmoba, and Petra became part of the new province of Arabia, into which Philadelphia and Gerasa were incorporated. The cities of the area reached a height of prosperity in the second century C.E. under the Antonines, due to a new paved road (the Via Nova) running from Elath (Aila) to Bostra throughout the length of Transjordan.

Christianity gained an early foothold in Transjordan, when the Jerusalem community moved to Pella in 70 C.E. In the Byzantine period southern Transjordan was attached to Palaestina III, the rest to Arabia. Churches and monasteries were built in all the large cities and the bishops took part in church councils. In the last centuries of Byzantine rule, Arab influences in the area were marked. The first battle between the Arabs and the Byzantines took place in 629, still in the lifetime of the prophet *Muhammad, in Transjordan (in Mu'ta, near Karak). The final Arab conquest was effected in several stages: southern Transjordan was taken in 630, the mountains of Seir and Moab in 634, and the rest of the region in 635. With the battle on the Yarmuk in 636, Arab rule in the area was established. In the early Arab period, the area up to Jerash was attached to the Jund al-Urdunn; central Transjordan, including Amman, to the Jund Filasṭīn; and the northern part to the Jund Dimashq (*Damascus). Under Arab rule the northern part of Transjordan together with northern Palestine constituted an administrative unit called Jund al-Urdun, with Tiberias as its capital. Central and southern Transjordan, with the equivalent parts west of the river Jordan, became Jund Filasṭīn, administered from Ramleh. The Arab period marked the beginning of a new decline in the population, which became pronounced for centuries after the Crusades (13^{th} to 19^{th} centuries). In the Crusades period, the Jordan Valley, part of the ʿAjlūn, and the mountains of Karak and Shawbak down to the Red Sea were combined into a principality known as Terre D'Outre Jourdain. As the Crusaders, and especially the rulers of the fortress of Montreal (Shawbak), threatened the pilgrims' route to Mecca and even the holy cities themselves, Saladin attacked and reduced the Crusader fortresses before the battle of Ḥiṭṭin. Under *Mamluk rule Transjordan was divided between Mamlakat Dimashq (the districts (*aʿmāl*) of ʿAjlūn and al-Balqāʾ) and Mamlakat al-Karak, which included Maʿān, Shawbak, Zughar (Zoar), and Karak. In the time of Baybars it was ruled by the last descendant of the *Ayyubid dynasty. In Ottoman times the population of Transjordan reached its lowest level and most of Transjordan was left to the Bedouin, although the sultans kept up a semblance of administration in the western areas. Most of the region was part of the *vilayet* of Damascus, divided into the Sanjak of Ḥawrān (to the Jabbok), the Sanjak of Nablus, which occasionally included the Balqāʾ,

and the Sanjak of al-Karak. The southern sections, Maʿan and Aqaba, were part of the *vilayet* of Hijaz. However, Ottoman rule was nominal most of the time. Transjordan was regarded as the backyard of Syria and Palestine and concerned the Ottomans only during the annual pilgrimage, as the main Hajj caravan from Damascus had to cross it en route to *Medina. Only in the second half of the 19th century, after the short-lived Egyptian occupation (1831–40) and during the reform period (Tanzimat), under *Abdul-Ḥamid II, was resettlement begun. The Ottomans had extended their direct rule over Transjordan. Karak, the capital of its namesake sanjak, was the major city in the area and the jurisdiction of its governor stretched over most of sedentary Transjordan. Local population increased when Circassian refugees from Russian-occupied Caucasus were encouraged by the Ottomans (in 1861–64, and later after the Turkish-Russian war of 1877–78) to migrate to Palestine and Transjordan. In the latter they settled in and around Amman, Zarqa, and Jarash. The 19th century also witnessed growing European interest in Transjordan, mainly for archeological and historical reasons – in 1812 Burckhardt discovered Petra and in 1806 Seetzen discovered Jarash. In the second half of the 19th century the interest of the Palestine Exploration Fund as well as of Christian churches and missions in Transjordan yielded, inter alia, the discovery of the *Mesha stele and the *Madaba mosaic map. In 1900–08 the Ottomans built the Hijazi railroad from Damascus to Medina. About one third of the 1,200 km. line passed through Transjordan, bringing it closer to the administrative centers of Damascus and *Istanbul, yet also triggering several rebellions in Karak.

For modern period after 1914, see also *Israel; *Jordan.

[Michael Avi-Yonah / Joseph Nevo (2nd ed.)]

TRANSLATION AND TRANSLATORS (Medieval). The earliest Jewish translations, apart from possible examples in the Bible, are the Greek version of the Pentateuch and, later, other books of the Bible, which were made to fill a need in the Greek-speaking Jewish community of Alexandria and other places that no longer understood the original Hebrew. Similarly, the Aramaic vernacular of Jewish settlements in Palestine and other parts of southwestern Asia explain the development of Aramaic versions of the Bible.

In the 10th century *Ḥisdai ibn Shaprut was one of the main translators of Dioscorides' work from Greek to Arabic in the court of Cordoba. During the 12th and 13th century Toledo was a very notable center of translations and the Jews played an important role in this enterprise. In the middle of the 12th century the archbishop of Toledo, Don Raimundo de la Sauvetat (1124–52), promoted the translation of Arabic philosophical works from Arabic through the Romance versions into Latin. The Jew Avendauth worked together with the Christian Gundisalvus, translating, for instance, the *De Anima* of Avicenna and Ibn Gabirol's *Fons Vitae*. One century later, King Alfonso the Sage relied on Jewish translators to get Romance versions of many scientific works. Among them, Judah ben Moses ha-Kohen, Isaac ibn Sa'id, the Alfaquim Don Abraham (Ibn Shoshan?), Samuel ha-Levi Abulafiah, and Don Moses Alfaquí, translated important astronomic and astrologic treatises.

The many translations into Hebrew which began to appear in Western Europe early in the 12th century can be attributed to several factors, among which the spread of Judeo-Islamic culture was of central importance. Cultured and scholarly men from Islamic Spain began to travel to Christian lands. Abraham Ibn Ezra, for example, traveled to Italy, France, and England, and supported himself by writing Hebrew grammars, translations, and biblical commentaries commissioned by Jewish communities. These works undoubtedly stimulated interest in the new approaches to language and learning and reflected the cultural richness of Spain. In consequence of religious persecutions and other disturbances in the Iberian Peninsula during the 12th century, some Jewish families emigrated to southern France or northern Italy, and spread something of the learning and achievements of their native land in their new homes. Works written in Hebrew, moreover, stimulated a desire for additional works in that language. In addition, the general cultural awakening in Western Europe during the 12th century affected the Jews, encouraging them to the further acquisition of knowledge. Without question, at the end of the 12th century, Maimonides' Hebrew code of Jewish law *Mishneh Torah* excited scholars in France and Italy, so that they avidly sought everything the master produced, translating it from Arabic into Hebrew.

No discernible pattern governed the books that were translated into Hebrew. Apparently, books were often translated on the request of a patron, or a scholar would select a book to translate for his own reasons. However, besides the large number of such unclassifiable translations, activity was concentrated in the fields of philosophy, mathematics, medicine, and other sciences. Generally, translators explained their undertakings as being in response to a special request. Judah ibn *Tibbon relates in the introduction to his Hebrew version of Baḥya ibn Paquda's *Ḥovot ha-Levavot* (*Duties of the Heart*) that Meshullam b. Jacob, whom he praises as an adept in both religious and secular studies, urged him to prepare a translation of the Arabic work. Similarly, Judah *Al-Ḥarizi states that he translated Maimonides' *Moreh Nevukhim* (*Guide of the Perplexed*) at the invitation of some Provençal scholars. There are many other examples of requests urging the translation of a work, yet there is no information about remuneration, although the translators presumably received some payment

from those who requested the work. Perhaps a community assumed some obligation for payment, especially if the persons interested in the translation were influential members in it. While it is reasonable to assume this of professional translators, like the Tibbonids or al-Ḥarizi, it is probable that other translators were impelled by a personal interest in the work and a desire to bring it to the attention of their fellow Jews.

There was considerable complaint about the neglect of Hebrew and the employment of Arabic. Writers occasionally pointed out the difference between Jews who lived under Islamic domination and Jews who resided in Christian lands. It was not the use of the vernacular Arabic which vexed them, because it was taken for granted that for social intercourse the language of the land was the proper vehicle. But in view of the fact that Jews in Christian countries utilized Hebrew in their literary productions, Jewish writers in Islamic countries justified their use of Arabic by claiming that the subjects they dealt with – subjects not cultivated by Italian and French Jews – required a vocabulary which Hebrew did not possess and which Arabic possessed in abundance. Moses ha-Kohen *Gikatilla, who supplied a Hebrew translation of the grammatical studies of Ḥayyūj, explains that grammarians were compelled to write in Arabic "because it is the current speech of a victorious people, and it is explicit while Hebrew is vague; clear and plain whereas Hebrew is ambiguous; and it is proper to elucidate the unknown by the known and the vague by the explicit." Judah ibn Tibbon presents a brief historical survey of the course of development: "Afterward most of the *geonim* lived in the Diaspora of the Muslim Empire, Iraq, Ereẓ Israel and Iran, and spoke Arabic, and all the Jewish communities in those areas spoke that tongue. Most of their interpretations of biblical and mishnaic and talmudic books were in Arabic, as also most of their compilations and responsa in answer to inquiries made of them. All the people understood it. Moreover it is a rich language, fully adequate for every theme and every need of orator or author; straight and clear rhetoric, to express the essence of every subject more than is possible in Hebrew." Notwithstanding the conceded advantages of Arabic over Hebrew, Jews adhered to the tradition that Hebrew was the divine tongue, the first to serve mankind. But the exile and the tribulations which Jews suffered had caused the loss of a significant portion of Hebrew vocabulary, since the Bible was the only record preserved.

In view of the difference in the richness of the two languages, the role of translator imposed certain duties, the main being the coinage of words and phrases in Hebrew according to need. For translating philosophical, scientific, or medical works new technical words had to be created in Hebrew. It was also necessary to decide what method to pursue in this process. Ordinarily translation is in large measure interpretation, and the function of the translator is to transmit in the new medium the sense of the original. Before Samuel ibn Tibbon translated the *Guide of the Perplexed* into Hebrew, he asked Maimonides for suggestions. The latter offered the following instructions: a translator must first understand the content, and narrate and explain that content in the language in which he is working. He will not escape changing the order of words, or transmitting phrases in single words, or eliminating vocables, or adding them, so that the work is well ordered and expounded, and the language of the translator will follow the principles governing that language. Despite this very sensible advice, Samuel ibn Tibbon's translation of the *Guide*, and his father's version of other works, give the impression of excessive faithfulness to the original. Yet this did not prove contrary to Maimonides' demands, inasmuch as he expressed his gratitude for the accomplishment of his translator. In fact, the style developed by father and son, with strong Arabic influence in its morphology, syntax, and vocabulary, became the standard for subsequent efforts in this field (Goshen-Gottstein). Other ways of translating, searching for a pure, more literary biblical language and avoiding the numerous neologisms, was undertaken also by other Jewish scholars like Judah Al-Ḥarizi, who translated Maimonides' *Guide* in a completely different way not long after the Tibbonid translation. But the method of the ibn Tibbon family was taken as a model for the future, while Al-Ḥarizi's translation was quickly forgotten.

When the full mastery of Arabic was lacking, books were translated from Arabic to Latin by way of the Hebrew version, and occasionally Hebrew translations were made from the Latin rather than from the original Arabic. Although thorough knowledge of both tongues was theoretically necessary – to appreciate the nuances and fathom the true meaning of the original, and to render it authentically and idiomatically – in practice this was unfortunately rarely the case. Translators, even if they were qualified to produce the ideal version, were so concerned about remaining faithful to the original Arabic that they frequently violated Hebrew syntax or sentence structure, and disregarded simple rules of gender and number. Nevertheless, translators contributed greatly to the enrichment of Hebrew, adding a large scientific and philosophic vocabulary. The means utilized to expand the vocabulary were forming new words from existing roots, creating additional noun patterns, making derivations from verbal stems, or forming verbs from nouns. Occasionally a new meaning was attached to an existing term, parallel to the course followed in the coinage of the Arabic terminology. In addition, a number of words were borrowed from Arabic, and they were generally adjusted to the morphological requirements of Hebrew. It should also be kept in mind that the philosophic and scientific style introduced by the translators became the standard, so that men who composed in Hebrew followed the patterns adopted from Arabic.

Translators were not always familiar with the subject of the work they were rendering. Occasionally criticism would be voiced about translators who offered to work without adequate knowledge of the field involved. However, on the whole, translators were usually conscious of their obligations, and succeeded in transmitting authentic versions of the originals. Even in more popular literature, where greater freedom could be taken since in popular works eloquence was frequently a

major quality, the Hebrew version, although it may read like an original, will still be a correct rendering. Abraham ibn Ḥasdai's **Ben ha-Melekh ve-ha-Nazir*, a beautiful Jewish book in Hebrew, is unmistakably a rendering of *Barlaam and Josaphat*. Other popular works translated into Hebrew were **Kalila and Dimna* and *Sinbad the Sailor*. In this genre, and, for that matter, in some of the more serious compositions, like Ibn Gabirol's *Improvement of the Qualities of the Soul*, translators often substituted Jewish personalities and references for foreign ones, and even replaced Arabic verses with Jewish equivalents.

Translators generally approached their task with deep humility. Statements of inadequacy and confessions of ignorance, which should have kept them from the undertaking, are often found in translators' introductions to their works. Although some of these expressions were undoubtedly *pro forma*, many others represent expressions of genuine trepidation with which translators assumed the charge. Samuel b. Judah of Marseilles, who translated Aristotle's *Ethics*, admits openly and sincerely his insufficient acquaintance with the subject and expresses the hope of studying it in depth to improve his rendering. Judah b. Nathan, who prepared a Hebrew version of Ghazalī's *The Intentions of the Philosopher*, frankly describes his inadequate command of the language and the subject. Yet the results are by and large highly commendable.

Our main source of information about Hebrew translations is still the monumental work of M. Steinschneider, *Die hebraeischen Uebersetzungen des Mittelalters und die Juden als Dolmetscher* (1893, repr. 1956). The following is a survey of medieval Hebrew translations of Arabic and Latin works. It begins with philosophy, and in this field *Aristotle was far and away the outstanding representative of Greek thought among Muslim and Jewish thinkers. The latter, who were mostly unfamiliar with Greek, knew him only through the Arabic. Two Muslim philosophers are extremely important for their influence on their Jewish counterparts: Abu al-Naṣr Muhammad al-*Fārābi (c. 870–950), known as "the second teacher" (Aristotle was the first), and Abu al-Walīd Muhammad ibn Rushd (*Averroes; 1126–1198). The Jewish philosophers knew the views of the Greek master through the commentaries of these two.

The Muslim thinkers, and Maimonides among the Jews, knew of a compendium of the entire Organon; but in Hebrew translation, only some parts are to be found: (1) Porphyry's *Isagoge* was called *Kiẓẓur mi-Kol Melekhet ha-Higgayon* by its translator Moses b. Samuel ibn Tibbon. A fragment of another version of their Introduction to logic is also extant; (2) *Categoriae Sifrei Ma'amarot*, in two renderings; (3) *Hermeneutica*, in two Hebrew translations, both known to Abraham Avigdor in his commentary on Averroes; (4) *Syllogisms*, also in two translations, and an abridgment by Jacob Anatoli; (5) *Analytica Posteriora – Ma'amar bi-Tena'ei ha-Hekkesh ha-Mofet*, anonymous; (6) *Topica – Ommanut ha-Nissu'aḥ*, in two translations, both anonymous. All of these works in logic are in al-Fārābi's version.

Averroes studied Aristotle's works in three ways: (1) Summaries of the latter's teachings which he himself called Al-Jawāmi ʿal-Sighār (the brief compendia; in Heb. *Kiẓẓur*). (2) The *Middle Commentaries*, which Averroes named Talkhiṣ – *Be'ur* or *Perush*; the Hebrew renderings do not indicate in each work whether it is from this body, or from the next one. (3) The *Great Commentaries*. In these Aristotle's text is offered in sections, followed in every case by a detailed commentary. In the ensuing list 1 = *The Compendium*, 2 = *The Middle Commentary*, 3 = *The Great Commentary*. I. Logic. (1a) *Kol Melekhet ha-Higgayon le-Aristoteles mi-Kiẓẓurei ibn Rushd* by Jacob b. Inaktur, Nov. 10, 1189. (1b) *Kiẓẓur Higgayon* by Samuel b. Judah of Marseilles, December 1329. He explains in his introduction that he undertook it only because the previous one was a poor performance. (2a) by Jacob b. Abba Mari Anatoli, March 1232. (2b) *Nissu'aḥ ve-Hata'ah* by Kalonymus b. Kalonymus, Arles, 1313. (2c) *Halaẓah ve-Shir* by Todros Todrosi, Arles, 1337. (3) *Ha-Mofet* by Kalonymus b. Kalonymus, December 1314.

II. A. Physics. (1) *Ha-Shema ha-Tivi* by Moses ibn Tibbon. (2a) *Ha-Shema* by Zerahiah Ḥen of Barcelona, in Rome, 1284. It is in eight sections (*ma'amarim*), divided into principles (*kelalim*), and these into chapters (*perakim*). (2b) *Ha-Shema* by Kalonymus b. Kalonymus, Arles, 1316. (3) *Ha-Shema* by Kalonymus b. Kalonymus. It seems that another version was prepared by Moses b. Solomon.

B. *Sefer ha-Shamayim* (1) Themistius' paraphrase, by Zerahiah Ḥen, Rome, 1284. Averroes' *Kelalei ha-Shamayim veha-Olam* was done by Moses ibn Tibbon. (2) by Solomon b. Joseph ibn Ayyūb of Granada, in Béziers, 1259.

C. (1) *Ha-Havayah ve-ha-Hefsed*, by Moses ibn Tibbon, 1250. (2) by Zerahiah Ḥen, Rome, 1284. Also by Kalonymus b. Kalonymus, October 1316.

D. *Al-Āthār al-ʿAlawiyya* on meteorology. (1) *Otot ha-Shamayim* by Samuel ibn Tibbon, 1210. A work by Averroes: *Otot Elyonot* was translated into Hebrew by Moses ibn Tibbon. (2) *Be'ur Sefer ha-Otot ha-Elyonot* by Kalonymus b. Kalonymus, Arles, 1316.

E. *Ha-Ẓemaḥim* 1–2 by Shem Tov ibn Falaquera, and Kalonymus b. Kalonymus, who did Averroes' commentary, April 1314.

F. *Sefer Ba'alei-Ḥayyim*, consisting of *de Natura Animalium, de Partibus* and *de Generatione*. The last two were translated by Jacob b. Machir ibn Tibbon, December 1302.

G. *On the Soul*, translated by Zerahiah Ḥen in Rome, 1284. Averroes' treatment (1) *Kelalei Sefer ha-Nefesh*, by Moses ibn Tibbon, 1244. (2a) by Shem Tov b. Isaac of Tortosa. (2b) *Be'ur Sefer ha-Nefesh* by Moses ibn Tibbon, April 1261. (3) Of the *Great Commentary* no Hebrew translation is known, but it was used by Shem Tov Falaquera and was commented on by Joseph b. Shem Tov. It is also pertinent to mention the treatise of Alexander of Aphrodisias, which in Hebrew is *Ma'amar Nefesh*, translated by Samuel b. Judah of Marseilles in Murcia, November 1323.

H. Of the *Parva Naturalia*, consisting of *de Sensu et Sensato, de Memoria, de Somno*, and *de Berevitate Vitae*, only the

first was translated as *Ha-Ḥush ve-ha Muḥash* by Moses ibn Tibbon, July 1314, in Montpellier.

Metaphysics. Al-Fārābī's introduction *Kitāb fī Aghrāḍ Aristo fī Kitāb mā baʿd al-Tabīʿa* was rendered anonymously in Hebrew under the title: *Be-Khavvanot Aristo be-Sifro Mah she-Akhar ha-Teva*. Books alpha–lambda were done from the Latin by Baruch b. Yaʾish for Samuel Sarfati about 1485. Of Averroes' treatment, one was presented in Hebrew by Moses ibn Tibbon in May 1258, a second by Zerahiah Ḥen, 1284, in Rome and also by Kalonymus b. Kalonymus in May 1317. The third is by Moses b. Solomon of Salon in Beaucaire, 1310–20, of which only Hebrew fragments survive. Themistius' paraphrase of Book Lambda (12) was translated by Moses ibn Tibbon. *De Anima* plus Averroes' commentary was explained, and possibly translated by Moses Narboni under the title *Efsharut ha-Devekut ba-Sekhel ha-Poʿel*. Three treatises on the same theme were translated into Hebrew by Samuel ibn Tibbon. Aristotle's *Nicomachean Ethics* were rendered in Hebrew from the Latin by Don Meir b. Solomon Alguadez, Averroes' middle commentary in Hebrew by Samuel b. Judah of Marseilles, February 1321.

His *Politics* were never translated into Arabic, although its existence was known as the practical application of the principle in the *Ethics* to the conduct of the state, but it is Plato's *Republic* which was available in Arabic under the title *Kitāb al-Siyāsa* and was translated into Hebrew by Samuel b. Judah of Marseilles in 1320–22.

Of Aristotle's *Economica*, a Hebrew version from the Arabic was prepared by David b. Solomon of Seville (1373?), and probably from the Latin by Leon Aretino. The latter carries an *Introduction* by an otherwise unknown Abraham ibn Tibbon. Several pseudo-Aristotelian works circulated in Hebrew, generally via Arabic. Of these, *Problemata* by Moses ibn Tibbon (1264); on stones – *Sefer ha-Avanim* or *De Lapidario; Theology* by Moses b. Joseph Arovas, from the Arabic, and also in Italian by him; *Secretum secretorum*, in Arabic *Sirr al-Asrār*, and in Hebrew, anonymously, *Sod ha-Sodot*, in the 13th century; *de Causis*, on the absolute good, by Zerahiah Ḥen called *Ha-Beʾur be-Tov ha-Gamur*, and also by Hillel b. Samuel of Verona, both from the Arabic, which is not known (Produs' *de Causis* was rendered in Hebrew by Judah Romano, and called *Sefer ha-Sibbot); Kitāb-al-Tufāḥa* ("On the Apple"; on immorality, and seen as an imitation of Plato's *Phaedo*) in Hebrew by Abraham ibn Ḥisdai; these are also letters which he sent to Alexander the Great, and works on auguring.

Muslim thinkers who wrote in Arabic, and whose works were translated into Hebrew, include al-Fārābi: *Fi al-Tanbīhʿ alā Sabīl al-Saʿāda* is rendered in Hebrew, *Ha-Heʿarah al-Derekh ha-Hazlaḥah*, by an anonymous translator; *Kitab al-Mabādiʾ* or *al-Siyāsa* was translated by Moses ibn Tibbon, and named *Sefer ha-Hathalah; Iḥṣāʾ al-Ulūm* (an enumeration of the sciences), in Hebrew, by Kalonymus b. Kalonymus, *Be-Mispar ha-Ḥokhmot; ʿUyūn al-Masāʾil* (answers to philosophical problems), in Hebrew *Ayin Mishpat ha-Derushim* by Todros Todrosi; Kalonymus b. Kalonymus did *Iggeret be-Siddur Kriʾat ha-Ḥokhmot* from the Arabic *fī mā Yanbaghīʿan Yaqdum qabla Taʿallum al-Falsafa; Ba-Sekhel u-va-Muskal from fī al-ʿAql wa al-Mʿaqūl*; the last was also translated anonymously as *Ha Sekhel ve-ha-muskalot. Risāla fī Hayāt al-Nafs* was done in Hebrew by Zerahiah Ḥen, in 1284, Ibn Sīnā (Avicenna, d. 1037), accepted by orthodox Islam, wrote *al-Samāʾ wa al-ʿĀlam*, translated into Hebrew as *Ha-Shamayim ve-ha-Olam*, by Solomon b. Moses of Melgueil (second half of 13th century), probably from Latin; *Sefer ha-Shenah ve-ha-Yekẓah* by the same, again from Latin; *al-Najāt*, translated as *Hazzalat ha-Nefesh* by Todros Todrosi (1330–40); Ḥai ibn Yaqzān, in Hebrew *Iggeret Ḥai ben Mekiẓ* by Abraham ibn Ezra.

Al-*Ghazālī (d. 1111), the famous critic of philosophy, wrote *Maqāṣid al-Falāsifa* ("The Objectives of the Philosopher"; it was cribbed by Saádiah b. Daud al-ʿAdeni under the title *Zakāt al-Nafs*) which was adopted by Isaac al-Balagh (only the first two parts) and called *Deʿot ha-Pilosofim*. A translation, *Kavvanot ha-Pilosofim*, was prepared (1352–58) by Judah b. Nathan, a Provençal physician. A third anonymous version also exists. His *Tahāfut al-Falāsifa* ("The Collapse of the Philosophers") was translated into Hebrew, by Zerahiah b. Isaac ha-Levi, called Saladin, and possibly the Rabbi Ferrer of the Tortosa disputation (1412–14). *Miʿyar al-ʿIlm* is *Moznei ha-Iyyunim* by Jacob b. Machir ibn Tibbon; *Mīzān al-ʿAmal*, an ethical work, done by Abraham b. Samuel ibn Ḥasdai and called *Moznei Ẓedek. Mishkatt al-Anwar* ("The Niche of the Lights") is *Maskit ha-Orot* by Isaac b. Joseph al-Fāsī, of the 13th century. Another, but anonymous, rendering is called *Ha-Orot ha-Elohiyyot*.

Abdallah ibn Muhammad of Badajoz (d. 1127) wrote *al-Dāʾira al-Wahmiyya* ("The Imaginary Circle") a work which was quite influential among Jewish thinkers. Moses ibn Tibbon rendered it into Hebrew, calling it *Ha-Agullot ha-Raʾyoniyyot*. It was also done by Samuel Motot, as part of his commentary on *Sefer Yeẓirah*. Ibn Baja (d. 1138 in Fez) wrote *Kitāb al-Wadāʿ* ("The Farewell" [to the world]) which was converted into Hebrew by Ḥayyim ibn Vivas, and *fī Tadbīr al-Mutawaḥḥid* (on the conduct of the recluse) which is *Be-Hanhagat ha-Mitboded*, by Moses of Narbonne who wrote a commentary on it. Ibn Ṭufayl (d. 1185 in Murcia) composed a celebrated *Risālat Ḥayy ben Yaqzān*, in Hebrew *Iggeret Ḥayawan ben Yakson*, it was also incorporated by Moses of Narbonne in his commentary. Ibn Rushd (Averroes, d. 1198) wrote an exposition of the harmony of religion and philosophy called *Faṣl al-Maqāl* etc., which was translated into Hebrew, anonymously, under the name *Ha-Hevdel ha-Neʾemar she-Bein ha-Torah ve-ha Ḥokhmah min ha-Devekut*. He refuted Ghazāli's critique of philosophy in his *Tahāfut al-Tahāfut* ("The Collapse of the Collapse"); its Hebrew version, *Happalat ha-Happalah*, was prepared by Kalonymus b. David b. Todros. A second rendering, anonymous, is also extant.

Since a number of Jewish thinkers wrote their works in Arabic, they also required conversion into Hebrew. The earliest is Isaac Israeli. Among his philosophic writings are *Kitāb al-Ḥudūd wa al-Rusūm* ("Book of Definitions"), in Hebrew, *Sefer*

ha-Gevulim ve-ha-Reshamim by Nissim b. Solomon; *Kitāb al-Ustuqṣāt* as *Sefer ha-Yesodot* by Abraham ibn Ḥisdai; *Maqāla fi-Yishersku ha-Mayim*, in an anonymous Hebrew version; *Sefer ha-Ru'ah ve-ha-Nefesh*, only a small fragment of the Arabic original is extant. Saadiah b. Joseph al-Fayyumi (d. 942) composed *Kitāb al-Amānāt wa al-Iʿtiqādāt*, called in Hebrew *Sefer ha-Emunot ve-ha De'ot* by Judah ibn Tibbon. An anonymous version titled *Pitron Sefer ha-Emunot* is also extant. His commentary on *Sefer Yeẓirah* is likewise found in Hebrew, but the translator is not known with certainty.

Baḥya ibn Paquda composed the ethical-philosophical, *Farāʾid al-Qulūb*; in Hebrew it is *Ḥovot ha-Levavot* translated by Judah ibn Tibbon, who also appended an interesting introduction to his translation.

Solomon ibn Gabirol wrote a philosophic rather than a theological study, whose Arabic original has not been discovered. No medieval Hebrew translation exists (one is extant in Latin), but an epitome, *Likkutim*, prepared by Shem Tov ibn Falaquera, is extant. A modern Hebrew version is now available. Other works Ibn Gabirol rendered into Hebrew included *Iṣlāḥ al-Akhlāq* ("The Improvement of the Character") translated by Judah ibn Tibbon as *Tikkun Middot ha-Nefesh*, and a collection of aphorisms, probably by the same translator, under the title *Mivḥar ha-Peninnim*. Another version, in the rhyme, *Shekel ha-Kodesh*, was the work of Joseph Kimḥi. Joseph ibn Ẓaddik, a judge in Cordoba (d. 1149), wrote *al-ʿĀlam al-Ṣaqhīr* ("Microcosm"), which is *Ha-Olam ha-Katan* in Hebrew, but the translator is unknown.

Judah Halevi (d. 1141) is the author of *Kitāb al-Hujja wa al-Dalil* ("The Argument and Proof"), known as *Ha-Kuzari* in Judah ibn Tibbon's Hebrew rendering. A fragment is also extant of a translation by Judah b. Kardena. Abraham ibn Daud, the earliest Aristotelian among Jewish thinkers, wrote *al-ʿAqida al-Rafiʿa*, on free will and other matters. It was translated as *Ha-Emunah ha-Nissa'ah* by Samuel ibn Motot in 1312, and as *Ha-Emunah ha-Ramah* by Solomon b. Levi. Moses Ibn Ezra wrote a work of literary criticism, *Kitāb al-Muḥaḍara wa al-Mudhākara* (which is called *Shirat Yisrael* in a modern Hebrew version by B. Halper, or *Sefer ha-Iyyunim ve-ha-Diyyunim* by A.S. Halkin), and *Fī Maʿna al-Majāz wa al-Haqīqa* ("On Literalisms and Figurative Expressions"), part of which was rendered into Hebrew as *Arugat ha-Bosem*.

Many of the works of Maimonides were rendered in Hebrew translation. Of his commentary on the Mishnah, Judah al-Ḥarizi translated the general introduction and most of *Zera'im*; Joseph ibn al-Fawwāl and a certain Simḥah did *Mo'ed* and *Nashim* in Huesca; the remaining three were done in Saragossa by Solomon ibn Ya'qūb (*Nezikin*) and Nethanel ibn Almali (*Kodashim* and *Tohorot*). There are also fragments of other translations. *Avot* was done by Samuel ibn Tibbon. Maimonides' *Sefer ha-Mitzvot*, listing the 613 biblical precepts, was rendered into Hebrew by Abraham ibn Ḥisdai, of which only fragments exist, and by Moses ibn Tibbon. A third version exists by Solomon ibn Ayyūb. His epistle on forced conversion was titled *Iggeret ha-Shemad* in Hebrew; the translator is unknown; his *Iggeret Teiman* exists in three Hebrew versions: (a) by Samuel ibn Tibbon; (b) by Abraham ibn Ḥisdai; (c) by Nahum ha-Ma'aravi; his treatise on resurrection, *Ma'amar Teḥiyyat ha-Metim*, by Samuel ibn Tibbon. His major philosophic composition, *Dalālat al-Hāʾirīn*, was translated by Samuel ibn Tibbon and also by Judah al-Ḥarizi. His treatise on logic, *Maqāla fi Sināʿat al-Manṭiq*, is available in Hebrew, probably from Moses ibn Tibbon's hand, as *Millot ha-Higgayon*.

Joseph b. Judah ibn Aknin wrote a philosophic commentary on the Songs of Songs, which he called *Inkishāf al-Asrār wa Ṭuhūr al-Anwār*. It was recently translated into Hebrew. Of Karaite thinkers, Joseph al-Basir's two works were provided with a Hebrew translation: *Al-Muḥtawī* was translated under the title *Sefer ha-Ne'imot*, and *Kitāb al-Tamyīz*, received by the Hebrew name *Maḥkimot Peti*.

Books by Christians which are available in Hebrew translation include *Quaestiones naturale* by Adelard of Bath (c. 1120), which is *Dodi ve-Nekhdi*, by Berechiah ha-Nakdan; *Philosophia* of Albertus Magnus (1193–1286) is in a Hebrew version titled *Kiẓẓur ha-Pilosofyah ha-Tivit* by Abraham Shalom, and Aegidius de Columnas' (d. 1306) *De Regimine Principum*, in Hebrew *Hanhagat ha-Melakhim*. The *De Consolationes Philosophiae* of Boethius (d. 524) was translated into Hebrew by Samuel b, Benveniste and called *Menaḥem Meshiv Nafshi*, and again by Azariah b. Abba Mari under the name *Neḥamot ha-Pilosofyah*. Other scholastics whose works were translated are Occam (d. 1343/7) whose *Summa totius*, in Hebrew *Perakim ba-Kolel*, was translated by Eli Habillo, who called himself Don Manuel. Petrus Hispanus (d. 1276) wrote *Parva Logicalia*, a work quite popular among Jews, as can be judged from the several renderings: (a) *Higgayon Kaẓar* by Abraham Avigdor; (b) *Higgayon* by Judah b. Samuel Shalom; (c) *Trattat*, anonymous; *Be'ur ha-Mavo* by Jehezekiah b. Ḥalafta. Raimund Lull (d. 1215) created an *Ars Parva* from his *Ars Magna*, the former was rendered into Hebrew by several translators as *Melakhah Keẓarah*. Many of Thomas Aquinas' works, particularly the philosophic treatises and commentaries, were made available in Hebrew.

The Jews in the Islamic world were deeply interested in mathematics, first, because of its intrinsic challenge, and secondly, because of its use in astronomy and astrology, which had important practical and religious implications. As in philosophy, so in science, the pursuits of the Greek scientists were eagerly studied. Archimedes' work on cylinders was translated by Kalonymus b. Kalonymus under the title *Ba-Kaddur u-va Iẓtevanah* from Costa ibn Lucca's Arabic version. Kalonymus also provided a Hebrew version of the measurement of circles, *Bi-Meshiḥat ha-Agullah*; from Thābit b. Karras' Arabic. Euclid was the representative of the Greeks. His *Kitāb al-Uṣūl* or *al-Ustuqṣāt*, in 12 books, augmented by two more of Hypsicles, was rendered by Moses ibn Tibbon in 1270. Another version called *Yesodot ve-Shorashim* was made by Jacob b. Machir about 1270. Other Hebrew texts also exist, possibly from the Latin, for example, his *Data* in *Sefer ha-Mattanot*

by Jacob b. Machir. The *Optics, bi-Khtilāf al-Manāthir,* and *Ḥilluf ha-Mabbatim* in Hebrew, was also the work of Jacob b. Machir. In the Hebrew manuscript *Sefer ha-Marim* of Euclid follows the preceding work. But the Arabs know only a *Kitāb al-Mirʾa* by Aristotle. A book of Menelaus of Alexandria (first century; Ar. *Kitāb al-Ashkāl al-Kurriyya*) was translated into Hebrew by Jacob b. Machir and called *Sefer Mileus ba-Temunot ha-Kadduriyyot*.

Ptolemy of Alexandria (d. 150), known to Jews and Arabs as Betolomaus, is the author of *Elmegiste*, which was translated into Hebrew as *Ḥibbur ha-Gadol* by Jacob Anatoli. The introduction to *Elmegiste* was turned into Hebrew as *Ḥokhmat ha-Kokhavim*, or *Ḥokhmat Tekhunah ha-Keẓarah* by Moses ibn Tibbon. His *Hypotheses* was rendered by Kalonymus b. Kalonymus in 1317 under the title *Be-Sippur Inyenei ha-Kokhavim ha-Nevukhim*. Several works ascribed to Ptolemy also circulated, among them the *Astrolabe*, called *Maʿaseh ha-Aẓterolav* by Solomon Sharvit ha-Zahav (14th century), and *Planispherium*, called *Mofetei Kelei ha-Habbatah*, probably from the Latin.

Muslim mathematician and astronomer Jābir ibn Aflaḥ's *Kitāb al-Hayʾa*, which was translated into Hebrew by Moses ibn Tibbon, is identical with the alleged *Elmegiste* in nine books, completed in 1274. His *Sector of Menelaus is Ha-Ḥibbur ba-Temunah ha-Ḥitukhit le-Mileus*; the translator is not known with certainty. Abu Batir's *De Nativitatibus* was rendered into Hebrew as *Sefer ha-Moladot* by Isḥāq abu al-Khayr from the Latin in 1498. Averroes' *Compendium* is *Kiẓẓur Elmegiste* by Jacob Anatoli in 1231. Abu Isḥāq al-Bitrinji of Seville composed *Kitāb fī al-Hayʾa, Maʾamar ba-Tekhunah* in Hebrew by Moses ibn Tibbon. Costa ibn Lucca's *Al-ʿAmal bial-kurra al-Nujūmiyya* was translated by Jacob b. Machir as *Sefer ha-Maʿaseh be-Khaddur ha-Galgol*. Aḥmed al-Ferghani (d. 833/844) wrote *Jawāmiʿ al-Nujūm* which is *Yesodot ha-Tekhunah* by Jacob Anatoli (the title is not his). Muhammad al-Ḥaṣṣār composed an arithmetic which he named *Al-Bayān wa al-Tidhkār*, and it is available in the Hebrew translation of Moses ibn Tibbon as *Ḥeshbon*. Ibn Haitham's *Qawl fī Hayʾat-ʿAlam* was translated as *Sefer ha-Tekhunah* by Jacob b. Machir in 1271, and by Solomon ibn Fatir ha-Kohen in 1322. Abu Yūsuf al-Kindī's astrological work on the new moon was prepared in Hebrew by Kalonymus b. Kalonymus as *Iggeret be-Kiẓẓur ha-Maʾamar ba-Moladot*. His *Iggeret ha-Maspeket ba-la-Ḥiyyut u-va-Matar* exists in an anonymous translation. Jaʿfar Abu Maʿshar (d. 885/6 at the age of 100) wrote *Al-Madkhal al-Kabīr*, which was translated into Hebrew from the Latin under the name *Mavo ha-Gadol me-Ḥokhmat ha-Tekhunah* by Jacob b. Elijah. Another work of his is *Sefer Kaẓar be-Mivḥar Liabi Maʿshar* by an anonymous translator from the Arabic *al-Ikhtiyārāt*. The astronomical *Tables*, by an unknown Muslim, were translated into Hebrew by Abraham ibn Ezra and called *Taʿamei Luḥot al-Khwarizmi*. Ibn Muʿadh's discussion of the solar eclipse of 1079, was converted into Hebrew by Samuel b. Judah of Marseilles (1320–40), who also translated Ibn Muʾadh's treatise on the Dawn, as *Iggeret be-Ammud ha-Shaḥar. Kitāb al-ʿAmal bi al-Asturlab* by Aḥmad ibn al-Saffār was rendered into Hebrew as *Perush ha-Aẓterolab* by Jacob b. Machir. Kalonymus b. Kalonymus translated Abu l-Qāsim ibn Samḥ's work under the title *Maʾamar ba-Iẓtevanot u-va-Meḥudadim*. Abu al-Kāmil Shujāʿ of Egypt (900–950) composed *Ṭharāʾif al-Ḥisāb*, and it was translated from the Latin into Hebrew by Mordecai Finzi of Manta (1344–1375). Thābit b. Qurra (d.901) composed *Kitāb al-Shakl al-Qaṭāʿ*. Its Hebrew version, *Sefer ha-Temunah ha-Ḥittukhit*, is by Kalonymus b. Kalonymus. Ibrāhīm al-Nakkūsh ibn al-Zarkala (1061–80) composed *al-Ṣafīḥa al-Zarkaliya*, which was done in Hebrew by an unknown translator under the title *Iggeret ha Maʿaseh ba-Luʾaḥ ha-Nikra Ṣafiha*. Another work by this author, on the fixed stars, was translated by Samuel b. Judah of Marseilles and called *Maʾamar bi-Tenuʾat ha-Kokhavim ha-Kayyamim*.

A few Jewish astronomers wrote in Arabic, and their works required translation. Mashalla (d. 820) wrote an astrological study, which Abraham ibn Ezra translated under the title *Sheʾelot*. He also translated Mashalla's work on eclipses which in Hebrew is called *Be-Kadrut ha-Levanah ve-ha-Shemesh ve-Ḥibbur ha-Kokhavim u-Tekufat ha-Shanim*. Sahl ibn Bishr (d. c. 820) compiled a book of principles of astrology, *Kitāb al-Aḥkām*. Rendered into Hebrew by an unknown translator, it is called *Kelalim*. Maimonides' treatise on the calendar is translated by an unknown scholar as *Ḥibbur be-Ḥokhmat ha-Ibbur*. Joseph ibn Naḥmias' astronomical study, *Nūr al-ʿAlam*, was rendered into Hebrew by an unknown translator as *Ha-Shamayim ha-Ḥadashim*. The astronomical tables of Joseph ibn Wakkār were also done in Hebrew.

The *Alphonsine Tables*, prepared by the Jew Yisḥak ibn Cid in 1265, for the Christian astronomer Alphonse, have been rendered into Hebrew, as have other tables, with adjusted dates. Gerard of Sabionetta wrote a *Thearica Planetarum* which, in the Hebrew of Judah b. Samuel Shalom, is *Iyyun Shivah Kokhevei Lekhet*. Hermanus Contractus (d. 1054) produced *de Mensura Astrolabu*, which in Hebrew is called *Sefer ha-Aẓteroblin*, and, in another version, *Sefer Astrolog*. Both translators are unknown. John of Gmund (d. 1417) is the author of a treatise on the stars which David b. Meir Kalonymus translated into Hebrew and called *Marot ha-Kokhavim*. Alessandro Piccolomini (d. 1578) composed *La Spera del Mondo* and *Speculazione dei Pianete*. In Hebrew they are respectively *Sefer ha-Kidor* and *Iyyunei Kokhevei ha-Nevokhah* in the translations of an unknown author. Dioscorides (first cent. C.E.) compiled a work on *Simplicia* in which Ḥisdai ibn Shaprut participated in translating into Arabic; no Hebrew version is known, except for passages in the medical work of the so-called Asaf. His *Succeda Nea* was translated from the Latin by Azariah Bonafoux under the title *Temurat ha-Sammim*. Numerous writings of Galen were available in Hebrew. *Ars Parva* (*Techne*) was rendered from the Arabic as *Ha-Meʾassef le-khol ha-Maḥanot* by an unknown scholar. Four of his smaller works on illnesses, their cause and symptoms, were combined in the Hebrew of Zerahiah Ḥen (1277) under the heading *Sefer ha-Ḥolaʾim ve-ha-Mikrim*. Zerahiah Ḥen also translated the *Kata-*

genos, which deals with compound medicines. Galen's work on crises, *al-Buḥrān* in Arabic, was made available in Hebrew under the Arabic name by Bonirac (perhaps Boniac) Solomon (c. 1300–1350). *On Blood Letting* was rendered by Kalonymus b. Kalonymus (1308) as *Sefer ha-Hakazah*. Kalonymus also translated *Ba-Ḥuknah u-va Kulang* ("on enema and colic"). The author's treatise on epilepsy was rendered in Hebrew by an unknown translator under the title *Be-Hanhagat ha-Na'ar Nikhpeh*, and his *De Malitia Complexionis Diversae* was rendered in Hebrew from the Latin by David b. Abraham Caslari (1280–1337) and called *Sefer Ro'a Mezeg Mitḥallef. The Compendia* (Ar. *al-Jawāmiʿ*) was converted into Hebrew by Samson b. Solomon (1332). Many smaller tracts of his were also made available in Hebrew, all, of course, from the Arabic or the Latin. Some writings ascribed to Galen are *Sefer ha-Em* ("Gynaecaeas") and *Sefer Issur ha-Kevurah* (on prohibition of burial before 72 hours after death) *fī Taḥrīm al-dafn*.

Hippocrates, the father of Greek medicine, was known to the medieval Jews, through the Arabs, by his aphorisms, *Kitāb al-Fusūl*, translated by Moses ibn Tibbon as *Perakim*. This work was also translated by an unknown scholar and by Nathan ha-Me'ati, in 1283. Hillel b. Samuel of Verona prepared a Hebrew version of it from the Latin with the title *Ma'amar ha-Rofe'im*, and another version under the name *Agur*, again from the Latin, was made by an unknown translator. Hippocrates' *Prognostica* with Galen's comments and titled *Hakdamat ha-Yedi'ah*, was probably translated by Nathan ha-Me'ati. It also exists as *Ḥidot ve-Hashgaḥot*, evidently rendered from Greek and Latin by an unknown translator. His work on acute illnesses, *Hanhagat ha-Ḥola'im ha-Ḥaddim*, was translated by Nathan ha-Me'ati, and by his grandson Samuel b. Solomon. Hippocrates' study of air, water, and places, *Sefer ha-Avirim u-va-Zemannim ve-ha-Memot ve-ha-Araẓot* – was rendered by Nathan ha-Me'ati, and Galen's commentary on it, in Hebrew, is the work of Solomon b. Nathan in 1299. A book, *Marot ha-Sheten* ("on the color of urine"), ascribed to the Greek physician, is extant in Hebrew in the translation of Joseph b. Isaac Yisre'eli.

In Arabic a good deal was produced on medicine, and much of it was rendered into Hebrew. The celebrated translator of Galen, Ḥunayn ibn Isḥāq, himself a physician, compiled an introduction, *Madkhal fī-al-Ṭibb*, which exists in Hebrew as *Mavo* or *She'elot* translated from the Latin by Moses ibn *Tibbon and two anonymous scholars called *Mavo.* Māsawayh (d. 857) wrote medical curiosities, *al-Nawādir al-Ṭibbiyya*, translated into Hebrew as *He'arot min ha-Refu'ah* by an unknown scholar, and *Iṣlāh al-Adwiya al-Mushila* ("on laxatives") rendered into Hebrew as *Me-ha-Eẓah ve-ha-Teva'im ve-ha-Tena'im* by Samuel b. Jacob (end of 13th century), and also by an unknown scholar. There is an antidotary by Māsawayh, *Aqrābadhīn*, of which three or four anonymous versions are in existence. Muhammad al-Rāzī (d. 932/3), one of the famous Muslim writers on medicine, wrote *al-Manṣūrī*, a general work in ten tracts, which was translated by Shem Tov b. Isaac Tartasi (d. 1264), and was later abridged. His *Aegritudine junctuarum* (*Me-Ḥolyei ha-Ḥibburim*), *de Aegritudinibus puerorum* (*Me-Hanhagat ha-Ne'arim ha-Ketannim*) are both by unknown translators from the Latin, the latter being a more literal translation than *Me-Ḥoli ha-Ne'arim ke-fi Rāzi. Pirkei Razi*, 119 short aphorisms, is an anonymous translation from Arabic, as is also *Sefer ha-Pesakot*. A compendium, *Liber Divisionum*, was translated by Moses ibn Tibbon as *Ha-Ḥilluk ve-ha-Ḥilluf*; he also translated Al-Rāzī's antidotary in 1257; of the latter an anonymous version also exists. Al-Rāzī's explanation of why people go to charlatans, *Ba-Meh she-Yikreh bi-Melekhet ha-Refu'ah*, is perhaps the work of Nathan ha-Me'ati. There is an anonymous *Ma'amar be-Hakkazah*, and, from the Latin, *Mi-Segullat Evrei Ba'alei Ḥayyim ve-Te'aliyyotam ve-Hezzekam* ("on limbs and organs of living beings"). Ibn Sīnā (Avicenna) is the author of the standard medical textbook of the late Middle Ages. His *Canon, al-Qānūn*, was translated by Nathan ha-Me'ati, although the manuscripts do not include the rendering of the whole. Zerahiah Ḥen also worked on a translation of the *Canon*, but only the first two books are known. Of Joseph ha-Lorki's rendering (before 1402) only book one and part of book two are extant. Avicenna's *al-Qānūm al-Ṣaghīr* was translated by Moses ibn Tibbon in Montpellier in 1272. *Canticum*, a medical book in verse (*arjūza* in Arabic), was rendered into prose by Moses ibn Tibbon, and, in verse, by Solomon b. Joseph ibn Ayyūb (*Sefer ha-Ḥaruzim ha-Nikra arjūza*), and by Ḥayyim Israel, and by an unknown scholar of whose work only a fragment exists. His *al-Adwiya al-Qalbiyya* on cures for heart disorders, is found in two anonymous Hebrew versions: *Ha-Sammim ha-Libbiyyim*, and *Ha-Refu'ot ha-Levaviyyot*, the latter from Latin.

ʿAmmār ibn Ali (d. 1020), an ophthalmologist, wrote *al-Muntakhab fī ʿIlāj al-ʿayn*, translated by Nathan ha-Me'ati under the title (not by him) *Shetalim ha-Nifradim ha-Mo'ilim la-Ayin*. Ali ibn Riḍwān (d. 1068) wrote *al-Uṣūl fī-al-Ṭibb* which Kalonymus b. Kalonymus translated into Hebrew in Arles in 1307 under the title *Ha-ʿAmmud be-Shorshei ha-Refu'ah*. His *Sharḥ Kitāb al-Ṣināʿa al-Saghīra*, on a work by Galen, is translated as *Perush Melakhah Ketannah* by Samuel ibn Tibbon, done in Béziers in 1199. Another rendering from the Latin, by Hillel b. Samuel, is called *Sefer ha-Tenge.* ʿAmmār's *al-Ustuqṣāt*, was translated into Hebrew as *Perush ba-yesodot* by an unknown scholar. Aḥmed al-Jazzār (11th century) is the author of *al-Iʿtimād*, on simple cures, which in Hebrew is the anonymous *Sefer ha-Ma'alot*. His *Zād al-Musāfir* (viaticum) is *Ẓeidat ha-Derakhim* by Moses ibn Tibbon in 1259, *Ẓeidah la-Oreḥim* by Abraham b. Isaac, and *Ya'ir Nativ* by an unknown translator. He also wrote on forgetfulness, in Hebrew *Iggeret ha-Shikhḥah* by Nathan ha-Me'ati.

Abu al-Qāsim Zahrawī of Spain (11th century) compiled *al-Taṣrīf*, on medical practice, which was rendered into Hebrew by Shem Tov b. Isaac Tartasi (1261–64) and called *Sefer ha-Shimmush. He-Ḥafeẓ ha-Shalem*, a medical compendium, is the version by Meshullam b. Jonah (1287) of a no longer extant Arabic original, a compendious work in two tractates and 14 sections. Ibn Ṣoar (d. 1162) wrote *al-Taysir fī-al-Mudāwāt*

wa al-Tadbīr (which in the Hebrew of an unknown translator is *Ha-Ḥelek ha-Kolel*) and *Kitāb al-Aghdhiya*, on foods, which was converted into Hebrew by Nathan ha-Me'ati in about 1275 under the title *Sefer ha-Mezonot*. His work on the difference between sugar and honey became in the Hebrew version of Bon Senior ibn Ḥisdai *Ma'amar ba-Hevdel bein ha-Devash ve-ha-Sukkar*. Ibn Rushd (Averroes) was both philosopher and physician. In the latter capacity his work *Kitāb Kulliyyāt fī-al-Ṭibb*, a compendium, was titled *Klal* by Solomon b. Abraham in his translation, as well as in that of an anonymous translator. It is also unknown who translated *Maqāla fī-al-Teriak, Simplicia*, which is called *Peshatim be-Rippui Ḥola'ei ha-Guf*, and the work on purgatives, titled *Shorashim Kolelim*. His tract on diarrhea was translated into Hebrew by Jacob ha-Katan under the title *Ma'amar ha-Shilshul*. Among Jewish writers on medical subjects, Isaac Yisre'eli composed *Kitāb al-Adwiya al-Mufrada wa-al-Aghdhiya*, on cures and foods, and it was rendered into Hebrew by an unknown translator under the name *Sefer ha-Misadim*. Likewise anonymous are the three Hebrew versions of *Kitāb al-Bawl* ("on urine"); *Bi-Ydi'at ha-Sheten, Marot ha-Sheten*, and *Sefer ha-Shetanim*. So are also the book on fevers, *Kitāb al-Ḥummayāt*, in Hebrew *Sefer ha-Kaddaḥot*, and 50 aphorisms, not known in Arabic, called *Musar ha-Rofe'im*. *Maimonides' writings include *fī-al-Bawāsīr* ("on hemorrhoids") called, in an anonymous Hebrew version, *Bi-Refu'at ha-Teḥorim*, a work on intercourse *fī-al-Jim'a*, translated by Zerahiah Ḥen and called *Ma'amar ha-Mishgal*, and *Fuṣūl Mūsā*, aphorisms, also rendered by Zerahiah and by Nathan ha-Me'ati under the title *Pirkei Moshe*. Moses ibn Tibbon is the translator of *fī al-Sumūm* ("on poisons") which, in Hebrew, is called *Ha-Ma'amar ha-Nikhbad*. Solomon b. Yaish (d. 1343) wrote a commentary on ibn Sīnā's *Qānūn*, of which an extract in Hebrew was made by Jacob Kaphanton. As the Christian West learned the medical knowledge transmitted and composed in Arabic, its physicians also began to write, generally in Latin. Nicolaus of the Salerno school of medicine (1150–1200) prepared an *Antidotarium* which is known by the same name in the Hebrew rendering of Jacob. Petrus Hispanus (d. 1276) produced a medical compendium, *Thesaurus pauperum*, translated as *Oẓar ha-Aniyyim* in an anonymous version, and *Oẓar ha-Dallim* in the rendering of Todros Moses Bondoa, 1394. Lamprandi's (d. 1296) *Chirurgia Parva* is abridged in an anonymous Hebrew version titled *Alanfranchina*, and *ha-Yad* in Hebrew. Bernard de Gardon is the author of *Lilium Practica*, which is called *Ḥokhmah Nishlemet bi-Melekhet Medicinae* (c. 1305). In the version of Moses b. Samuel it is titled *Peraḥ ha-Refu'ot ha-Sali*, and in that of Jekuthiel b. Solomon of Narbonne, *Shoshan ha-Refu'ah* (1387). He also wrote *Regimen Acutarum Aegritudinum de Phlebotomia*, and *de Medicinarum gradibus*, all three of which were translated anonymously and titled respectively *Ḥibbur be-Hanhagot ha-Ḥaddot, Ha-Ma'amar be-Hakkazah*, and *Sefer ha-Madregot*. Arnaldus of Villanova (d. 1317/18) is the author of *Regimen sanitatis*, which in Hebrew is called *Ma'amar be-Hanhagat ha-Beri'ut* by the translator Israel Kaslari (1327), and *Hanhagot ha-Beri'ut* in the anonymous version. His *Arnavdina* is called *Practica* in Israel Kaslari's version.

Gentile da Foligna (d. 1348) composed a book on practice, *Prattiche, Nisyonot* in its anonymous Hebrew version, and *Consilium*, which is called *Eẓah* by its Hebrew translator, probably Joshua of Bologna. Guy de Gauliac, a surgeon in Avignon (d. 1363), prepared a *Chirurgia magna*, translated by an unknown scholar; the beginning and end are unfortunately missing. He also produced a *Chirurgia Parva*, translated into Hebrew by Asher b. Moses (1468), and titled *Giddu'a Kaẓar*. John Jacobi (1366), wrote *Secretarius practicus*. It is available in two anonymous Hebrew renderings: *Sod ha-Melakhah* and *Sod ha-Pratikah*. Gerard de Salo composed a commentary on the ninth book of Al-Rāzī's *al-Manṣūrī* titled in *Nomum mansoris*; Abraham Avigdor made an abridged translation, and Leon Joseph a full one in 1394. His *introductarium juvenum*, on the care of the body, was likewise done in Hebrew by Leon Joseph and called *Meishir ha-Mathilim*, and his treatise on fever, *de Febribus*, was translated by Abraham Avigdor. Bernard Alberti (1339–58) compiled an *Introductarium in practicam*, a collection of prescriptions, done in Hebrew by Abraham Avigdor under the title *Mavo ba-Melakhah*. Albertus Magnus is the author of discussions on six needs of the body, which Moses Ḥabib called *She'elot u-Teshuvot* in his Hebrew version of it.

Jews were interested not only in philosophy and the sciences, but also in what can be called the humanities. They translated and wrote a good deal of popular literature, and they also cultivated eloquence, linguistics, and poetry. Mention should be made of the great popularity among them of all sorts of divinations, called *Goralot*, including astrology, mantic, and facial features. Among the foreign creations which made their way into Hebrew are the fables of Aesop, known as *Ḥidot Esopito*, and *Kalila and Dimna* by the Indian Bidpai. Its anonymous Hebrew translation is the source of all European versions made from its Latin rendering by the convert John of Capua (1262–78). Another Hebrew text prepared by Jacob b. Eleazar (d. 1223) is less literal than the other. The story of a demon who entered a woman and was expelled by a man, which is found in an Indian source and in the *1001 Nights*, is told in *Ma'amar Midyenei Ishaḥ. Mishlei *Sindabar*, the Hebrew counterpart of the very popular *Seven Sages*, although originally of Indian origin, is important as the link which connects the eastern type of individual and the western type.

The history of Alexander the Great, originating in Callisthenes' Greek story, was popular in Jewish literature from talmudic times. The medieval Hebrew book, *Sefer Alexander Mokedon ve-Korotov*, said to be the work of Samuel ibn Tibbon or Judah al-Ḥarizi, is a translation of an Arabic original. Immanuel b. Jacob did another *Toledot Alexander* from the Latin. It should also be noted that sayings gleaned by various authors were also attractive to Jews, so that books like *Sefer ha-Musar, Mishlei Arav*, or *Mishlei Anashim ha-Ḥakhamim*, not to speak of works in which they are introduced *en passant*, are all translations from the Arabic, whether from one work

or from many. A good example is presented by Ibn Gabirol's *Mivḥar ha-Peninnim*, discussed above. A work of consolation, allegedly sent to a friend who sustained a loss, is the *Ḥibbur Yafeh me-ha-Yeshu'ah* by Nissim b. Jacob ibn Shaḥin of Kairouan, a Hebrew translation of his Arabic original. The *Maqāmāt* of al-Ḥarīrī (1054–1121), a literary genre characterized by rhymed prose and metrical verse, in which beauty of language was the major objective, were translated by Judah al-Ḥarizi under the title *Maḥbarot Iti'el*. Abraham ibn Ḥisdai produced a Hebrew version, called *Ben ha-Melekh ve-ha-Nazir*, of an Arabic translation of the original Indian tale of *Barlaam and Josaphat*, and Kalonymus b. Kalonymus composed *Iggeret Ba'alei Ḥayyim*, which is a discussion between men and beasts and is a free rendering of Epistle No. 21 of the *Epistles of the Ikwān al-Ṣafā'*.

Hebrew grammar and lexicography attracted the attention of a number of Jewish writers who were stimulated by the parallel studies of Arabic, and many of their works were originally written in Arabic, and only later translated into Hebrew. The comparative lexicographic study of Judah ibn Quraish (tenth century) was not translated until modern times. Judah Ḥayyuj (early 11th century) wrote on verbs with quiescent letters, and geminative verbs. These tracts were first translated by Moses ha-Kohen Gikatilla as *Otiyyot ha-Sefer ve-ha Meshekh*, and later, by Abraham ibn Ezra as *Otiyyot ha-Naḥ*, *Ba'alei ha-Kefel*, and *ha-Nikkud*. The master work of Hebrew grammar by Jonah ibn Janāḥ, *Kitāb al-Luma*ʿ, was translated into Hebrew by Judah ibn Tibbon, and the lexicon, *Kitāb al-Uṣūl*, was translated by Isaac b. Judah, and by Isaac ha-Levi, both translations going only to the letter *lamed*. A complete translation was made by Judah ibn Tibbon in 1171. Ibn Jarah's shorter work, *al-mustalḥiq*, is called *Sefer ha-Hassagah* by its Hebrew translator Obadiah (c. 1300). Judah ibn Bal'am compiled a work on Hebrew particles *Ḥurūf al-Maʿāni*, rendered as *Otiyyot ha-Inyamim* in an anonymous Hebrew version; and *al-Afʿāl Mushtaqqa min al-Asmā'*, a work on verbs derived from nouns, which in its anonymous Hebrew rendering is *Ha-Pe'alim she-Hem mi-Gizrat ha-Shemot*. He also is the author of a short tract on the proper reading of the Bible, *Hadāyat al-Qāri'*, which was rendered into Hebrew either by Nethanel b. Meshullam or by Menahem b. Nethanel under the title *Horayat ha-Kore*.

Some miscellaneous compositions include halakhic writings of Hai Gaon (d. 1038) such as *al-Buyūʿāt*, which was translated into Hebrew by Isaac b. Reuben and was called *Sefer ha-Mikkaḥ ve-ha-Mimkar*, and, in an anonymous Hebrew version *Mishpetei ha-Tena'im ve-Halva'ot*, and the book on oaths which in its anonymous Hebrew translation is titled *Mishpetei Shevu'ot* or *Sefer ha-Shevu'ot*. A metrical version also exists, *Sha'arei Dinei Mamonot ve-Sha'arei Shevu'ot*. Joseph ibn ʿAknīn, who wrote an introduction to the Talmud and a book on biblical and talmudic weights and measures, is represented in Hebrew translation by *Mevo ha-Talmud*, perhaps by an Abraham Yerushalmi, and by an anonymous version *Ma'amar al ha-Middot*. Of Abraham Maimonides' moralistic and pietistic work *Kifāyat al-'Abidin*, only a short section was rendered into Hebrew. A work on liturgy, *Mitzvot Zemanniyyot*, by Israel Yisre'eli, was translated into Hebrew by Don Shem Tov b. Ardutiel. Of Joseph ibn ʿAknīn's *Ṭibb al-Nufūs*, only the first chapter was translated under the name *Marpeh ha-Nefashot*.

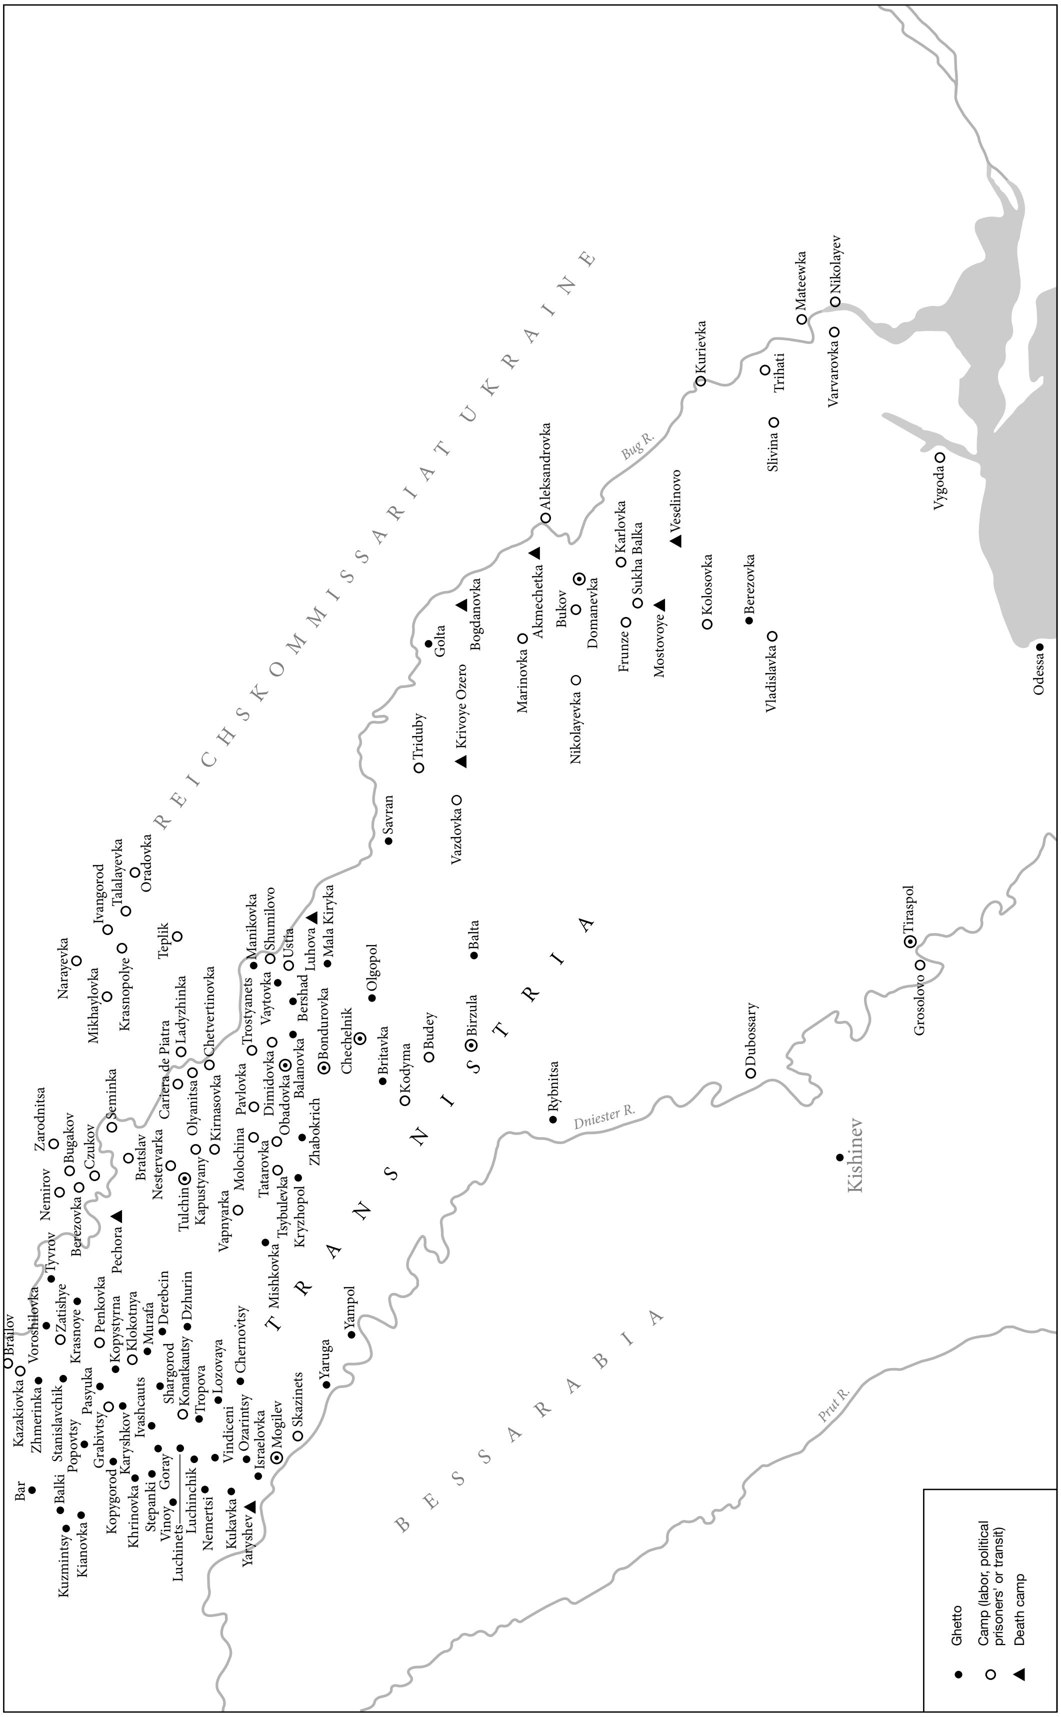
[Abraham Solomon Halkin / Angel Sáenz-Badillos (2nd ed.)]



TRANSNISTRIA, geographical designation, referring to the area in the Ukraine situated between the Bug and Dniester rivers. The term is derived from the Romanian name for the Dniester (Nistru) and was coined after the occupation of the area by German and Romanian troops, in World War II. Before the war the area had a population of 3,400,000, but in the course of the occupation it was reduced to 2,250,000, as a result of the mobilization of men and of mass flights.

Jewish Population

Before 1939 the Jewish population was 300,000 according to the statistical data of 1926. According to reports of the Nazi Einsatzkommandos ("action groups") which entered the area in July 1941 in the wake of the occupying troops, two-thirds of the local Jewish population had fled the area. However, there remained local Jews and Jewish refugees, primarily from neighboring *Bessarabia; these refugees had fled previously from the advancing German troops. It must also be assumed that many local Jews were apprehended while escaping and were murdered by German troops or by Einsatzkommandos. In general, Einsatzgruppe "D" under the command of Otto Ohlendorf, was most active in Transnistria. In the north Einsatzkommando "10B," and in the south "11B" were also active. Their reports contain some information on the murder actions committed by the units (e.g., in Yampol, Kokina, Mogilev), but the figures given on the local population are far too low and unrealistic. To illustrate the magnitude of the murder actions perpetrated by the Nazis: in one town alone, *Dubossary, on the east bank of the Dniester, two common graves contained the bodies of 3,500 Jews from Dubossary itself and 7,000 from the vicinity, killed in the town after being rounded up by the Nazis.

Deportations to Transnistria

After its occupation Transnistria became the destination for deported Romanian Jews. At the end of July 1941, 25,000 Jewish survivors from towns in northern Bessarabia were expelled

Camps and ghettos in Transnistria. Based on T. Lavi (ed.), Pinkas ha-Kehillot: Romanyah, *vol 1, Jerusalem, 1969.*

to Transnistria by the Romanians, but they were sent back to Bessarabia by the Germans, after 4,000 refugees were murdered. Other groups sent to Transnistria wandered about the area of Mogilev, Skazinets, and Yampol for about two weeks, before the Romanians agreed to their return. Finally, on August 17–18, another 20,500 were readmitted to Bessarabia; many were shot or thrown into the river, by both German and Romanian troops.

Systematic deportations began in the middle of September. In the course of the next two months, all the surviving Jews of Bessarabia and *Bukovina (except for some 20,000 Jews of *Chernovtsy) and a part of the Jewish population of the *Dorohoi district of Old Romania, were dispatched across the Dniester. This first wave of deportations reached 118,847 by mid-November 1941.

Deportations resumed at the beginning of the summer of 1942, affecting 4,200 Jews from Chernovtsy and 450 from Dorohoi. A third series of deportations from Old Romania came in July 1942 affecting Jews who had evaded the forced labor decrees, as well as their families, Communist sympathizers, and Bessarabian Jews who had been in Old Romania and Transylvania during the Soviet occupation of Bessarabia in June 1940, and had asked to be repatriated to their homes. Of the latter group, 350 Jews were shot to death by *SS troops on their arrival at Berezovka (in Transnistria).

The Communist sympathizers, among them many socialists, were taken to a special concentration camp in Vapnyarka Transnistria. Some individual deportation orders were directed against Jewish merchants and industrialists accused of economic sabotage, bribery, and similar "economic crimes."

The Romanian general staff submitted an additional list of 12,000 Jews who had violated the forced labor laws. In the meantime, however, the Romanian government policy changed and the deportation of this group was not implemented; neither did the Romanian government give its consent to Germany's insistence on the deportation of all Romania's Jews. According to a German source, a total of Romanian archival sources 146,000 Jews were deported to Transnistria. In December 1943 the Romanian Ministry of Interior informed its government that 50,741 deportees had survived.

Ghettos and Expulsions

The status of the Jews in Transnistria was determined by a decree (Nov. 11, 1941) serving to follow up the Tighina Agreement, which expressly referred to the imprisonment of Jews in ghettos. At the end of the month large numbers of Jews were dispatched to the northern part of Transnistria. In the southern part they were put into several large ghettos in the Golta district: 54,000 in Bogdanovka, 12,000 in Domanevka, and 18,000 in Akmechetka. All 48,000 Jews in the Bogdanovka concentration camp were murdered by Ukrainian police and local German members of the SS and Sonderkommando R, on the initiative of Fleischer, the German adviser to the district commander. At first, 5,000 sick and maimed Jews were locked into sheds and burned alive, and in the course of the following two months the remaining inmates of the camps were shot to death and their bodies cremated. In January and February 1942, 18,000 Jews were murdered in the Domanevka 18,000 and Akmechetka. Another 28,000 Jews were murdered by SS troops and local German police in German villages in the Berezovka area. By March 1943, only 485 Jews were still alive in the southern area, between *Odessa and Mogilev; of these 60 were in Odessa itself. When Odessa was taken, by Romanian troops in October 1941, 25,000 Jews were killed on the personal orders of Antonescu after a Russian-made time bomb exploded in a building housing high-ranking Romanian officers. The rest of the Jews of the city were driven out. Members of the local Ukrainian militia participated in the murder though in many cases Ukrainians provided Jews with food and hideouts. The deportees from Bessarabia, Bukovina, and Dorohoi were sent to the northern part of Transnistria. At first they wandered from place to place, as some of the towns refused to accept them. Some groups from southern Bukovina had money and bribed the local authorities for the right to stay (e.g., in Mogilev). In some cases entire communities were expelled as a group together with the community leaders, e.g., the communities of *Radauti and *Suceava; the latter also saved the community's funds with which they managed to obtain better living conditions. In some instances the deportees took it upon themselves to repair local factories in ruins – as in the case of the sugar factory in Vindiceni. In Mogilev, where the local Romanian authorities at first refused a residential permit to the deportees, a group of 500 Jewish deportees successfully undertook repairs of the local electric power station and a local foundry; they established a repair workshop for automobiles, and were generally useful in the rehabilitation of the city. In some of the towns – *Shargorod, Dzhurin, and Mogilev – Jewish committees were set up comprising community leaders from Romania and representatives of the local Jewish population. In other places the Romanians themselves appointed local Jewish committees and forced them to collaborate with the regime. After the war some of the latter committees were brought to trial by both the Russians and the Romanians on charges of harshly dealing with the deportees. On the other hand, others, especially former leaders of their communities, sacrificed themselves for the welfare of the refugees.

In places where the local Jews still survived, the deportees received shelter in homes or in those synagogues which had not been destroyed. Jewish refugees from the Ukraine (who had crossed the Bug River) were hidden by local Jews or by the deportees from Romania. In some cases the local committees provided them with forged identification documents. The first winter (1941–42) was extremely harsh, with temperatures dropping to 40° C below zero. Many died of cold or starved to death. The bodies of the dead accumulated in the cemeteries until the spring, when graves could be dug for them. Various epidemics, such as typhus and dysentery, also claimed tens of thousands of victims. In Dzhurin, Shargorod, and Mogilev the local committees succeeded in organizing the

internal life of the refugee communities. In some ghettos the committees established public kitchens, hospitals, orphanages, bakeries, and soap factories, and organized sales cooperatives. All this helped make life more bearable. Post offices were organized by a number of Jewish committees, and a register of deaths and births was kept. Jewish police detachments were formed, but these not infrequently became a tool in the hands of the occupation power, who used them for drafting men and women for forced labor. Improved internal organization controlled epidemics. In the second winter (1942–43) only four out of 25 patients died in an epidemic in the town of Shargorod, as compared to 1,400 the year before. The doctors among the deportees vigorously combated the epidemics, and many died in the execution of their task. In those camps where no internal organization was created, the mortality rate reached almost 100%.

The Jews were completely at the mercy of the local authorities. Their situation was especially grave in the area adjoining the Bug River, as from time to time the Germans crossed the west bank to use Jews for forced labor on the other side of the river. At Pechora, a sign at the camp entrance identified it as a "death camp." There were several German raids from across the Bug, and in the fall of 1942, 1,000 Jews were dragged across the river. In the camp at *Bar, which was over the Bug River and in German occupied territory 12,000 Jews were put to death on Oct. 20, 1942. The people who had been taken to eastern Ukraine for forced labor were put to death as soon as their job was done, while those who were unable to work were instantly murdered. The head of the *Tulchin district was particularly efficient in handing Jews over to the Germans, especially to the Todt Organisation. Tens of thousands were murdered in the second deportation to the German-administered territories beyond the Bug, in such places as *Gaisin, Krasnopolye, and Trihati. In the spring of 1942 the Romanians initiated the deportation of several thousand Jews to the other side of the Bug, in order to dispose of them; this however, did not fit in with *Eichmann's overall plans for the "Final Solution" and he protested to the German Foreign Office; as a result, the Jews were returned to Transnistria where some of them were murdered. The special camp at Vapnyarka for Communist sympathizers fed the prisoners poisoned beans which caused paralysis and death.

Aid Operations

From the very beginning, Jewish leaders and institutions in Bucharest made efforts to provide help to the deportees. In December 1941 the Council of Romanian Jewish Communities received permission from Antonescu to extend aid to the refugees. The special central committee established for this purpose collected money and contributions in kind, and dispatched financial aid, clothing, and medicines to the refugees. Other sources of help were provided by the Joint and the Zionist Organization and by special committees established by natives of the deported communities who were residents of Old Romania.

The central aid committee was finally granted permission in 1943 to send a delegation to visit the area. The papal nuncio, Monsignor Andrea Cassulo, visited Transnistria from April 27 to May 5, 1943, and an International Red Cross mission arrived there in December of that year. Jewish leaders in Bucharest established contact with Jewish organizations abroad, and obtained financial aid for the deportees from the American Jewish *Joint Distribution Committee, the Rescue Committee of the Zionist Organization, the World Jewish Congress, and OSE. In the first two years, 500,000,000 lei were spent in aid to the Jews in Transnistria, of which about 160,000,000 was spent in cash and the rest provided salt, coal, glasspanes, wood, medicines, and equipment for artisans.

In February 1944, as a result of Cassulo's visit, the pope donated 1,300,000 lei to alleviate the conditions of the Jews of Transnistria.

Rescue and Assistance

At the first reports of deportations to Transnistria, W. Fildermann made efforts to stop the deportations and, failing in this, tried to alleviate the refugees' plight. A secret committee was formed in Bucharest, with both Fildermann and Zionist leaders participating. The committee's major purpose was to put a stop to the deportations. In November 1941 it persuaded Antonescu not to deport 20,000 Jews considered essential for the smooth functioning of the city. In the spring of 1942, as a result of German pressure, 4,000 of the remaining Jews of Chernovtsy were also deported. The deportation of the Jews of Southern Transylvania was canceled during the fall of 1942 for reasons yet to be understood; this deportation was intended to be the first stage in the deportation of all the Jews of Romania to the death camps in Poland. One factor was the protests of foreign diplomats, such as the ambassadors of neutral countries and the papal nuncio, and of the representatives of the International Red Cross, leaders of the Romanian Church, the queen mother Helena, and leaders of Romanian political parties. This intervention, along with the turning tide of the war, prompted the Romanian government in November 1942 to enter into negotiations with Jewish leaders in Bucharest on the return of the deportees and the emigration to Palestine of 75,000 survivors.

In March 1943 a selection commission was sent to Transnistria by the Romanian government. In April Antonescu approved the repatriation of 5,000 orphaned children, and of persons who had been "innocently" deported. As early as December 1942 the German Foreign Ministry, the German minister in Bucharest, Manfred von Killinger, and Eichmann's representative, Gustav Richter, protested against any decisions to repatriate Romanian Jews from Transnistria. In March 1943 Eichmann informed *Himmler of the planned emigration of Jewish orphans from Transnistria to Palestine and asked the German Foreign Ministry to prevent it.

In the spring of 1943 Fildermann, who in the meantime had himself been deported to Transnistria, called upon the Romanian government to permit the return of all the de-

portees. By mid-December 1943 the first group, consisting of 1,500 Jews from Dorohoi were allowed to go back to their homes. Repatriation was stopped at the end of January 1944, but the secret committee persevered and in March a group of 1,846 orphans, out of a total of 4,500, arrived in Jassy. Earlier, in February 1944, the chief rabbi of Palestine, Isaac *Herzog, appealed to the papal nuncio in Istanbul, Monsignor Roncalli (later Pope *John XXIII), to ensure the safety of the Transnistria deportees, now threatened by the withdrawing German armies. Roncalli transmitted this request to Monsignor Cassulo, the nuncio in Bucharest. On March 15, 1944, the Soviet armies crossed the Bug. Within five days they advanced northward up to the Dniester. A Jewish commission from Bucharest had in the meantime arrived in the south and arranged for the repatriation of 2,518 Jews in the towns of *Tiraspol and *Balta to Romania. On their arrival in Romania, 563 deportees from the Vapnyarka camp were seized by the Romanians and sent to the Targu-Jiu concentration camp in the western part of the country. The Transnistria deportations resulted in 88,294 deaths, out of a total of 146,555 persons deported. At least another 175,000 persons among the local Jewish inhabitants of Transnistria also fell victim to the Holocaust.

TRANSOXIANA, ancient region of central Asia, between the Oxus and Jaxartes rivers, known to the Arabs as Ma-Waran-Nahr ("beyond the river"). In the medieval period it was divided into several provinces, one being Khwarizm, with its two capitals Khiva and Urgench, and another Soghd, with the two capitals *Samarkand and *Bukhara. These four cities have been connected in various periods with Jewish settlements, mostly consisting of Persian Jews who had penetrated into these remote regions from the central provinces of Persia and *Khursan. According to an ancient Pahlavi tradition, Khwarizm was built by Narses (fifth century), the son of Yezdegerd I and his Jewish wife Shushan Dokt, daughter of the exilarch. That Jews lived in this region in early Islamic times can be inferred from the work of the ninth-century Arab historian, al-Ṭabarī (II, 1238); recounting that the shah of Khwarizm assembled the leaders of the various communities of his domain, he mentions the "Habar," a term usually applied to Jews. The 13th-century Muslim historian al-Umari mentions expressly in his *Masālik al-Absār* that there were in Khwarizm 100 Jewish families and the same number of Christian and that they were not permitted to exceed this total.

Khiva (see *Khorezm), a large city on the bank of the Oxus which was a central meeting place for merchants, had, according to one manuscript version of the travels of *Benjamin of Tudela (ed. A. Asher, 1 (1840), 128; 2 (1840), 168–9), a community of 8,000 Jews. *Solomon b. Samuel, the author of a Hebrew-Persian dictionary of the Bible, known as *Sefer ha-Meliẓah* (c. 1339), lived in Urgench in the 14th century.

TRANSPLANTS. Advances in medical knowledge and technology have made possible the transplantation of organs from a deceased (or, in the case of some organs such as a kidney, from a living) person into another individual stricken with disease, and this technological advance reached an acme with the transplantation of a human heart. Such operations raised many moral, theological, legal, social, and philosophical problems.

With regard to the general permissibility, Rabbi I. *Jakobovits is of the opinion that a donor may endanger his life or health to supply a "spare" organ to a recipient whose life would thereby be saved, only if the probability of saving the recipient's life is substantially greater than the risk to the donor's life or health. This principle is applicable to all organ transplantation where live donors are used as a source of the organ in question. Rabbi Y. Waldenberg (Responsa *Ẓiẓ Eliezer*, 9 (1967), no. 45) discusses at length the question of whether a healthy person may or must donate one of his organs to save the life of another. The majority opinion seems to be that a small risk may be undertaken by the donor if the chances for success in the recipient are substantial.

Most of the rabbinic responsa literature concerning organ transplantation deals with eye (cornea) transplants. The basic halakhic principles governing eye transplants, however, are applicable to nearly all other organ transplants. Kidney and heart transplants involve several additional unique questions. The classic responsum is that of Rabbi I.Y. *Unterman (*Shevet mi-Yhudah* (1955), 313ff.) who states that the prohibitions on deriving benefit from the dead, desecrating the dead, and delaying the burial of the dead are all set aside because of *pikku'aḥ nefesh* – the consideration of saving life. These prohibitions would remain if there is no threat to life involved in the condition for the treatment of which the transplant is being done. For example, there is no *pikku'aḥ nefesh* involved in a nose transplant. Rabbi Unterman considers eye transplants to involve *pikku'aḥ nefesh* because blindness is a situation in which a person so afflicted may fall down a flight of stairs or into a ditch and be killed. What of a person blind in one eye? The concept of *pikku'aḥ nefesh* does not apply. However, argues Rabbi Unterman, once the donor eye is implanted into the recipient, it is not considered dead but a living organ. Thus, the prohibitions on deriving benefit from the dead and delaying burial of the dead are not applicable since no dead organ is involved. For the same reason, the problem

of ritual defilement or *tumah* is nonexistent, in regard to the transplanted eye. Rabbi J.J. Greenwald (*Kol Bo al Avelut*, 1 (1947), 45 ff.) presents reasoning from which the conclusion can be drawn that one may not remove the entire eye from a deceased donor for transplantation; only the cornea may be used since a whole eye represents flesh whereas the cornea alone is considered skin. Furthermore, one cannot overcome the problems of desecrating and delaying burial of the dead without invoking the concept of *pikku'aḥ nefesh*. Thus, Rabbi Greenwald, as most authorities, would only permit eye grafts for a person blind in both eyes. Rabbi I. Glickman (*No'am*, 4 (1961), 206–17) added to Rabbi Unterman's theses described above that one may perform a transplant only if the donor gave permission prior to his death. Most rabbinic responsa agree with this requirement.

The problem of eye banks is raised by Rabbi M. Steinberg (*No'am*, 3 (1960), 87 ff.). Since the permissibility of organ transplants rests primarily on the overriding consideration of *pikku'aḥ nefesh*, then it would seem that the recipient would have to be at hand (*lefaneinu*). Rabbi Steinberg states that since the number of blind persons is so large, a recipient is considered to be always at hand. Rabbi Jakobovits also permits organs or blood to be donated for deposit in banks provided there is a reasonable certainty that they will eventually be used in life-saving operations including the restoration or preservation of eyesight. Rabbi Unterman, at the end of his remarks on eye transplants, also states that donations to blood banks are permissible.

The question of whether the eye of a non-Jewish donor may be used for an eye transplant is raised by Rabbi M. Feinstein (*Iggerot Moshe*, pt. *Yoreh De'ah* (1959), no. 229). He draws the conclusion that it is permissible for a Jew to use the eye of a gentile donor.

Kidney transplants are governed by the same principles as those discussed above for eye transplants. In fact, many of the responsa deal with both eye and kidney transplants. In addition to cadaver kidneys, kidneys from live donors are used for transplantation. Here, new halakhic questions arise. Is the donor allowed to subject himself to the danger, however small, of the operation to remove one of his kidneys in order to save the life of another? Does the donor transgress the commandments to "take heed to thyself" (Deut. 4:9 and 4:15)? The Shulḥan Arukh and Maimonides in the *Yad* answer this question by stating as follows: "The Jerusalem Talmud concludes that one is obligated to put oneself even into a possibly dangerous situation [to save another's life]." The reason seems to be that the death of the sick person (i.e., the kidney recipient) without intervention is a certainty, whereas his (the donor's) death is only a possibility.

With regard to heart transplantations, medical and ethical guidelines have been established. Recommendations include the requirements that the surgical team shall have had extensive laboratory experience in cardiac transplantation, that death of the donor shall be certified by an independent group of physicians, and that the information and knowledge gained should be rapidly disseminated to the medical world.

From the halakhic point of view, the prohibitions dealing with desecrating the dead, delaying burial of the dead, and ritual defilement, are all set aside in the case of human heart transplantation, for the overriding consideration of *pikku'aḥ nefesh*, saving a life. The major halakhic problem remaining is the establishment of the death of the donor. Prior to death, the donor is in the category of a *gosses* (hopelessly ill patient) and one is prohibited from touching him or moving him or doing anything that might hasten his death. There are many types of death: mental death when a person's intellect ceases to function; social death when a person can no longer function in society; spiritual death when the soul leaves the body; and physiological or medical death. The Jewish legal or halakhic definition of death is that a person who has stopped breathing and whose heart is not beating is considered dead. This classic definition of death in the Talmud (Yoma 8:6–7; Yoma 85a; TJ, Yoma 8:5, 45a and Maimonides, Yad, Shabbat 2:19; Sh. Ar., OḤ 329:4) would be set aside if prospects for resuscitation of the patient, however remote, are deemed feasible.

On the assumption that the donor is absolutely and positively dead, most rabbinic authorities permit heart transplants. Rabbi Jakobovits has stated that "…in principle, I can see no objection in Jewish law to the heart operations recently carried out, provided the donors were definitely deceased at the time the organ was removed from them." Rabbi I. Arieli is also quoted as having said that heart transplants are permissible if the donor is definitely dead, but only with the family's consent. A similar pronouncement was made by Rabbi D. Lifshutz. Rabbi Unterman's published responsum (*No'am*, 13 (1970), 1–9) dealing specifically with heart transplants begins by stating that consent from the family of the donor must be obtained for several reasons. Touching briefly on the problem of organ banks, he states that freezing organs for later use is allowed provided there is a good chance that they will be used to save a life. Then the situation would be comparable to having the recipient at hand (*lefaneinu*). Rabbi Unterman concludes with the novel pronouncement that in the case of a human heart transplant recipient, removing the patient's old heart takes from him his hold on life (*ḥezkat ḥayyim*). Therefore, the removal of the recipient's heart can be sanctioned only if the risk of death resulting from the surgery is estimated to be smaller than the prospect for lasting success.

Dissenting from Rabbi Unterman's permissiveness toward heart transplants under the conditions described above is Rabbi J. Weiss who strongly condemns cardiac transplants as double murder (*Ha-Ma'or*, 20 (1968), no. 7, 1–9). Rabbi Feinstein also added his voice to those condemning heart transplants (*Ha-Pardes*, 43 (1969), no. 5). Careful reading of his lengthy responsum on this subject discloses the following clarification of his position: if the donor is definitely dead by all medical and Jewish legal criteria, then no murder of the donor would be involved and the removal of his heart or other organ to save another human life would be permitted. Concerning

the recipient, he wrote at the time, when medical science will have progressed to the point where cardiac transplantation becomes an accepted therapeutic procedure with reasonably good chances for success, then the recipient shall no longer be considered murdered. Major obstacles such as organ rejection, tissue compatibility testing, and immunosuppressive therapy must be first overcome. Other responsa on cardiac transplantation are those of Rabbi S. *Goren (*Maḥanayim*, 122 (1969), 7–15), Rabbi Y. Gershuni (*Or Ha-Mizraḥ*, April 1969), Rabbi D.C. Gulewski (*Ha-Maor*, 21 (1969), no. 1, 1–16), Rabbi M. *Kasher (*No'am*, 13 (1970), 10–20), and Dr. J. Levi (*No'am*, 12 (1969), 289–313). The major concern of most, if not all, rabbis attempting to render legal rulings in heart transplant cases is the establishment of the death of the donor.

For a full legal discussion with later rulings, see *Medicine and the Law.

[Fred Rosner]

TRANSYLVANIA (Rom. **Transilvania** or **Ardeal**; Ger. **Siebenbuergen**; Hung. **Erdély**), historic province now forming western *Romania. Each territorial component of this region has its own history, which has influenced the history of the Jews living among the Hungarians, Romanians, Germans, and other peoples inhabiting it. In 1940, as a result of the second arbitration decision of Vienna, the territory was divided between Hungary and Romania – northern Transylvania going to Hungary and southern Transylvania to Romania – where the Jews suffered different fates. In 1945 the whole of Transylvania reverted to Romania.

Transylvania has always been a center of routes connecting the Orient with the West, and southern Europe with northern Europe. Its location influenced the general development of the region, and in particular Jewish settlement from its beginnings. The first Jews arrived from the south – the Balkans and Turkey – by the trade routes to the north of Transylvania. It has, however, been surmised that a small Jewish settlement existed there, as one had also in neighboring Pannonia, during the first and second centuries C.E. when the territory was under Roman rule and constituted Roman Dacia, though there is no definite evidence for this assumption. Between 1571 and 1687, historic Transylvania and a number of the bordering territories formed an independent principality ruled by the Hungarian-Transylvanian princes. It was in this principality, which was adjacent to the Ottoman Empire and maintained close relations with it, that the first recorded Jewish settlement developed. The overwhelming majority of its members were Turkish Sephardi Jews. Their first organized Jewish community was in *Alba Iulia, the seat of the prince. A letter of protection of 1623 guaranteed the Jews extensive rights, but restricted their residence to this town only. However, despite the restrictions, Jews began to settle in other localities close to the mother community. The relations of the local Jews with the Jews in the north and the west attracted a small number of Ashkenazi settlers from distant places.

This first settlement also affected the development of the Transylvanian Christian sect of *Somrei Sabat, whose customs and prayer books were influenced by the Sephardi ritual. Although the princes, particularly Gabriel Bethlen, had promised the Jews certain rights, there were also schemings against them, and at the general assemblies of the classes it was suggested that the number of Jews be restricted. The first decision to this effect was passed as early as 1578.

With the close of the period of the independent principality and the beginning of Austrian rule, Jews also began to settle on the estates of noblemen who were not bound by the residence prohibitions already issued against Jews. (The aristocrats needed the Jews for the economic exploitation of their land, but provoked antisemitic feelings among their dependents in order to make the Jews afraid of them.) Most of the towns nevertheless remained closed to Jewish settlement. The revolutionary year of 1848 theoretically marked the end of the residence restrictions. There were then about 15,000 Jews in historic Transylvania. The number of Sephardim was declining and Ashkenazi settlers from the north – i.e., Poland – began to play an important role in community life. The number of Jews in historic Transylvania has been estimated at 2,000 in 1766; 5,175 in 1825; and 15,600 in 1850. Organizationally, between 1754 and 1879, the Jews were under the jurisdiction of a chief rabbi whose seat was in Alba Iulia. In 1866, when Transylvania was still ruled by the central government in Vienna, representatives of the Jewish communities gathered for the first time in *Cluj for a national conference to create a unified communal organization with regular organizational patterns.

The objectives of this congress did not materialize because in 1867 the whole of Transylvania was incorporated within Hungary, and Jewish communal organization followed that of Hungarian Jewry until the end of World War I. The religious schism which occurred within Hungarian Jewry after 1868–69 (see *Hungary) also left its imprint on Transylvania and, after struggles within the communities, separate Orthodox, *Neologist, and *Status Quo Ante communities were formed. The influence of *Ḥasidism, which penetrated Transylvania from the north, was powerful. During the period of the struggles and separations, the Jews of historic Transylvania numbered 25,142. By 1880, upon the completion of the new organization, they numbered 30,000. The majority of the communities, especially those with large memberships, joined the Orthodox trend. There were sharp controversies between the Ḥasidim and the rabbinist-Ashkenazi Jews, who in spiritual-religious matters turned to Pressburg (*Bratislava) as a center of authority. The Neologist communities, in which the Magyar assimilationist trend became strong, regarded Budapest as their center.

The densest Jewish population developed in northeastern Transylvania, whose territories bordered upon Poland and Moldavia, the urban centers of this region being *Sighet and *Satu Mare. Until its liquidation, the majority of Jews there

remained loyal to traditional Jewish culture, and the predominant language was Yiddish. During the 19th century, Yiddish newspapers were published there, and several poets and authors published works in this language. In the western part of Transylvania, where the large urban centers were *Oradea and *Arad, the predominant language was Hungarian, while in the southwestern part of the region, whose center was *Timisoara, it was Hungarian and German. In the southeastern part, whose center was *Brasov, the Jews lived among a German population which influenced them culturally, but their social ties with it were not extensive. Although there was a large Romanian population in the whole of Transylvania, the Jews were not influenced culturally by the Romanian element until the end of World War I. On the contrary, in most places Jews were pioneers in spreading among the Romanian population the Magyar national trend of the central government in Budapest. The natural center of Transylvania, the town of Cluj – which also occasionally served as its official capital – was also a Jewish center during most of the 19th and 20th centuries. Cluj University, where Jews were also appointed professors, was an important intellectual center for Jews in historic Transylvania, while those in the western districts attended the University of Budapest.

From the beginning of the 20th century, the Jewish population in historic Transylvania only increased from 53,065 (2.2 percent of the total population) in 1900 to 64,674 (2.4 percent) in 1910. In the whole area currently known as Transylvania the Jews numbered 181,340 (3.57 percent) at the beginning of Romanian rule in 1920. The growth of the Jewish population and its dispersion throughout the region was linked to economic development, the establishment of industry, and the construction of the railway system. Jews played an important role in this development, at first in small trade and later in large-scale industrialization; they were also prominent in railroad construction. In general cultural life Jewish participation was considerable, and from 1860 Jews took an active part in political life. Jewish journalists were prominent and in particular assisted in raising the standard of the theater. Jewish producers active in Cluj before World War I were pioneers in the film industry in Hungary, among them Alexander *Korda. In the field of Jewish culture before the end of World War I there were Hebrew printing presses, and attempts were made to publish newspapers and weeklies in Hebrew, Yiddish, and Hungarian. Most communities had elementary schools.

In 1918–19 historic Transylvania and the other territories which constitute present-day Transylvania were transferred from Hungary to Romania. Links were established with Romanian Jewry and its center in Bucharest, but they remained very weak, with neither of the two sides willing to compromise; very few of the Hungarian-speaking Transylvanian Jews were prepared to change their cultural affiliations. Even after World War II and the Holocaust, many Transylvanian Jews continued to see themselves as "Hungarians of the Mosaic faith." Important secondary schools were established in Cluj (where the language of instruction was also Hebrew), Timisoara, and Oradea. A Hungarian-Jewish daily, **Uj Kelet* (first appearing as a weekly), was published in Cluj from 1918 until 1940; its publication was resumed in Israel in 1948. Jewish works were published under its aegis, and its supporters and members of the editorial board were active in Jewish cultural life and even in the general political sphere, among them the editor-in-chief, E. *Marton. In the interwar period there were 110 organized Jewish communities in Transylvania, of which 23 belonged to the Neologist organization, 80 were Orthodox, and the remainder belonged to the Status Quo Ante organization. The headquarters of the Neologist communities were in Cluj, while those of the Orthodox communities were at first in *Bistrita and later in *Turda.

Zionist activity, which had already commenced at the time of the first Zionist congress, developed to large proportions. Every trend of the Zionist movement reached the major towns and even the smallest localities of the region. Until 1927, the Zionist national headquarters were situated in Cluj, after which its organizational section was transferred to Timisoara. In association with the Zionist movement, a national Jewish party, active mainly after 1930, campaigned on a large scale in parliamentary and municipal elections. The party delegates in the Romanian Parliament fought against anti-Jewish discrimination by the government, and for promulgation of the *minority rights expressly granted the Jews by the Trianon peace treaty. A number of Jews, especially in the western districts, who had remained politically attached to the Hungarians, organized a separate political party in Transylvania. Jews rose to the leadership and were elected to municipal councils and as delegates to the Parliament in Bucharest. A limited number of Jews were also active in the national Romanian parties, and slightly more in the Social Democratic Party. Jews also belonged to the underground Communist movement, some serving among its leaders between the two world wars.

Romanian antisemitism, strong throughout this period, also made its appearance in Transylvania. In 1927 pogroms were organized by Romanian students who had convened in Oradea for their national conference. These disorders spread to the areas in the vicinity of Oradea, to localities situated near the Oradea-Cluj railway line, and to Cluj itself. In 1936–37, when the Romanian Fascist movement, the Iron Guard, formed branches throughout Romania, centers were also established in most Transylvanian towns, particularly in Arad. After 1933, the overwhelming majority of the German population – the Swabians in Banat and the Saxons in southern Transylvania – proclaimed themselves supporters of the Third Reich. Most of the German population was associated with the Transylvanian Fascist organizations. These, however, did not take active measures against the Jews and contented themselves with an economic *boycott and social ostracism. Between the end of 1937 and the beginning of 1938, when the outspokenly antisemitic O. Goga-A.C. Cuza government came to power, Jews, under the direction of the Zionists, formed clandestine *self-defense organizations which succeeded in preventing acts of brutality. A Jewish economic organization

was established to assist Jews threatened with dismissal from employment. The succeeding Romanian governments continued to discriminate against Jews; severe economic problems arose, and there was growing poverty. The Jewish organizations combined in efforts to provide relief and assistance. *Aliyah* to Palestine increased, though few immigration certificates were allocated to Transylvanian Jews. The number of Jews in this period remained approximately 200,000, forming 1.8 percent of the general population of historic Transylvania, 20.9 percent of that of Maramures, 5 percent of that of Crisana, and 1.2 percent of that of Banat.

Holocaust and Contemporary Periods

In August 1940, in the second arbitration decision of Vienna, it was decided by Germany and Italy – upon the basis of political considerations of the German Nazis – to incorporate one part of Transylvania into Hungary, while the other remained within Romania, the parts being known respectively as northern Transylvania and southern Transylvania.

SOUTHERN TRANSYLVANIA. The minority of about 40,000 Jews remained in the southern, Romanian sector, where the government began severe persecution of the Jewish population. The land owned by the community bodies was confiscated, Jews were deprived of factories and shops, and many Jews of military age were forced into labor battalions. Whole Jewish populations of villages and provincial towns were expelled and concentrated in the district capitals. The communities were nevertheless able to continue their religious activities and provided assistance for the needy. The Zionist movement continued activities, and its leaders and members of the youth movement organized rescue and defense from their center in Timisoara.

NORTHERN TRANSYLVANIA. The fate of the Jews in northern Transylvania, who numbered approximately 150,000, was very different. The Fascist Hungarian government which occupied this territory during the first half of September 1940 immediately introduced economic, social, and cultural restrictions against the Jews. The newspaper *Uj Kelet* was compelled to cease publication on the first day of Hungarian rule in Cluj. Zionist activity was prohibited in most places. Jews were immediately dismissed from law offices and public positions, and the number of Jewish pupils in the general secondary schools was restricted to 4 percent of the student rolls. The Jewish organizations took steps to relieve this situation. In the fall of 1940 a Jewish secondary school was established in Cluj with eight classes for boys and eight for girls, and later absorbed pupils who had been dismissed from the general secondary schools, as well as from outlying districts. Central relief organizations were set up in which both the Orthodox and the Neologist communities cooperated. In 1942, the Hungarian military command began to conscript Jews of military age into forced labor battalions, most of which were sent to the eastern front and reached the advance lines of the German-Hungarian invasion of the Soviet Union. Most of the conscripts perished under the harsh conditions. The Jews in northern Transylvania began to resume participation in the organizational life of Hungarian Jewry, whose center was in Budapest. The Transylvanian Zionist movement functioned clandestinely, and even succeeded in sending youths and adults to Palestine through Romania and the Black Sea.

A further turning point occurred on March 19, 1944, when the Germans occupied Hungary. After a few weeks, preparations were made to establish ghettos and for deportations to the death camp at *Auschwitz. The area was declared to be a danger zone from the security aspect, and both the Hungarian and German authorities sped up the deportations to the death camps. From the end of the summer of 1944 nearly all the Jews in northern Transylvania were deported; few succeeded in hiding themselves. The Jewish institutions were liquidated and a number of synagogues were destroyed.

After the capitulation of Romania on Aug. 23, 1944, northern Transylvania became a battle zone: the Soviet and Romanian armies entered the region and defeated the German and Hungarian forces. Toward the end of this period, a few Jews left southern Transylvania for northern Transylvania. In 1945 survivors began to return to the region.

By 1947 a Jewish population had been formed from survivors of the camps, the arrivals from southern Transylvania, and others who had come to the region from Romania and northern Bukovina, occupied by the Soviet Union. According to an estimate for that year, they numbered about 44,000 in northern Transylvania, 13,000 in Crisana, and 15,000 in Banat. The traditional community institutions were revived, and Zionist organizations were also active until 1949 in finding opportunities for *aliyah*. In addition, a new Jewish Democratic Committee (Comitetul Democratic Evreesc – CDE) was established by Jewish activists of the Communist Party. However, as soon became evident, the committee was an instrument of the new Communist regime, with the principal objective of disbanding the Zionist movement so that organized Jewish activities could be placed under close government and party supervision. After the war, and especially after the establishment of the State of Israel, many thousands of Jews made their way to Israel. The Jewish population in the region in 1971 was estimated at between 6,000 and 7,000. In towns with traditional communities – Cluj, Oradea, Arad, and Timisoara – and in several other smaller towns, the community organizations continued to be active, and prayers were held in the synagogues at least on Friday evenings and festivals. The communities were affiliated to the central organization of Romanian Jews with headquarters in Bucharest. The dwindling of the Transylvanian Jewish communities continued into the 21st century, with most of the remaining Jews now being entirely assimilated.

TRAPANI, city in Sicily. Documents suggest that 200 Jews, constituting one-tenth of the town's inhabitants, lived in Trapani in 1439. Their share of the taxes, however, was one-sixth, and from 1426 they had to provide one-third of the guard for the town walls. The affairs of the community were directed by the *prothi* ("notables"), assisted by 12 elders. In 1484 the community adopted the unusual system of having the outgoing *prothi* appoint their own successors. Like all the Jews in Sicily, the Jews of Trapani were under continuous pressure to pay special levies to the sovereigns. In 1404 King Martin urged the *prothi* to proceed energetically against Jewish tax defaulters through excommunication, denial of circumcision for their sons, and exclusion from burial in the Jewish cemetery. Two years later he reconfirmed the privileges of the Jews, in consequence of the exceptional contributions they had paid. The brothers Samuel and Elia Sala, who in 1402 had been granted special privileges for services rendered to the royal house, were commissioned in 1405 and 1409 to negotiate the peace between the rulers of Sicily and Tripoli. In the meantime they ransomed the bishop of Syracuse from the Saracens. The Jews of Trapani made their living from trade, including shipping merchandise to Tunisia, and many worked in the manufacture of coral jewelry. The number of Jews obliged to leave Trapani at the expulsion in 1492 (see *Sicily) is estimated at about 300. In 1492, at the time of the expulsion many wealthy Jewish families left Trapani, but they returned a few years later as *Neofiti (baptized Jews). In 1499 the city negotiated the taxation of Jewish property that remained after the expulsion specifying that it concerned the newly converted Jews, and referring to the "assets, debts, silver, gold, jewels, and other things of the said former Jews, at present baptized." Shortly after its establishment in 1500, the Spanish Inquisition in Sicily concentrated its efforts against the converted Jews of Trapani and many were prosecuted. Inquisitorial registers list 80 converts living in Trapani after the expulsion.

°TRASKE, JOHN (c. 1585–1636), English sectarian leader and Judaizer. Born in Somerset, Traske became an Anglican minister in 1611. He then became a peripatetic preacher and, by the mid-1610s, influenced by a tailor named Hamlet Jackson, he and his followers regulated their lives by the Hebrew Scriptures, strictly observing the Sabbath and dietary laws. After being condemned to savage punishment by the Star Chamber (1618), he recanted and published *A Treatise of Libertie from Judaisme … by John Traske, of late stumbling, now happily running again in the Race of Christianitie* (London, 1620). Some of his associates, including Hamlet Jackson, immigrated to Amsterdam where the latter, at least, formally joined the Jewish community.

[Cecil Roth]

TRAUB, MARVIN S. (1925–), U.S. retail executive. Traub, a native New Yorker, became synonymous with one of the city's best-known attractions, Bloomingdale's department store. Under his leadership, it evolved from dowdy to dazzling and turned shopping into show business. It was also on his watch that Bloomingdale's had its darkest days, being forced into a brief period of bankruptcy. Traub was raised in a retailing environment. His mother was a fashion director at Bonwit Teller on Fifth Avenue and his father had a licensing agreement with Christian Dior. After serving in France with the U.S. infantry in World War II and receiving a Purple Heart for a leg wound, Traub graduated from Harvard College in 1947 and Harvard Business School in 1949. He worked briefly at Macy's and Alexander's, then joined Bloomingdale's in 1950. It would be his employer for the next 41 years. When Traub arrived, the store's wares were modestly priced, "a notch below Gimbel's," he once recalled. His first assignment was to manage the 49-cent bargain hosiery table. By 1959, Traub had risen to vice president of home products and he made history by sending his buyers to Italy to look for everything from flatware to furniture. The Casa Bella promotion became the first of Bloomingdale's import events, presaging the transformation of the store into one of the most dynamic retailing operations in the U.S. The import promotions spread to other departments and eventually were storewide. Traub also advanced the concept of in-store boutiques, a key retail development. He was named president of Bloomingdale's in 1960 and chairman in 1978, retaining that post until he retired in 1991. That year, he was awarded the National Retail Federation's Gold Medal. From 1988 to 1992, Traub was also a vice chairman of Federated Department Stores, Bloomingdale's owner. In 1992, he formed Marvin Traub Associates, a marketing and consulting

business. He was a senior advisor to Financo, an investment banking firm. In 1993, Traub co-authored *Like No Other Store in the World*, a chronicle of his triumphs at Bloomingdale's and an unsparing critique of Robert Campeau, a Canadian real estate tycoon who borrowed billions to complete a hostile takeover of the store in 1988. Pressed by debt, Campeau put Bloomingdale's up for sale. Traub tried and failed to buy the store, which was driven into bankruptcy in 1990 and emerged from it in 1992.

[Mort Sheinman (2nd ed.)]

TRAUBE, ISIDOR (1860–1943), German physical chemist. Traube, who was born in Hildesheim, worked at the universities of Heidelberg and Bonn. From 1901 he was professor at the Technische Hochschule of Berlin, but left Germany in 1934 and settled in Edinburgh.

Traube related the laws governing the behavior of dilute solutions to the gas laws, actually anticipating Van't Hoff and Arrhenius, the Dutch and Swedish physical chemists. Traube also propounded that absorbed films on liquid surfaces obeyed two-dimensional analogies of the gas laws, a proposition that was substantiated 30 years later. He published numerous papers on surface phenomena. His theory of the action of drugs had a positive effect on pharmacological research for years. The effect of organic compounds on the surface tension of water is governed by "Traube's Rule."

[Samuel Aaron Miller]

TRAUBE, LUDWIG (1818–1876), German pathologist; a pioneer in the field of experimental pathology. Traube was born in Silesia and graduated from the University of Berlin. In 1849 he was appointed lecturer and research worker at the Charité Hospital in Berlin and his clinic soon achieved a high reputation for exactness and thoroughness in diagnoses and therapy. His book *Gesammelte Beitraege zur Pathologie und Physiologie* (3 vols., 1871–78) earned him a worldwide reputation. He was one of the first Jewish physicians to attain the title of professor in Germany.

Traube investigated pulmonary resection of the vagus nerve and carried out studies on suffocation, effects of digitalis and other drugs, the pathology of fever, the relationship between heart and kidney diseases, and many other subjects. He was the first to introduce the thermometer in his clinic for regular checking of temperature of all patients. He described an area of the chest wall over which stomach resonance is obtained ("Traube's Space"). "Traube's Sign" is a double sound over the peripheral arteries in aortic insufficiency or mitral stenosis. He also described blood curves ("Traube's Curves") and an artificial chemical membrane ("Traube's Membrane").

[Suessmann Muntner]

TRAUBE, LUDWIG (1861–1907), master paleographer and critic of Latin texts. Born in Berlin, the son of Ludwig *Traube, the great pathologist, he became professor of the Latin philology of the Middle Ages at the University of Munich in 1904 after a long struggle in which his Jewishness played a key role. His importance lies in the fact that through his independent research he raised paleography to the status of a historical science and made a basic contribution to the intellectual history of the Latin Middle Ages. Possessed of independent means, he was able to visit all the important libraries of Europe and study the Latin manuscripts at length. His studies of contractions of Latin words and *nomina sacra* (his major work, a study of various ways of writing divine names in manuscripts) proved crucial in tracing the history of schools of copyists, tracing manuscripts to particular monks, and indicating which medieval scholars had used them. He unraveled the complicated textual histories of the Rule of St. Benedict and of the Latin historian Livy. Of his projected comprehensive work on Latin paleography, the study of the half-uncial script appeared posthumously. Despite his premature death, Traube, because of his ability to attract and influence students, continued to exercise a profound influence on the field through his students – P. Lehmann, P. Maas, C.U. Clark, C.H. Beeson, E.A. *Lowe, and E.K. Rand – not only in Germany but also in England and especially in the United States.

BIBLIOGRAPHY: F. Boll and P. Lehmann (ed.), *Vorlesungen und Abhandlungen von Ludwig Traube*, 1 (1909), 11–73 [biography and list of his writings, including a large number in manuscript, some of which were edited posthumously by Boll and Lehmann]; J.E. Sandys, *A History of Classical Scholarship*, 3 (1958), 195.

[Louis Harry Feldman]

TRAUBE, MORITZ (1826–1894), German chemist and biologist. Traube was born in Ratibor, Upper Silesia, the brother of Ludwig *Traube. For most of his life he had to combine scientific research in his private laboratory with running the family wine business. With his discovery of semipermeable membranes he pioneered the field of osmosis. He also did research into autoxidation of hydrogen peroxide, plant respiration, biological oxidation and reduction, and nutrition. Traube was a member of the Berlin Academy of Sciences.

TRAUBE, WILHELM (1866–1942), German organic chemist. Traube was born in Ratibor, Upper Silesia, the son of Moritz *Traube, and the brother of Hermann Traube, professor of mineralogy at Breslau. He studied at Heidelberg, and in Berlin. He spent his career at the University of Berlin, where he became professor in 1929, retiring in 1934. He published on aromatic and heterocylic compounds and pharmaceutical activity.

TRAVEL, PRAYER FOR (Heb. תְּפִלַּת הַדֶּרֶךְ, *Tefillat ha-Derekh*), prayer recited upon setting out on a journey to protect the traveler from the dangers associated with travel. The Talmud attributes the institution of this practice to the prophet

Elijah, who cautioned a scholar that "when thou goest forth on a journey, seek counsel of thy Maker and go forth." The talmudic text of this prayer is:

> May it be Thy will, O Lord my God, to lead me forth in peace, and direct my steps in peace and uphold me in peace, and deliver me from the hand of every enemy and ambush by the way, and send a blessing on the works of my hands, and cause me to find grace, kindness, and mercy in Thy eyes and in the eyes of all who see me. Blessed art Thou, O Lord, who hearkenest unto prayer (Ber. 29b).

With only slight alterations, this text has since been used as the traveler's prayer among both Ashkenazim and Sephardim (Hertz, Prayer, 1044). It is, however, recited in the first person plural in accordance with the dictum of Abbaye that "a man should always associate himself with the congregation" (Ber. 29b–30a). It is recited once daily at the start of each day's travels, as long as a distance of 1 Persian mile (about 3 miles) is to be covered. It is preferable to recite this prayer while standing, although it may be said while sitting in places where it is difficult to stand (Ber. 30a; Sh. Ar., OḤ 110:4–7), as in an automobile or airplane. It has also become customary to recite appropriate biblical selections (e.g., Gen. 32:2–3; Ex. 23:20; Ps. 91) at the conclusion of the prayer. Additions have also been made for sea and air travel. Alternative versions of this prayer for paratroopers, pilots, sailors, and soldiers were composed by S. Goren, the former chief rabbi of the Israel Defense Forces.

TRAVELERS AND EXPLORERS. In the ninth century Jewish traders known as "*Radaniya" traded between Western Europe and China, by land and sea. They were fluent in several languages and dealt in female and boy slaves, eunuchs, brocades, furs such as beaver and marten, and swords from the West. They brought back musk, aloes, camphor, cinnamon, and other products from China and India. After the Arab conquest of North Africa in the seventh century, Jewish traders had followed the Berber and Arab armies and reached the Niger Basin. As late as the 18th and 19th centuries, Jewish caravan travelers were sending geographical information about southern Morocco and the western Sahara back to Europe.

*Isaac the Jew, who accompanied Charlemagne's embassy to Hārūn al-Rashīd as an interpreter in 797, returned four years later with an elephant, Abulaboz, which was a gift from the sultan. *Eldad ha-Dani (c. 880) claimed to have made two voyages. The range of his travels seems to have extended from Baghdad and Kairouan to Spain. Jacob ibn Ṭāriq (ninth century) is supposed to have traveled from Baghdad to Ceylon to obtain books on astronomy, while an Arabian or Turkish ruler sent a Jacob Aben Sheara to India (c. 925), for the same purpose.

According to the *ʿAjaʾib al-Hind* ("The Wonders of India," c. 953), by Buzurg ibn Shahriyar of Ramhurmuz, Isḥāq (Isaac) the Jew traveled from Oman (Sohar, southeastern Arabia) to India. From there, he went to China, where he lived for 30 years and amassed a fortune. He returned to Oman in 912/13. Isḥāq was subsequently killed at Serboza in Sumatra on orders of Oman's governor Ahmad ibn Hilāl. He is also supposed to have visited Lhó or Bhutan in the Himalayas. *Ibrāhīm ibn Yaʿqūb of Tortosa (tenth century) visited France (including the area around the English Channel), Mainz, Fulda, Schleswig, apparently Bohemia, and the court of the German emperor, Otto I, in 966. According to Abraham *Ibn Ezra (12th century), a Jewish traveler brought the "Arabic" numerals from India. Ibn Ezra himself visited Rome, a number of other Italian towns, Provence, France, England, Africa, Rhodes, and perhaps Ereẓ Israel and even India. His *Reshit Ḥokhmah* contains important information on Egypt, Arabia, Ereẓ Israel, Persia, and India. *Genizah* documents attest to considerable travel by Jewish merchants from the Middle East to India and other Asian countries.

The most famous Jewish medieval traveler was *Benjamin b. Jonah of Tudela who journeyed in the second half of the 12th century. He wrote a book on his travels, which vividly depicts the many Jewish communities he visited and also gives a picture of general political and economic conditions. His contemporary, the German traveler *Pethahiah of Regensburg, journeyed throughout the Middle East and his account, although incorporating certain legendary elements, gives much valuable information on the Jewish communities he encountered. An adventurous traveler was the Hebrew poet and translator Judah *al-Ḥarizi. In his youth he traveled from his native Spain to Provence. In about 1216 he set out on his journey to the East. Some chapters of his classical work *Taḥkemoni* contain his observations, at times very critical, of the Jewish communities he visited between 1216 and 1230, which included those in Southern France, Egypt, Ereẓ Israel, Syria, and Mesopotamia. A document of King James IV of Majorca (1334) states that Yuceff Faquin, a Barcelona Jew, had circumnavigated the entire known world on the king's orders. Much Jewish travel concentrated on journeys to and from Ereẓ Israel, for which see *Travelers and Travel to Ereẓ Israel.

The Age of Discovery

Luis de *Torres, Columbus' interpreter, was a Jew who was baptized the day before the expedition's departure. De Torres, who reported the discovery of the phenomenon of tobacco, was the first person of Jewish origin to settle in Cuba.

The Portuguese, who attempted to find both a sea and an overland route to the Indies, sent João Perez of Covilhá and Alfonso de Paiva to search for such a route. When the pair had not been heard from for some time, *Abraham of Beja, known for his fluency in several languages, and Joseph Copateiro, an experienced eastern traveler, were sent to find them. They met Perez returning from India, in Cairo. De Paiva had died meanwhile. Abraham and Perez returned to Portugal via Ormuz, Damascus, and Aleppo, while Copateiro returned directly to Portugal with the information which indicated the existence of a sea route to the Far East; this information was then used by Vasco da Gama. One of the pilots and navi-

gators who helped Da Gama in his later journey was a Jew, variously described as from Posen and Alexandria, whom he picked up on an island 60 miles from Goa. Da Gama had the Jew baptized as Gaspar da *Gama, and made him a pilot of the Portuguese fleet.

Hernando Alonso (1460–1528) had a particularly adventurous career. He was born in Niebla, Spain, immigrated to Cuba where he met Hernando Cortez (1516), and became a member of Cortez' army that sailed for Mexico (1520). A blacksmith and carpenter by trade, he helped build the ships that Cortez needed for the conquest of Tenochtitlán. He led the group that subdued the Indians of Pánuco and took part in the conquest of Guanajuato. Cortez awarded him the estate of Actopan, 40 miles outside of Mexico City, and he engaged in the lucrative business of supplying the town with meat. In 1528 he was denounced as a Judaizer and burned at the stake.

One of the most interesting and enigmatic figures of Jewish history is David *Reuveni, who appeared in Italy in 1524 claiming that his brother Joseph ruled over the tribes of Gad and Reuben and half the tribe of Manasseh in the wilderness of Habor and that he was the commander of his army. He claimed to have traveled, disguised as a Muslim, through Ethiopia, Egypt, and Ereẓ Israel, and came to Europe to elicit the military assistance of the Christian powers for the liberation of the Holy Land from the Turks. His "project" failed and he is reported to have died in prison in Spain. His Hebrew diary, which reflects his claims, describes, among other things, his talks with the pope and the king of Portugal, his visits to Italian Jewish communities, and his meetings in Portugal with Marranos, who saw in him the bearer of their hope.

Joseph *Delmedigo, who was born in Crete and studied in Padua, traveled through Egypt, Turkey, Poland, Russia, and Lithuania in the course of his career. A Jewish interpreter accompanied Captain James Lancaster (1601) on the East India Company's first expedition. He helped to negotiate the treaty between the English and the sultan of Achin in Sumatra, which served as the basis for British expansion in the Far East.

The 16th-century Yemenite poet *Zechariah al-Dāḥiri traveled widely. He journeyed to Yemen, India, Persia, Babylonia, Turkey, Syria, Ereẓ Israel, Egypt, and Ethiopia. His travel impressions form the literary background of his magnum opus *Sefer ha-Musar.*

Pedro *Teixeira (c. 1570–1650), a Marrano from Lisbon, may have been the first Jew to go around the world, and is believed to have been the first white man to make a continuous journey up the River Amazon.

In 1644 Antonio de Montezinos, who had returned from a trip to the Americas, told the worthies of the Amsterdam community about Indians he had met near Quito, Ecuador, who knew the *Shema* and claimed that they were descended from the tribes of Reuben and Levi. His report encouraged *Manasseh Ben Israel to write "Hope of Israel" and later to negotiate with Oliver Cromwell to readmit the Jews to England in order to complete their dispersion to the "end of the earth," which was a prerequisite for the coming of the Messiah.

In 1687 there appeared in Amsterdam *Notisias dos Judeos de Cochin*, a report on the condition of the Jews of *Cochin, by Moses *Pereira de Paiva, an Amsterdam Jew of Portuguese descent, who visited India.

18th–20th Centuries

Sason Hai of the House of Castiel was a native of Istanbul, who from his youth evinced a great desire to travel. From his travel account, in Hebrew, published by Izhak Ben-Zvi (*Sefunot*, 1 (1956), 141–84), it is difficult to determine the route of his travels. He mentions his return to Istanbul in 1703 and that in 1709 he was in Basra. Among the countries he visited were Holland, Italy, Ethiopia, Tunisia and Morocco, Persia, and Afghanistan. Although his account abounds in legends, folk tales and hearsay, it nevertheless contains many accurate facts which he reports as an eyewitness.

The best-known Jewish travel record of the 18th century is the *Ma'gal Tov* of Ḥayyim Joseph David *Azulai, the famous rabbinical scholar and bibliographer. He twice toured European Jewish communities as an emissary of the Jewish community of Hebron. On his first journey (1753–58), he sailed from Alexandria to Leghorn, where he returned after traveling through Italy, Tyrol, Germany, Holland, England, and France, and sailed from there to Smyrna. He subsequently visited Istanbul, returning from there by boat to Ereẓ Israel. On his second journey (1772–78), he sailed from Alexandria to Tunis and from there to Leghorn. He traveled through Italy, France, Belgium, and Holland, finally settling in Leghorn. His diaries are replete with acute observations on life in the cities he visited.

A contemporary of Azulai was Simon von *Geldern. A native of Vienna, he grew up in Germany and studied at yeshivot there. He led an adventurous life, traveling through Europe and the Near East, visiting Ereẓ Israel several times. He was equally at home in the Jewish community and in high society and gentile scholarly circles in various European countries. Von Geldern, who was a great-uncle of Heine, kept a diary. His life was described by Fritz Heymann (*Der Chevalier von Geldern*, 1937). Earlier David Kaufmann had published extracts from his diary in his *Aus Heinrich Heines Ahnensaal* (1896).

A Jewish traveler whose travel record was very popular was Israel Joseph Benjamin (*Benjamin II). From his early youth he formed the desire to make a pilgrimage to Ereẓ Israel and to travel in search of traces of the lost ten tribes. After he failed in business in his home town Fălticeni, in the then Turkish province of Moldavia, he set out to realize his dream. He traveled through Turkey, Egypt, Ereẓ Israel, Syria, Kurdistan, Mesopotamia, India, Afghanistan, and Persia, and also visited Singapore and Canton. Shortly after his return to Europe, he set out on another voyage, traveling through North Africa. He published *Cinque années de voyage en Orient 1846–1851* (Paris, 1856) about his travels in Asia. The book appeared later in German with additional chapters on his travels in Af-

rica (*Acht Jahre in Asien und Afrika*, 1858) and was translated into English, Hebrew, and Ladino. From 1859 to 1862, Benjamin was in America, and he recorded his experiences there in *Drei Jahre in Amerika* (1862; Eng. edition: *Three Years in America*, 1956).

Jacob *Saphir was the first Jewish traveler to report on the life of the Jews of Yemen. Born in Lithuania in 1812, he settled with his parents in Ereẓ Israel when he was ten years old. In 1858–63 he visited Egypt, Aden, Yemen, Bombay, Cochin, Colombo in Ceylon, Calcutta, Rangoon, Singapore, Batavia, Australia, and New Zealand, as an emissary of the Jerusalem community. He spent longer periods in Yemen and India and in his travel book *Even Sappir* (2 vols., 1866–74) gives detailed descriptions of the life and customs of the Jews of Yemen, the Bene Israel of India, and the black and white Jews of Cochin.

Jehiel Fishl Kestelmann visited the Jewish communities of Syria, Kurdistan, Mesopotamia, and Persia as an emissary of the Jewish community of Safed in 1859–61. His description of his travels was published by A. Yaari under the title *Massa'ot Shali'aḥ Ẓefat be-Arẓot ha-Mizraḥ* (1942).

Asher ha-Levi was born in Galicia. After an unhappy childhood, in 1866, at the age of 17, he left Jassy, where he had lived for several years, and traveled through the Balkans, Asia Minor, Mesopotamia, and India. Eventually he settled in a city in the Himalayan Mountains. He wrote several books in Hebrew, including an autobiography. His account of his travels in the Balkans in 1866–68 was published in 1938 by A. Yaari under the title *Harpatka'otav shel Asher ha-Levi*.

Salomon Rinman was born in Galicia. After spending many years in Cochin he returned to Europe and at the urging of the Hebrew writer Wolf Schur he wrote a description of his travels in India, Burma, and China, *Massa'ot Shelomo be-Ereẓ Hodu, Birman ve-Sinim* (1884).

In 1883–86, Ephraim *Neumark visited the Jewish communities in Syria, Kurdistan, Mesopotamia, Persia, Afghanistan, and Central Persia. His travel impressions *Massa be-Ereẓ ha-Kedem* were first printed in *Ha-Asif* (5, 1887). He was the first to report on the crypto-Jews of *Meshed in Persia.

In 1868, the Orientalist Joseph *Halévy was sent by the Alliance Israélite Universelle to study the conditions of the Falashas, describing his journey there in "Travels in Abyssinia" (*Miscellany of Hebrew Literature*, 2 (1877), 177–256). Not long after his return he went to Yemen to inquire into the state of the Jews there and to examine the Sabean inscriptions. Halévy did not write a book about his travels to Yemen, but years after the expedition Ḥayyim *Ḥabshush, a Yemenite Jew who had served as Halévy's guide, wrote an account of their travels there. Written partly in Hebrew and partly in Arabic, it was published in Hebrew in 1939 by S.D. Goitein under the title *Massa'ot Ḥabshush*.

Ephraim *Deinard wrote several travel books. His *Massa Krim* (1878) includes chapters on the life of the Karaites and the Krimchaks (original Jews of the Crimea). *Sefer ha-Massa'ot be-Ereẓ Kavkaz u-vi-Medinot asher me-Ever le-Kavkaz* (1884) by Joseph Judah *Chorny, printed after the death of the author, gives an account of his travels among the Jewish communities in the Caucasus and in Transcaucasia.

Arctic explorers and travelers of the 18th and 19th centuries include Israel Lyons (1739–1775) who served as chief astronomer with Captain Phipps' expedition to the Polar regions in 1773; Isaac Israel *Hayes (1832–1881), surgeon to the "Advance" expedition searching for Sir John Franklin, discoverer and explorer of Grinnel Land, and leader of an 1860 expedition to Greenland which encountered another expedition led by August Sonntag; Emil *Bessels (1847–1888), surgeon and naturalist of the ill-fated "Polaris" expedition to the North Pole; Edward *Israel (1859–1884), astronomer with the Greely expedition to Greenland, where he died of malnutrition; Aldo Pontremoli (1896–1928), physics professor at the University of Milan and an aviation pioneer during the interwar period, who died on Nobile's 1928 Arctic dirigible expedition; Rudolph *Samoilovich (1881–1939), who led the Russian relief expedition to the Nobile party's aid (1928), discovered the Spitzbergen coal deposit, and explored the Franz Josef Archipelago; and Angelo Heilperin (1853–1907), who made geological expeditions to Florida (1886), Bermuda (1888), and Mexico (1890), led a relief expedition to Peary's aid in Greenland (1892), took part in expeditions to North Africa (1896) and to the Klondike (1898–99), and scaled and explored Mt. Pelee (1902–03).

Explorers of Africa in the 19th century include Nathaniel *Isaacs, a member of the King expedition sent to search for Farwell, wrecked off Natal in 1825, who explored Natal for seven years; *Emin Pasha (Eduard Schnitzer), General Gordon's aide, then his successor as governor of the Equatorial Province, who made important explorations and investigations in Central Africa; Edouard *Foa, who traveled through Morocco, southern and central Africa, French Congo and Dahomey; and Louis Arthur Lucas, who traveled through the U.S. (1872), Egypt (1873), and navigated the northern part of Lake Albert Nyanza in 1876.

Other travelers, adventurers, or explorers of the 18th, 19th, and 20th centuries who were Jewish or of Jewish origin include Mantua-born Samuel *Romanelli, whose *Massa ba-Arav* (Berlin, 1792) is a vivid account of his four-year journey from Gibraltar to Algiers and Morocco; Captain Moses Ximenes (c. 1762–c. 1830), who led an expedition from England to the island of Bulama, West Africa, and made an unsuccessful attempt to establish a colony there; a U.S. Army colonel from Boston named Cohen, who traveled from Adana via Smyrna to Constantinople with a group of Egyptian soldiers; *David D'Beth Hillel, author of *The Travels From Jerusalem through Arabia, Koordistan, Part of Persia, and India, to Madras* (1832), who searched for the remnants of the Ten Tribes, and described in detail the holy places and historical sites of Christianity, Judaism, and Islam from India to Ereẓ Israel, the Yazidis in Sinjār, the Sabeans, Wahhabis, Druze, the Dāwūdiyya sect in western Persia, and the differences between the Sunnite and Shi'ite Muslims; Alexander *Salmon, an English sailor who married a Tahitian clan chief-

taineess and served as adviser to the rulers of Tahiti; Heinrich Bernstein (1828–1865), who explored the Moluccas, the Malay Peninsula, and New Guinea for Holland; William Gifford Palgrave (1826–1888), who worked as a Catholic missionary in India, Syria, and Arabia and wrote *Narrative of a Year's Journey Through Central and Eastern Arabia* (2 vols., 1865); Arminius *Vambery who, disguised as a Muslim dervish, was the first European to travel from Trebizond to Teheran, Persia, and Samarkand in Central Asia (1861–63); Gottfried *Merzbacher, who climbed mountains in the Caucasus and the Tien Shan range and studied the ecology of the latter for more than five years; Ney *Elias, who traveled across the Gobi Desert, through the Pamir Mountains, and Chinese and Afghan Turkestan, and traced the Oxus River's upper course; Elio Modigliani, who explored the Malay Peninsula; Samuel *Fenichel, who explored New Guinea for bird and butterfly specimens; Nathaniel Wallich, who explored Assam, Hindustan, and Burma; Lamberto Loria, who traveled in Australia and New Guinea; Eduard *Glaser, the Austrian explorer who made four expeditions to the Yemen, located San'a, and discovered numerous old manuscripts and inscriptions; Hermann *Burchardt, German explorer and ethnographer, who traveled in the Near East, North Africa, Australia, America, India, and Iceland, and was murdered in Yemen; Julius Popper, who explored and reigned briefly over Tierra del Fuego; Sir Mark Aurel *Stein, who headed expeditions in India, Chinese Turkestan, China, Persia, and the Middle East; Raimondo *Franchetti, the "Italian Lawrence," who traveled in Indochina, Malaya, the Sudan, East Africa, and Ethiopia; the ethnologist Vladmir *Jochelson, who, in the course of a ten-year exile in Siberia (1884–94), studied the nomad Yokaghir tribe and latter accompanied expeditions to Kamchatka, Eastern Asia, and Alaska; Lev Yakovlevich Sternberg, who was also exiled to Siberia (1910–20) and studied the nomad Giyake tribe in northeastern Siberia; and Charles *Bernheimer, who explored the northern Arizona and Utah badlands for the American Museum of Natural History and undertook expeditions to Guatemala and Yucatan.

Of the many travel books which appeared in the 20th century only a few can be mentioned: E.N. *Adler's *Jews in Many Lands* (1905). Jacques *Faitlovitch, who devoted his life to the Falashas, wrote *Quer durch Abessinien* (1910; Hebrew: *Massa el ha-Falashim*, 1959). Zvi Kasdoi described his journeys in Caucasus, Central Asia, Siberia, and the Far East in *Mamlekhet Ararat* (1912) and *Mi-Yarketei Tevel* (2 vols., 1914). Among Nahum *Slouschz's many studies on North African Jewry was *Travels in North Africa* (1927). Ezriel *Carlebach's *Exotische Juden* (1932) included, among other travel reports, chapters on the descendants of the Marranos of Portugal, the Chuetas of Majorca, the Doenmeh of Turkey, and the Karaites of Lithuania. *A World Passed By* (1933) by Marvin *Lowenthal does not describe existing communities but landmarks and memories of the Jewish past in Europe and North Africa. Abraham Jacob *Brawer gave an account of his travels in the Middle East in *Avak Derakhim* (2 vols., 1944–46). Shmuel *Yavne'eli's *Massa le-Teiman* ("Journey to Yemen," 1952), Israel *Cohen's *Travels in Jewry* (1953), David S. *Sassoon's *Massa Bavel* ("Voyage to Babylonia," 1955), L. *Rabinowitz's *Far East Mission* (1952), and Joseph Carmel's *Massa el Aḥim Nidaḥim* (1957) are about the Far East. H.Z. Hirschberg's *Me-Ereẓ Mevo ha-Shemesh* (1957) is on travels in North Africa. Jacob Beller's travel books on South America included *Jews in Latin America* (1969). Henry Shoshkes circled the globe many times. His travel accounts were published in the Yiddish press, and he was the author of several books, among them *Your World and Mine* (1952). In 1972 *Jews in Remote Corners of the World* by Ida Cowen appeared. It described visits to Jewish communities in the Pacific and in the Far and Near East.

TRAVELERS AND TRAVELS TO EREẒ ISRAEL.

Jewish Travelers

Jews have traveled to see the Holy Land ever since they first settled in the lands of the Diaspora, i.e., travel by Jews to Ereẓ Israel began from the time of the Babylonian Exile and in effect never ceased entirely from then to the present.

During the Second Temple period the focus of attraction for *pilgrims was the Temple. However, even after the destruction of the Temple, and after most of the people were exiled from its land, the attraction of Ereẓ Israel did not abate. Actual descriptions of the travels by the travelers themselves exist only from the middle of the 12th century. The first known Jewish traveler who left literary evidence about his travels was *Judah Halevi. He left Spain in 1140 but apparently did not reach Ereẓ Israel. The literary evidence which he left expresses the poet's feelings about the adventures which befell him on his travels, rather than the adventures themselves. Its usefulness lies in that it reveals the profound emotional motives operating within the traveler to the Holy Land. The first historical document offering a mostly factually accurate travel description is the itinerary of *Benjamin of Tudela from Spain. He arrived in Ereẓ Israel about 1170. He describes various geographic sites there, as well as the number of Jewish inhabitants he found in each place, the conditions under which they lived, the history of the places, historical identifications, etc. Benjamin arrived before the collapse of crusader rule, and his accounts are an important source of information about the situation of the Jews there during that period.

About ten years after the visit of Benjamin of Tudela, *Pethahiah of Regensburg toured the country. He completes the picture of the impoverished situation of the Jewish community at the end of the crusader period, in contrast to the comfortable situation of contemporary Babylonian Jewry under Muslim rule. His main interest was the *holy places, and he did not devote much attention to the material conditions of the Jews. Jacob b. Nethanel, who visited the country and Jerusalem, apparently before its conquest by Saladin (1187), was also mainly interested in the holy places and the tombs of the *tannaim* and *amoraim*.

The situation was different during the travels of Judah *Al-Ḥarizi. He arrived in 1218, after the country had been conquered from the crusaders, and after the immigration of 300 rabbis from France and England, some of whom he met in Jerusalem. The Muslim conquest and the immigration eased the conditions of the Jewish community there. Al-Ḥarizi himself attests: "From the day it was conquered by Ishmaelites, it was settled by Israelites." In 1238 a journey was made by R. Jacob, the emissary of R. *Jehiel of Paris, but in contrast to Al-Ḥarizi he gives almost no description of the situation of the Jewish community, and concentrates primarily on describing the holy places and the tombs. A special place among the settlers of Ereẓ Israel is held by *Naḥmanides (1267), who gives a very somber description of the conditions of the Jews during his stay. He also describes the destruction and desolation which abounded in the country. Naḥmanides' action in renewing the settlement of Jerusalem was an outstanding enterprise.

An interesting figure among travelers was *Estori ha-Parḥi, who arrived in 1322. Far from being a mere transitory tourist, he delved deep into the study of Ereẓ Israel. He investigated the problem of identifying several places in the country, displaying an outstanding expertise in Jewish literature and foreign languages, and approached his subject scientifically.

Nevertheless, love of Ereẓ Israel was not the legacy of Jewish scholars or men of letters alone. Simple people, too, greatly desired to settle there. This is evidenced by the tale about two Spanish Jews who vowed to immigrate in 1317. When their attempts proved unsuccessful, one of them asked R. *Asher b. Jehiel if he could break his vow (Resp. Rosh, 8:11). In the course of time common people (usually merchants) came, e.g., Isaac ibn al-Fara of Malaga, Spain, who visited Ereẓ Israel in 1411 and wrote a letter to Simeon b. Zemaḥ *Duran in Algiers, describing what he saw there. He also visited the important cities of Syria. In 1443 he sent a list of the locations of the holy graves in Ereẓ Israel, which he took from an ancient book in his possession, to Solomon b. Simeon *Duran. The two letters are lost but they were summarized in Abraham *Zacuto's *Sefer Yuḥasin*. In 1473 an anonymous traveler went there from Candia, and numerous others went there from Italy in the second half of the 15th century. The most famous among these were R. Meshullam of Volterra (1481), a wealthy merchant, whose book of travels is very important from a historical point of view, and Obadiah of *Bertinoro (1488–90), who became one of the greatest rabbis of Ereẓ Israel of his time; three of his letters from there are among the most beautiful in travel literature.

In the 16th century a considerable number of Italian Jews traveled to the Holy Land. The book of travels of Moses *Basola (1521–23) is a gem among travel literature. In 1563 the wealthy merchant Elijah of Pesaro settled there, and his book contains a detailed description of the means of travel from Italy to Ereẓ Israel. The description of the economic conditions prevailing there in the 16th century is also detailed and enlightening. This is reflected in a letter from David di Rossi, a merchant who was a fellow-countryman of Elijah, and who journeyed there in 1535. Solomon Shlomil Meinstril from Resnitz, Moravia, arrived in Safed at the end of 1602, and his letters are filled with realistic descriptions of the Safed community, its spiritual life, its economic situation, relations with non-Jews, climate, etc. Isaiah *Horowitz tells about his travels in his letters and describes Safed, where he arrived in 1620, and his visits to the tombs of the *ẓaddikim*, as well as his journey to Jerusalem.

During the 17th and 18th centuries Karaite pilgrims went to Ereẓ Israel from the Crimean Peninsula, after having vowed to undertake the journey. The descriptions of the travels of *Samuel b. David (1641–42), Moses b. Elijah (1654–55), and *Benjamin b. Elijah (1785–86) are filled with religious fervor and love of the Holy Land. The Karaites used to bestow the title *Yerushalmi* ("Jerusalemite") on every immigrant, and such an event was a great celebration for the entire community.

One of the travelers in the famous group of *Judah Ḥasid was Gedaliah of Siemiatycze, from Poland. In his book, *Sha'alu Shelom Yerushalayim*, he describes the adventures of the travelers, as well as life in Jerusalem. The adventures undergone by Abraham Roiyo and his group (1702) during their travels to Ereẓ Israel, as well as the yeshivah built by him, are described in a letter written by one of the travelers. There is a series of letters and stories about travels to and in Ereẓ Israel in connection with the immigration (1741) of Ḥayyim *Attar, author of *Or ha-Ḥayyim*.

In 1746 Abraham Gershom of Kutow, brother-in-law of *Israel b. Eliezer Ba'al Shem Tov, immigrated there. He served as the first bridge for the great ḥasidic immigration. As a result, there are numerous travel descriptions written by settlers and travelers who went from eastern Galicia and Volhynia, the provinces where Ḥasidism originated. In 1760 Joseph Sofer journeyed there from Berestzka in Volhynia province. He related in his letter that there was a gradual but regular immigration from Poland. In 1764 two ḥasidic leaders from eastern Galicia, *Naḥman of Horodenka and *Menahem Mendel of Peremyshlyany, arrived with the groups of ḥasidic immigrants. Information about their journey is given by a Galician Jew, who recounts the stories of his travel to Ereẓ Israel in a book entitled *Ahavat Ẓiyyon*.

In the framework of the ḥasidic immigration, an especially great role was played by the Ḥasidim of Lithuania and

Rydzyna, whose leaders describe, among other things, their travels and immigration in their letters (1777), as well as the situation of the Jews of Ereẓ Israel at the time. The most famous traveler was R. *Naḥman of Bratslav, who traveled in 1798–99, and who regarded the Holy Land as the center of his ḥasidic teaching. About 30 years after the move by Ḥasidim to settle in Ereẓ Israel, their opponents, the *Mitnaggedim*, also felt the spiritual need to settle there. The first group of the disciples of R. Elijah, the Gaon of Vilna, traveled there in 1808, and settled in Safed. Two additional groups of R. Elijah's disciples went in 1809. Their letters give expression to the religious yearning of the immigrants, and the great call on Diaspora Jewry to take part in the settlement of the land. Supplementary information about this immigration is given in the book of travels of R. *David D'Beth Hillel, who joined the disciples of the Gaon in Safed, in 1815, but did not remain with them long, and left to wander around the country. In 1824 R. David D'Beth Hillel left to tour the world. The description of his travels in Ereẓ Israel is the only one of its kind by a Jew during the first quarter of the 19th century. His diary is also of historical significance, because he is generally precise in the facts which he presents. In 1833 Menahem Mendel of Kamieniec arrived in Ereẓ Israel. He published a small work entitled *Korot ha-Ittim* in 1840, describing the terrible sufferings of the Jews of Safed as a result of the fellahin's rebellion against Ibrahim Pasha. He devotes a special chapter to describing daily life in Ereẓ Israel.

In 1833 R. Yehoseph *Schwarz from Bavaria settled in Ereẓ Israel. He was not an ordinary traveler. Like Estori ha-Parḥi in the 14th century, R. Yehoseph Schwarz devoted all his strength and energy to the study of the country. He covered its length and breadth, dealing with its borders, antiquities, flora, climate, etc. His book, *Tevu'ot ha-Areẓ* (1845), is the major product of his investigations, and was translated into German and English. In a letter written in 1837, he describes the quality of life in Jerusalem, its holy places, and the climate and productivity of the country.

Travel literature and the history of travels in the 19th century accompany the first manifestations of national revival and the renewal of Jewish settlement. Moses *Montefiore and his wife, Judith, made seven trips. She kept a detailed travel diary about her second trip with her husband (1839). Eliezer Halevi, Montefiore's secretary and right-hand man, described in four letters what he had seen in his tour throughout the country, in which he spent two months (1838).

The beginning of Zionism may be associated with the activity of Jehiel Michael *Pines, who traveled throughout the country in 1878 examining the quality of land suitable for settlement. He tells about these travels in his letter. The historian Ze'ev *Jawitz, who immigrated in 1887, tells in his letter about his arrival and his visits to various places. There is also the description by Mordecai b. Hillel, among the first of the Ḥovevei Zion, who visited the new *yishuv* in 1889. In his book of travels, he describes the situation of the moshavot, as well as the way of life of the old *yishuv* in Jerusalem.

The travels of Zionist leaders *Aḥad Ha-Am (1891) and Theodor *Herzl (1898) to Ereẓ Israel exemplify the new trend in travel (see *Zionism).

[Menahem Schmelzer]

Christian Travelers

Numerous travel descriptions were written from the 12th century to modern times by Christian pilgrims who went to Ereẓ Israel to visit the holy places of their faith, and other travelers who wandered through the countries of the East and visited the Holy Land. Among them were some who were not adept at literary expression, whose travels were described by companions or by someone to whom they told their story. Their writings are often nothing more than a list of the Christian holy places visited by pilgrims, the pilgrimage "stations," and the prayers which were to be said at these places. Many of the pilgrim-travelers, however, were priests and intellectuals, who could describe their travels in works which bore a literary character. All such works were called in Latin *itineraria*. Since many of the pilgrims visited Syria and Egypt as well, their travel books include interesting information about these countries also. These works are important sources not only for the history of Ereẓ Israel, and especially for the study of its topography, but also for the history of Oriental civilization in general, including data about the social and economic conditions. On the other hand, all the itineraries show the authors to be aliens unfamiliar with the way of life of the country, especially with the languages spoken by its inhabitants; they required the mediation of guides and translators, who often misled them. The tendency to believe legends was almost general in the Middle Ages. However, in the course of the generations in which travel descriptions were written by the Christians who went to Ereẓ Israel, the nature of these writings underwent changes according to the national and social origin of their authors, as well as according to their approach to matters relating to the country.

A few itineraries from the period preceding the Crusades have been preserved. Most of them were written in Latin by West European priests, and some of them were written in Greek by Byzantine priests. Their character was determined by that of the authors: they concentrate mainly on descriptions of the holy places, the monasteries, etc. The earliest extant itinerary is by an anonymous author called the "Bordeaux Pilgrim," who gives an account of his journey from France, through Italy and the Balkans, to Ereẓ Israel, where he describes, naturally first and foremost, the Christian holy places in Jerusalem. This journey was apparently made in the 330s (333?). About 50 years later an itinerary was written which is attributed to Saint Silvia of Aquitania. The authoress spent three years in the countries of the Orient and, after a lengthy stay in Ereẓ Israel, also visited Syria and Mesopotamia. Her description of her travels is so detailed that it is an invaluable aid for the study of topography. One of the most popular works from that time was the description of the journey undertaken by the French bishop Arculfus, around 670. Arculfus spent nine months in Jerusalem, visiting the shore of the Dead Sea, the northern

part of the country, Damascus, and Tyre, and later traveling to Constantinople. He finally arrived in Scotland, where he told the head of an Irish monastery about his travels, and the latter wrote down his story. This work is important in that it is the first (known) work from the period of Muslim rule in Ereẓ Israel and the neighboring countries. A detailed travel book, which gives a lengthy description of the adventures and tribulations of a western pilgrim in the Oriental countries, is the travel description by St. Willibald, who went to Ereẓ Israel in 723. Willibald was an Englishman, but he became bishop of Eichstadt, Germany.

Beginning with the First Crusade there was an increasing number of pilgrims who wrote descriptions of their travels. The types of traveler-authors became more variegated, and the establishment of Frankish rule in Ereẓ Israel and a few Syrian provinces resulted in the broadening of the travelers' scope of interests, and they included in their books topics other than just the holy places. Of greatest interest among the works written in the second half of the 12th century are the travel descriptions of Saewulf, who went to Ereẓ Israel while making a sea voyage and visiting Greece and Constantinople (1102–03), and those by the Russian ascetic, Daniel (1106–08), whose work is one of the first written in Russian. From the second half of the 12th century, mention should be made of the travel descriptions of Nicolaeus Saemundarson, the head of a monastery in northern Ireland (1151–54), of Johannes of Wurtzburg (1165), and the description of Ereẓ Israel by Johannes Phocas (1177). The most important among the itineraries of the 13th century are the works by the Germans Wilbrand of Oldenburg (1212) and Thietmar (1217), the book by Sabbas, archbishop of Serbia (1225–27), written in ancient Slavic, and the work by Perdiccas, protonotary of Ephesus (c. 1250). From the end of the century there is a description of the "Holy Land" by Burchardus of Mount Zion (de Monte Sion; 1283), which is not actually an itinerary but rather a work by a monk who lived in Ereẓ Israel for a long time.

After the elimination of the last remnant of crusader rule in Jerusalem, i.e., the conquest of Acre in 1291, the pilgrimage movement increased. Many of the visitors and travelers wrote about their travels, and hence a greater number of itineraries is preserved from the 14th century than from earlier periods, and they are more varied. During this period the pilgrims began to write their works in their national languages as well. Of these, special mention should be made of the travel descriptions by the Irish monk Simeon Simeonis (1332); the German priest Ludolf of Suchem, who spent the years 1336–41 in the countries of the Orient and described them in a Latin and German work; the Italian monk Niccolo da Poggibonsi (1345) who wrote in Italian "A Book about the Land Across the Sea"; and the Russian priest Ignatius of Smolensk, who went to Ereẓ Israel at the end of the century and described the Christian holy places in his mother tongue. Of the emissary-spy type was a German nobleman, Wilhelm of Boldensele, who was a member of the Dominican Order and visited Ereẓ Israel (1333) as an emissary of a French cardinal connected with plans for a new Crusade. The detailed itinerary by the monk Giacomo of Verona (1335), written in Latin, is a combined guide for pilgrims and exploration of possibilities of a new Crusade. Itineraries of a completely different type were written by three Florentines, Lionardo Frescobaldi, Simone Sigoli, and Giorgio Gucci, who went to Ereẓ Israel in 1384 by way of Egypt and returned by way of Syria. The three pilgrims were secular and their travel books reflect the secular-commercial approach of the townsmen. They abound in descriptions of the economic and social life and they also contain exact data about expenditures. With the increase in pilgrimages high-ranking noblemen also went to Ereẓ Israel in that generation and their travels were described by their companions. Among these was the future King Henry IV of England (1392/93). Mention should also be made of the travelers during that century who visited in all the Oriental countries and did not go especially to Ereẓ Israel, but in whose travel books the description of Ereẓ Israel plays a major role. Among these were the Italian Odorico de Pordenone (1320), the Englishman John of Mandeville (c. 1336), and the Italian Giovanni de Marignola (1350).

The 15th century was the classic period of Christian pilgrimage to Ereẓ Israel in the sense that the pilgrimage movement was more intense, its forms were more crystallized, and the composition of the pilgrims in terms of their origins was more variegated than in any preceding period. The proportion of priests was smaller than formerly while the proportion of the bourgeois was larger. The variety of pilgrims is reflected by the variety of itineraries preserved from that century. Some travelers did not take the short sea-route from Italy to the shores of Ereẓ Israel, but wandered in many countries on the way to and from Ereẓ Israel, since their entire purpose was to gather information about the strength of the armies and fortifications in the Holy Land itself and its neighboring countries. There are many itineraries of noblemen from various countries who went to Ereẓ Israel during the 15th century and whose travels are described by their companions. Especially characteristic of the pilgrimages of that time was the broad participation of the urban laymen. These bourgeois came from various countries. However, the most important itineraries in terms of their comprehensiveness and the value of their information about the contemporary social scene in Ereẓ Israel were still those written by priests. Among the itineraries of churchmen of the 15th century, especially significant are the works of the Italians Santo Brasca (1480) and Pietro Casola (1494), and of the Germans Bernhard of Breidenbach and Felix Fabri, who went to Ereẓ Israel in 1483. Both Bernhard of Breidenbach, who was a priest in Mainz, and Felix Fabri, who was a Dominican monk in Ulm, wrote travel books. Their works, especially that by Fabri, are, on the one hand, travel descriptions, and, on the other, studies in the history of Ereẓ Israel, its settlement, and the holy places. Naturally, in many of the descriptions of travels, which were written in the course of hundreds of years, there is also information about the meetings between the pilgrims and Jews in various places and especially about the places of origin of these Jews. Although

most of the authors display a marked orthodoxy and even extreme religious zealousness, with regard to this matter they were simply reporting.

Of greater historical significance are the Christian itineraries from the 16th century on, which mainly describe the population in general and the Christians in particular. However, the Jewish population was increasing in Safed and later in Jerusalem, Tiberias, and Hebron, and the Christian travelers, now mostly coming from the various German countries, from Spain, and later from France and England as well, did not miss the opportunity to describe their meetings with the Jews. They also tell about religious discussions conducted between themselves and the Jews, with whom they found a common tongue (German, Spanish) and whose houses often provided clean and secure inns, and polite hospitality (in places where there were no monasteries or inns for pilgrims). These travel books, especially because they were numerous and sometimes contained contradictory views, serve as a primary source for the history of the Jews of Ereẓ Israel during the Ottoman period, since most of them perhaps quite unintentionally gave expression to a completely objective picture. The many travel books, amounting to about 120 in all, which were written by Christian travelers in the course of 400 years (16th–19th centuries) add up to a considerable historical treasure.

It is impossible to review here all the Christian travel books published during this period, particularly since many of them merely parrot the words of their predecessors. However, some of them should be mentioned: the travel book of the Franciscan monk from Portugal, Pantaleao de Aveiro, *Itinerario da Terra Sancta* (c. 1565, publ. 1927); of the French Franciscan monk Jaques Goujon, *Histoire et Voyage de la Terre Sainte* (Lyons, 1571); of John Sanderson, who was in Ereẓ Israel in 1601, *The Travels of John Sanderson, 1584–1602* (publ. 1931); of George Sandys, *A Relation of a Journey, A Description of the Holy Land of the Jewes* (London5, 1652); and especially the description by the monk-missionary Eugéne Roger (c. 1630), *La Terre Sainte* (1664). The learned Dutchman Olaf Dapper collected much information which he found in works by preceding scholars, added his own eyewitness accounts, and wrote a complete description of Ereẓ Israel, first published in Amsterdam in 1681, and later in German translation in Nuremberg, 1688–89, *Asia, oder genaue und gruendliche Beschreibung des gantzen Syrien und Palestins*. This is not an original work but it includes considerable geographic-historical material. The broad travel memoirs of L. de Arvieux, who served as French consul and ambassador in Algeria and Tunisia (1664–65) and later as special ambassador to the sultan in Constantinople (1672–73), and finally as consul with broad authority in Aleppo (1682–88), adapted De la Roque, *Voyage dans la Palestine* (Amsterdam, 1718). The Dutchman Cornellius le Bruya undertook a comprehensive tour of Asia Minor, the Aegean Isles, Egypt, Syria, and Ereẓ Israel at the end of the century. His work, which includes numerous illustrations (about 200 copper engravings), was published in Dutch, translated into French and from French into English: *A Voyage to the Levant, etc.* (London, 1702). Of lasting scholarly worth is the work by Thomas Shaw, *Travels or Observations relating to several parts of Barbary and the Levant* (Oxford, 1738).

Among the numerous travelers of the 18th century special mention should also be made of Richard Pococke (1738), *A Description of the East II/1* (London, 1745); Frederick Hasselquirst (1751), *Voyages and Travels in the Levant* (London, 1766); and especially the Frenchman C.-J. Volney, *Travels etc.* (1783–85; London, 1788), who visited the countries of the Orient at a young age and who in his travel description offers a brilliant analysis of the political situation and of the strategic plans already formulated at that time, ten years before Napoleon prepared to conquer Egypt.

After Napoleon's campaign of conquest in the area, and despite his failure, there was an increasing number of Christian travelers who went to Ereẓ Israel not necessarily from purely religious motives. There were among them important scholars such as Edward Robinson, E. Picrotti, C.R. Conder, and many others who opened up Ereẓ Israel for Muslim scholarship and who cannot be regarded as traveler-tourists in the accepted sense. The travel works devoted to describing the Ottoman Empire, Egypt, and North Africa, often contain descriptions dealing with Ereẓ Israel which mention Jews as well.

Muslim Travelers

Throughout the Middle Ages and in modern times numerous Muslims have gone to *Jerusalem to pray at the mosque on the Temple Mount, which is considered one of the holy places of *Islam. These pilgrims also came from many countries. However, despite the richness of Arabic literature, almost no books are devoted solely to descriptions of these travels. It should be pointed out that also in relation to travels to Mecca no literary branch developed similar to the descriptions of Christian travels to Ereẓ Israel.

A book describing travels to Ereẓ Israel and Mecca was written by the Spanish judge Abū al-Baqāʾ Khālid b. ʿIsā al-Balawī, who set out in 1336. This work, however, is in part a copy of itineraries by earlier writer-travelers. The mystic ʿAbd al-Ghanī b. Ismāʿil al-Nābulusī, who lived in *Damascus, wrote a description of a journey to Jerusalem at the end of the 17th century. However, these works did not become well known in Arabic literature, and if one were interested in a description of Ereẓ Israel one would have to resort to works describing long journeys and general works on geography. Especially interesting among these itineraries are the Persian work *Sefer Nāmeh* ("The Book of Travel") by Nasir-i Khosrau, who visited Ereẓ Israel in 1047; the Arabic work *Riḥla* ("The Journey"), by Abu al-Ḥusayn Muhammad ibn Jubayr, who visited Ereẓ Israel in 1184; and the work by the world traveler Ibn Baṭṭūṭa, who visited Ereẓ Israel in 1326–30, on his long journey in Eastern Asia from which he returned in 1348. The descriptions of Ereẓ Israel included in the works of Arabic geographers of the classical school were also the product of personal observations and investigations. These geographers,

the most important of whom lived in the tenth century, based their works on firsthand research in various countries to which they traveled. The three outstanding representatives of this school were al-Iṣṭakhrī (c. 950), Ibn Ḥawqal al-Nasībī (977), and Muhammad b. Aḥmad, called al-Maqdisī (the Jerusalemite, who wrote in 985).

The Muslims also composed itineraries for pilgrims, similar to the itineraries written by Christian clerics for the pilgrims who came to worship at the holy places. The most famous, *Kitāb al-Ishārāt ilā maʿrifat al-Ziyārāt* ("Guide for the Places of Pilgrimage"), written by Ali b. Abī Bakr Al-Harawī (d. 1214), includes the vast material he collected on long journeys. The work is not limited to a description of the Muslim holy places in Ereẓ Israel, but lists holy places in other countries as well. Such itineraries generally contained sayings attributed to *Muhammad about the holiness of Jerusalem and especially about the mosque of the Dome of the Rock, as well as reviews of the history of Jerusalem.

More numerous were the works containing only sayings about the holiness of Jerusalem and especially of the mosques on the Temple Mount. Such works on the "praises of Jerusalem" became characteristic of the Muslim literature of Ereẓ Israel. In the second half of the 11th century Abu 'l-Ma ʿalī al-Musharraf b. al-Murajja (d. 1099), a Jerusalemite, composed such a work, entitled *Faḍā'il Bayt al-Maqdis wa al-Shām* ("The Qualities of Jerusalem and Damascus"). Al-Qāsim ibn ʿAsākir (d. 1203) wrote a work about the al-Aqṣa Mosque, and his relative, Niẓām al-Dīn (d. 1274), wrote *Faḍā'il al-Quds* ("The Qualities of Jerusalem"). While the manuscripts of these writings have not been found, there are extant manuscripts of a book praising Jerusalem which was written by the Baghdad historian, Abu al-Faraj ibn al-Jawzī (d. 1200). In the 14th century Burhān al-dīn Ibrāhīm ibn al-Firkāh, a teacher in Damascus (d. 1329), wrote *Bāʿith al-Nufūs ilā Ziyārāt al-Quds al-Maḥrūs* ("He who Stirs his Soul to Visit Preserved Jerusalem"). In 1351 in Jerusalem itself, Shihāb al-dīn Aḥmad b. Muhammad b. Ibrāhīm ibn Hilāl wrote a similar book entitled *Muthīr al-Gharām ilā Ziyārāt al-Quds wa al-Shām* ("The Arouser of Desire to Visit Jerusalem and Damascus"). In the mid-14th century the Hebronite preacher Isḥāq b. Ibrāhīm al-Tadmurī wrote about the cave of *Machpelah as a place of pilgrimage. In 1470 the Egyptian Shams al-Dīn al-Suyūṭī wrote in Jerusalem about the "Outer Mosque." These works were preserved and published, and some of them were even translated into English. The most important of these books is the comprehensive work about Jerusalem and Hebron written in 1494/95 by the Jerusalemite judge Mujīr al-Dīn al-ʿUlaymī entitled *al-Uns al-Jalīl bi-Taʿrīkh al-Quds wa al-Khalīl* ("A Weighty Discussion of the History of Jerusalem and the City of the Friend [Abraham] – Hebron"). This work contains all the sayings about the holiness of Jerusalem attributed to the prophet of Islam, as well as a detailed description of the holy city and the other towns of Ereẓ Israel (the book was printed in Cairo in 1293 A.H.). Works about Jerusalem continued to be written during the period of Ottomon rule. In the mid-17th century a judge from Medina, Nāṣir al-dīn Muhammad b. Khiḍr al-Rūmī al-Jalālī, wrote a book entitled *Al-Mustaqṣā fī Faḍl al-Ziyārāt bi al-Masjid al-Aqṣā* ("The Book Concerning the Right to Visit the Outer Mosque"). This work differs from the traditional type of the Muslim "praises of Jerusalem" in that it contains a detailed guide for pilgrims.

In summation, the Arabic writings about Ereẓ Israel, most of which contain "praises of Jerusalem," generally lack factual-documentary content. In contrast, the descriptions of the Turkish traveler Evliya Çelebi, who visited Ereẓ Israel twice (first in 1649 and then in 1660–61), are of great significance. He was an experienced statesman-scholar, whose sharp eyes observed the situation of the population, the administrative division of the country, the changes which had occurred during the time between his two visits, and the amount of taxes collected. He paid attention to the Jewish populations of all the countries he visited. Of special importance in connection with the situation of Ereẓ Israel is his recounting of the mass exodus of the Jews of *Safed, which took place in his time, and the mention of the custom of pilgrimage to Meron, which in his time was not yet celebrated on Lag ba-Omer. Evliya Çelebi, however, was the last Muslim traveler to devote part of his work to Ereẓ Israel.

TRAVNIK, town in Bosnia. Under Ottoman rule until Austrian annexation in 1878; within Yugoslavia from 1918. After *Sarajevo, it had the second most important settlement of Sephardi Jews in the region; some of them originally lived in Sarajevo and transferred their residence to Travnik in the 18th century. A community was organized by the mid-18th century and a *kal santo* (synagogue) existed from 1768. The Jews themselves constructed it, working daily between the *Minḥah* and *Ma'ariv* prayers.

Trouble assailed the community when an apostate, Moses Habillo, who took the name of Derwish Aḥmed, incited a massacre of the Jews. Many Muslims rioted but disaster was prevented when Rabbi Raphael Pinto achieved a compromise. Ten Jewish hostages were taken into custody for inquiry. They were freed after a ransom was paid on the second day of Marḥeshvan (in 1807), which was celebrated for many years by the community as a feast of deliverance. In 1818 the local *qāimaqam*, the vizier's representative, accused the Jews

of ritual murder. Some Jews were arrested, but were released when Muslim notables intervened on their behalf. Apart from such isolated incidents, and cases of extortions, Jewish communal life remained undisturbed and relations with the majority of the city's residents were good. The best known rabbi of Travnik was Abram Abinun. Jews were occupied as blacksmiths, joiners, saddlers, tailors, and shoemakers, dealers in medicinal plants and folk healers. Some of them were distillers and wheat merchants. In 1878, shortly after Travnik passed to Austria, a small Ashkenazi community was founded. A synagogue was erected in 1769. The community had a philanthropic association, Ezrat Dalim, and in the 20th century a "Jewish Club" existed there. Until the Holocaust, 375 Jews lived there peacefully.

In World War II the German-Croatian occupation violently and cruelly clamped down on the community. A concentration camp was established at nearby Kruščica (Krooshchitza); survivors were deported and murdered elsewhere in Croatia or Poland. The community was not renewed. The synagogue was used as a workshop.

[Zvi Loker]

TREASURE, TREASURY (Treasure: Heb. אוֹצָר, בֶּצֶר, חַיִל, חֹסֶן, מַטְמוֹן, מִסְתָּר, מַצְפּוּן, נֶעְלָם, סְגֻלָּה; Akk. *niṣirtu*; Treasury: Heb. (בֵּית הָאוֹצָר(וֹת), גִּנְזֵי הַמֶּלֶךְ, גִּנְזַךְ, בֵּית נְכֹת; Akk. *bīt niṣirti, bāt nakkamīti*). The concepts of treasure and treasury in the Bible are denoted by many different terms.

Semantic Range of Words Meaning Treasure

Most of the Hebrew words for treasure listed above may be divided into two semantic groups:

a) Words which mean both treasure and something hidden or secret (*maṭmon, mistar, maẓpun, ne'lam*).

b) Words which mean both treasure and strength (*beẓer, ḥayil, ḥosen*).

The most common Akkadian term for treasure, *niṣirtu*, belongs to the first group as may be seen from the following passage:

> *Utnapištim ana šâšuma izzakkara ana Gilgameš luptēka Gilgameš amat niṣirti u pirišta ša ilāni kâša luqbīka.* "Utnapishtim said to him, to Gilgamesh: 'Let me divulge a hidden matter to you, O Gilgamesh, And let me tell you a secret of the gods'" (Gilgamesh, 11:8–10).

Types of Treasures

While the most common type of treasure referred to is "silver and gold" (*kesef, zahav,* e.g., Isa. 2:7; Ezek. 28:4; Eccles. 2:8; I Chron. 29:3; cf. Ps. 68:31 where perhaps the reading should be *beẓer kesef,* so Tur-Sinai), treasures of clothes (e.g., Jer. 38:11; Zech. 14:14), wine (I Chron. 27:27), oil (I Chron. 27:28), food in general (Joel 1:17; II Chron. 11:11), precious stones (I Chron. 29:8), and dedicated gifts (I Chron. 26:26) are all represented. Elsewhere, temple treasures are listed in Ezra 1:9–11 (cf. Ezra 2:68–69; Neh. 7:69ff.) and include gold and silver dishes and bowls, and gold drachmas and priestly vestments, while royal treasures are mentioned in II Chronicles 32:27–29 (period of Hezekiah) comprising silver, gold, precious stones, spices, shields, and miscellaneous items. Babylonia in particular is singled out for her opulence and is called "the one rich in treasures" (Jer. 51:13). The treasures of Israel's enemies (*ḥeil goyim*) will all come to her when God executes His punishment upon them (Isa. 60:5, 11; 61:6; Zech. 14:14). Treasures are sometimes described as being transported on the backs of beasts of burden (Isa. 30:6; I Kings 10:2 = II Chron. 9:1; cf. Isa. 66:20). The gold of Ophir is described as "the treasure of the rivers" (Job 22:24; cf. N.H. Tur-Sinai, in bibl.). Finally, treasures are used as bribes in the Bible. In Jeremiah 41:8 the ten men who remained after Ishmael son of Nethaniah's massacre of the rest of their group bribed Ishmael to let them live in return for treasures of wheat, barley, olive oil, and honey, hidden in the fields. In I Samuel 12:3 and Amos 2:6; 8:6, there are additional instances of bribes involving treasure. In all three cases the word *n'elam*, "hidden treasure" (the vocalization of which is still uncertain) must be restored to the text (in place of *na'alayim*, "shoes" in Amos 2:6; 8:6, and *'a'alim*, "I shall hide" in I Sam. 12:3, cf. Septuagint which also reads *na'alayim*, "shoes"). This meaning is demonstrated both by Ben Sira 46:19 which paraphrases I Samuel 12:3, by juxtaposing the Hebrew word *kofer*, "gift," with the word *na'alayim*, and by Targum Jonathan which translates *na'alayim* in Amos 2:6 and 8:6 by a form of the word *ḥosen*, "treasure" (see above).

In extra-biblical sources, mention must be made of the Copper Scroll discovered in 1952 in Cave 3 of Qumran. This Copper Scroll consists of three sheets of very thin copper on which is engraved a Hebrew text. The Hebrew text is a register of 64 deposits of buried treasure supposed to be hidden in and around Qumran (in an area extending from Hebron to Mt. Gerizim). The objects listed include a silver chest, ingots of gold and silver, jars of all shapes and sizes, bowls, perfumes, and perhaps, vestments. It should be noted that the purpose of the scroll is still a mystery. Among the theories advanced by scholars are that it is a list of the treasures of the First Temple, the Second Temple, or the Qumran community. A fourth theory, posited by T.H. Gaster (see bibl.), is that the scroll represents "an unconscionable fraud [or even a cruel practical joke] perpetrated by some cynical outsider upon the naive and innocent minds of the ascetics of Qumran."

Treasures in War

The defeated nation often was obliged to give up all of her treasures to the victor (Isa. 39:6ff.). For example, Shishak of Egypt took from Jerusalem the royal treasures, the Temple treasures, and everything else (I Kings 14:26 = II Chron. 12:9). While no part of the *ḥerem* of Jericho after Joshua's conquest could be taken by any Israelite, all the silver and gold, and the copper and iron vessels were to be added to the Temple treasury (Josh. 6:19, 24). As part of Israel's punishment, Babylon would carry off all of her treasures as spoil (Jer. 15:13; 17:3; 20:5); but the day would also come when Babylon would be punished

in kind (Jer. 50:37). Likewise, Moab (Jer. 48:7) and the Ammonites (Jer. 49:4), who trusted in their treasures, and Edom (Jer. 49:10; cf. Obad. 6) would suffer the same consequences. In extra-biblical sources, the same situation prevailed in times of war. Sennacherib of Assyria in describing his defeat of Merodach-Baladan of Babylon claims:

> *Ann ekallišu ša qereb Bāb-ili ērumma aptēma bīt niṣirtišu ḫurāṣa kaspa unūt hurāṣi kaspi abnu aqartu bušê makkūr ēkallišu ašlula.* "I entered his palace in Babylon and I opened his treasury. I took as spoil – gold, silver, gold and silver vessels, precious stones, valuables, and property of his palace" (D.D. Luckenbill, *The Annals of Sennacherib* (1924), p. 67, lines 5–6).

Symbolic Treasures

Both Israel and God are spoken of as each other's treasure. Israel is spoken of as God's *segullah*, "treasured/private possession" (Ex. 19:5; Deut. 7:6; 14:2; 26:18; cf. Mal. 3:17; Ps. 135:4; for this meaning compare likewise Akk. *sikiltu*). Eliphaz instructs Job to return to God and consider the Lord his treasure (Job 22:23–25). There are many references to the heavens as God's treasure (Deut. 28:12; Jer. 10:13; 51:16; Ps. 135:7), while various forces of God are described as His treasure (Jer. 50:25; Ps. 33:6–7; Job 38:22). Finally, wisdom and devotion to God are described as the treasure of faith (Isa. 33:6).

Concept of Treasure in Wisdom Literature

The connection between wisdom and treasure may best be seen from those passages where wisdom is personified. Wisdom fills the treasuries of those who seek her (Prov. 8:21), and, in turn, should be sought after like buried treasure (Prov. 2:4). Elsewhere, there are many references to the treasures of the wise man, but the fool has none (Prov. 15:6; 21:20). Treasures gained through wickedness are of no avail (Prov. 10:2), while a little in the way of material goods plus a good deal of faith are better than the most precious treasures (Prov. 15:16). Finally, the acquisition of treasures through deceitful means will cause their owner's downfall (Prov. 21:6ff.), a theme which has several extra-biblical parallels. In an Akkadian composition entitled "Counsels of Wisdom," the following advice is given:

> My son, if it be the desire of the prince that you be his, if you are entrusted with his closely guarded seal, open his treasure house [*niṣirtašu*], enter into [it]; apart from you there is not another man [who may enter into it]. You will find therein untold wealth. Do not covet anything. Do not take it into your head to conceal something. For afterwards, the matter will be investigated, and what you have concealed will come to light … (W.G. Lambert, *Babylonian Wisdom Literature* (1960), p. 102, lines 81ff.).

Treasury

Of the three words for treasury listed above, only one, *bet nekhot*, was not understood until fairly recently. The context of the single biblical verse in which this term occurs (II Kings 20:13 = Isa. 39:2) showed that it must mean treasury, but the origin of the term was still a mystery. It is now known that *bet nekhot* is a loanword from the Akkadian *bīt nakkamāti*, "treasury." Both the Hebrew and Akkadian nouns have corresponding verbs, *ʾẓr* and *nakāmu*, meaning "to amass, store up." For example, Ashurbanipal boasts in his annals about his conquest of Susa:

> *Aptēma bīt nakkamātišu* (*nu*) *sa kaspu ḫurāṣu bušû makkūru nukkumū qrebšun.* "I opened his treasure house wherein silver, gold, valuables and property were stored …" (M. Streck, *Aššurbanipal*… (1916), p. 50, lines 132–4).

Elsewhere, *ʾoẓrot bet* YHWH, "Temple treasury" (e.g., I Kings 7:51 = II Chron. 5:1), and *oʾẓrot bet ha-melekh*, "palace treasury" (e.g., I Kings 14:26), are often mentioned together. For example, Asa gave all he had in both treasuries to Ben-Hadad (I Kings 15:18 = II Chron. 16:2), Joash gave up both his treasuries to Hazael (II Kings 12:19), and Nebuchadnezzar took everything from the treasuries in Jerusalem (e.g., II Kings 24:13; II Chron. 36:10, 18). Another instance is the discussion between Isaiah and Hezekiah concerning the delegation sent by the Babylonian king to see Hezekiah (II Kings 20:12ff. = Isa. 39:1ff.). Finally, the term *genazim* is used three times in the latest biblical books to refer to the treasury of Persia (Esth. 3:9; 4:7) and the treasuries of multicolored garments of many nations (Ezek. 27:24).

[Chayim Cohen]

TREBIC (Czech **Třebič**; Ger. **Trebitsch**), town in W. Moravia, Czech Republic. The Trebic community was considered one of the oldest in Moravia; it is alleged that a synagogue was built in 938. During the wave of massacres of Jews in 1338, which commenced in *Pulkau, some Trebic Jews were killed. The first documentary mention of the community concerns an attack on Jews and robbery in 1410. In 1464 it was destroyed along with the rest of the town. Jewish matters were included in the *Stadtordnung* ("municipal regulations") of 1583. In 1604 the majority of Trebic's merchants were Jews. The old synagogue was allegedly built in 1639–42; in 1757 its roof had to be lowered so that its lights could not be seen from the castle. It was damaged three times by fire and was redesigned several times, the last time in neo-Gothic style in 1880. Services were held until World War I. Since 1954 it has been used by the Hussite Church. The new synagogue was built in the early 17th century and renovated in 1845. After World War I, it fell into disuse. After World War II, it was converted into a Jewish museum.

In 1727 Jews were compelled to live segregated from Christians. In 1848 the Jews were prevented from organizing a Jewish unit in the National Guard. Becoming one of the Politischen Gemeinden ("political communities," see *Politische Gemeinde) in 1849, Trebic retained this status until the dissolution of the Hapsburg monarchy. After freedom of movement and settlement had been granted to Jews, the community began to decline, many moving to *Vienna, *Brno, *Jihlava,

and other larger cities. Whereas in 1799 there were 1,770 Jews in the Jewish quarter of Trebic, and in 1850 the community numbered 1,605, in 1890 their number declined to 987; in 1900 to 756; in 1921 to 362; and in 1930 to 300. During the German occupation, in May 1942, 1,370 Jews from *Jihlava province were assembled in Trebic and deported to *Theresienstadt; only 35 of them survived the war. A small congregation was reestablished in 1945. In 1957 a memorial tablet for the victims of the Holocaust was dedicated.

Born in Trebic were Wolfgang *Wessely, the first Jewish university teacher in Austria; Adolf Kurrein (1846–1919), one of the first Zionist rabbis in Austria; and Sigmund Taussig (1840–1910), a pioneer in the field of hydro-engineering.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

TREBITSCH, ABRAHAM (**Reuven Hayyat**; b. 1760), Moravian historical author. Born in Trebic, he attended a Prague yeshivah c. 1775, and later in *Mikulov was secretary of the Moravian *Landesrabbiner. His history, *Korot ha-Ittim* (Bruenn, 1801), contains "tales of all the wars from 1741 to 1801 which were waged in the countries of Austria, Prussia, France, and England and all that Jews went through in those days." Intended as a continuation of Menahem *Amelander's *She'erit Yisrael* (Amsterdam, 1743), it differs from it by covering non-Jewish as well as Jewish history. It was published simultaneously in Yiddish as *Tsaytgeshikhte*. The work is important mainly for its traditionalist evaluation of the reforms of *Joseph II. In 1851 Jacob *Bodek published a revised edition entitled *Korot Nosafot*, and there also exists an edition apparently plagiarized by Bodek's brother-in-law. Along with Hirsch Menaker, Trebitsch wrote *Ru'aḥ Ḥayyim*, an account of the exorcism of a **dibbuk* in Mikulov (Vienna, 1785; Yid. (same title), Bruenn, 1785; repr. in several editions of Moshe Graf's *Zera Kodesh*).

[Meir Lamed]

TREBITSCH, MOSES LOEB BEN WOLF (18th century), Central European Hebrew scribe-illuminator, from Trebic in Moravia. He was one of the pioneer figures in the renaissance of Jewish manuscript art at the beginning of the 18th century. At least a dozen works from his gifted pen are known – most of them Passover *Haggadot*. His pen drawings, usually set off by wash, are well-composed, small genre paintings. The family scene which he prefixed to the *Van Geldern Haggadah* (1723) and a companion work now in the Hebrew Union College, Cincinnati (1716–17), are among the outstanding specimens of the new Jewish miniature art of the period.

[Cecil Roth]

TREBITSCH, NEHEMIAH (**Menahem Nahum**; 1779–1842), Moravian rabbi. Trebitsch taught at the Prague yeshivot of Jacob Guensburg and Simon Kuh before becoming rabbi in Prossnitz (1826–32). He was subsequently appointed Landesrabbiner of Moravia with his seat in Nikolsburg. The right bestowed upon him by the provincial government (1833) to appoint candidates for vacant rabbinates was canceled in 1838 because of his persistent refusal to nominate rabbis with liberal leanings. This cancellation was also influenced by his opposition to the use of German in sermons for which he had been officially censured. However, he consented to, and participated in, the establishment of a Hebrew-German industrial school. He wrote glosses to the Jerusalem Talmud, and *Koveẓ al Yad ha-Ḥazakah* (8 vols., 1835–42), notes on Maimonides' *Yad*.

Gold (ed.), *Juden und Judengemeinden Maehrens* (1929), 500 and index; I. Kahn, in: A. Engel (ed.), *Gedenkbuch im Auftrag des Kuratoriums Nikolsburg* (1936), 71–74; A.H. Weiss, *Zikhronotai* (1895), 41–45.

[Oskar K. Rabinowicz]

TREBITSCH, SIEGFRIED (1869–1956), Austrian novelist, playwright, and translator. The son of a Viennese silk merchant, Trebitsch was a great traveler. His first volume of poetry, *Gedichte* (1889), was followed after prolonged intervals by *Wellen und Wege* (1913) and *Aus verschuetteten Tiefen* (1947). He was, however, better known as a prose writer and wrote many psychological novels, including *Genesung* (1902), *Spaetes Licht* (1918), and *Renate Aldringen* (1929). *Die Rache ist mein* (1934) was a volume of novellas. Trebitsch's plays include *Ein Muttersohn* (1911), *Frau Gittas Suehne* (1920), and *Das Land der Treue* (1926). His German translations of George Bernard Shaw's plays (in various editions from the turn of the century on) paved the way for Shaw's European vogue. Following the *Anschluss* in 1938, Trebitsch, a convert to Christianity, settled in Switzerland. His autobiography, *Chronik eines Lebens* (1951; *Chronicle of a Life*, 1953), is an informative and entertaining firsthand account of the European literary scene.

[Harry Zohn]

His stepbrother, ARTHUR TREBITSCH (1880–1927), was also a writer in Vienna. Like Siegfried he abandoned Judaism and, as a disciple of Otto *Weininger, was a notorious antisemite. His book *Geist und Judentum* (1919) blamed the defeat of the Central Powers during World War I and the subsequent collapse of the Hohenzollern and Hapsburg dynasties on Jewish machinations. His *Deutscher Geist – oder Judentum* (1921) utilized the forged *Protocols of the Elders of Zion* to prove the existence of a Jewish conspiracy to dominate and debauch the world. An admirer of Houston Stewart *Chamberlain, whose racial theories he developed to a pathological extreme,

Trebitsch vilified his fellow Jews until his death and even offered his services to the Austrian Nazis.

TREBLINKA, one of the three Aktion Reinhard death camps during World War II, second only to *Auschwitz in the number of Jews killed. Known until then as a small railroad station between Siedlce and Malkinia, located approximately 62 miles (100 km.) northeast of Warsaw. The Germans built a railway spur that led from the labor camp to the death camp and to the railway station in the village of Treblinka. Heavily wooded, it could be hidden from view. Treblinka became the final destination for transports that brought Jews from the ghettos of the General Government and about ten European countries to their death. The Jews were brought to Treblinka under the pretext of resettlement in former Soviet territories that had been occupied. The actual site of mass slaughter was located approximately 2.5 miles (4 km.) from the station, camouflaged inside a pine forest. On the border of this area was a platform for the train that carried the Jews from the station in consignments of 15–20 cars, which reached the camp on a side track especially built for this purpose.

However, the name Treblinka refers to two camps: the first one (later called Treblinka I), which began operating in 1941, was openly and officially designated as a forced-labor camp for offenses against the occupation authorities; the second camp, located approximately 1 mile (1.5 km.) from the first, and designed for mass extermination, was treated by the German authorities as a state secret, and its name was coded even in confidential letters as T.II.

Treblinka I: For Jews and Poles (December 1941–July 1944)
Unlike Treblinka II, this camp was intended not only for Jews, but also for Poles deported for economic or political offenses. The Poles would remain in the camp for the duration of their punishment, and only part of those charged with political crimes were killed or transferred to concentration camps. Jews were transferred there after roundups or from forced-labor contingents required from the Judenrate, and only in a very few cases would they leave the place alive. Devastated by hunger, overwork in the nearby gravel pit, brutal beatings, and cruel harassment, they died in large numbers. Others perished in occasional executions or were transferred to Treblinka II to be murdered after they lost all their strength. The last execution at Treblinka I took place on July 24, 1944, just prior to the entrance of the Soviet army.

According to the statistical estimates of Judge Z. Lukaszkiewicz, who conducted an investigation of both camps in 1945 on behalf of the Main State Commission for the Investigation of Nazi Crimes in Poland, approximately 10,000 individuals had passed through Treblinka I, 70% of whom were either shot or murdered in other ways. In light of the practices for mixed camps, according to which the Aryans benefited from larger food rations and were allowed to receive provisions from their families, it can be assumed that at least 90% of those who perished were Jews. After the war more than 40 mass graves were dug up in the nearby forest and as many as 6,500 bodies were counted. Deeper in the forest were more graves that were not dug up.

The commanding officer of Treblinka I was SS Hauptsturmfuehrer von Eupen. His favorite sport was horseback riding, which gave him the opportunity to trample and kill prisoners. The statements of surviving witnesses from Treblinka I include a particularly gruesome description of how 30 children brought there during the *Warsaw ghetto uprising were killed with an ax by a Ukrainian from the auxiliary service under the supervision of Hans Heinbuch, an SS man, who was a university graduate and worked as a teacher after the war.

Treblinka II: The Culmination of "Efficiency" in the Extermination of Jews (July 23, 1942–Oct. 14, 1943)
After the beginning of mass slaughter in the *Belzec and *Sobibor camps in March and May 1942, Treblinka II became the third and, in terms of capacity, the largest camp for the death camps of Jews in the General Government. It measured 1,312 feet by 1,968 feet, trees camouflaged the camp, and watchtowers were placed along the fence. The camp was divided into three sections: the reception area, the killing area, and the living area. The living area was used by camp personnel, Germans and Ukrainians. It had storerooms and workshops. There were also barracks for Jews. Construction on the killing center began in May and was completed on July 22. A day later massive deportations began arriving from Warsaw.

The stationary gas chambers installed in the above-mentioned camps used a uniform organizational and technical system based on a common operational center located in Lublin. The creator and head of this center, the SS and Polizeifuehrer of the district, Odilo *Globocnik, was appointed by *Himmler as a high official in charge of the "Final Solution" of the Jewish question on a European scale. He acted in close collaboration with Reichsamtsleiter Victor Brack, the former chief of the euthanasia program in Germany.

Mobile gas chambers constructed on the model of the lethal sanitary vans tested in Germany were put into operation in the parts of Poland annexed by the Reich (Wartheland) and in some former Soviet territories. The main obstacle to the mass application of these vans was their limited capacity, their frequent breakdowns and the disposal of bodies; in short, they lacked efficiency. Mass shooting of the Jewish inhabitants in the U.S.S.R. by the *Einsatzgruppen* was no less problematic from the Nazi point of view. These massacres caused misgivings in commanding military circles; they caused too much noise and were carried out in broad daylight, and also left too many wounded or unhurt witnesses who could flee the graves. To employ this method on territories near European centers and even to Germany itself was out of the question.

The death camp reversed the process: instead of sending mobile killers to stationary victims, the victims were made mobile – by being placed on a train – and were sent to stationary execution centers, death camps that operated on an assembly line basis. Arriving prisoners had their values confiscated, they were stripped naked, hair was shaven, and then they were murdered in gas chambers, gold was removed from their teeth, and their bodies were burned in crematoria or open pits. The solution was achieved by the division of labor and the coordination of individual sections. The functions of rounding up the victims at their places of residence and their extermination at the place of execution were separated. One of the *Einsatzgruppen* (the notorious *Einsatz Reinhardt*) was to continue to act, but in the framework of Globocnik's camps its activities were connected mainly with deportation. As a result, the transports directed to the camps had fixed quotas. After a fixed number of "heads" and transports had been dispatched from a given place, the *Einsatz* team was free to perform its *Aktion* in another place. This ensured the death factories a regular and plentiful supply of human material.

The services of the railway network of the Reich and the occupied countries comprised a link in this chain. Transport was a difficult matter at a time when all the railways were swamped with military personnel and supplies. In addition, the trains for transporting Jews from Western and Central Europe had to be ordinary long-distance passenger trains in order to prevent the suspicions of the victims and soothe the conscience of some satellite circles. Jews from the Polish ghettos were being "resettled" without such ceremonies. Freight trains and cattle cars escorted by murderers were filled beyond capacity with people designated for death. They were cold in winter, hot in the summer and a bucket was used for sanitation. Jews had to sit in their own excrement prior to arrival. For hours, and sometimes days, these trains would stand on the side tracks allowing other transports to pass, and thus a large proportion of the deportees (mainly babies, the aged, and the sick), lacking water, air, and sanitary arrangements, frequently died before reaching their destination.

Those who arrived alive were awaited by the third link in the chain – a team of executioners. It was their duty to get the largest possible number of victims through the respective stages of the procedure at lightning speed: to strip them of the last remnants of their possessions including their hair, gold teeth and dentures; to supervise the removal of the corpses; and to sort out the remaining belongings for shipment to Germany.

The large area of Treblinka (32 acres; 13 hectares) was divided into two sectors. In the first, the larger one, the victims were received and classified and their remaining possessions were sorted out and dispatched. In the second were two buildings containing gas chambers and a field of mass graves dug up by mechanical excavators. Three gas chambers (measuring 25 sq. m. each) were located in the building erected earlier, and ten more chambers, twice as large, were in the building erected at a later date. The staff of both sectors consisted of about 30 SS men, 120 so-called Ukrainians (that is, members of the auxiliary services), and about 1,000–1,500 Jewish prisoners who were recruited for the work from among the younger men and, after having been brought to a state of emaciation, were often replaced by men from new transports.

Both buildings had annexes outside. Inside were passages containing narrow, hermetically shut doors to the gas chambers fitted out with small peepholes. On the opposite wall of each chamber there was a hermetically adherent trapdoor that could be opened from the outside. The walls of the chambers were set with tiles and on the ceiling there were openings fitted out with shower heads, to give the obviously false impression that the chambers were showers. The openings in the ceilings were connected to pipes leading to diesel engines located in the annexes. After the engines were started, fumes containing carbon monoxide (CO_1) emanated from the pipes and consumed all the oxygen in the hermetically closed room, causing the suffocation of the people crowded inside. Death in the chambers was calculated to occur within 15–20 minutes, however it sometimes lasted much longer, especially in the larger chambers of the building constructed later on and also when the engines were out of order.

In Treblinka there were also camouflage buildings such as "*Lazarette*" and "train change stations" intended to prevent any self-defending from the victims. The entire procedure was set in motion the moment the vans arrived at the loading platform. After the doors of the vans were pulled aside, a horde of Germans and Ukrainians rushed at the victims, shouting, and beating them. They would throw the victims out of the vans, wounding and injuring them straightaway and causing the miserable people unbelievable shock. Shortly thereafter the *Hoellenspektakel* ("inferno show") would begin. Men and women were separated and families were broken up without being allowed the opportunity for farewells. Men were ordered to undress at the square. While their heads and faces were being whipped, they had to snatch armfuls of clothing and bring them to a large pile to be sorted. A prisoner from the Jewish staff dealt bits of string to men to tie their shoes into pairs. In a nearby barrack another Jewish prisoner would distribute bits of string to women for the same purpose. From the "changing room," women would go over to the "hairdressers," where their hair would be cut off. It would then be used in some industries of the Third Reich.

No pain and no humiliation were spared to those sentenced to death.

Jews arrived on transports from Theresienstadt, Greece, and Slovakia as well as Poland. Jews from Bulgarian-occupied zones of Thrace and Macedonia were sent to Treblinka – but no Jews from Bulgaria itself. There were also Jews from Austria, Belgium, France, Germany, and the occupied Soviet Union. Some 2,000 Roma and Sinti (gypsies) were also deported to Treblinka.

The victims would be stood in a row – ready for the "chase" – naked and barefoot, even in the worst winter days. Before them stretched a 150-yard path connecting both sectors

of the camp, called by the Germans *Schlauch* (tube) or, more "wittily," *Himmelstrasse* ("Way to Heaven"). The condemned ran between the rows of torturers, who shouted, battered them with their whips, pricked them with bayonets. Among the shouts, the barking of an enormous hound (the famed dog Bari who belonged to the principal sadist of the camp, nicknamed "Doll") would be heard. Excited by the cries, the hound would tear chunks of flesh from the victims' bodies. The victims screamed as well, and cursed; some of them calling *Shema Yisrael* or "down with Hitler." All inhibitions abandoned, even the men howled with pain; children cried, women were frantic with fear. This route to the gas chambers also had its name, *Himmelfahrt* ("Ascension"), in the camp slang.

Perhaps Brack's experts instructed the executioners that if victims arrived at the chambers out of breath, the effect of the gas would be hastened and the time of agony shortened. The condemned were probably oblivious of this aspect, but they would already be hurriedly running and pushing in order to get to their only refuge left in the world after what had happened to them.

After it was ascertained, by looking through the peepholes, that all movement had ceased, the trapdoor was lifted from the outside and a sight unparalleled in its ghastly nightmarishness would be revealed. The corpses "stood" pressed one against the other ("like basalt pillars") and appeared to be staring with the horror of suffocation. The first corpses had to be pulled out with hoops, and after that they fell out in heaps on the concrete platforms. They were pale and damp and bathed in perspiration and the secretions of the last defecation. The buttocks and faces were blue, mouths open, teeth bared, and bloody effusions oozed out from the mouths and noses.

In the corridors, the staff began cleaning and washing the chambers for the next shift, sprinkling the *Himmelstrasse* with fresh sand, while on the side of the graves, men began the run with the corpses, under a storm of blows and threat of pistols, toward the enormous graves. The gravediggers placed corpses in the gigantic cavities head to feet, and feet to head, in order to put in the maximum number. On the way to the graves stood a squad of "dentists" whose duty it was to pull out gold teeth and dentures from the mouths of the corpses. Another group of specialists was to check quickly whether there were any diamonds hidden in the corpse's rectums or in the women's vaginas. From time to time single shots were fired by the guards to increase the zeal of the gravediggers standing in the grave full of blood, pus, and dreadful stench. Whoever was beaten up, had a trace of blood, or a bruise left on his face, was finished off with a bullet after the roll call. And there was also musical accompaniment to the shows of Treblinka; at first *klezmerim* from the surrounding villages and later an excellent chamber orchestra played under the direction of Artur Gold known for his jazz ensemble from Warsaw. In addition there was a choir which every evening sang the idyllic song *Gute Nacht, Gute Nacht, schlaft gut bis der Morgen erwacht* and a marching song composed by one of the prisoners. None of those musicians survived Treblinka. During roll call and on their way to work prisoners were forced to sing the Anthem of Treblinka written by Artur Gold at the insistence of Kurt Franz.

> We look straight out at the world,
> The columns are marching off to their work.
> All we have left is Treblinka,
> It is our destiny.
> We heed the commandant's voice,
> Obeying his every nod and sign.
> We march along altogether,
> To do what duty demands.
> Work, obedience and duty
> Must be our existence.
> Until we too, will catch a glimpse at last
> Of a modest bit of luck.

Yechiel Reichman, one of the very few to survive the camp, described the lives of those who worked there:

> We tried to encourage and calm each other. "Leibel," I said to him. "Yesterday at this time my little sister was still alive." And he answered: "And my whole family, my relatives, and 12,000 poor Jews from our city." And we were alive, spectators to this great calamity and we became like stone, so that we could eat and carry with us this great pain.

Acts of Resistance

The greatest number of transports occurred in the late summer and autumn of 1942; in the summer of 1942 beginning on July 23 and continuing through September 12, at least 265,000 Jews were transported from the Warsaw Ghetto alone. During the winter the frequency and number of transports abated. After the German defeat at Stalingrad and foreseeing the need to retreat from the Eastern front, the Nazi authorities decided to cremate the corpses in order to eliminate the traces of their crimes.

A special corps of Jewish prisoners, coded by the number 1005, was set up on the grounds where the mass graves were placed. After Himmler's visit to Treblinka in February 1943, the monstrous action of pulling the corpses out of the mass graves and burning them on iron grates began. In most of the 1005 squads, the commandants of this difficult task were forced to stop killing the already trained prisoners and their replacement by new ones. This, however, did not lessen the prisoners' belief that they would also be shot and burned the moment their task was finished. That is when plans for rebellion and escape were born and ripened in almost all such groups in the second half of 1943 and in the first half of 1944. Sometimes these plans even partially succeeded, despite losses. The same happened in Treblinka.

Isolated escapes from the camp began as early as the first weeks of its existence. The runaways would escape under the piles of clothing taken from the dead, that is, in the dispatch vans that had been cleared of the victims. There were also acts of resistance, although only a few have been reported because of the limited number of witnesses who survived to tell the story. On Aug. 26, 1942, a young man from the Kielce transport armed with a penknife threw himself at a Ukrainian who

had prevented him from bidding farewell to his mother. As a punishment, all the men who had arrived on the same transport were shot. On Sept. 10, 1942, while the selection was being carried out, Meir Berliner, a citizen of Argentina who was caught by the occupation while visiting his parents in Warsaw, lethally wounded an SS man, Max Biel, with a knife.

Among the better known cases was the resistance of a group of men from Grodno who had refused to undress. They had thrown themselves in unison at the guard but only achieved being shot by automatic fire instead of being gassed in the chambers. Statements by a number of witnesses claim that the news of the armed resistance in January and of the April uprising in Warsaw reached the prisoners and influenced the activities of the conspirators. Their aim now was not only to escape and save their lives, but also to take revenge on the murderers.

Such a group had come into existence in Treblinka II toward the end of 1942. Members of the committee were the physician, Dr. Julian Chorażycki; the head of the Jewish squad, engineer Galewski; Shmuel Rajzman (d. 1979); Kurland; a former captain of the Czech army, Zielo Bloch; and others. They began to make efforts to obtain arms, which they had hoped to smuggle in from the outside with the help of bribed Ukrainian guards. However, they paid for these activities with the loss of Chorażycki, who managed to commit suicide when caught with a packet of bank notes. After various failures the conspirators succeeded, with the help of a copied key, in obtaining arms from the camp arsenal and hiding them in a workshop. Contact was established with the second sector in Treblinka II, where the conspirators had only shovels and spades. They set a date and a signal: a shot and the explosion of a hand grenade. The revolt was to begin on August 2 at 4:30.

At the beginning everything went well. On the appointed day, benzine had been substituted for a solution of lysol during the disinfecting of the wooden buildings. Each active member had a task assigned to him and waited for the signal. At 3:40 a shot suddenly resounded in the first sector, followed soon by the explosion of a hand grenade. Only those in the front barrack knew what had happened. Two young boys there had unearthed some hidden money from a hiding place and a Kapo had caught them. Soon the commanders at their observation points caught sight of Germans leading the youngsters at gunpoint for interrogation to the guardhouse. They realized that they had to begin immediately. The first shot heard in the camp killed the Kapo.

Immediately thereafter one of the leaders dashed through the square with a hand grenade that he was supposed to hurl at the SS men's canteen. He realized that there would not be enough time, and, in order not to confuse the signal, he threw it before he reached his target. The prematurity of the outbreak of the revolt had disastrous consequences. They had not managed to remove the Ukrainian staff guarding the machine guns on the turrets (the conspirators had planned to lure them away with gold); nor had the telephone connections with the outside world been cut.

The leaders of the revolt did not lose their heads. All the barracks were set on fire immediately. They managed to kill one of the main hangmen, Kuetner, cut through the barbed-wire entanglements, and open the way to escape. They tried to kill the Ukrainians operating the machine guns on the guard turret, but did not succeed. Although a few gunners were killed and some wounded, it was impossible for the rebels, with only a few hand grenades and pistols, to lead a systematic struggle under the torrent of machine gun fire from above. Almost all those in command fell. They tried to cover the escape of those who rushed at the wires, but could do little more than die with honor. Apart from the heavily armed Germans and the Ukrainians of the staff, "relief" troops had arrived from Treblinka I. The whole district was alerted by telephone.

Most of the rebels fell while forcing their way through the barbed-wire entanglements. Most of those who escaped (between 300 and 500) from the range of fire were caught in the first weeks of the manhunt and killed or betrayed by the local peasants, who were on the lookout for the riches carried out of Treblinka. There were, however, Poles who gave shelter to the fugitives, either in their houses or in haystacks, dressed the wounded, fed them, and helped them to survive. However, almost a year was to pass before the area was liberated and there were casualties day after day and week after week. Only a total of about 50 survivors, including those who had escaped from Treblinka at an earlier time, could be counted after the liberation. And yet the rebellion and the escape from Treblinka were a great phenomenon in those times: as an act of resistance and revenge and as a bridge to the future struggles of the Jewish nation.

The Aftermath

As a result of interviews and investigations conducted after the liberation, it appeared that although the wooden barracks were burned down, Aug. 2, 1943 was not the last day of activities in Treblinka II. Most of the German and Ukrainian staff remained alive. They completed the burning of the corpses and dealt with some transports, in the main from the General Government, up to September. In October 1943 all buildings were blown up and the entire area was plowed and sown with fodder, in order to obliterate all traces of the crime. According to the data collected by the Polish authorities, apart from Jews from the General Government and Reichskommissariat Ost (Bialystok and Grodno), Jews from several Central and West European countries (Germany, Austria, Bohemia-Moravia, Slovakia, Holland, Belgium, Luxembourg) and from Balkan countries (Greece, Yugoslavia, and Bulgaria) were murdered there. Coins and identity cards of the citizens of more than 30 countries were found among other exhibits unearthed in the camp grounds. In addition to Jews, a certain number of Poles and gypsies were also murdered there. According to the calculations of Judge Z. Lukaszkiewicz, the number of victims murdered in Treblinka amounted to at least 731,600. The basis of this calculation was the railway documentation and an estimation of the average number of vans and people. This

number, which was published in 1946, must be enlarged and rounded out to about 750,000 on the basis of German documents discovered later on by Jewish researchers.

After the liberation of Poland, a Central Jewish Historical Committee came into existence almost simultaneously with the Main State Commission for the Investigation of Nazi Crimes. It established itself in Lodz and later transferred to Warsaw as the Jewish Historical Institute. The committee pursued the contacts established with a group of 35 survivors of Treblinka. In November 1945 representatives of the Polish Main Commission and of the Central Jewish Historical Committee visited the scene of the crimes; they were assisted by five former prisoners and accompanied by a unit of militia men and representatives of the local Polish authorities. The most explicit evidence of the monstrous crimes that had taken place there were the human skulls and bones scattered all over; they had been unearthed when the local inhabitants and scavengers of a nearby station of the Soviet army, out for gold teeth and other treasures of the murdered Jews, tore up the grounds.

The document that remained after this visit was a memorandum of the Jewish participants to the Central Committee of Jews in Poland appealing for action to prevent further profanation of the place of martyrdom and disaster of close to three-quarters of a million Jews. This appeal remained unanswered, and only in 1961 was the building of a monument begun on behalf of the Jewish division for the preservation of places of commemoration in Poland, presided over by S. Fischgrund. A pamphlet was published in several languages urging Jews from all over the world to contribute toward this goal.

In 1963 a delegation from Israel arrived in Poland for the commemoration of the 20th anniversary of the Warsaw ghetto uprising. It also went on a pilgrimage to Treblinka, where a monument and a mausoleum in the form of a symbolic railway and cemetery, designed by A. Haupt and F. Duszenko, had in the meantime been erected. The delegation returned to Israel with a case of remains, and a profoundly moving funeral was held at the Naḥalat Yiẓḥak cemetery near Tel Aviv. Since then, the former prisoners of Treblinka have held an annual memorial service there.

In kibbutz *Loḥamei ha-Getta'ot, a model of Treblinka planned and executed by the senior of the former prisoners of Treblinka II was erected. The number of former prisoners of Treblinka in Israel amounted to 20 and they remained in contact with the surviving fellow prisoners scattered all over the world.

Three trials directly concerning the crimes at Treblinka were conducted in Germany. The first was of Joseph (Sepp) Hirtreiter (Frankfurt, 1951) who was sentenced for life. The second was of ten defendants from Treblinka II (Dusseldorf, 1965), in which the chief defendant from this camp, Kurt Franz (called "Doll") was sentenced to life imprisonment, while his companions received various sentences up to a maximum of 12 years, one of them being acquitted. The third was of Franz Stangl, the commandant of Treblinka, who was arrested in Brazil and delivered to the German authorities. After a six-month trial he was sentenced to life imprisonment in January 1971. Under extradition agreement this punishment was reduced to 20 years, but in June of the same year he died in prison.

TREFOUSSE, HANS LOUIS (1921–), U.S. historian. Born in Frankfurt, Germany, Trefousse became professor of history at Brooklyn College, New York. After he retired from teaching, he was named professor emeritus of history. He published books on American diplomacy and on the role of Republicans in the American Civil War and Reconstruction. His biographies *Ben Butler, the South Called Him Beast* (1957) and *Benjamin Franklin Wade, Radical Republican from Ohio* (1963) were significant preludes to his *Radical Republicans* (1969).

Some of his other published works include *Germany and American Neutrality, 1939–41* (1951), *Reconstruction* (1971), *Lincoln's Decision for Emancipation* (1975), *Andrew Johnson: A Biography* (1989), *Pearl Harbor: The Continuing Controversy* (1982), *Carl Schurz: A Biography* (1998), *Thaddeus Stevens: 19th-Century Egalitarian* (2001), and *Rutherford B. Hayes* (2002).

°**TREITSCHKE, HEINRICH VON** (1834–1896), German historian and politician. Treitschke was a member of the National Liberal Party and author of a popular German history of the 19th century (*Deutsche Geschichte im 19. Jahrhundert*, 5 vols., 1879–94). He became well known as a staunch advocate of German nationalism increasingly critical of liberalism. The Berlin historian was very vocal in various campaigns for a cultural unification and homogenization of the young German nation-state. In this context, he published an anti-liberal article in 1879 entitled "Unsere Aussichten" in the *Preussische Jahrbuecher* in which he justified the antisemitic movement which had emerged in Germany since 1873. Behind this, Treitschke saw "a brutal but natural reaction of German national feeling against a foreign element," and he praised the "instinct of the masses, which has perceived a grave danger," that of Jewish domination of Germany. He launched the famous slogan: "The Jews are our misfortune!"

As a result, the antisemitic agitation, which until then had been considered vulgar, especially in intellectual circles, now received the approval of one of the most illustrious think-

ers in Germany at the time and acquired a warrant of respectability. Over the course of the following year, controversies about his attacks broke out among the educated bourgeoisie; participants included the historian Heinrich *Graetz, who had been personally attacked in Treitschke's article, and the historian of Rome, Theodor *Mommsen, who accused Treitschke of disturbing the public peace in Germany. Treitschke was not a "racist" in the radical sense of the word. He limited himself to demanding the rapid and complete assimilation of the Jews in the Germanic culture, yet he became more and more skeptical about the likelihood of accomplishing this objective. In the years after 1879 his political and historical writings, therefore, remained persistently antisemitic.

TREMELLIUS, JOHN IMMANUEL (1510–1580), Italian Hebraist and apostate Jew. Born in Ferrara and educated at the University of Padua, Tremellius became a Catholic in about 1540, his godfather being Cardinal Reginald Pole, archbishop of Canterbury. A year later, he abandoned Catholicism for Protestantism, and in 1542 was appointed professor of Hebrew at the University of Strasbourg. The European wars of religion drove Tremellius to England, where Archbishop Thomas Cranmer, a leading Protestant, gave him lodgings for a time in Lambeth Palace. Following the death of Paulus *Fagius, Tremellius served as king's reader in Hebrew at the University of Cambridge, where he remained from 1549 until the Catholic reaction under Queen Mary (1553), when he left for Germany. He was professor of Old Testament at the University of Heidelberg between 1561 and 1576, but paid a second visit to England in 1565. As a Calvinist, he incurred Lutheran displeasure at Heidelberg and was expelled in 1576, concluding his teaching career at Sedan.

Tremellius' main work was his Latin translation of the Bible from Hebrew and Syriac (Old Testament with F. Junius, Frankfurt on the Main, 1575–59; New Testament, Geneva, 1569), of which many editions were published. He also issued an Aramaic and Syriac grammar (Geneva, 1569). His Latin Bible had a profound impact on Hebrew studies in England during the 17th century.

[Godfrey Edmond Silverman]

TRENCIN (Slovak **Trenčín**; Hung. **Trencsén**; Ger. **Trentschin**), town in western Slovakia.

In the 14th century there were several Jews in Trencin. In the 16th century Jews reappeared. After the Kuruc invasion of Ubersky Brod in 1683, some Jews took refuge in Trencin. For the next 100 years, the community was under Ubersky Brod's jurisdiction. In 1734 the Jews took a secret oath to use only Ubersky Brod's court in disputes and to avoid the Hungarian court system.

The Trencin Jews tried to develop community life. They established a *ḥevra kaddisha* and held services on the Sabbath and holidays in private homes. They also had a *mikveh*. In 1736 there was a Jewish school, and in 1760 the community hired its first rabbi, David Kahn Casid (d. 1783). The municipal authorities were not well disposed toward the Jewish community. It charged the Jews municipal and state taxes and prohibited several religious rituals, such as marriage and circumcision. To perform these rituals, the Jews were charged heavy taxes. They were forbidden to employ Christian servants. The authorities tried to curtail the expansion of the community.

In 1703 Jews opened a factory that produced a scarce oil for tanning hides. During the first quarter of the 18th century, Jews were engaged in trade in hides and bones, and in producing spirits. In 1787 a fire destroyed the community's archives. In 1834 the congregation owned a small wooden synagogue. During the first half of the 19th century, the school system was expanded. Most of the schools had been privately owned but slowly became public and then government-owned. The major government-run Jewish elementary school was established in 1857. It had an excellent reputation, and many gentile children were enrolled.

After the Congress of Hungarian Jewry in 1868, the Trencin congregation joined the Reform (Neolog) stream of Jewry. In 1911 a new synagogue was constructed, often described as one of the most beautiful in Hungary. The congregation had a *ḥevra kaddisha*, a cemetery, and a kosher butcher. There were several social, women's, religious, and charitable societies. During World War I, 150 men enlisted in the army.

From 1785 the community underwent rapid expansion. In that year there were 388 Jews in Trencin. In 1848 there were 688, while 50 years later the community numbered 1,113. An increase was seen in 1922 when the community reached its peak of 2,115. In 1930 the number decreased to 1,539.

At the end of World War I, mobs looted Jewish property and homes and injured and even murdered Jews. When the disturbances subsided, the Jewish community recovered and contributed significantly to economic life. Several local factories were owned by Jewish entrepreneurs. Outstanding among them was one that produced natural oil. It supported local agriculture and provided employment. Jews were well represented in the educated strata and comprised much of Trencin's intelligentsia. There was active political and social life in the community. In 1932 five Jews were elected to the municipal council, four of them from the Jewish party. A number of Zionist groups influenced the community. The congregation belonged to the Slovakia-wide Jeshurun association, which

unified the Neolog and Status Quo congregations. There was also a small Orthodox group.

On the eve of the deportations in 1942, there were 2,500 Jews in Trencin and environs; in Trencin itself there were 1,619. Most of them perished in the extermination camps in Poland. In 1947 there were 228 Jews in Trencin. In the small synagogue, the names of the victims were inscribed on the walls. Most of the survivors emigrated or settled in other parts of Czechoslovakia. The rest attempted to preserve Jewish life.

In 1968, during the Prague Spring, another wave of emigration took place. In 1978 a memorial was unveiled in the cemetery for Jewish anti-Fascist fighters and victims of the Holocaust. The Reform synagogue served as the city's cultural center.

[Yeshayahu Jelinek (2nd ed.)]

TRENT, city in northern Italy. The presence of some Jews in Trent, most of them emigrants from Germany, is mentioned from the first half of the 14th century. The usury regulations of the Jews of Trent served as a model elsewhere in the Tyrol. In the 15th century Jews in Trent possessed a synagogue, a house for study, and three other houses. The Jewish physician Tobiah practiced among the Christian as well as the Jewish population. In 1475, the fanatical Franciscan, Bernardino da *Feltre, preached there against the Jews in his Lenten sermons, and foretold that their sins would soon be manifested to all.

A few days after this, on Maundy Thursday, a Christian infant named Simon disappeared. Shortly afterward his body was discovered near the house of the head of the Jewish community, and the whole community, men, women, and children were arrested. After 17 of them had been tortured for 15 consecutive days they "confessed" to the crimes of which they had been accused. One of the tortured died in prison, six were burnt at the stake, and two (who had converted to Christianity) were strangled. At this stage Pope *Sixtus IV intervened in the affair and the judicial proceedings were temporarily halted. A papal commissary was sent to Trent to investigate the circumstances of the incident, but was forced to leave when the results of his inquiries led him to contradict the findings of the local "trial." Proceedings were reopened in Trent in face of violent opposition from the commissary, and at the end of the year five more Jews were executed (two of them were converted to Christianity before their deaths). A papal court of inquiry in 1476 justified the libel, and in 1478, as a result of its proceedings, Sixtus published the *Bull *Facit nos pietas* endorsing the "legality" of the trial. In the meantime four Jewish women of Trent had accepted the Christian faith and the property of the murdered Jews had been confiscated. Jews were henceforth excluded from Trent, and in the 18th century were still not allowed to pass through the town (see Ḥ.J.D. Azulai, *Ma'gal Tov*, 10–11).

Simon was beatified. The libel had widespread repercussions and served for intense antisemitic propaganda both inside and outside Italy. According to legend, the rabbis of Italy imposed a ban on Jewish settlement in Trent after 1475: this was formally raised when Simon was de-beatified in 1965.

[Shlomo Simonsohn]

TRENTON, capital of the state of New Jersey, U.S., situated between Philadelphia and New York City. Greater Trenton has a population of about 341,000 (2003); the Jewish population of Greater Trenton numbered about 10,000 in 1970, but by the mid-1990s, the Jewish population numbered approximately 6,000 as Jews from the city migrated to surrounding suburban areas. Greater Trenton in 2005 included most of Mercer County and its Jewish population remained at some 6,000 in 2005.

Trenton was founded in 1679. The first Jew connected with Trenton was Simon *Gratz, of Philadelphia, who bought shares in the Trenton Banking Company when it was established in 1805. In 1839, Daniel Levy Maduro *Peixotto, of New York City, became editor, for a few months, of the *Emporium* and *True American*, a daily and weekly newspaper. Judge David *Naar, who bought the *True American* in 1853 and was its editor until 1869, played a prominent role in the political life of New Jersey as well as in local civic and educational affairs. German Jews began to settle in the late 1840s. The first prominent Jew was Simon Kahnweiler, a merchant and manufacturer. The Mt. Sinai Cemetery Association was incorporated in 1857 and the Har Sinai Hebrew Congregation held its first service in 1858 in rented quarters, and held its first formal services in 1860 when the congregation formalized its organization. In 1866 it bought a small Lutheran Church. Chevra Bikkur Cholim, "for the mutual relief of the sick and the burial of the dead," was incorporated in 1877.

The East European immigration, started in the late 1870s, was composed mainly of Lithuanian, Polish, and Hungarian Jews. They organized the synagogues Achenu Bnai Yisroel (1883); Anshey Emes (1891); Ahavath Israel (1909); and Poaley Emes (1920). Until 1903 Jewish education was conducted by private teachers, after which the Brothers of Israel Synagogue founded a Hebrew school. Later, in 1945, it became partly a day school, under the leadership of Rabbi Issachar Levin, who served the community from 1927 to 1969. In 1969 it became a full-fledged day school, the Trenton Hebrew Academy. Renamed in 1981 as the Abrams Hebrew Academy (named for

a local foundation that made a significant endowment to the school), it moved from Trenton, New Jersey, to Yardley, Pennsylvania. In 2006, the school had 30 faculty teaching 300 students from nursery school through eighth grade in a secular/religious day school curriculum.

An influx of Jews into Trenton after World War I resulted in a proliferation of social, literary, and recreational societies as well as political groups. Har Sinai joined the Reform movement in 1922. Adath Israel was organized in 1923 as a Conservative congregation. The Workmen's Circle began its activities in 1924. The YMHA was organized in 1910, reorganized in 1916, and acquired its first building in 1917 – the forerunner of the Jewish Community Center (1962). Zionist societies started in the early 1900s. The Jewish Federation of Trenton was organized in 1929. The Jewish Family Service (1937) dates back to its predecessor the Hebrew Ladies Aid Society (1900). The Home for the Aged Sons and Daughters of Israel, now called the Greenwood House, was organized in 1939 and had 132 beds in 2006. An assisted living center, Abrams Residence, was added in 2003 using money provided by a local Jewish foundation called the Abrams Foundation. It was created from the fortunes of the last surviving members of the Abrams family, brothers Samuel and David and sister Susan. The family's fortune came from diversified holdings financed originally by a retail furniture operation; they began their diversification by purchasing single shares of General Motors Corporation stock during the Great Depression. The Abrams Foundation also helped finance the activities of the Abrams Day Camp, a Jewish day camp operated by the Jewish Community Center since 1963. An eight-week program, it offers activities for about 400 Jewish children each summer. In 1937 a Jewish census study showed that there were 7,191 Jews, or about 6 percent of the population; 32 organizations including 6 synagogues; and that 59 percent of the Jewish population was in trade, 13.3 percent in mechanical and manufacturing enterprises, and 12.3 percent in professions. The 1949 and the 1961 census showed increases in the professions which in 1970 probably amounted to nearly 30 percent. In 1970 there were 40 organizations, including three Conservative congregations as well as two Orthodox and one Reform. By the beginning of the new millennium, the community within the city limits had diminished to two congregations, one Conservative and the second a Reform congregation.

It was the culmination of a general migration of Jewish families out of the city and into surrounding suburban communities in Pennsylvania and New Jersey. In 2006, the last two congregations within the city limits, Congregation Brothers of Israel (200 families) and Har Sinai Temple (500 families), were each in various stages of relocating. In 2006, Brothers of Israel was in the process of purchasing land for a new synagogue in Yardley, Pennsylvania, and Har Sinai was building a new facility approximately 15 miles north of Trenton, in Pennington, New Jersey. At that time, Har Sinai announced its intention to remain vested in the city of Trenton by continuing its charitable programs there.

The Jews have been well-integrated in the communal life of the city, participating actively in the United Fund and other charitable and educational institutions. Outstanding leaders in the general and Jewish community include Judge Phillip Forman, United States Circuit Court; Judge Sidney Goldmann, presiding judge of the Appellate Division of the Supreme Court of New Jersey; Bernard Alexander; Leon Levy; comedian Jon Stewart; and Expressionist painter Max *Weber.

[S. Joshua Kohn / David Weinstock (2nd ed.)]

TREPMAN, PAUL (1916–1987), journalist, author, community leader. Born in Warsaw, Trepman was an only child. His father's family were followers of the Gur Rebbe, and one of Trepman's earliest memories was going with his father to meet the him. Trepman attended both traditional and modern cheders, as well as the Takhkemoni Yeshivah in Warsaw. In his youth, he joined the Betar Zionist movement, and was a strong supporter of Ze'ev *Jabotinksy and his Revisionist Zionism. He began to publish in Polish, and his works appeared in a journal edited by Janusz *Korczak and in the Revisionist press. He also began university at the Stefan Batory University in Vilna, but the war halted his studies.

During the war, Trepman had the opportunity to escape east to Russia but refused to abandon his mother in Warsaw. He returned to Warsaw to find his mother in the ghetto, weak and stricken with typhus. He narrowly escaped his mother's fate – deportation to Treblinka – and lived in the Warsaw area with Aryan papers. His Jewish identity hidden, he was arrested in June 1943 and accused of being a Soviet spy. He was sent to *Majdanek and subsequently saw the inside of various camps. He was in *Bergen-Belsen when it was liberated by the British in April 1945, and only after liberation did Trepman resume his Jewish identity. He was soon involved in the cultural and political life of the Bergen-Belsen Displaced Persons Camp. In July 1945 he was the founding co-editor (with Rafael Olewsky and David Rosenthal) of *Undzer Shtimme*, the first Jewish newspaper in the British Zone. In December 1947 *Undzer Shtimme* was replaced with the more substantial *Vochnbalatt*. Trepman was also an editor of Zamy Feder's *Anthology of Songs and Poems from the Ghettos and Concentration Camps*, and was co-editor, again with Olewsky and Rosental, of an early photo album of the Holocaust, the multilingual *Undzer Churbn in Bild*, (*Our Destruction in Pictures*, Bergen-Belsen, 1946).

With the support of Hirsch *Wolofsky, the editor of Montreal's Yiddish daily, *Keneder Adler*, Trepman and his wife immigrated to Montreal in 1948. He was hired to teach at the Jewish People's Schools, where he remained for 23 years. In the summers he directed the Labor Zionist Camp Undzer – Camp-Kindervelt. Between 1971 and 1981 he was the executive director of the Jewish Public Library of Montreal. Trepman

became a central figure in the Montreal survivor community. In 1961 he established the Montreal chapter of Bergen-Belsen survivors, and served as its president for a number of years.

In Montreal, Trepman was a frequent contributor to the *Adler*, often writing under pen-names, including the tongue-in-cheek pen-name Pinchas Batlan (Pinchas the Loafer). He also wrote several books focusing on his life before the war and his wartime experiences. These include *A Gesl in Varshe* (1949; *Among Men and Beasts*, 1978), based on newspaper articles he had written between 1946 and 1953; and his description of going back to visit Poland, *A Traumatic Return to Poland* (1980), a translation of six articles he had written for the *Keneder Adler* about a return trip he took to Poland in 1979.

[Richard Menkis (2nd ed.)]

TREPPER, LEOPOLD (**Leiba Domb**; 1904–1982), former Soviet intelligence agent, head of the anti-German spy network known as "The Red Orchestra." Trepper was born in Nowy Targ near Zakopane, Poland. He was active in the Polish Communist youth movement and was imprisoned for several months. Afterwards he joined Ha-Shomer ha-Ẓa'ir and in 1926 went to Ereẓ Israel, where he soon became affiliated with the illegal Communist party and was detained several times by the police for his clandestine activities. In the Histadrut he became known as the leader of the Eḥud (Unity) faction which advocated workers' unity, intending to include Communists and Arabs. After the first conference of Eḥud (1927), Trepper was expelled from Ereẓ Israel and went to France. There he became active in the Jewish section of the French Communist party as well as in the Soviet secret service. In 1932, in consequence of the discovery of a Soviet spy network, referred to in the French press as the "Fantomas" affair, Trepper had to leave France and proceeded to the Soviet Union. In Moscow he studied at the Communist University for Western Workers (KUNZ) and was probably also trained for intelligence work. In 1938 he was sent to France and Belgium, where, under various covers, he played a central role in Soviet military intelligence. He organized and headed a widespread clandestine radio service which had agents in high echelons of the German military machine in Berlin. German counter-intelligence called the network "The Red Orchestra."

In 1941 Trepper warned Moscow of Germany's imminent attack on the U.S.S.R., predicting even its exact date, but Stalin disregarded these warnings as originating in "British provocation." During the German-Soviet war "The Red Orchestra," under Trepper's direction, contributed greatly, and sometimes decisively, to Soviet strategy and tactics. In November 1942 Trepper was captured in Paris by a combined team of German counter-intelligence and the Gestapo. They attempted to enlist his services for a sophisticated anti-Soviet operation in which he would continue his radio transmissions under secret German control (the so-called *Funkspiel*). According to previous orders from his superiors for such a contingency, Trepper pretended to respond to these overtures, thus saving his life and even succeeding in escaping less than a year later. During his imprisonment, he managed to smuggle out a detailed report, written in a mixture of Hebrew, Yiddish, and Polish, which was transmitted to Moscow by underground Communist party channels and which contained exact information about his arrest as well as about the German control already established over parts of "The Red Orchestra." After his escape he resumed his intelligence activity.

In 1945 he was recalled to Moscow and on arrival immediately arrested. He spent ten years in prison and was constantly interrogated by the highest Soviet security officials. At a certain stage, during Stalin's antisemitic Black Year, one of the main charges leveled against him was the fact that in "The Red Orchestra" he had "surrounded himself with Jews" (some of them, like Hillel Katz, were old comrades from Ereẓ Israel), to which he replied that at that time Jewish Communists were the most reliable people he could find. In 1955 he was released and completely "rehabilitated." From then on Trepper devoted himself exclusively to Jewish interests. He submitted to the post-Stalin leadership a detailed plan to revive Jewish cultural life and institutions in the Soviet Union, but in 1956, after the Twentieth Congress of the Soviet Communist party, he was officially informed that his plan had been rejected. He then went to Warsaw, where, under the name Leiba Domb, he headed the government-sponsored Jewish Cultural-Social Society (Yidisher Kultur-Gezelshaftlekher Farband) and its publishing house Yiddish Bukh.

In 1968, during the violently anti-Jewish period in Polish policy, Trepper decided to return to Israel, where members of his family had already settled, but was constantly denied an exit permit. This attitude of the Polish government, possibly a result of Soviet pressure, aroused in 1971–72 worldwide publicity and many protests, including hunger strikes by Trepper's sons in Jerusalem, in Canada, and at the United Nations building in New York.

Toward the end of 1972 a French court heard a libel action by Trepper against the former French secret agent Jean Rochet, who had accused Trepper, in a letter to *Le Monde*, of having collaborated with the Nazis and betrayed his comrades in the underground. Despite Trepper's inability to appear because he was not allowed to leave Poland, he won the case and Rochet was fined and ordered to publish the court's verdict.

Trepper was finally granted permission by the Polish authorities to leave Poland for England in order to undergo a serious operation. He stated that his plans included the writing of "the full and true account of the 'Red Orchestra,'" not merely as an intelligence network, but as an organization of anti-Nazi resistance in which Jews played such a prominent part. His memoirs, *Le Grand Jeu*, were published in 1975 and in English translation by the author in 1977 as *The Great Game: The Story of the Red Orchestra.*

Trepper settled in Israel in 1974. He died early in 1982 and was buried in Jerusalem.

TREST (Czech **Třešt**; Ger. **Triesch**), town in Moravia, Czech Republic. R. Jacob of Triesch is mentioned in a query addressed to Solomon b. Abraham *Adret. The community developed after the expulsion from nearby *Jihlava (1426) but it may be assumed that it existed earlier. In 1678 Jews owned fields and in 1693 they were permitted to distill spirits and to fatten cattle. Trest Jews were connected with the textile industry as sellers of wool, and in 1723 a distillery, tannery, and butchery were rented to a Jew. In 1789 there were 102 Jewish families permitted by the *Familiants Laws; 20 others also lived in the town. One hundred years later the community numbered 316. Trest was the seat of an important yeshivah and among its rabbis was Eleazar *Loew. In 1930 the community numbered 64 (1.3% of the total population). It came to an end in the Holocaust period, some immigrating to England and Palestine and the rest deported to the death camps of Poland via Theresienstadt. Its sacred objects are now in the Jewish State Museum in Prague.

TRETS (Heb. טְרִיץ), town in the department of Bouches-du-Rhone, S. France. Jewish sources indicate that a Jewish community, which included some scholars, existed there at least from 1269. The non-Jewish sources mention the protection given by the lords of Trets to local Jews in the 14th and 15th centuries, granting them equality with Christian inhabitants. However, in 1413, the Jewish community was obliged to request an order, which they obtained, placing them under the protection of the lord and imposing a heavy fine of 50 silver marks "for any injury or offense to them." The community continued to exist until the expulsion of the Jews from Provence in 1501.

TREVES, a ramified family which produced scores of scholars, rabbis, and communal workers. It is usually assumed that the family's origins were in Troyes, France, *Rashi's birthplace, from where it spread throughout Italy and Germany. Others hold that it came from Treviso near Venice, Italy, in the 14th century, while a third opinion is that it originated in Trier (Germany), called Trèves in French. In France members of the family were called Triverzans and in Germany, Drifzan. Branches of the family spread through the different countries of Europe from the 14th to the 20th centuries. From the original family there afterward branched off the Trefouse, Dreyfuss, and Tribas families. JOHANAN, the founder of the family, lived in Germany in the second half of the 13th century. The first to be called Treves was JOSEPH B. JOHANAN (the Great), rabbi of Paris or Marseilles in the first half of the 14th century. His son MATTATHIAS (c. 1325–died c. 1385) of Provence lived in Spain, studied under his father, and was a pupil of Nissim b. Reuben *Gerondi and Perez b. Isaac ha-Kohen. He returned to France when the edict of expulsion was repealed in 1361. In Paris he founded a yeshivah which had a large number of students. He was given the title of honor *Morenu*, and in 1363 was appointed rabbi of Paris by Charles V. Mattathias and the members of his family were among those exempted from wearing the Jewish badge decreed upon the Jews of France by Charles V. He is mentioned in the responsa of *Isaac b. Sheshet Perfet (No. 271) and in the fragments of the *Kiryat Sefer* of Isaac *Lattes published by Neubauer (*Seder ha-Ḥakhamim ve-Korot ha-Yamim*, pt. 2 (1893), 241). Mattathias had three sons, Johanan *Treves, ABRAHAM, and JOSEPH, the last apparently being ordained rabbi in Italy, where he died in 1429. Joseph's great-grandson NAPHTALI HERTZ (Drifzan) was the author of the kabbalistic commentary *Dikduk Tefillah*, on the prayer book *Malah ha-Areẓ De'ah* (Thuengen, 1560), and *Naftulei Elohim*, a supercommentary on the commentary of *Baḥya b. Asher (Heddernheim, 1546). He was cantor in Frankfurt on the Main and was renowned as "the great kabbalist." Naphtali Herz's son JOSEPH together with his brother ELIEZER (1495–1566) published their father's commentary on the prayer book. Eliezer served as rabbi of Frankfurt for 22 years. A third son SAMUEL settled in Russia (see below). He wrote *Yesod Shirim* (Thuengen, 1559) on the Book of Ruth, giving both literal and kabbalistic explanations. Many members of the Treves family settled in Italy. The first known is Johanan b. Joseph *Treves, author of the commentary *Kimḥa de-Avishuna* (Bologna, 1540). His son RAPHAEL JOSEPH (16th century) was rabbi in Ferrara, engaged in the publication of books, and in 1559 worked as a proofreader in the Hebrew press in Sabbioneta. JOSEPH B. MATTATHIAS in Svigliano was involved in the notorious Tamari-Venturozzo case (1566) in which the rabbis of Venice and Mantua took part (see Moses b. Abraham *Provençal).

From the 16th century onward the Treves family is found in Russia. The Russian branch of the family traces its descent to Samuel, the son of Naphtali Herz of Frankfurt, who crossed into Russia and adopted the family name of Ẓevi. He had two sons, one of whom, ELIEZER, called Ashkenazi or Ish Ẓevi, served as rabbi in Opatow, and wrote commentaries on the Talmud, and glosses to tractate *Ḥullin*, which were published under the title *Dammesek Eliezer* (Lublin, 1646). He was also the author of a collection of prayers, *Si'ah ha-Sadeh* (*ibid.*, 1645).

Still another branch of the Treves family is found in Turkey from the end of the 15th century. From there a number of them also went to Ereẓ Israel. Of these the following may be

mentioned: ABRAHAM B. SOLOMON ẒAREFATI (1470–1552) was born in Mantua, but in 1495 went to Salonika. In 1505 he was appointed rabbi of Ferrara, and in 1522 went to Constantinople. He subsequently lived for several years in Adrianople with Joseph *Caro, where he became friendly with Solomon *Molcho. Immediately after Molcho's death he moved to Ereẓ Israel, settling in Jerusalem. He was the author of the *Birkat Avraham* (Venice, 1552), on the ritual washing of the hands. His copy of the *Halakhot* of Isaac *Alfasi contained his own glosses and those of his ancestors. Another member of this branch was ISAAC B. MORDECAI GERSHON, one of the scholars of Safed and a pupil of Moses *Alshekh. He became rabbi in Constantinople (1583), but from there went to Venice. He became renowned as a proofreader and publisher of the works of the scholars of Safed. RAPHAEL TREVES was born in Smyrna and from 1710 lived in Jerusalem, where he died around 1745. His works are *Ẓaḥ ve-Adom* (Constantinople, 1740), giving the order of prayers for those settling in Ereẓ Israel, and *Dagul me-Revavah* (*ibid.*, 1743), a commentary on the Song of Songs.

[Yehoshua Horowitz]

TREVES, EMILIO (1834–1916), Italian publisher. Born in Trieste, Treves began to work as a proofreader in a local office and wrote anonymously for magazines prohibited by the Austrian censor. He was forced to leave for Paris when his association with the prohibited journals was discovered, and after working as a journalist and translator he became a publisher in Fiume. He joined Garibaldi's legion in 1859 in the war against the Bourbon regime in Naples, and after peace was declared he founded the Treves publishing company with his brother Giuseppe. The Treves brothers published the highly successful *Illustrazione Italiana*, and later the works of many famous Italian writers including De Amicis, D'Annunzio, and Verga, as well as translations from foreign languages. By the end of the 19th century the Treves publishing company was the most important in Italy.

[Giorgio Romano]

TREVES, JOHANAN BEN JOSEPH (1490?–1557?), Italian rabbi and scholar. His place of birth is unknown. In his youth he studied together with Joseph of Arles in the yeshivah of Moses *Navarro in Ferrara, where he later became a member of the *bet din*. For about 20 years he wandered in different towns of northern and central Italy, serving as religious instructor and rabbi, and as a result he was termed one of "the peripatetic rabbis." For a number of years during this period, he lived in the house of Ishmael Rieti in Siena as his private tutor, a practice common in Italy. He then lived in Sabbioneta and Bologna (1540). It was assumed that he worked in the Hebrew press in Bologna from 1537 to 1541; and it is possible that in the years 1545–46 he worked as a proofreader in the printing press of Daniel *Bomberg in Venice.

Johanan was an author, publisher, and writer of responsa. Widely known is his commentary, *Kimḥa de-Avishuna* (Bologna, 1540), on the festival prayer book according to the Roman rite, published anonymously. He endeavored to establish the correct readings "and did not invent anything; well nigh everything was gathered from existing authors … as the gleaner follows the harvester." The work was designed for the untutored, and its title is explained in the statement that "he was not concerned to produce fine flour but flour made from roasted ears [*Kimḥa de-Avishuna*; see Pes. 39b] … that had already been ground and roasted." His commentary is based almost entirely upon Midrashim, some of which are otherwise unknown, and upon commentaries on early *piyyutim*, his purpose being simply to explain the words and subject matter. He was extremely active as a proofreader of midrashic works and in the establishment of accurate readings of the tractates he studied with his pupils. His glosses to the *Halakhot* of Isaac *Alfasi, his approbations to the works of his contemporaries, and his responsa (one of which, no. 58, was included in the responsa of Moses *Isserles), are extant. He also compiled a commentary on the laws of **shehitah u-vedikah* and the *halakhot* of **issur ve-hetter* of the *Mordekhai* of *Mordecai b. Hillel (Venice, 1550). His *piyyutim* and poems are also known. Of his three sons the best known is Raphael Joseph who was a *posek*, as well as a book publisher. In 1559 he was working in the Sabbioneta press.

[Yehoshua Horowitz]

TREVES, JOHANAN BEN MATTATHIAS (d. 1429), French rabbi. Treves was ordained by his father Mattathias b. Joseph. He was a son-in-law of the procurator-general, *Manessier de Vesoul. Treves first served as rabbi to a single French community but on the death of his father in 1385 was appointed chief rabbi of Paris with the consent of Charles VI and served in this office from 1385 to 1394. After some years of tranquility, a distinguished pupil of his father, Isaiah Astruc b. Abba Mari, became his enemy and claimed for himself the sole right of appointing rabbis in France and of conducting a yeshivah. With the help of Meir b. Baruch ha-Levi of Vienna, Isaiah Astruc tried to remove Johanan from his post by proclaiming that all arrangements of the rabbinate not confirmed by him were null and void. Johanan turned for help to the greatest rabbis of Catalonia, Ḥasdai *Crescas and *Isaac b. Sheshet Perfet (the Ribash). These two supported the persecuted rabbi and in their responsa opposed both Isaiah Astruc and Meir b. Baruch. They claimed that Johanan, "besides inheriting his

rabbinate from his father with the approval of the monarch in accordance with the wishes of the communities, was also worthy of it on account of his learning and activities" (Resp. Ribash, 270–72). Some justify the intervention of Isaiah Astruc on the grounds of his constructive criticism of the affairs of the French communities and Johanan's inability to halt the religious decline which had taken place. It was Johanan who characterized the attitude of Isaiah Astruc as prompted by a desire to oust him from office. The expulsion of the Jews from France in 1394 ended the quarrel. Johanan went to Italy, where he lived until his death. He achieved great renown among his contemporaries who referred to him as "the greatest in our times," and "the paragon of the generation." His rulings were much referred to by contemporary scholars. From Italy he corresponded with Jacob b. Moses *Moellin (the Maharil). His responsa on the prayers to be said by orphans and a responsum to the Padua community are extant.

[Yehoshua Horowitz]

TREVIÑO DE SOBREMONTE, TOMÁS (1592–1649), Marrano martyr in Mexico. His father came from an old aristocratic Christian family and his mother, Leonor Martínez de Villagómez, was a Judaizing New Christian. Born in Medina de Riosoco, Spain, he studied Latin in two Jesuit schools and canon law at Salamanca, and became a page for a nobleman in his home town. When a fellow page called him a Jew, he killed him and went into hiding. In 1612 Tomás fled to New Spain, where he prospered as a merchant, with connections at the commercial centers of Zacatecas, Guadalajara, Acapulco, and Vera Cruz. His brother, Gerónimo, was arrested with their mother by the Inquisition in Spain, and revealed under torture that Tomás was a Judaizer. Consequently, the Mexican Inquisition arrested Tomás in November 1624 and reconciled him to the Church the following year after he expressed repentance. The repentance was feigned, however, for Tomás had no intention of relinquishing his Judaism. He even had himself circumcised in jail by a cell mate. In 1629 he married the Judaizer, Maria Gómez, and despite the interdict of the Inquisition he dressed in finery, wore arms, and rode on horseback. When his wife and her family were arrested by the Inquisition, he found various ways of communicating with them, but refused to take his wife back after her reconciliation with the Church until he was ordered to do so by the Inquisition. He was planning to flee New Spain, most probably to Holland, when he was rearrested as a relapsed heretic on Oct. 11, 1644, and after a lengthy trial condemned to the stake. He was the only one of over a hundred prisoners to be burned alive at the great **auto-da-fé* of Apr. 11, 1649. To his last moment, learned theologians tried to convert him, but could not budge him from his devotion to Judaism. The poet Miguel de Barrios dedicated a eulogy to Tomás Treviño de Sobremonte, but it is apparent that he confused him with another Marrano victim, Francisco Maldonado de *Silva, who died at the stake a decade earlier.

[Martin A. Cohen]

TREVISO, city in N. Italy. The presence of Jews in Treviso and its vicinity is first mentioned in 905. A document from May 28, 972, records that the Emperor Otto I donated to the Monastery of San Candido D'Indica a farm situated near a property owned by a certain Isaac the Jew. In 1235 a certain Vascono Judeo is mentioned in a document. In 1294, Solomon, presumably an Ashkenazi Jew, founded loan banks in the town.

After the annexation of Treviso by the Venetian Republic in 1339 the position of the Jews there was similar to that of the other Jews of the Veneto region. A decree from 1390 orders the local authorities to supervise the activity of the moneylenders. In 1398 the Doge Antonio Venier authorized a tax of 3,000 ducats to be paid by the Jews living in Treviso and Ceneda. By the end of the 14th century five loan banks in Treviso were owned by Jews, among whom were Jacob di Alemagna and Elhanan de Candida, who signed the renewal of their license in 1401. At this time also, the Sicilian scholar *Abulrabi was a student at a yeshivah in the town. At the end of the 15th century R. Benedict Alexander Axelrod was head of a yeshivah in Treviso. A halakhic question addressed by the Jews of Treviso to Judah *Mintz at the end of the 15th century (responsum no. 7) contains references to the construction of a new synagogue and a *mikveh* as well as to a method for treating eye complaints used by Treviso Jews. In 1443 the obligation to wear the yellow badge was reintroduced. In 1480, five Jews were arrested in Treviso and accused of killing a Christian child, Sebastian Novello, in the wake of similar cases following the affair of Simon of *Trent (1475); they were burned at the stake in Venice. It seems that the Jews of Treviso were banned from moneylending from 1483 until 1487. A Christian loan bank (**Monti di Pietà*) was established in Treviso in 1496, and the citizens asked the Venetian government to banish the Jews from the town. After the Jews had agreed to give up moneylending, they were permitted to remain.

In 1509, when Treviso was captured by the armies of the League of Cambrai, the populace rioted against the Jews under the pretext that they had collaborated with the Germans. All Jewish homes were destroyed, except the house of "Calman the Jew, friend of the people of Treviso," or Calimano de Treviso, head of the Venetian family of the same name. That year the doge issued a decree of expulsion, prohibiting Jews from living in Treviso: the ordinance was engraved on a marble pillar in the town square. The Jews moved to nearby Asolo. In 1547 rioting broke out there also when, without apparent motive,

a gang of peasants killed eight and wounded ten out of the 37 Jews living there at the time. The rest fled from the area. In the latter half of the 16th century a few individual Jews were to be found in Treviso. In 1880, 27 Jewish gravestones were found during excavations. In 1909–10 fragments of Jewish tombstones dating from the 15th century were found in the Borgo Cavour (then the Borgo Santi Quaranta). In the second half of the 19th century a small Jewish community was again founded in Treviso, but has since ceased to exist.

[Shlomo Simonsohn / Samuele Rocca (2nd ed.)]

TRÉVOUX (Heb. טרבוט), town in the department of Ain, E. France. Article 49 of the charter of freedom of Trévoux of 1300, which prohibited the residence of Jews in the town, was not respected; however, in exchange for an annual payment of 15 pounds, many Jews were authorized to live there. The Jewish population increased considerably in 1420 with the arrival of the Jews who had been expelled from *Lyons, who introduced the gold- and silver-thread industry. In 1429 an investigation was carried out against the books of the Jews. This act closely resembled the trial of Paris of 1240; the books were seized, and several Jews were subjected to an interrogation concerning their contents. The sentence was a double one: the books were burned and the Jews were expelled. This expulsion did not remain in force for long, however; three years later, Jews were again found in Trévoux. In 1433 there were several Jews among the prisoners taken in Trévoux by the Duke of Savoy. In 1467 the inhabitants of Trévoux obtained the expulsion of the Jews by taking upon themselves the payment of their taxes. The few Jews who were spared from this expulsion were driven out in 1488. The Rue des Juifs, subsequently known as Rue Japperie, was situated in the eastern part of the town. Near this quarter was a stone building known as the "Tower of the Jews." The synagogue was situated in the Grande Rue. The only scholars who bore the name of "Trévoux" or Trabot lived in Italy.

[Bernhard Blumenkranz]

TRIBE, LAURENCE H. (1941–), U.S. lawyer, legal scholar. Born in Shanghai, China, Tribe and his family moved to San Francisco when he was five. He graduated from Harvard summa cum laude in mathematics in 1962 and Harvard Law School in 1966, magna cum laude. After serving as a clerk on the Supreme Court, Tribe joined the Harvard Law faculty in 1968 and became recognized as one of the foremost constitutional law experts in the country. He was the author of *American Constitutional Law* (1978), the most frequently cited textbook in that field. He served as a consultant to several government committees, including the Senate Committee on Public Works (1970–72). In 1978 he helped write a new constitution for the Marshall Islands. He was also noted for his frequent testimony before congressional committees and his extensive support of liberal legal causes. His book, *God Save This Honorable Court* (1985), in which he warned against "presidential court-packing," was considered the main influence in the failure of Robert H. Bork to win confirmation to a seat on the United States Supreme Court in 1987. Tribe's expertise was in legal, constitutional, and jurisprudential theory, the role of law in shaping technological development, and the uses and abuses of mathematical methods in policy and systems analysis. He argued many high-profile cases before the Supreme Court, including those for Al Gore during the disputed presidential election of 2000. The court had also ruled against Tribe in *Bowers v. Hardwick* in 1986, holding that a Georgia state law criminalizing sodomy, as applied to consensual acts between persons of the same sex, did not violate fundamental liberties under the principle of substantive due process. However, Tribe was vindicated in 2003 when the court overruled Bowers in *Lawrence v. Texas*. Although Tribe did not argue that case, he wrote the amicus, or friend of the court, brief on behalf of the American Civil Liberties Union urging that Bowers be overruled. Tribe was widely respected by the justices, as indicated by the fact that many of them referred to him as Professor Tribe during oral arguments, a sign of respect not generally shown toward law professors arguing before the court. In 2004, it was revealed that several passages in *God Save This Honorable Court* were copied without proper attribution from the 1974 book *Justices and Presidents*, written by Henry J. Abraham, a University of Virginia political scientist. In 2005, Harvard's president and dean released a statement saying that Tribe's admitted failure to provide appropriate attribution was a "significant lapse in proper academic practice," but that they regarded the error as "the product of inadvertence rather than intentionality." Tribe was the J. Alfred Prufrock University Professor at Harvard, one of 19 holding the title university professor.

[Stewart Kampel (2nd ed.)]

TRIBES, THE TWELVE, the traditional division of Israel into 12 tribes: Reuben, Simeon (Levi), Judah, Issachar, Zebulun, Benjamin, Dan, Naphtali, Gad, Asher, Ephraim, and Manasseh. Biblical tradition holds that the 12 tribes of Israel are descended from the sons and grandsons of Jacob (Gen. 29–30; 35:16–18; 48:5–6). The tribes are collectively called Israel because of their origin in the patriarch Jacob-Israel. Jacob and his family went into Egypt as "70 souls" (Ex. 1:1–5). In Egypt "the Israelites were fertile and prolific; they multiplied and increased very greatly" (1:7), and there they became the "Israelite

people" (1:9). A pharaoh, "who did not know Joseph" (1:8), oppressed them by burdensome labor. God "remembered His covenant with Abraham, with Isaac, and with Jacob" (2:24), made Himself known to Moses (Ex. 3), and rescued the Israelites from Egypt. By this time the nation numbered "600,000 men on foot, aside from *taf*" which apparently means women as well as children (12:37). At Sinai, the nation received its laws and regulations, covenanting itself to God (Ex. 19–24). After wandering for 40 years in the desert under the leadership of Moses, the 12 Israelite tribes penetrated the land of Canaan with Joshua in command. The united force of the 12 tribes was sufficient to conquer the land, which was then distributed among them. During this period of settlement, and the subsequent period of the Judges, there was no predetermined pattern of leadership among the tribes, except for deliverer-judges sent to them by God in time of need (see also *Judges, Book of). Such crises forced the tribes into cooperative action against enemies under the leadership of the "deliverer." *Shiloh served as a sacral center for all the tribes, housing the Ark of the Covenant under the priestly family of Eli (I Sam. 1:3, 12; 2:27). Under the impact of military pressures, the Israelites felt compelled to turn to *Samuel with the request that he establish a monarchy, and *Saul was crowned to rule over all the tribes of Israel (I Sam. 11:15). Upon his death, *Ish-Bosheth, Saul's son, was accepted by all the tribes save Judah and Simeon who preferred David. David's struggle with the house of Saul ended in victory for him, and all the elders turned to David for royal leadership. He ruled from Jerusalem over all the tribes of Israel (II Sam. 5:3), and was succeeded by his son. After the death of *Solomon, the tribes once again split along territorial and political lines, with Judah and Benjamin in the south loyal to the Davidic house, and the rest of the tribes in the north ruled by a succession of dynasties.

Modern scholarship does not generally accept the biblical notion that the 12 tribes are simply divisions of a larger unit which developed naturally from patriarchal roots. This simplistic scheme, it is felt, actually stems from later genealogical speculations which attempted to explain the history of the tribes in terms of familial relationships. The alliance of the 12 tribes is believed to have grown from the organization of independent tribes, or groups of tribes, forced together for historical reasons. Scholars differ as to when this union of 12 took place, and when the tribes of Israel became one nation. One school of thought holds that the confederation took place inside the country toward the end of the period of the Judges and the beginnings of the Monarchy. All of the traditions which see the 12 tribes as one nation as early as the enslavement in Egypt or the wanderings in the desert are regarded as having no basis in fact. This school recognizes in the names of some of the tribes the names of ancient sites in Canaan, such as the mountains of Naphtali, Ephraim, and Judah, the desert of Judah, and Gilead. With the passage of time, those who dwelt in these areas assumed the names of the localities. M. Noth feels that the Leah tribes, Reuben, Simeon, Levi, Judah, Zebulun, and Issachar, existed at an earlier stage as a confederation of six tribes whose boundaries in Canaan were contiguous. Only at a later stage did other tribes penetrate the area, eventually expanding the confederation to 12. A second school grants that the union of 12 existed during the period of wanderings in the desert, but that Canaan was not conquered by an alliance of these at any one time. Rather, there were individual incursions into the land at widely separated periods. However, the covenant among the 12 tribes and their awareness of national unity flowing from ethnic kinship and common history, faith, and sacral practices had their source in the period prior to the conquest of the land.

The number 12 is neither fictitious nor the result of an actual genealogical development in patriarchal history. It is an institutionalized and conventionalized figure which is found among other tribes as well, such as the sons of Ishmael (Gen. 25:13–16), the sons of Nahor (Gen. 22:20–24), of Joktan (Gen. 10:26–30 – so LXX), and Esau (Gen. 36:10–13). Similar organizational patterns built about groups of 12, or even six, tribes, are known from Asia Minor, Greece, and Italy. In Greece, such groupings were called amphictyony (ʿΑμφικτυονία), from ʾαμφικτίζω, meaning "to dwell about," that is, about a central sanctuary. Each tribe was assigned a prearranged turn in the provision and maintenance of the shrine. The amphictyonic members would make pilgrimages to the common religious center on festive occasions. The exact measure of correspondence between the amphictyony of the Hellenic world and the duodecimal structure of the tribes of Israel may be the subject of scholarly controversy, but there can be little doubt that this pattern of 12 attributed to the Hebrew tribes is very real and historically rooted. Thus, if one tribe were to withdraw from the union or to be absorbed into another, the number 12 would be preserved, either by splitting one of the remaining tribes into two or by accepting a new tribe into the union. When, for example, the tribe of Levi is considered among the 12 tribes, the Joseph tribes are counted as one (Gen. 35:22–26; 46:8–25; 49:1–27). However, when Levi is not mentioned, the Joseph tribes are counted separately as Manasseh and Ephraim (Num. 26:4–51). For the same duodecimal considerations, Simeon is counted as a tribe even after having been absorbed into Judah (Josh. 19:1), and Manasseh, even after having split in two, is considered one. Among the six Leah tribes, Gad, although the son of Zilpah, is counted as one of them when Levi is missing (Num. 1:20–42; 26:5–50).

The confederation of the 12 tribes was primarily religious, based upon belief in the one "God of Israel" with whom the tribes had made a covenant and whom they worshiped at a common sacral center as the "people of the Lord" (Judg. 5:11; 20:2). The Tent of Meeting and the Ark of the Covenant were the most sacred cultic objects of the tribal union. Biblical tradition shows that many places served as religious centers in various periods. During the desert wanderings, "the mountain of God," that is, Sinai, known as Horeb, served as such a place (Ex. 3:1; 18:5; cf. 5:1–3; 8:23–24), as did the great oasis at Kadesh-Barnea where the tribes remained for some time

(Deut. 1:46). From there the Israelite tribes attempted a conquest of the land (Num. 13:3, 26). Many sites in Canaan are mentioned as having sacred associations or as being centers of pilgrimage. Some of these, such as Penuel, where Jacob, the nominal progenitor of the tribes, received the name Israel (Gen. 32:24–32), Beth-El (28:10–22; 35:1–15), where the Ark of the Lord rested (Judg. 20:26–28), and Beer-Sheba (Gen. 21:33; 46:1–4; Amos 5:5; 8:14) go back to patriarchal times. Jacob built an altar at Shechem (Gen. 33:18–20) and the tribes gathered there "before the Lord" and made a covenant with Him in Joshua's time (Josh. 24). Shiloh enjoyed special importance as a central cultic site for the tribes. There they gathered under Joshua to divide up the land by lot, and it was there that they placed the Tent of Meeting and the Ark of the Covenant (Josh. 18:1–8). Eli's family, which traced its descent from Aaron, the high priest, served at Shiloh (I Sam. 2:27), and it was to Shiloh that the Israelites turned for festivals and sacrifices (Judg. 21:19; I Sam. 1:3; cf. Jer. 7:14; 26:9). The multiplicity of cultic places raises the question of whether all 12 tribes were, indeed, centered about one amphictyonic site. It may be that as a tribe's connections with the amphictyony were weakened for various reasons, the tribe began to worship at one or another of the sites. Possibly, different sites served the several subgroups among the tribes. Beer-Sheba and Hebron, for example, served the southern groups of tribes (Gen. 13:18; Josh. 21:10–11; II Sam. 2:1–4; 5:1–3; 15:7–10); Shechem, Shiloh, and Gilgal (Josh. 5:9–10; I Sam. 11:14–15; 13:4–15; Amos 5:5) were revered by the tribes in the center of the country; and the shrine at Dan served the northern tribes (Judg. 18:30–31). The likelihood of a multiplicity of shrines is strengthened by the fact that clusters of Canaanite settlements separated the southern and central tribes (of the mountains of Ephraim), and divided the central tribes from those in Galilee. It is possible that various shrines served different tribes simultaneously, while the sanctuary which held the Ark of the Lord was revered as central to all 12.

The changes which occurred in the structure of the 12 tribes and in their relative strengths, find expression in the biblical genealogies. The tribes are descended from four matriarchs, eight of them from the wives Leah and Rachel, and four from the handmaids Bilhah and Zilpah (Gen. 29–30). It is a widely held view that attribution to the two wives is indicative of an early stage of tribal organization, the "tribes of Leah" and the "tribes of Rachel." The attribution of four tribes to handmaids may indicate either a lowered status or late entry into the confederation. In the list of the 12 tribes, Reuben is prominent as the firstborn (Gen. 46:8), followed by Simeon, Levi, and Judah, the sons of Leah, who occupy primary positions. Reuben stood at the head of a tribal league and had a position of central importance among his confederates prior to the conquest of the land (Gen. 30:14; 35:22; 37:21; 42:22, 37; Num. 16:1ff.). On the other hand, the same tribe is inactive during the period of the Judges. It did not provide any of the judges, and during Deborah's war against Sisera, Reuben "sat among the sheepfolds" and did not render any aid (Judg. 5:16). Possibly, because this tribe dwelt on the fringes of the land (I Chron. 5:9–10), its links with the others were weakened, and its continued existence as one of the tribes of Israel was in jeopardy (cf. Deut. 33:6). Simeon was absorbed by Judah. Levi spread throughout Israel as a result of its sacral duties. Judah was cut off from the rest of the tribes by a Canaanite land strip that separated the mountains of Judah and Ephraim. Reuben's place as head of the 12 tribes was taken by the house of Joseph which played a decisive and historic role during the periods of the settlement and the Judges. Joshua came from the tribe of Ephraim (Num. 13:8). Shechem and Shiloh were within the borders of the house of Joseph (cf. Ps. 78:59, 67–68). Samuel came from the hill country of Ephraim (I Sam. 1:1). Ephraim led the tribes in the war against Benjamin over the incident of the concubine in Gibeah (Judg. 19–21). At the beginning of the Monarchy, the leadership passed to Judah (cf. Gen. 49:8ff.). The passage in I Chronicles 5:1–2 illustrates well how the dominant position among the tribes passed from Reuben to Ephraim and from Ephraim to Judah.

Each of the 12 tribes enjoyed a good deal of autonomy, ordering its own affairs after the patriarchal-tribal pattern. No doubt there were administrative institutions common to all the tribes, situated beside the central shrines, though information about them is exceedingly scanty. During the desert wanderings, leadership of the people was vested in the princes of each of the tribes and the elders who assisted Moses. They met and legislated for the entire people (Ex. 19:7; 24:1, 9; Num. 1–2; 11:16–24; 32:2; 34:16–29; Deut. 27:1; 31:28). There are references to meetings of tribal leaders and elders during the periods of the settlement and the Judges. "The princes of the congregation, the heads of the thousands of Israel" along with Phinehas the priest, conducted negotiations with the Transjordanian tribes, in the name of the entire nation (Josh. 22:30). Joshua summoned "the elders, the heads, the judges, and the officers of Israel" to make a covenant in Shechem (Josh. 24). The elders of Israel, speaking for the entire nation, requested Samuel to appoint a king (I Sam. 8:4). The incidents of the concubine in Gibeah (Judg. 19–21) and Saul's battle with Nahash the Ammonite (I Sam. 11) are classic examples of joint action taken by the league of 12 tribes acting "as one man, from Dan even to Beer-Sheba, with the land of Gilead" (Judg. 20:1; I Sam. 11:7). In the one case, unified action was taken by the tribes against one of their members, Benjamin, for a breach of the terms of the covenant (Judg. 20:7). The war against Nahash the Ammonite proves that the tribes were required to come to the aid of any one of the league that found itself in difficulty. Because of the sacral nature of the league, the wars of the tribes were considered "wars of the Lord" (Ex. 17:16; Num. 21:14). Nevertheless, the narratives in the Book of Judges regarding the battles which Israel waged against its enemies make it clear that the league must have been rather weak in those days. The consciousness of national and religious unity had not yet led to a solid politico-military confederation. The Song of Deborah gives clear expression to the lack of solidarity among the

tribes, for some of them did not come to the aid of the Galilean tribes. It is impossible to designate even one war against external enemies during the period of the Judges in which all the tribes acted in concert. Indeed, there are indications of intertribal quarrels and disputes (Judg. 7–8; 12). In this connection, there are scholars who hold that the judge-deliverers were not pantribal national leaders, but headed only individual tribes, or groups of them (see *Judges). It was only toward the end of the period of the Judges when the Philistine pressure on the Israelite tribes increased in the west and that of the Transjordanian peoples in the east, that the religionational tribal confederation assumed political and military dimensions. The Israelite tribes then consolidated as a crystallized national-territorial entity within the framework of a monarchical regime. David, Solomon, and afterward the kings of Israel and Judah tended to weaken tribal consciousness in favor of the territorial and monarchical organization. It is apparent, however, from Ezekiel's eschatological vision (Ezek. 47–48) that the awareness of Israel as a people composed of 12 tribes had not, even then, become effaced.

See also *Ten Lost Tribes.

[Bustanay Oded]

In the *Aggadah*

In aggadic literature the word *shevatim* ("tribes," sing., *shevet*) applies to both the 12 sons of Jacob and to the 12 tribes descended from them. When Jacob left home and had his dream, he took 12 stones as a headrest and declared: "God has decreed that there are to be 12 tribes; yet they did not issue from Abraham or Isaac; if these 12 stones will join into one I will know that I am destined to beget them" (Gen. R. 68:11), and in fact the 12 stones coalesced into one (Gen. 28:11 being contrasted with v. 18). Whereas Abraham and Isaac both begat wicked sons, Ishmael and Esau, all of Jacob's 12 sons were loyal to God (Shab. 146a; cf. Ex. R. 1:1). They were all named in reference to Israel's redemption (Tanḥ. Shemot 5), and God declared, "Their names are more precious to me than the anointing oil with which priests and kings were anointed" (Eccles. R. 7:1, 2).

All the tribal ancestors were born outside the Land of Israel, save Benjamin, and all, with the exception of Benjamin, participated in the sale of Joseph. Therefore the tribe of Benjamin was privileged to have the **Shekhinah*, i.e., the Temple, in its portion (Sif. Deut. 3:5, 352). None of the tribes maintained its family purity in Egypt, and all except for Reuben, Simeon, and Levi, engaged in idolatry there (Num. R. 13:8). Just as the heavens cannot endure without the 12 constellations (Ex. R. 15:6), so the world cannot endure without the 12 tribes, for the world was created only by their merit (PR 3:10). The names of the tribes are not always enumerated in the same order, so that it should not be said that those descended from the mistresses (Rachel and Leah) took priority over the descendants of their handmaids (Bilhah and Zilpah; Ex. R. 1:6).

The tribe of Zebulun engaged in trade and supported the tribe of Issachar, to enable it to devote itself to the study of the Torah; therefore in his blessings, Moses gave priority to the tribe of Zebulun (Yal. Gen. 129). All the tribes produced judges and kings, except Simeon, on account of the sin perpetrated by Zimri (Mid. Tadshe 8; see Num. 25:1–2, 14). Every tribe produced prophets; Judah and Benjamin produced kings by prophetic direction (Suk. 27b).

Whereas the tribes of Benjamin and Judah were exiled to Babylon, the Ten Tribes were exiled beyond the river *Sambatyon (Gen. R. 73:6). The Ten Tribes shall neither be resurrected nor judged; R. *Simeon b. Yoḥai said, "They shall never return from exile," but R. Akiva maintained that they would return (ARN 36:4). But see *Ten Lost Tribes. The Davidic Messiah will be descended from two tribes, his father from Judah and his mother from Dan (Yal. Gen. 160).

TRIENNIAL CYCLE, term denoting the custom according to which the weekly Pentateuchal readings on Sabbaths are completed in a three-year cycle. The triennial cycle was practiced in Palestine and in Egypt as late as 1170 C.E., whereas in Babylonia the reading of the Pentateuch was completed in one year, from Tishri to Tishri. The latter became the accepted traditional custom the world over (Meg. 29b; Maim., Yad, Tefillah 13:1).

The masoretic text of the Pentateuch has 154 divisions, known as *sedarim*. According to other traditions, however, the Pentateuch consists of 161 and even 175 portions (Sof. 16:10); the Yemenites divide the Pentateuch into 167. It has been suggested that the 154 division corresponds to the minimum number of Sabbaths in the triennial cycle and 161 to the maximum. The difference is due to the occurrence of festivals on Sabbaths when the regular Pentateuch portions were superseded by special Pentateuch readings appropriate to the festivals. The 175 division stems from the practice of completing the reading of the whole Pentateuch within a cycle of three and a half years (twice within seven years). In general, the different Jewish communities arbitrarily divided the Pentateuch, either by joining portions or dividing them. In the triennial cycle, the Pentateuch reading started on Nisan the first, which was regarded as the Jewish *New Year (see: Ex. 12:2); while the reading of each of the five books of the Pentateuch started on one of the New Years mentioned in the Mishnah (RH 1:1), as can be seen in the following list (p. 142):

The reading of the book of

Genesis started on Nisan the 1st	1st
Exodus started on Shevat the 15th	1st
Leviticus started on Tishri the 1st	2nd
Numbers started on Shevat the 15th	2nd
Deuteronomy started on Elul the 1s	3rd

The above division corresponds with biblical events narrated in aggadic legends:

(1) The creation story was read in the month of Nisan (in the first year of the cycle) as it was held that the world was created in this month (R. Joshua's view, in RH 11a).

(2) The sin of Cain (Gen. 4) was always read on the third Sabbath in Nisan (on Passover) which tallies with the legend that Cain offered his sacrifice on Passover (PdRE, sect. 21).

(3) The story of Rachel giving birth to Joseph after having been barren for years (Gen. 30:22ff.), was always read at the beginning of Tishri (in the first year) which corresponds to the legend that Rachel, Sarah, Hannah, etc., were remembered by God on Rosh Ha-Shanah (RH 10b).

(4) Exodus 12, whose subject is the exodus from Egypt and was read in Nisan (second year), coincides with the Passover festival.

(5) The reading of the Ten Commandments (Ex. 20:1–14) on the 6th of Sivan (second year) tallies with the *Shavuot festival.

(6) Exodus 34, read on the last Sabbath of Av, records Moses receiving the two tablets of the law for the second time (80 days after the 6th of Sivan). This is in accordance with the tradition that Moses spent twice 40 days on Mount Sinai. With the first two tablets he descended on the 17th of Tammuz but broke them because of the sin of the Golden Calf (Ex. 32); he then ascended for another 40 days and returned with the second two tablets on the 29th of Av.

(7) The reading of Leviticus always started (second year) at the end of Elul. Leviticus 8:1; 10:7, whose subject is the sacrificial cult of the priests in the Temple, was read on the *Day of Atonement on which the high priest performed the most sacred ritual in the Holy of Holies.

(8) Numbers (6:22ff.), always read at the beginning of Nisan (in the third year), corresponds to the biblical date of Moses' inauguration of the tabernacle.

(9) Deuteronomy 34, on the death of Moses, always read at the beginning of Adar (third year), tallies with the tradition that Moses died on the 7th of Adar.

The intention behind the triennial cycle was that the weekly portions correspond to the character of the festivals on which these are read (as may be seen from the above examples). This thematic coincidence was not always possible and did not always occur. There is, for example, no thematic correspondence between the portions to be read in Tishri (the first year) with the festivals in this month. The Mishnah (Meg. 3:5), therefore, ordered for all festivals special readings from the Pentateuch dealing with the commandments, etc., of each particular festival. Since the reading of the whole Pentateuch ended in Adar of the third year of the cycle and a few Sabbaths were left until Nisan (when the cycle started anew), the particular portions for the Four Sabbaths (*Arba Parashiyyot; Shekalim, Zakhor, Parah,* and *Ha-Ḥodesh*) were read as is customary nowadays (see *Torah, Reading of and *Sabbaths, Special).

In traditional synagogues, the Pentateuch is read in one year. *Reform Judaism (and some *Conservative synagogues) has, however, reverted to the ancient Palestinian custom of a triennial cycle. It was done in response to the spiritual need of the congregants most of whom do not understand Hebrew, and consequently, cannot follow – with proper attention – the lengthy reading in Hebrew of the entire weekly **sidrah*. The weekly reading was shortened to approximately one third. In order that the portion should not be different from that read in traditional synagogues, the first part of each weekly *sidrah* is read in the first year, the second in the next, and the third in the last year of this triennial cycle. Consequently, three different *haftarot* were provided for every standard Pentateuch portion to correspond to the central theme of the particular part of the portion read. (See *Union Prayer Book*, 1 (1924), 399–406.)

The accompanying Table: Triennial Cycle is based on a number of hypotheses, first developed by Buechler and later taken up, with significant modification, by Mann (see bibl.). According to Buechler, the triennial cycle began in Nisan. According to Mann, it began in Tishri. Both of them worked with references in the Midrash and with *genizah* fragments. There is, however, no lectionary extant which, with any certainty, can be ascribed to either the tannaitic or the amoraic period. On the contrary, all available evidence seems to point in the direction of a complete absence of a definite triennial cycle in the talmudic period – although a number of such "cycles" were definitely in existence in the post-talmudic period. During the talmudic period – whence comes the ruling that each one of the seven people, "called" to read from the Torah, must not read "less than three verses" – various congregations seem to have begun and completed the reading of the Pentateuch at different times of the year.

TRIER (**Treves**), city in Germany and formerly also a bishopric. Archaeological evidence seems to point to the presence of Jews in Trier as early as the end of the third century C.E., although the existence of a Jewish community there at the time is uncertain. Traces of Jewish commercial activity in the sixth century suggest the possibility of Jewish settlement. The first definitive evidence for the presence of a Jewish community dates from 1066, when the Jews were saved from an attempted expulsion on the part of Archbishop Eberhard through his sudden death at the altar. The Jewish community was accused of the use of black magic in order to bring about his death. On April 10, 1096, the first day of Passover, Peter the Hermit appeared before the gates of Trier armed with a letter from the Jewish communities of France to their coreligionists in Germany, requesting that they provide provisions for Peter and his crusaders for their expedition to the Holy Land. The Jewish community responded to the letter, and Peter and his followers went on their way. Sometime later the burghers of the city rose against the Jews; they discovered the community's Torah scrolls, which had been placed in a building for safekeeping, and desecrated them. In panic the Jews fled to the palace of Archbishop Egelbert; somehow they rescued their desecrated scrolls and took them along. The archbishop did his best to protect them, and the Jews hoped to remain under his protection until the imminent return of Emperor *Henry IV to Germany. A number of Jews were murdered and others committed suicide; the archbishop and his retinue were themselves attacked for shielding the Jews. Under increasing pressure from a mob outside the palace, the archbishop prevailed upon the remaining Jews to convert, including their leader, Rabbi Micah, who was converted by the archbishop himself. One year later, however, with the return of Emperor Henry IV to Germany, all of them were permitted to return to Judaism.

Other Jewish communities in the bishopric were also severely affected by the First Crusade; soon, however, the Jews of Trier returned to their homes and rebuilt their community life. The *Gesta Trevarorum* tells of a Jew named Joshua who served as a physician in the retinue of Archbishop Bruno of Trier (d. 1124). Joshua, who later converted to Christianity, was also a mathematician and astronomer. During the Second Crusade (1146), R. Simon of Trier fell as a martyr in the vicinity of Cologne; the community as a whole, however, remained undisturbed. During the course of the 12th-century, its economic position was strengthened considerably. The communal organization, known as *universitas Judeorum Treverensium*, had as its leader a so-called "Jewish bishop" (**Episcopus Judaeorum*) with considerable authority. The community possessed a cemetery, and in 1235 a synagogue and community building (*domus communitatis*). A *Judenstrasse* is mentioned at the beginning of the 13th century. The Jews occupied themselves mostly in trading and moneylending, although other occupations were known. They reached, in fact, such a level of economic well-being as to arouse the cupidity of Archbishop Henry (1260–86), who extorted a considerable amount of money from the Jews in 1285. There was some measure of cultural contact between Jews and gentiles. Lambert of Luettich, a monk at the monastery of St. Matthew in Trier, was taught Hebrew by a Jew and with the aid of his teacher succeeded in deciphering a rare Hebrew manuscript. Sources dating from the 14th century indicate that Jews continued to own houses and vineyards outside the Jewish quarter and that Christians were living on the *Judenstrasse*. The community profited from the liberal and energetic administration of Archbishop Baldwin (1307–54), who entrusted a considerable portion of his financial administration to Jewish hands. Although Jews suffered during the *Armleder uprising of 1336, its effects were limited by the prompt action of the archbishop. In 1338 he was forced to guarantee to the burghers that the number of Jewish families in the city would not rise above 56. During the *Black Death persecutions of 1349, the burghers attacked the Jews, murdering some, stealing their property, and desecrating their cemetery. The community fled in panic, although Baldwin and his successor Boehmund sought to compensate them for the expropriation of their property. It was only in 1356 that King *Charles IV gave permission for the Jews to return, although in 1354 Bishop Boehmund made Simeon b. Jacob of Trier his court physician.

By 1418, however, the Jews were expelled once more from the entire bishopric of Trier; among the properties of the Jewish community in the city that were disposed of in 1422 was a hospital. Jews did not reappear again in the bishopric until the beginning of the 16th century; in 1555 they were permitted the services of a rabbi to care for the needs of all who were

resident in the bishopric. Elector Johann von Schoeneberg expelled them in 1589, only to readmit them in 1593. In a regulation put into force in that year, a yellow *badge was prescribed for Jews to distinguish them from Christians. In 1597 a consortium of Jewish merchants headed by Magino Gabrieli were granted special trading privileges that were to last 25 years. However, in 1657, among other restrictive provisions, legislation was approved which severely limited the interest rate of Jewish moneylenders.

In 1675 Jews were accused of giving aid to French troops quartered in the city; after the French surrendered, Jewish homes were plundered and the Jewish community sustained overwhelming losses. A fast day was declared in perpetuity for the 15th of Elul to mark the event; a **Memorbuch* also dates from the period. At the head of the community at the time was David Tevele b. Isaac Wallich (d. 1691), a physician. In 1723 Elector Franz Ludwig limited the number of Jews in the bishopric to 160; in addition to some highly restrictive provisions, legislation of that year reaffirmed the authority of the rabbinate in the bishopric. A synagogue was constructed in 1762, formerly a house occupied by R. Mordecai Marx, grandfather of Karl *Marx. The French conquered the city in 1794, bringing with them civic equality for the Jews, a measure acknowledged fully by the Prussian administration only in 1850. Among the rabbis who served the community in the 19th century were Moses b. Eliezer Treves (d. 1840) and Joseph Kahn, who was rabbi at the time of the dedication of a new synagogue in September 1859. The modern community also developed a number of philanthropic organizations and an elementary school. There were 568 Jews in the city in 1871; 823 in 1893; 802 in 1925; 796 in 1933; 400 in 1938; 210 in 1939; and 450 in 1941.

The onset of Nazism brought with it accelerated emigration, aided by the efforts of Adolf Altmann, rabbi in Trier, who helped to develop a program of adult Jewish education that involved many other communities in the area as well. On *Kristallnacht*, Nov. 9–10, 1938, the synagogue was destroyed. Almost all the Jews remaining in the city in 1941 were deported to Poland and *Theresienstadt, never to return.

[Alexander Shapiro / B. Mordechai Ansbacher]

Post Word-War II

A new community of displaced persons was established after the war, and a new synagogue was erected in 1957. In 1971 there were 75 Jews living in Trier. The Jewish community numbered 61 in 1984; 54 in 1989; and 457 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union after 1990. The house where Karl Marx was born has housed a museum of his life and work since 1947. In 1996–97 the Arye Maimon Institute for Jewish History was founded at Trier University. The institute's work is focused on the research of Jewish history in central and Western Europe.

TRIER, WALTER (1890–1951), cartoonist and illustrator. Trier, who came from a Prague German family, settled in Berlin. He is best known for his witty and ironic drawings and for his illustrations of books by famous German authors, especially those of Erich Kaestner. Trier was one of the leading contributors to the German humorous weeklies *Simplicissimus* and *Lustige Blaetter* and published several collections of his drawings in volume form. He was one of the first to infuse contemporary content into "imitations" of the old masters. After escaping from Germany before World War II, he contributed to publications in England and America. His own collections included *1000 Bauernwitze* (1917), *Fridolins Siebenmeilenpferd, Fridolins Harlekinder*, and *Fridolins Zauberland,* all of which appeared in 1926.

[Avigdor Dagan]

TRIESTE, port in Friuli, N. Italy. Although Jews may have lived in Trieste before the end of the 14th century, there is no authoritative information. After the city's annexation to Austria in 1382 Jews from Germany settled there; some were subject to the dukes of Austria and some to the local rulers. Jews soon took the place of Tuscan moneylenders in the economic life of the city. The Jewish banker Moses and his brother Cazino, who lived in the Rione del Mercato, are mentioned in 1359. The Jews tended to live in the Riborgo neighborhood, then the civic and commercial center. The 15th century was a period of development for the small Jewish community. Two Jewish bankers dominated the period, Salomone D'Oro and Isacco da Trieste. In 1509 the Emperor Maximilian I granted to Isacco the position of *Schutzjude*, or protected Jew. It is important to stress the position of Jewish women, who sometimes directed the family's banking establishment. As in the other Imperial possessions, Jews were obliged to wear the yellow badge. In 1583 there was an abortive attempt to expel the Jews.

In 1620 Ventura Parente and the Grassin brothers received from the City of Trieste the concession of the title of public banker and moneylender. In 1624 Ventura Parente obtained from the Emperor Ferdinand II the title of Hoffaktor. During the 17th century Trieste's Patriciate took an unfavorable stand toward the Jews, asking the imperial authorities for their expulsion. The imperial authorities resisted the pressure and Jews were not expelled. However, in 1695 the 11 Jewish families in the city, around 70 people, were enclosed in the so-called Old Ghetto, or Trauner Ghetto. The Jews petitioned the authorities successfully for a healthier site, and in 1696 the Jewish ghetto was erected in the Riborgo neighborhood, near the harbor.

From the beginning of the 18th century the Hapsburgs adopted a mercantilist policy, which led to the development of the port of Trieste. In 1746 the Università degli ebrei, or Jewish community, was constituted. In this period there were 120 Jews living in Trieste. The most important families were the Morpurgo, Parente, Levi, and Luzzatto. In the same year the first synagogue was erected, the so-called Scuola Piccola. Maria Theresa permitted the richest Jewish families to live outside the ghetto. Moreover, Marco Levi, head of the community, received the title of Hoffaktor in 1765. In 1771 Maria Theresa granted a series of privileges to the Nazione Ebrea of Trieste. In the 18th century Jews were traders and craftsmen and some of them were factors to the Austrian court (see above). One of the most distinguished scholars of the mid-18th century was Rabbi Isacco Formiggini. Emperor *Joseph II's *Toleranzpatent* of 1782 gave legal sanction to the gradually improving condition of the Jews in Trieste, and in 1785 the gates of the ghetto were destroyed. There were around 670 Jews in 1788. In 1775 the Scuola Grande or Great Synagogue was erected on the plan of the architect Francesco Balzano. The building included also a Sephardi synagogue.

In 1796 the community inaugurated a Jewish school under the Chief Rabbi Raffael Nathan Tedesco. This school was in part inspired by the proposals of N.H. *Wessely. The first Hebrew work printed in Trieste was Samuel Romanelli's Italian-Hebrew grammar, published in 1799.

In 1796 the French under Napoleon arrived in Trieste. In 1800, 1,200 Jews lived in Trieste. From 1809 to 1813 Trieste was part of the Kingdom of Italy. Some Jews were supporters of the French Revolution and Napoleon, although Napoleon's economic blockade ruined the city's trade. Thus, when the Austrians returned in 1814, the Jewish community was relieved. Tedesco was followed by Abramo Eliezer Levi, who was the chief rabbi of Trieste between 1802 and 1825.

The 19th century was the golden age of Trieste Jewry. In 1831 Giuseppe Lazzaro Morpurgo established the Assicurazioni Generali, which dominated the economic life of the city for more than a hundred years. During the 19th century some members of the community played an active part in the Risorgimento and the Irredentist struggle which culminated in Trieste's becoming part of Italy in 1919. Trieste Jews, such as the writer Italo *Svevo and the poet Umberto *Saba, were central in the creation of the Italian intellectual world. *Il Corriere Israelitico*, a Jewish newspaper in Italian, was published in Trieste from 1862 to 1915. In 1862 S.D. *Luzzatto issued there his dirge on Abraham Eliezer Levi. In the 1850s some Hebrew books were printed at the Marinigha press, including Ghirondi-Neppi's *Toledot Gedolei Yisrael* (1853). The Jewish printer Jonah Cohen was active in the 1860s. His illustrated Passover *Haggadah* (by A.V. Morpurgo) with and without Italian translation (1864) was a memorable production.

The number of Jews increased gradually in the 19th century. In 1848 there were around 3,000 Jews, in 1869 there were 4,421, and in 1910, 5,160 Jews lived in Trieste. Most of the chief rabbis of Trieste were Italian Jews, such as Marco Tedeschi, elected in 1858, and Sabato Raffaele Melli from 1870 to 1907. The monumental new synagogue in Via Donizzetti opened in 1912 and it was inaugurated by Chief Rabbi Zvi Perez Chajes. It followed the Ashkenazi rite. After World War I Trieste was the main port for Jews from Central and Eastern Europe who immigrated to Ereẓ Israel.

[Shlomo Simonsohn / Samuele Rocca (2nd ed.)]

Holocaust Period

According to the census of 1931, the Jewish community of Trieste had 4,671 members, including 3,234 Italians and 1,437 foreigners. Census data for 1938 recorded 5,381 Jews in Trieste, belonging for the most part to the lower and middle sectors of the middle class. The racial laws at the end of 1938 caused an initial period of disorientation, including many conversions, the withdrawal of membership of many Community leaders and members, and the emigration of most foreign Jews. By 1939, however, the elected council had been replaced by one appointed by the Italian government. In October 1941, the first visible acts of real intimidation occurred. The facade of the central temple of the German rite and the headquarters of the community in Via del Monte were defaced with antisemitic slogans and red ink. Vandalism and violence recurred in July 1942, when several Fascist squads devastated the temple and assaulted defenseless passers-by. Similar incidents occurred in May 1943, when Jewish and Slavic businesses and shops were sacked. By then, the Jewish community of Trieste had no more than 2,500 members.

After the Italian armistice with the Allies on September 8, 1943, and the German occupation of Italy, Trieste and the surrounding area were incorporated into the Adriatisches Kustenland and formally annexed as an integral part of the Reich, with dire consequences for the Jews. Not all Jews were able to go into hiding before a German *Einsatzkommando* initiated the first roundup of Jews on October 9. A second roundup occurred on October 29, and a third on January 20, 1944. During the latter event, Dr. Carlo Morpurgo, secretary of the community, remained at work in order not to abandon the elderly patients at the Jewish Pia Casa Gentilomo hospice. He was arrested and deported with them to Auschwitz, where he was murdered on November 4, 1944.

In March 1944, other Jews recovering in various hospitals throughout the city, including the Regina Elena, the psychiatric hospital, and the hospital for the chronically ill, were seized. After being arrested, the Jews were taken to the Coroneo prison and, after February or March 1944, also to the Risiera di San Sabba, the only concentration camp with a crematorium in Italy. Some Jews arrested in Fiume, Venice, Padua, and Arbe were also sent to the Risiera. From October 1943 to February 1945, about 60 convoys left Trieste, all headed for the concentration camps of Central and Eastern Europe. According to estimates, Jews deported from the Adriatisches Kustenland numbered 1,235, of whom 708 were from Trieste. Of the latter, only 23 returned.

Some Jews from Trieste joined the partisans and died in combat. Sergio Forti was killed in battle near Perugia on June 16, 1944; Rita Rosana died near Verona on September 17, 1944, at the age of 22; and Eugenio Curiel, a university teacher, was killed by Fascists in Milan on February 24, 1945, just a few weeks before the liberation.

[Adonella Cedarmas (2nd ed.)]

After the war about 1,500 Jews remained in Trieste; by 1965 their number had fallen to 1,052, out of a total of 280,000 inhabitants, partly because of the excess of deaths over births. In 1969 the community, numbering about 1,000, operated a synagogue and a prayer house of the Ashkenazi rite, a school, and a home for the aged. In the early 21st century the Jewish population of Trieste was around 600.

TRIETSCH, DAVIS (1870–1935), Zionist leader and author. Born in Dresden, Germany, Trietsch was educated in Berlin and subsequently studied migration problems in New York (1893–99). There he conceived (1895) the idea of settling Jews in *Cyprus, but he pursued this notion only after attending the First Zionist Congress (1897). He opposed Theodor *Herzl's political Zionism, insisting on immediate practical settlement wherever possible in the vicinity of Palestine. He tried in vain to persuade the Zionist Movement to adopt his conception of a "Greater Palestine," which was to comprise Palestine proper, Cyprus, and *El-Arish. After negotiations with the High Commissioner of Cyprus in 1899, Trietsch brought a group of 11 Boryslaw miners to the island (March 1900). This attempt ended in failure, however, because of inadequate preparation of both the settlers and of the land. He regarded Herzl's negotiations with the British authorities for a settlement in El-Arish (1902–03) as "an acceptance by Herzl of his program without him." This led to a permanent rupture between the two men (Sixth Zionist Congress, 1903). He subsequently organized the Juedische Orient-Kolonisations-Gesellschaft in Berlin, in whose name he negotiated with the London Colonial Office (1903) concerning a settlement in Cyprus, but was turned down.

Trietsch was a delegate to the First Zionist Congress and at many subsequent ones. In 1905 Trietsch opened an Information Office for Immigration in Jaffa, with branches in other cities in Ereẓ Israel, but was unable to maintain it. In 1906 he organized and participated in an expedition to El-Arish to investigate the area for Jewish settlement with a view to reopening negotiations with the British government, but this effort, too, ended in failure. He was a member of the Zionist General Council in 1907–11 and 1920–21. Some of his suggestions regarding practical settlement in Ereẓ Israel were adopted by Zionist Congresses. At first he supported the new leadership consisting of practical Zionists (from 1911 onward), but soon fell out with them and opposed Arthur *Ruppin's "slow settlement methods." During World War I he served in the statistical department of the German army, and after 1915 he published a number of officially sponsored pamphlets in which he pleaded for collaboration between Zionism and Germany after the war. At the request of the British government, Arnold J. Toynbee opposed these ideas and pleaded (in *Turkey: A Past and A Future*, 1917) for cooperation between Zionism and the Allies. After World War I Trietsch fought for his "Zionist maximalism" with still more fervor, believing that a chance for large-scale immigration to Ereẓ Israel was at hand and that the agricultural methods of the Zionist Organization were inadequate to handle it. He suggested planned industrial development of the country in conjunction with numerous small "garden cities" and propagated these ideas at Zionist Congresses and in his periodical *Volk und Land* (Berlin, 1919).

Trietsch was coeditor and cofounder (with Leo Wintz) of *Ost und West* (Berlin, 1901–02) and with Alfred *Nossig of *Palaestina* (Berlin, 1902). He propagated his ideas in a great many books, pamphlets, and articles, including *Palaestina-Handbuch* (1907 and nine subsequent editions), *Juedische Emigration und Kolonisation* (1917), *Palaestina Wirtschaftsatlas* (1922), *Der Widereintritt der Juden in die Weltgeschichte* (1926).

TRIGANO, SHMUEL (1948–), French sociologist and intellectual, born in Blida, Algeria. A professor of sociology of religion and politics at the Nanterre University Paris x, Trigano's main purpose was to investigate the enigma of modernity and the nature of Jewish politics. By studying the Jews as agents and subjects of history, he tried to understand why Jews disappeared from the public space in the modern world in the aftermath of the Emancipation and how Jewish politics have been restored in the historical arena with the creation of the State of Israel. He developed his reflections in two directions: an analysis of modernity and an attempt to understand the essence of Jewishness, with regard to the political dimension of the world. Following an hermeneutical method, Trigano developed, from his initial *Le Récit de la disparue* (1977) to *La demeure oubliée, genèse religieuse du politique* (1982), *Philosophie de la Loi, l'origine de la politique dans la Tora* (1992), and *La séparation d'amour, une éthique d'alliance* (1998), an anthropological approach to Judaism.

He published numerous books, which are not only concerned with the Jewish sphere but also with the essence of politics and democracy as such. Assuming that the attitude of democracy towards the Jews is a key to the understanding of its very nature, he postulates that the Jewish question could illustrate the failure of the human rights theory to account for collective identity and to face the question of transcendence, which modernity can not paradoxically avoid despite the phenomenon of secularization and civil religion. Trying to pinpoint the origins of the presence and topicality of Jewishness in the modern world through Jewish history, Trigano conceives the idea of the Jewish State not as a regression to the past but as an invention of a new age. A special part of his work is devoted to French Judaism, considered as an exemplary case of the civil political status of the emancipated Jew. More recently Trigano focused on the new European antisemitism. In *Les frontières d'Auschwitz, les ravages du devoir de mémoire* (2005), he intended to demonstrate the way Europe expects the Jews to remain in the role of victims, the only recognition allowed to them. He assumes that as soon as they depart from this role, as is the case when they live in a sovereign political state, they are subjected to reprobation.

Being one of the main figures in contemporary French Judaism, Trigano was the founding director of the College of Jewish Studies at the *Alliance Israélite Universelle (1986–) and initiated the periodical *Pardès*, an European Journal for Jewish Studies and Culture (1985). In 2001, he created a research center devoted to the analysis of contemporary antisemitism. He was a president of the Observatory of the Jewish World. He also was the editor of the 4-volume series *La Société juive à travers l'histoire* (1992) intended to illustrate the permanence, unity, and continuity of the Jewish people over 30 centuries.

[Perrine Simon-Nahum (2nd ed.)]

TRIGERE, PAULINE (1908–2002), U.S. fashion designer. Trigere was born in Paris to parents who had emigrated there from Russia. As a child, she thought about becoming a doctor, but her father, Alexandre, a tailor, and mother, Cecile, a seamstress, persuaded her to learn dressmaking. She studied at Victor Hugo College, designed her own party dresses, and at 19 married Lazar Radley, a Russian-born tailor. Trigere and her brother, Robert, opened a store in Paris that became known for its smart suits and dresses, but in 1937, the looming Nazi threat forced Trigere and her family to head for New York City. In 1941, she and her husband separated, eventually to divorce. To support her two sons, she took a job as an assistant designer at Hattie *Carnegie for $65 a week. In 1942, with her brother, she opened her own business with an 11-piece collection. Her strength was being able to make dresses in the French style: instead of sketching a garment, she would actually cut the fabric to shape while it was draped on the model, wielding her scissors like a sword. It was a skill she was able to demonstrate for the rest of her life. Trigere was among the first to use common fabrics like cotton and wool in evening wear. She developed a thin wool called Trigeen that she used for 50 years. Her clothes, which combined elegance with practicality, were sold in the finest stores and became popular with such style icons as the Duchess of Windsor and Bette Davis. Trigere became known for her reversible capes and coats, and her jumpsuits, which became a fashion staple in the 1960s. In 1949 she won the first of three Coty Awards and in 1959 was inducted into the Coty Hall of Fame. In 1961 she was among the first major U.S. designers to hire an African-American model for an important runway show. She was honored by the Fashion Institute of Technology in 1992 on the 50th anniversary of her company. A year later, she closed the business, citing increasing retail consolidation as a reason. Its volume had peaked about a decade earlier at some $5 million. More honors followed: a Lifetime Achievement Award from the Council of Fashion Designers of America, induction into the Fashion Industry Walk of Fame and the French Legion of Honor. In 2001, Trigere – then 92 – went into a new business with an online retailer, designing accessories for older people: canes, pill boxes, cases for eyeglasses, and hearing aids. Although her clothes had become collectibles, she had never licensed out her name, something she said she regretted. She was a fiercely independent woman whose individual sense of style was evident not only in the clothes she designed, but in the life she lived. She learned English by sitting through multiple showings of Hollywood movies, collected turtles, practiced yoga, and never hesitated to speak her mind.

[Mort Sheinman (2nd ed.)]

TRIKKALA (**Trikala**), city in W. Thessaly, Greece. In the third and fourth centuries, Trikkala was an important Hellenistic city that probably had a Jewish population, but little is known about it. From 1421 to 1451, there were an estimated 387 Jewish families in the area, most of whom were Judeo-Greek–speaking *Romaniote Jews. After the Ottomans conquered Constantinople, they began sending Jewish sorgunim (those forcibly exiled) from Trikkala to the capital. In Istanbul,

the Trikkala Jews formed their own community and in 1540, it had ten family heads who paid the *jizya* (head tax). In 1545, there were only six family heads listed, and by the 17th century, no more traces of the community.

The Kahal Kadosh Yevanim ("Greek Community") synagogue in Trikkala confirmed the ancientness of the Jewish community, which grew during the 16th century with the arrival of refugees from Hungary, after the Ottoman conquest of Buda, Spain, Portugal, and Sicily. There were also Kahal Kadosh Sephardim and Kahal Kadosh Sicilyanim (Sicilians) synagogues in the town. While the Romaniot Jews absorbed the Iberian Sephardi exiles, eventually the Sephardim achieved communal hegemony. The refugees from Spain introduced the weaving of wool. In 1520–35, there were 1,000 Jews in the city and in the region. The Jews of the city worked in wool production, and in trading wool and hides. The Trikkala Jewish merchants had commercial relations with Larissa and Arta as well as with Venice and Ragusa (Dubrovnik).

Though **dhimmis*, they enjoyed communal autonomy and toleration from the authorities. In 1497 the community requested from the authorities exemption from the Ispenja tax, claiming that the Jews did not work in agriculture, but commerce and the crafts. Thus, they also were exempt from serving in the Janissary military units.

The Jews of Trikala were in contact with the rabbinic authorities of Salonika and Arta. Among the rabbis active in Trikkala in the 16th century were Romaniot rabbi Benjamin b. Rav Shmariya (Papo) of Arta (R. Samuel *Kalai was his student), *Benjamin b. Shmariya (rabbi of the Romaniot *kahal*), Solomon ben Maior, Menachem b. Moses *Bavli; Menachem b. Shabbetai ha-Rofeh (*av bet din*), and Eleazar Belgid.

In the failed Greek rebellion of 1770, Jews in Trikkala were robbed of their money and property. In the 18th century, the community was served by Rabbi Abraham Amarilio, author of *Sefer Berit Avraham* (1802). In 1873, the community number 150 families or 600–700 people, with Jews working as tinsmiths, moneychangers, and mainly small fabric merchants.

In 1881, Trikkala became part of the Greek sovereign state. In October King George I visited the city, stayed in the home of a local Jewish family, and was well received in a ceremony in the synagogue.

In the 1880s, the community was led by Jacob Joseph Sidis, who came in the 1870s from Ioannina and made improvements, including a boys' choir, hiring of new teachers for the *talmud torah,* renovation of two of the cities' three synagogues, and the building of a *mikveh*. At the end of the 19th century the community rabbi was Simeon Pessah, later of Larissa.

Ḥevrat Yetomot was a philanthropic society that helped poor girls, assisted in education, contributed to the *talmud torah*, assisted the Bikkur Holim society, and aided, in the religious sphere, *Tikkun Hatzot* and *Amirat Tehilim* (recitation of psalms). There were *blood libel accusations in 1893, in 1898 (followed by anti-Jewish riots), and in 1911. At the end of the 19th century there were about 800 Jews in Trikkala. In 1906, 17-year-old Yomtov Yakoel, who became a prominent Jewish community leader and lawyer in Salonika, founded the Zionist Eretz-Zion movement. Caught in hiding in Athens in 1944, he was deported to Birkenau and died as a crematorium *Sonderkommando* worker. Thirty-five local Jews fought in the Greek army in the Balkan Wars, two dying and some wounded.

In 1912, the wealthy landowner Elias Cohen housed the royal family on a visit to Trikkala. During World War II, as a result of this connection, Princess Alice (Aliki), mother to English Prince Philip, provided shelter for the widow and four sons of Haimaki (Elias's son), and was recognized as Righteous Among the Nations by Yad Vashem in Israel in the early 1990s.

In 1917–19, Judah Matitiya, edited the Greek publication *Israel,* organ of the Zionist Federation of Trikkala, Larissa, and Volos. Asher *Moissis assisted in its publication. Two large department stores in Trikkala were owned by Jews, and Lazarus Muchtar and Meir Solomon were known as wealthy local Jewish bankers. The Ohavei Tzion Zionist organization's club had an important function for the youth of the community.

In 1925, the community numbered 120 families. The Jews worked in commerce and banking. In the mid-1920s, there was a Jewish theatrical group in Trikkal.

In the Assembly of Representatives of the Jewish Communities of Greece in Salonika in 1929, the Jewish community of Trikkala was represented by the young lawyers Asher Moissis and Yomtov Yakoel (both of whom moved to Salonika in the 1930s).

On the eve of World War II the number of Jews had decreased to 500. Many local Jews fought in the Greek army against the invading Italians in Albania from October 28, 1940, until April 1940. During Italian military rule from April 1941 to September 1943, the Jews fared relatively well. After the Germans replaced the Italian military occupation in September 1943, Rabbi Kastel led more than 300 community members to the mountains under the protection of the ELAS-EAM leftist-leaning resistance movement. The Greek Orthodox clergy also assisted Jews to hide. A few days after the Nazis arrived, the communal leaders, including Abraham Baruch, were invited to the mayor's office, where the commander said they would not be deported to Poland like Salonikan Jewry and requested that they persuade the Jews who had fled to return, promising *matzot* for Passover, sugar, and travel permits to other cities, but the Jews did not agree. During the Nazi persecutions the majority of the Jews escaped to the region controlled by the Greek partisans. On March 23, 1944, the Germans spread false rumors that the partisans had killed a German commander and called a general curfew for the city. A Greek-Orthodox townsman, Alexander Tchatjigakis, warned the Jewish community that they would be deported to Poland the next day, so many Jews fled. The next day, early in the morning, remaining Jews were arrested; mostly the elderly, women, children, and a few people who returned to the city from hiding. Some 50 Jews were deported to extermination camps. In October the city was liberated from the Nazis. The Sephardi and Sicilian

synagogues were destroyed and the Romaniot synagogue was burned, but renovated after the war.

In 1946, the Jewish community numbered 73 families (267 people – of whom 65 were children (32 orphans) and 12 widows) as opposed to 492 people before the war. Twenty stores and 23 houses were returned to the Jews as well as the school and the damaged synagogue; which was in need of repair. The cemetery was in ruins and it took three years to refurbish it. Jews began to leave for Athens, Israel, and the United States. Trikkalan Jewish youth were among the founders of moshav Neveh Yemin in Israel in 1949. In 1954 the synagogue was damaged and repaired two years later with the financial help of Judah Perahia of Xanthi. In 1958 there were 123 Jews in the city and by 1967 they numbered 101.

In the 1970s and 1980s, Ovadiah Sabbas was community president and local WIZO leader Betty Haleva was community vice president. The Jews worked in the textile and clothing trade, and two prominent local Jewish families were Yesulas and Kabellis. The religious leader of the community was Moses Ganis and later Rabbi Eli Shabbetai. In the synagogue, there is a memorial tablet for the local Jewish Holocaust victims and the Jewish cemetery is situated on both sides of the interurban highway, which crosses the city. The cemetery was desecrated in neo-Nazi activities in the early 2000s. The city also has a Holocaust memorial statue.

TRILLIN, CALVIN (1935–), U.S. journalist, humorist, and novelist. Trillin, who was born in Kansas City, Mo., went to Yale University, where he was chairman of the *Yale Daily News*. After a stint in the U.S. Army, he worked as a reporter for *Time* magazine before joining the staff of the *New Yorker* in 1963, and from 1967 to 1982 he produced a series of articles called "U.S. Journal," 3,000-word articles every three weeks from somewhere in the United States on subjects that ranged from the murder of a farmer's wife in Iowa to the author's effort to write the definitive history of a Louisiana restaurant. Trillin's reporting for the *New Yorker* on the racial integration of the University of Georgia was published in his first book, *An Education in Georgia* (1964). From 1978 through 1985, Trillin wrote a humor column for *The Nation* called "Uncivil Liberties." From 1986 he produced a nationally syndicated column under the same name. He won acclaim in remarkably diverse fields of writing, writing about his family; about his adventures in eating (*American Fried: Adventures of a Happy Eater*, 1974); *Barnett Frummer is an Unbloomed Flower* (1969), short stories about trendiness in the 1960s; *Runestruck* (1977), a novel about a small town after the discovery of what could be a Viking artifact; *Killings* (1984), *New Yorker* articles on sudden death; *Travels with Alice* (1989), a book about traveling with his wife, mostly in Europe and the Caribbean; and *Deadline Poet: My Life as a Doggerelist* (1994). He also wrote and performed two one-man shows, *Calvin Trillin's Uncle Sam* (1988) and *Words, No Music* (1990). The most autobiographical of his books is *Messages from My Father* (1996), a memoir in which he discusses his father's fluency in Yiddish and the experience of growing up Jewish in the Protestant Midwest.

[Stewart Kampel (2nd ed.)]

TRILLING, DIANA (1905–1996), U.S. literary critic. Born in New York to Polish immigrants, Diana Rubin graduated from Radcliffe College. In 1927 she met Lionel *Trilling, a graduate student in literature at Columbia who was to become one of the foremost literary critics and teachers in the United States. They married in 1929. "With marriage I had entered Lionel's world," she wrote. "It was with his friends that I chiefly associated. They were not easy companions, these intellectuals. They were overbearing and arrogant, excessively competitive; they lacked magnanimity and often they lacked common courtesy. Ours was a cruelly judgmental society, often malicious and riddled with envy." These intellectuals included Alfred *Kazin, Irving *Howe, Philip *Rahv, Sidney *Hook, Delmore *Schwartz, Dwight McDonald, Hannah *Arendt, Saul *Bellow, Mary McCarthy, Clement *Greenberg, Irving Kristol, and others who helped set the intellectual agenda of the United States in the 1940s and 1950s. Diana Trilling began writing in 1941 and continued into her 90th year, despite failing eyesight, composing a 75-page article on a Welsh literary figure for *The New Yorker.* At one point, as a critic for *The Nation,* she read a novel a day for six and a half years, delivering challenging reviews on some of the most important works of the modern era: Evelyn Waugh's *Brideshead Revisited*, Robert Penn Warren's *All the King's Men*, Jean-Paul Sartre's *Age of Reason*, and George Orwell's *1984*. No novels, volumes of poetry, or short fiction bore her name, but among her writing credits were five books: three collections of essays and reviews, an impressionistic piece of journalism, *Mrs. Harris: The Death of the Scarsdale Diet Doctor* (1981), and *The Beginning of the Journey* (1984), a memoir. Her work appeared in leading magazines, including *The Atlantic, Harper's*, *The Saturday Review*, and *The Partisan Review*, to which she contributed essays. In 1975 Lionel Trilling died, and in the years that followed she worked to assure his legacy, editing a 12-volume uniform edition of his work. She also published two collections of her criticism, *Reviewing the Forties* and *We Must My Darlings* (1977).

[Stewart Kampel (2nd ed.)]

TRILLING, LIONEL (1905–1975), U.S. author, critic, and public intellectual. Born in New York City, Trilling attended Columbia University and then began teaching there. He eventually was appointed as the first Jewish assistant professor of English at Columbia University in 1939, receiving full professorship in 1948. Trilling was part of a group of largely Jewish New York intellectuals who dominated American culture and

letters in the 1940s and 1950s. He brought a nearly religious devotion to his study of literature and thought, and through his writings revived interest in many neglected authors and works. He was praised for his erudition, the elegance, clarity, and care of his prose, and his high moral thoughtfulness. He was particularly interested in the Victorian poet Matthew Arnold, whose works he examined using the methods of modern psychology. His first published book, *Matthew Arnold* (1939), gave new insight into Arnold's character. The same critical methods were evident in *E.M. Forster* (1943), *The Liberal Imagination* (1950), *The Opposing Self* (1955), *A Gathering of Fugitives* (1956), *Beyond Culture: Essays on Learning and Literature* (1965), and *Sincerity and Authenticity* (1972). Trilling's books and his essays in various journals and reviews were highly influential in intellectual circles, with his most influential book being *The Liberal Imagination*, an attempt to complicate and redeem liberalism with the addition of the imagination, ethical stoicism, and new-found ironies. His work also includes several short stories and a novel, *The Middle of the Journey* (1947), which introduced themes found in his criticism. He edited *The Portable Matthew Arnold* (1949) and *The Selected Letters of John Keats* (1951), and wrote *Freud and the Crisis of Our Culture* (1955). He often returned to studies involving Freud, and later co-edited with Steven Marcus *The Life and Work of Sigmund Freud* (1961).

Trilling did not often deal with Jewish subjects in an overt manner, and many other Jewish American scholars of the period, including Irving Howe and Alfred Kazin, believed that he was uncomfortable with his Jewish origins. However, early in his career, in the 1920s, Trilling wrote short stories focused on Jewish American identity for the humanist *Menorah Journal*, and he continued to write on Jewish writers and Jewish themes throughout his career. In "Wordsworth and the Rabbis" (1955), he explored what he saw as a common quality in Wordsworth's thought and Rabbinic Judaism: namely, devotion to a divine object – Nature for Wordsworth and Torah for the rabbis. In an essay on the Russian-Jewish writer Isaac *Babel (in the introduction to Babel's *Collected Stories*, 1961), he observed that Babel, the Jew who wrote about a Jew among the Cossacks, was painfully aware of the dialectic of Cossack and Jew, body and mind, society and self. Trilling was also interested in the problems of antisemitism facing American Jews, but only as far as these problems worked to exclude Jews from public life. He also served at Columbia as a supportive mentor to numerous important Jewish writers, including Allen *Ginsberg, John *Hollander, Steven Marcus, and Norman *Podhoretz. Trilling's wife, the literary critic Diana (Rubin) *Trilling (1905–1996), wrote *Claremont Essays* (1964) and edited works by D.H. Lawrence. She headed the American Committee for Cultural Freedom (1955–57).

TRIOLET (Blick), ELSA (1903–1970), French novelist. Born in Moscow, and a student of Maxim Gorki, Elsa Triolet first wrote in Russian. She settled in France, where she married the French poet Louis Aragon whose poems, *Les yeux d'Elsa* (1943) and *Elsa* (1959), she inspired. Her first book in French, *Bonsoir Therésè* (1938), revealed her narrative and stylistic gifts. Her novels *Mille regrets* (1942), *Le cheval blanc* (1943; *The White Charger,* 1946), and *Le premier accroc coûte deux cents francs* (1945; *A Fine of 200 Francs*, 1947, a winner of the Prix Goncourt), combined social and political concern with inventiveness, wit, and charm. Elsa Triolet's chronicle of the Resistance, *Les Amants d'Avignon* (1943), deals with serious, even somber, subjects with an unusual lightness. Her communist ideology is felt more strongly in *L'Inspecteur des Ruines* (1948; *The Inspector of Ruins*, 1953), *Le Cheval Roux* (1953), and *Le Rendez-vous des étrangers* (1956). However, in *Le Monument* (1957), the balance between social ideology and aesthetic approach was restored. In the trilogy, *L'Age de nylon* (*Roses à crédit*, 1959; *Luna-Park*, 1959; and *L'Ame*, 1963), Elsa Triolet revealed new breadth and power. *Le Grand Jamais* (1965), a meditation on death, displays considerable depth and richness of technique. She never lost touch with Russian literature, translated many of Chekhov's plays, and in 1939 published a study of the poet Vladimir Mayakovski, who was her brother-in-law.

BIBLIOGRAPHY: J.P. Madaule, *Ce que dit Elsa* (1960).

[Denise R. Goitein]

TRIPOLI, port in N. *Lebanon (Ar. **Tarabulus al-Sham**; called in Hebrew sources *Sinim*, on the basis of Gen. 10:17). From the seventh century there was a Jewish community in the town, although it never was large. At the beginning of the Arab conquest, Muʿāwiya, the *Umayyad governor of *Syria, established a garrison of Jewish troops in the harbor fortress to guard it against Byzantine attacks. At the beginning of the 11th century – after Syria came under *Fatimid rule – the caliph al-Ḥākim imposed severe restrictions on non-Muslim communities; as a result the Tripoli synagogue was turned into a mosque and several Jewish houses were destroyed. When the decrees were abolished, the Jews asked for the return of the synagogue; the Tripoli Muslims, unlike those in other towns, refused their demand, claiming that the place had already become a Muslim sanctuary. The Jews in turn asked for a royal permit to build a new synagogue. A document from the community, dated 1079, and which is signed and witnessed by the local *bet din*, has been preserved. There were Jews from Tripoli who immigrated to *Egypt in the Arab period. During the First Crusade, R. *Abiathar b. Elijah Ha-Kohen, the Ereẓ Israel *rosh yeshivah*, took refuge in Tripoli and sent a letter from there.

After its conquest by the crusaders in 1109, Tripoli became the capital of an independent principality, but remained a busy port and industrial center. The Jewish community continued its existence throughout the period of crusader rule. *Benjamin of Tudela, the 12th-century traveler, reported that there were many Tripoli Jews among the victims of the earth-

quakes that struck Syria in the middle of the 12th century. In 1289 the town was captured by the *Mamluks, who razed it and built a new town on a nearby hill and at its base. The Jewish community reestablished itself on the new site. During Mamluk rule there were *Karaites and Samaritans in the town, in addition to the Rabbanite Jews. In a letter written in 1489 R. Obadiah of Bertinoro reports that there were 100 Jewish families living in Tripoli at the time, but this figure seems exaggerated. At the end of the 15th century the Spanish scribe Abraham ha-Sefaradi lived in the city. In the 16th century Sephardi Jews came to settle in Tripoli and some became wealthy merchants. According to R. Moses Basola there were 100 Jewish households (400 people) in Tripoli in 1521, some of which were Mustaʿarabs and the others immigrants from *Spain and Sicily. The Jews owned shops and many of them were merchants and workmen. They had one synagogue. Tripoli rabbis are mentioned in the responsa dating from this period. In mid-16th century Isaac Mishan was the rabbi of the town and was followed by R. Samuel ha-Kohen and by the latter's son, R. Joseph ha-Kohen, who officiated until 1590. At the beginning of the 17th century Tripoli Jews suffered from the oppressive rule of Yūsufoglu Seyf Pasha and many left. A small community remained and is mentioned in the diary of a Hebron emissary who visited the town in 1675. The community went into a further decline during the 19th century due to the economic decline of the city and the emigration from Tripoli of many local Jews heading for *Beirut, *Aleppo, and other cities. In 1824 the traveler David D'Beth Hillel visited the city and found there 15 Jewish families who had a little synagogue. Yehoseph Schwarz noted 112 Jewish families in Tripoli. In 1843 there were only 11 Jewish families in the city, numbering 50 people. The head of the community at that time was Isaac, an oil merchant. The majority of the Jews were poor. Eliezer L. Frenkel visited the city in 1856 and found 17 families (80 people) there. The older graves survived 400 years. The Jews of Tripoli spoke Arabic. The community had no *talmud torah*. There were a few merchants who participated in international trade. On the eve of World War II only four Jewish families were left.

[Eliyahu Astor / Leah Bornstein-Makovetsky (2nd ed.)]

TRIPOLI, port city of *Libya. Tripoli was built by the Phoenicians in the seventh century B.C.E. They called the town Wiat (Latin Oea). Together with its two neighbors, Sabratha and Leptis (Homs), the town was included in the Greek designation Tripolis (i.e., three towns); they all paid tribute to Carthage. There is little information available on the Jews of Tripoli during the Roman and Byzantine periods. A Roman road map from the fourth century indicates a Jewish locality named Scina (or Iscina) *Locus Judaeorum Augusti* ("Scina, locality of Jews belonging to the emperor") in the vicinity of Oea. They were probably captives. Converts from Libya are mentioned at the end of the fourth century (TJ, Kil. 8:3). There was also a Jewish community in Oea during the fifth century.

The sources for the Arab period are also very scarce. During the second half of the 11th century, there was a *bet din* in Tripoli which was independent of the Palestinian one. The Jewish community suffered greatly under the rules of *Spain and the Knights of Malta (1510–51), but prospered again with the Ottoman conquest (1551) when many Jews from the small rural communities settled in Tripoli. It seems that at the end of the 16th century descendants of the Spanish Jews expelled from Christian Europe settled in Tripoli; during the 17th century they were joined by Jews from *Leghorn (Livorno, referred to as Gornim) most of whom were merchants of Sephardi origin. During the reign of the Turkish Qaramanlī dynasty (1711–1835), Tripoli became a haven for Jewish refugees from *Tunis (1756) and *Algiers (1805). Jews played an important role in the Trans-Saharan trade with Europe and the African continent, while others held diplomatic and consular positions. In 1705 and 1793 the Jews of Tripoli were saved from the danger of extermination by foreign invaders and two local Purim days were fixed to commemorate these events: Purim ash-Sharif on 23 Tevet and Purim Burgul on 29 Tevet, respectively.

In 1835, when Tripoli once more came under the direct rule of the *Ottoman Empire, there was a further improvement in the social and legal status of the community. The kingdom of *Italy – from its establishment in 1861 – attempted to wield its influence in Tripoli, especially among the Jews, many of whose big traders had strong economic and social ties with Italy. The community was divided between the traditionalist conservatives, who generally supported the Muslim authorities, and those who favored European culture and consequently Italy. The Italian influence increased during the period of Italian rule (1911–43), when the Jews enjoyed complete emancipation except for the World War II period. They engaged in the crafts and commerce as builders, carpenters, blacksmiths, tailors, cobblers, and wholesale and retail merchants. The gold- and silversmith crafts, as well as the textile trade, were entirely controlled by the Jews. In 1943 the Jews of Tripoli numbered about 15,000 (for the World War II period, see *Libya). In November 4, 1945, riots broke out with the Arabs attacking their Jewish neighbors while the British authorities were slow to intervene. During these riots 120 Jews were murdered in Tripoli and its vicinity, hundreds were injured, and a great deal of property was looted. As a result of these events, a secret Jewish defense organization was formed

with covert help from Palestine and small arms were acquired. When riots again occurred in June 1948, there were some Jewish victims, but the Jews were ready, fought back, and killed many of their attackers.

Religious and Communal Life

The community of Tripoli held the exclusive leadership over the Jews of the country. From the middle of the 18th century the presidents of the community represented Libyan Jewry before the government and were empowered to inflict corporal punishment and imprisonment. During the second period of direct Ottoman rule (1835–1911), these presidents attended the council meetings of the governor.

The revival of Jewish learning and the establishment of community *takkanot* (regulations) are attributed to R. Simeon *Labi (mid-16th century). In 1663 Abraham Miguel *Cardozo, who was later one of the leaders of the Shabbatean movement, settled in Tripoli. From the middle of the 18th century several *dayyanim* and prominent *ḥakhamim* of Tripoli came from *Turkey and *Palestine, returning home after a period of office in Tripoli. In 1749 R. Mas'ūd Hai Rakah, an emissary from Jerusalem, arrived in Tripoli. He was joined by his son-in-law R. Nathan Adadi, who was born in Palestine and returned there in his old age. His grandson, Abraham Ḥayyim Adadi, settled in Tripoli after the earthquake in *Safed in 1837 and accomplished a great deal as *dayyan* and *ḥakham* of the community. He also retired to Safed in his old age. After his death, the Ottoman government in Istanbul appointed Elijah Ḥazzan as *ḥakham bashi* (chief rabbi) (1874–88) by royal *firman* (order). The latter was also the representative of Tripolitanian Jewry before the government. The Italian government at first continued this tradition and appointed R. Elia Samuele *Artom to this position (1920–23).

Jews lived in two exclusively Jewish neighborhoods within the walled old city of Tripoli, though many carried out their business in trade in specific streets in the Muslim parts of town. With the establishment of new neighborhoods outside the walled city, wealthier Jews moved there and lived in mixed neighborhoods with Italians and Muslim Arabs.

[Haïm Z'ew Hirschberg / Rachel Simon (2nd ed.)]

Contemporary Period

Approximately 20,000 Jews lived in Tripoli in 1948. Following mass immigration to Israel in 1949–52, only 6,228 Jews remained, comprising 3% of the town's population of 198,000, according to the 1962 census. The majority of the Jews who remained after 1962 were wealthy merchants who were closely connected with Italy and spent part of the year there. After the riots that occurred in Tripoli during the Six-Day War in 1967 (see *Libya), most of the Jews immigrated to Italy and some to Israel. In 1970 there were only several dozen Jews living in the town and none by the end of the century.

The Tripoli community was headed by a committee, whose subcommittees provided services such as aid for paupers and dowries for brides (to help poor girls marry). The committee's incomes derived from the gabelle (Qābilah), a tax on kosher meat, the sale of unleavened bread, and from community dues. In 1916 the Zionist organization gained 11 out of 31 seats in the committee. Due to internal conflicts, the Italian authorities dispersed the committee in 1929 and appointed an Italian non-Jewish official to administer the affairs of the community. Only 700 paid dues in 1948, their number having fallen from 2,300 in 1944. Spiritual affairs were conducted by the chief rabbi, who also headed the rabbinical court of three members. The first European school in Tripoli was established in 1876 by Italian Jews in response to the local initiative of Jews with economic contacts with Italy. This was followed by a school run by the Paris-based *Alliance Israélite Universelle in 1890. The latter was attended by 70 pupils in 1949 with the number of pupils rising to 601 in 1951, but after the mass immigration to Israel, enrollment fell to 129 in 1953 and to 38 in 1960 when the Alliance school closed down. In addition, in 1950 the town possessed a *talmud torah*, with 371 pupils, a Youth Aliyah school with 68 pupils, and a school with 300 children of Jews who had moved from villages to Tripoli. A total of 1,800 Jewish children attended Italian schools. Emigration reduced the number of synagogues from 30 in 1948 to seven in 1951. The branch of the Maccabi Zionist sports and culture organization, which functioned in Tripoli from 1920, was closed in December 1953, as was the bureau of the Jewish Agency for Israel in January 1953, after having functioned there for four years.

For further information, see *Libya.

°**TRISTRAM, HENRY BAKER** (1822–1906), Anglican theologian, archaeologist, and naturalist whose work dealt with Palestine. Born in Eglingham, Northumberland, England, and educated at Oxford, Tristram became an Anglican vicar. He served as secretary and army and navy chaplain to the governor of Bermuda (1847–49), rector of Castle Eden near Durham (1849–60), vicar in Greatham (1860–74), and resident canon at Durham Cathedral. Delicate health forced him to spend winters in warmer climates such as North Africa, the Sahara, and the Far East. He visited Palestine several times from 1861 onward. In 1879 Tristram was offered by Disraeli the Anglican Bishopric of Jerusalem but declined. During his visits to Palestine he inspected missionary establishments and at the same time carried on geological, botanical, and zoological research, which earned him the title of "father of the nature study of Palestine."

Apart from numerous articles in periodicals, Tristram's published work concerned with Palestine included *The Land of Israel, a Journal of Travels with Reference to Its Physical History* (1865, and many editions), *Natural History of the Bible* (1867), *Land of Moab* (1874), *Pathways of Palestine* (1882),

Fauna and Flora of Palestine (1884), and *Eastern Customs in Bible Lands* (1894).

[Aviva Rabinovich]

°**TRITHEMIUS, JOHANNES** (**Johann Heidenberg of Tritheim**; 1462–1516), German churchman, scholar, and alchemist. Born in Trittenheim, he entered the Benedictine order in 1482 and became abbot of Sponheim three years later. Trithemius, who endeavored to reform the monastic system and to promote the "new learning," established a famous library at Sponheim containing manuscripts in five languages, mainly Hebrew and Greek. It was visited by many of the leading scholars of the age, notably Johann *Reuchlin (1496). Trithemius published several works, such as a *Catalogus scriptorum ecclesiasticorum* (1494) and *De viris illustribus Germaniae* (1495), but is best remembered for two celebrated works on magic, *Polygraphia* (1507) and *Chronologica mystica* (1508). Though no Hebraist, the abbot dealt in these books with subjects such as numerology, planetary influences, and the Kabbalah. He immersed himself in alchemy and occult sciences and was eventually condemned and deposed from office.

An opponent of the Inquisition, in 1510 he defended the Jews against charges of profaning the Host and of ritual murder (see *Blood Libel). Trithemius greatly influenced the astrologer and alchemist Henry Cornelius Agrippa (1486–1535), who wrote a controversial defense of magic, *De Occulta Philosophia* (Cologne, 1531; *Three Books of Occult Philosophy*, London, 1651), the last part of which drew on Reuchlin and the Kabbalah. Both Trithemius and Agrippa further influenced the celebrated philosopher and alchemist Paracelsus (Theophrastus Bombastus ab Hohenheim, 1493–1541). The careers of Trithemius and his two disciples became fused in popular imagination to produce the tragic figure of the legendary magician Faust.

[Godfrey Edmond Silverman]

TRIVALE, ION (originally **Iosef Netzler**; 1889–1917), Romanian literary critic. His *Cronici literare* (1915) and *Vina Războiuliu de Azi* ("War Guilt of Our Days," 1915) were outstanding works of criticism hailed by the leading pundits. Trivale also published a volume of translations from Mark Twain. His death in action during World War I robbed Romania of one of its most promising critical essayists.

°**TRIVETH (Trevet), NICHOLAS** (**Trivetus**; 1257/65–1334 or after), English theologian and historian. A Dominican preacher, Triveth taught at Oxford University and is best known for his English chronicle work, *Annales sex Regum Angliae*, covering the years 1136–1307 (published in Oxford, 1719). He also wrote a commentary on St. Augustine's *De Civitate Dei* (c. 1468–73). Many of his theological writings, manuscripts of which are in various Oxford and Cambridge libraries, reveal Triveth's extensive knowledge of Hebrew and rabbinic literature.

Outstanding among these is his commentary on Jerome's translation of the Psalms (*In Psalterium*, written 1317–20; Bodleian, Oxford). Triveth, a pioneer English Hebraist and the first recorded student of *Maimonides in England, often quotes the *Guide of the Perplexed*. His commentary was used by another medieval English Hebraist, Henry of Cossey, who was Triveth's contemporary at Cambridge. Other works by Triveth include *De Computo Hebraeorum*, and commentaries on Genesis, Exodus, Leviticus, and other books of the Old Testament. He lived on the Continent from about 1300 until 1314.

TRIWOSCH, JOSEPH ELIJAH (1855–1940), Hebrew writer and biblical commentator. Born in Vilna, Triwosch grew up in its Haskalah atmosphere. He first published poems and short stories – which were among the earliest Hebrew modern fiction – in *Ha-Levanon* (1873). His story "*Ha-Lita'i*" (in: *Ha-Shaḥar*, 10 (1880)) and especially his book *Dor Tahpukhot* (1881) made a great impression. His stories "*Din ve-Ḥeshbon*" (1895) and "*Pesi'ot Ketannot*" (1904) appeared separately. In addition to his stories he also published over the years articles and feuilletons, mainly in *Ha-Zeman*. After World War I, Triwosch taught at the Hebrew secondary school of Vilna. In his last years, he also engaged in biblical and philological research.

His translations into Hebrew include many works of world literature, among them Tolstoy's *War and Peace* (1921–24) and *Anna Karenina* (1918–22). He wrote the major part of the commentary, as well as the introductions, to the individual books of *Mikra Meforash* (1909, and after), a project of biblical exegesis, which he edited together with N. Lewin, D. Lewin, and D. Nottick. Triwosch also published an anthology of medieval Hebrew literature (1925) together with M.Y. Nadel.

[Getzel Kressel]

TRNAVA (Hung. **Nagyszombat**; Ger. **Tyrnau**), city in Slovakia. There were Jews in Trnava from the 14th, perhaps even the 12th century, making it one of the oldest Jewish communities

in ancient Hungary. Economic life was organized in guilds, which would not accept Jews. Fierce competition developed between the guild members and the Jews. Adverse relations prevailed in wine production and trade as well. The local vineyard owners wanted a monopoly to dictate prices; but the Jews imported wine, reduced the price, and thus evoked hostility (1471–86).

In the second half of the 14th century, Rabbi Eisig (Isac) Tyrnau officiated. He wrote the *Sidur ha-Minhagim*, a manual of Sabbath prayers used for centuries by Slovak, Czech, Hungarian, and Austrian Jews.

In the late 15th century, the burghers established a ghetto, locking the Jews in and depriving them of free movement. In 1539 a *blood libel was invented, and several Jews were executed. Hapsburg King Ferdinand ordered all Jews expelled. Jews were prohibited from staying in or even passing through Trnava. Only the few Jewish students of the local university could stay in the town.

In 1717, under royal insistence, Jews were allowed to pass through the city. Emperor Joseph II permitted the family of Joseph Loeb Wolf to live in the city; they were later joined by three other families. Encountering great hostility, they sometimes had to be protected by the military. In 1801 Wolf appealed to the court in Vienna to be allotted land for a cemetery. From that date, the *ḥevra kaddisha* was established in Trnava. In 1790 there were 78 Jews in the town. Until 1855, the community was under the jurisdiction of the nearby congregation Cifer, where Rabbi Simeon Sidon (1815–1891) resided. In 1855 he moved to Trnava. In 1814 a synagogue was erected. In 1855 the first Jewish school was installed. In 1848 a wave of plundering of Jewish property swept the city. Several neighboring communities joined the Trnava congregation. The Jewish school expanded in 1864. The next year, the community numbered 524. It was recognized by local and state authorities, which supervised its administration. After the 1868 Congress of Hungarian Jewry, the congregation chose the *status quo ante trend, refusing to join either the Orthodox or the Reform. In 1891 it erected an impressive synagogue and owned a *mikveh*. That year, Rabbi Sidon died. Five years later, Rabbi Mayer Maximilian Stein assumed the position, holding it until 1934. Among his achievements, he compiled a book about Hungarian rabbis.

In 1881, part of the congregation split and established an Orthodox congregation. It established its own school, *mikveh*, and synagogue (1914). It founded a renowned yeshivah, under the leadership or Rabbi David Unger (1885–1944). In 1930 it moved to Nitra.

In 1918 the Czechoslovak Republic was founded. In its first month, the new state saw a wave of violence. The population looted the property of the wealthy and the followers of the previous regime. But the main target was Jewish property of both the rich and poor.

In the 19th century, Jews were deeply engaged in the economic life of the city, and Jewish entrepreneurs established or advanced several branches of industry, such as breweries, sugar refineries, and confectionaries, providing employment for hundreds; their products were sold at home and abroad. Textile mills and ironworks also provided jobs. Jewish physicians and lawyers were part of the expanding middle class, which turned Trnava into a modern town.

The Zionist movement had deep roots in the community. Samuel Diamant participated in the First Zionist Congress in Basel in 1897; the following year he and friends founded Beit Yaakov. The Jewish party, supported by the Zionists, played an important role in public and municipal life. Both congregations developed social and philanthropic organizations; cultural activity was promoted by many clubs and organizations.

In 1830 there were 84 Jews in the city. In 1850 the Jewish population grew to 200; in 1880 there were 1,325 Jews. In 1904 they numbered 1,715; in 1910 there were 2,126. In 1930 there were 2,728.

Trnava was one of the Slovak centers of antisemitism. The first antisemitic party in Slovakia, the White Brotherhood (*Biel Bratstvo*), was founded there; it published "*Streicher-type" literature. The vicious antisemitism of this small organization influenced the Slovak storm troopers, the Rodobrana, and the Hlinka Guard. In December 1938, the status quo synagogue was torched by the mob.

Trnava was one of the first Slovak cities to deport Jews to extermination camps in Poland in 1942. In 1941 the Jewish population was augmented by hundreds of Jews expelled from Bratislava. The first transport to leave Slovakia departed from Trnava on April 12, 1942. Altogether, some 2,500 Jews were deported from Trnava.

In 1947 there were 336 Jews in Trnava. After the war, the status quo synagogue was made into a memorial for the murdered Trnava Jews. During the Communist regime, the memorial was destroyed. The synagogue was reconstructed and is used by the local art museum for exhibits. Most of the surviving Jews emigrated after returning to Slovakia. After 1989, some 15 Jews lived in Trnava.

[Yeshayahu Jelinek (2nd ed.)]

TROKI (Lith. **Trakai**; Ger. **Traken**), city in S.E. Lithuania; annexed to Russia after the third partition of Poland (1795), under Polish rule from 1922 to 1939. Troki is known as the site of an extended struggle between *Karaites and *Rabbanite Jews. It was the most ancient and important of the Karaite communities in the kingdom of *Poland-Lithuania, having apparently been founded by Karaites brought from the Crimea by the Grand Duke of Lithuania, Witold (Vitovt). In 1388 Witold gave the Troki Karaites a charter of rights (in which they

were called Jews) which assured them the status of freemen, commercial and professional freedom, religious liberty, and the right to their own jurisdiction. These privileges were confirmed and even extended by the Lithuanian dukes and Polish kings of the 15th to 17th centuries. In 1441 Casimir IV (see *Poland) granted the status of a city with *Magdeburg rights to that half of Troki occupied by the Karaites, under a special judge who was to deal with their internecine quarrels. After 1625 some Rabbanite families settled in Troki and engaged in trade, but in 1646 the Karaites obtained from Ladislaus IV an order banning those Jews from living in Troki and competing with the Karaites in commerce.

The Karaites of Troki, who up to recent times spoke a peculiar Tatar dialect, were comfortably situated, some of them becoming very wealthy. Although they were expelled along with the Jews of Lithuania in 1495, they resettled after the decree was canceled in 1503. They cooperated on many occasions with the Rabbanite communities in matters of taxes and confirmation of privileges, and lent Troki charters of rights to those communities for purposes of intercession with the authorities. The representatives of Troki were the acknowledged leaders at the councils of all the Lithuanian Karaites. The regulations of the all-Lithuanian Karaite Council, which met in Troki in 1553, were handed over to the heads of the Rabbanite communities for their approval in 1568, when the latter assembled at *Grodno. In 1579 the Karaite community of Troki was called on to join the discussions of the organization of Lithuanian Jewish communities concerning taxation; during the activity of the Council of Lithuania (see *Councils of the Lands), Troki paid the royal taxes through the Council. Up to the *Chmielnicki massacres of 1648 good relations obtained between the Karaites of Troki and the communities of Lithuania. Among the learned Karaites of Troki in the 15th and 16th centuries were Isaac b. Abraham *Troki, author of *Ḥizzuk Emunah* (against Christianity); his pupil Joseph b. Mordecai *Malinovski; *Zerah b. Nathan; Ezra b. Nisan (d. 1666); and Josiah b. Judah (d. after 1658). The last three were influenced by Joseph Solomon *Delmedigo.

Troki was so severely affected by the Russian-Polish struggle over the Ukraine in 1654–67 that by about 1680 there were no more than about 30 families in the declining Karaite community, divided by disputes with the other Karaite communities and with the Council of Lithuania regarding taxation demands. With the encouragement of King John III Sobieski, in 1688 a number of householders moved from Troki to Kukizov (Krasny Ostrov) near Lvov, to establish a Karaite community there. At the beginning of the 18th century Troki was again hit by war, famine, and plague, so that only three Karaite families remained. About that time another conflict broke out over the Rabbanites' right of domicile (permission was granted in the end). But in 1765 there were about 150 Rabbanites and 300 Karaites in Troki and its environs.

After Troki passed to Russia, many Jews who had been expelled from the villages settled there in 1804. In the same year the Karaites began to fight for the expulsion of those refugees, and in 1835, after protracted legal debates, the Rabbanites were ordered to leave the city within five years. In 1862 this order was rescinded and the Rabbanites returned to Troki. In 1879 there were about 600 Karaites there and in 1897, 377 Karaites and 1,112 Rabbanites (out of a total population of 3,240). Some of the Troki Karaites left the town and established a new community in Vilna. In the 19th and 20th centuries relations between Karaites and Jews were strained and hostile.

[Mordekhai Nadav]

Before the outbreak of World War II, there were about 300 Jews in Troki. The Jewish community was liquidated on Sept. 30, 1941. Only the Karaite community remained, and according to the 1959 Soviet census there were 5,700 Karaites in Troki. After the war the Jewish community was not reconstituted.

TROKI, ISAAC BEN ABRAHAM (c. 1533–c. 1594), *Karaite scholar, born in Troki (according to Mann's hypothesis, he was born and died eight years earlier than the above dates). Troki's learning earned him the respect and deference of his fellow Karaites, and his knowledge of Latin and Polish enabled him to hold conversations on theological subjects with Roman Catholic, Protestant, and Eastern Orthodox clergymen, as well as with Socinian and other sectarian adherents. The result of these discussions was his famous apology for Judaism entitled *Ḥizzuk Emunah*. Troki himself did not live to complete the work and his pupil Joseph b. Mordecai *Malinovski (Troki) supplied it with preface and index.

Troki's reasoned defense of Judaism and his penetrating examination of the vulnerable points of Christian tradition and dogma caused his work to achieve immediate popularity. It was circulated in manuscript by interested Jewish readers, and each copyist felt free to modify the text according to his own views, so that at present, pending the discovery of more authentic manuscripts, it would probably be impossible to restore Isaac's original text in its entirety. In about 1629 *Zeraḥ b. Nathan of Troki offered the work to *Manasseh Ben Israel for publication at the latter's press in Amsterdam, but it was not printed there (presumably Manasseh declined the offer). Several decades later, another manuscript copy, apparently amended by a *Rabbanite copyist, fell into the hands of Johann Christoph *Wagenseil, who published it with a Latin translation and an extensive refutation in his *Tela ignea Satanae* ("The Fiery Darts of Satan"; Altdorf, 1681). The Latin version made Troki's work accessible to wider Christian circles, and some of his arguments were later taken over by the 18th-century anticlerical writers; Voltaire mentions the *Ḥizzuk Emunah*

as a masterpiece of its kind. Troki would probably have been dismayed at this notoriety; he no doubt intended to have his work circulate among Jewish scholars only.

Wagenseil's text of the *Ḥizzuk Emunah* was reprinted for Jewish use at Amsterdam in 1705, and a Yiddish translation was printed there in 1717. An English translation by Moses Mocatta, uncle of Sir Moses Montefiore, was issued at London in 1851, with the statement on the title page "Printed but not published" (republ. 1970 with introd. by T. Weiss-Rosmarin). A German translation was published by David Deutsch (with the Hebrew text; 2nd edition, Sohrau, 1873). Among other editions, one appeared in Calcutta in 1846, and another in New York in 1932.

Some of Troki's hymns are included in the official Karaite prayer book. He is also said to have composed some works on Karaite ritual law.

[Leon Nemoy]

TROTSKY (Bronstein), LEV DAVIDOVICH (Leon; 1879–1940), Russian revolutionary, Soviet and Communist leader. Trotsky was the son of a Jewish farmer of Ivanovka, Ukraine. He studied mathematics at Odessa University, but gave up his studies to devote himself to revolutionary activities and joined the illegal Social Democratic Party in 1896. Arrested by the czarist authorities in 1898 and sent to Siberia, he escaped to England in October 1902, arriving on a forged passport issued in the name of "Trotsky." In London he cooperated with *Lenin, *Martov, and *Axelrod in editing the Social Democratic organ *Iskra*. At the second congress of the Russian Social Democratic Party in 1903, Trotsky attacked Lenin and supported the Mensheviks. In 1904 he left *Iskra* and published a pamphlet *Nashi Politicheskiye zadachi* ("Our Political Tasks"), in which he again attacked Lenin, exposing the dictatorial tendencies of the Bolsheviks. He became an independent socialist and worked for reconciliation between the various factions. At that time, under the influence of Helphand (Parvus), he formulated the theory of permanent revolution, according to which a bourgeois revolution in Russia would, by its inner momentum, lead quickly to the socialist stage, even before the socialist revolution in the West.

Trotsky returned to Russia at the outbreak of the 1905 Revolution and became a leader of the revolutionary workers' council (soviet) in Petersburg. He was arrested while chairing a meeting of the council and deported to Siberia a second time. Again he escaped and arrived in London in 1907 to take part in the congress of the Social Democratic Party. Later he moved to Vienna where he lived for several years as a correspondent for the popular liberal newspaper *Kiyevskaya Mysi* and wrote numerous articles devoted mainly to revolutionary theory.

At the outbreak of World War I Trotsky left for neutral Switzerland and wrote a detailed exposition of his anti-war policy entitled *Der Krieg und die Internationale*. He went to Paris in November 1914 to propagate his ideas in the émigré newspaper *Nashe Slovo*. Expelled two years later, he went to New York.

Trotsky returned to Russia shortly after the outbreak of the Revolution of February 1917, and was given a tremendous welcome by the Petrograd workers. He now cooperated with Lenin. Kerensky's provisional government arrested him, but he was soon released. While in prison he was elected to the Central Committee of the Bolsheviks. He also became head of the Petrograd Soviet and of its Military Revolutionary Committee. Trotsky voted for the armed insurrection at the decisive meeting of the Bolshevik Central Committee. He directed the operation of the armed uprising on November 7, when the members of the provisional government were arrested and Soviet rule established. From then on Trotsky was one of the main organizers and leaders of the October Revolution and the Soviet regime, and played a part second only to that of Lenin. He became people's commissar for foreign affairs and head of the Russian delegation at the Brest-Litovsk peace talks. It was during this period that Trotsky and Lenin clashed over the question of peace with Germany. Trotsky, believing the German revolution to be imminent, was against signing a peace treaty which would give imperial Germany large parts of Russian territory; he proposed to stop the war unilaterally, but not to make peace under these conditions, coining the formula, "neither war nor peace." But the more skeptical Lenin insisted upon signing the peace treaty in order to save the revolution from a renewed Russo-German war.

In March 1918, Trotsky became people's commissar for military affairs, organizing the Red Army and directing military operations on the various civil war fronts from his famous armored train. After the bloody suppression of the Kronstadt fleet mutiny, aimed against the Bolshevik dictatorship, he took the salute at the victory parade in April 1921. He also served as people's commissar for transport and was responsible for preventing the complete collapse of the railway system.

In internal party debates during Lenin's lifetime, he expounded a harsh "left-wing" approach to the problems of the legitimacy of revolutionary terror against the regime's opponents, how to induce the peasants to supply the cities with food, and labor discipline in the nationalized industry.

After Lenin's death in 1924, however, Trotsky's position in the Communist hierarchy weakened quickly as a result of a campaign by party veterans aimed at discrediting him. He fought back with great determination. He headed the semilegal left-wing opposition in the party and even enjoyed, from time to time, demonstrative support, mainly from younger party members and students. Stalin, however, played the various leaders and factions against each other until he assumed sole control of the party machine, and within two years succeeded in ousting Trotsky from the political life of both the Soviet Union and the Communist International. In January 1925, Trotsky was forced to resign from the Ministry of War and subsequently held only lesser posts in the Supreme Economic Council. Removed from the Politburo and the Central

Committee in 1926, he was eventually expelled from the Communist Party on November 14, 1927, on the grounds that he was an "instigator of counterrevolutionary demonstrations."

In January 1928, Trotsky was convicted of counterrevolutionary activities and sent to Alma-Ata in Turkestan. Even there he fearlessly continued to lead the left-wing opposition in the Communist Party and a year later was expelled to Turkey with his wife and son. In Turkey he maintained contact with the opposition to Stalin in an attempt to organize a new Communist International, independent of Moscow. He went to Norway in 1936, but was forced to leave after several defendants at the Moscow trials accused him of joining *Zinoviev and *Kamenev in "an imperialist plot" to murder Stalin. He later settled in Mexico. During his years in exile he produced his vast literary output, including *My Life* (1930), *The History of the Russian Revolution* (3 vols., 1932–33), and *The Permanent Revolution* (1931), and edited *The Living Thoughts of Karl Marx*, published in 1939. On August 21, 1940, he was assassinated in Mexico City by a "friend" who is generally assumed to have acted on Stalin's orders. Remarkably gifted, a brilliant writer and orator, Trotsky fought all his life to bring about the socialist world revolution. He was opposed to Stalin's policy of building up "Socialism in one country," arguing that Socialism could only be achieved through revolution on a world scale. In 1938, his followers assembled in Switzerland to found the Fourth International which would be independent of the Moscow-centered Third (Communist) International, but they failed to create a mass movement in support of Trotsky. In the Soviet Union his name and the term Trotskyism officially became synonymous with treason and perfidy and served as the main object of hatred and slander during the famous purge-trials of veteran Bolsheviks in the middle and late 1930s. Trotsky's role in the revolution and the early Soviet regime was expunged from all official historical records in the Soviet Union and in the "orthodox" Communist movement everywhere, but he has had supporters and admirers in many countries including, silently, in the Soviet Union as well.

Trotsky and the "Jewish Question"

Convinced that there was no future for the Jews as a separate people, Trotsky favored their assimilation. At the second congress of the Russian Social Democratic Party (1903), he attacked the *Bund, claiming that despite its opposition to Zionism, it had adopted the nationalist character of Zionism. After the Sixth Zionist Congress he wrote an article in *Iskra* prophesying the disappearance of the movement (Jan. 1, 1904).

Trotsky visualized the solution of the Jewish problem only through the socialist reshaping of society within an international framework. But he was quite aware of the fact that his Jewish origin was a political handicap. When Lenin, after the victory of Nov. 7, 1917, proposed to put him at the head of the first Soviet government, Trotsky refused, and – in his own words (*Moya Zhizn*, II, 62–63) – mentioned "among other arguments the national aspect: would it be wise to give into the hands of the enemies such an additional weapon as my being Jewish?" Later he was shocked at the antisemitic innuendos of the campaign conducted against him in the late 1920s in the Soviet Union and he later emphasized the antisemitic undertones of the Moscow trials against Zinoviev, Kamenev, and others. In an interview with the New York *Jewish Daily Forward*, he admitted, in 1937, that the reemergence of antisemitism in Germany and the U.S.S.R. had brought him to the conclusion that the Jewish problem required a territorial solution, but he did not believe that Palestine was the answer; and the final solution would come only through the emancipation of all humanity by international socialism. "The longer the rotten bourgeois society lives, the more and more barbaric will antisemitism become everywhere," he said in the same interview.

In *Trotsky and the Jews* (1972), J. Nedava has made a special study of this question, throwing new light on the subject and revealing, inter alia, that Trotsky sat as an adviser at the Sixth Zionist Congress in Basle (1903), and later became increasingly interested in the Jewish Labor Movement in Ereẓ Israel.

TROYES, chief town of the department of Aube, in northeast central France. Evidence of the earliest period of Jewish settlement in Troyes is derived from rabbinic sources. From the first half of the 11th century, an organized Jewish community collected taxes from its members, and Jews owned real estate, more particularly vineyards. The *synods which were reputedly held in the town may have been little more than assemblies convened by the local community and expanded to include the representatives of a number of dependent communities. It may be assumed that in *Rashi's time the community numbered no more than 100 people. Only from the beginning of the 13th century is there evidence of the Jews of Troyes engaging in *moneylending; their clients included the Saint-Loup Abbey. On the other hand, a number of Jews owed this abbey a regular quitrent, which was calculated in measures of wheat and wine, presumably for plots of land or vineyards leased from it.

In 1288 the community was persecuted, with accompanying bloodshed, as a result of an accusation of ritual murder (see *Blood Libel). On Good Friday, March 26, during the Jewish Passover, a body was surreptitiously placed in the house of one of the Jewish notables, Isaac Châtelain. The inquiry was carried out by the Franciscan and Dominican Orders, and 13 Jews (most of them members of Châtelain's family) sacrificed themselves in order to spare the remainder of the community. They were handed over to the "secular arm" and burned on April 24. The shock which was aroused in the Jewish world by this auto-da-fé can be measured by the fact

that six elegies, in Hebrew or in Judeo-French, relate the details of it. The most moving account is the famous *Complainte de Troyes*, a Judeo-French elegy, the author of which Arsène *Darmesteter identified as Jacob b. Judah de Lotra (Lorraine), who also wrote a Hebrew elegy on the subject (manuscript in Vatican Library). Although King *Philip IV the Fair prohibited the religious orders from prosecuting any Jew in France without informing the civil authorities – even if it be for a religious crime (1288) – he did not disregard the material benefit accruing from this auto-da-fé when he ordered the confiscation of the victims' property for the treasury.

Following the banishment of the Jews of France in 1306, Jews returned to Troyes after 1315. In 1320 King *Philip V the Tall addressed a series of criticisms to the bailiff of Troyes because he tolerated Jews not wearing their distinctive sign and permitted them to make so much noise in their synagogues (indicating that at least two were still in existence) that even the predicant friars and the minor canons were disturbed in the execution of their duties. The Jews do not appear to have returned to Troyes after the expulsion of 1322, although several Jews in the duchy and county of Burgundy between 1332 and 1388 originated in Troyes. During the 14th and 15th centuries, however, Christians bearing the surname "le Juif" are mentioned in Troyes and were possibly descendants of converted Jews. The Jewish quarter, also known as "La Broce-aux-Juifs," was situated in the St. Frobert parish, and the St. Frobert Church is thought to be a former synagogue. The cemetery was situated at the entrance of the Faubourg de Preize. Troyes was the native city of Rashi, the great commentator on the Bible and Talmud. Rashi served as the rabbi of Troyes, where he founded (c. 1070) a school which became famous. The present-day streets rue de la Synagogue and rue Salomon Rachi perpetuate the memory of the flourishing medieval community, although their topographical relationship to the ancient location has not been determined. After Rashi, the scholars who taught or were born in Troyes included R. Jacob b. Meir *Tam, R. *Joseph b. Moses, the tosafist R. Samson, R. Joseph Ḥazzan b. Judah, his son Menahem, and the disciple of the latter, Judah b. Eliezer.

In 1808, there was not a single Jew in Troyes or in the whole of the department of Aube. The community was reorganized only during the second half of the 19th century (the synagogue was erected in 1877). On the eve of World War II there were some 200 Jews in Troyes. During the war, however, a large number of non-French Jews, as well as those who came from "prohibited" departments, were interned in the town by the Germans. The community, which was reconstituted after World War II, numbered 400 in the early 1970s and has since 1966 maintained the Rashi Community Center.

[Bernhard Blumenkranz]

TRUJILLO, town in Estremadura, W. Spain, on an important junction near the Portuguese border. Trujillo was taken by Alfonso VIII in 1184, then reconquered by the Moors; it definitely became part of the kingdom of Castile only in 1233. It may be assumed that there was a Jewish settlement there in the Muslim period, but the available data mainly concerns the Christian period. Toward the end of the 13th century, the community of Trujillo was the second largest in Estremadura, after Badajoz. In the 14th century Jews in Trujillo owned land, vineyards, and houses, which apparently had belonged to them before. There also were merchants and craftsmen among them. No data has survived about the fate of this community during the 1391 persecutions, but there were Jews who forsook their faith under duress in Trujillo as elsewhere. Yet the community was able to pay 6,000 maravedis in 1439 and 7,500 in 1474. A year before the edict of expulsion, in 1491, it spiraled to 11,400 maravedis, owing to an influx of refugees from other Jewish communities and to a special tax imposed as a contribution toward the war against Granada. In 1480 the segregation of Jews and Conversos into different quarters was carried out in Trujillo. The Jews were ordered to leave their quarter within two years and resettle in another part allotted to them. Exchange of houses was arranged, and the Jews were allowed to build a synagogue in their own area. Abraham *Seneor collected taxes and imposts in the town and its surroundings in the 1480s. The community existed until the edict of expulsion, when the exiles from elsewhere in Spain passed through Trujillo and Badajoz on their way to Portugal.

[Haim Beinart]

°**TRUMAN, HARRY S.** (1884–1972), 33rd president of the United States. From 1922 to 1924 his partner in an unsuccessful haberdashery business in Kansas City was Eddie Jacobson, a Jewish businessman. Truman was elected to the U.S. Senate in 1935, in 1945 became vice president, and a few months later (April 12, 1945) – on Roosevelt's death – president.

Among the vast problems faced by Truman following the defeat of Germany and Japan in 1945 were Jewish refugees and the disposition of Palestine. In 1945 and 1946 they were only remotely related to the major crisis of the Cold War, but it nevertheless proved uncommonly difficult to find a solution. In the short run, Truman desired to bring 100,000 displaced Jews to Palestine. This was supplemented by a request to Congress, repeated in his address of Oct. 4, 1946 (which fell on the Day of Atonement), to liberalize the immigration laws so that more displaced persons, "including Jews," might enter. The U.S. Legislation permitting 200,000 displaced persons to enter above the quota was passed in 1948. Truman's desire to

send Jewish DPs to Palestine was subsequently supported by the recommendation of the Anglo-American Committee of Inquiry (April 1946) and also by the United Nations Special Committee on Palestine (UNSCOP; August 1947). But Truman was less certain regarding the establishment of a Jewish state, maintaining that the UN was the proper agency for handling the long-range solution of the Middle East problem. Even such steps as Truman was willing to advocate – the entrance of more Jewish refugees into Palestine and tentative support of the concept of partition – faced the stubborn opposition of his closest advisers in the State Department and the Joint Chiefs of Staff, and resentment by the British government. When the State of Israel was proclaimed on May 14, 1948, Truman personally made certain that within its first half hour of existence de facto U.S. recognition was extended to it. Nevertheless, he continued to advocate a temporary UN Trusteeship for the area. He subsequently opposed severing the Negev from the new state, a key element of the Bernadotte partition plan.

There was some speculation concerning Truman's motives in precipitously reversing U.S. policy for Palestine. The critical situation of the Democratic Party preceding the election of 1948 fueled suspicion that Truman acted purely for political reasons. It had become clear in the years after Roosevelt's death that the coalition of southern conservatives and urban-based liberal elements which formed the core of the Democratic Party, was no longer viable. The former components broke away from the party to form the Dixiecrats. At the same time a strong pull from the left developed when Henry Wallace formed the Progressive Party. Its platform of "progressive capitalism" and sincere negotiations with the Soviet Union to nip the developing Cold War in the bud exercised a strong attraction for the traditional left-wing elements in the Jewish voting bloc. At the same time the imposition of an arms embargo for the Middle East in December 1947 and the fact that the Republican Party candidate, Thomas Dewey, had given strong pledges of support to the U.S. Zionists, threatened to capture the Jewish vote or at least deny it to the Democrats, who needed it desperately to keep their chances alive. In February 1948 the worst fears of Democratic leaders regarding the loss of the Jewish vote were confirmed when Leo Isaacson ran on the Wallace platform in a largely Jewish congressional district in the East Bronx, New York, and won by a two to one margin. It was at this juncture that Truman supposedly decided to make an all-out bid to win back the Jewish vote. He did so by recognizing the State of Israel in May 1948.

Undoubtedly some political capital did accrue to Truman as a result of this step and his strong support for the new state between May and the election in November. The election results show that the Republican ticket was able to attract only two to three percent more of the Jewish vote in the election of 1948 as compared to 1944. But like the theory that Truman chose to recognize Israel because of the influence of his longtime friend and former business partner Eddie Jacobson, such theorizing is too simplistic to fit the facts. The considerable vote for Henry Wallace, especially in the poorer Jewish districts of the urban northeast, indicates that the great majority of Jewish voters were still drawn to the party of liberalism and Franklin Roosevelt which both Truman and Wallace were heir to. Truman himself adamantly denied that his recognition was based on domestic political imperatives: "The fate of the Jewish victims of Hitlerism," he explains in his memoirs, "was a matter of deep personal concern to me…" It may well be that in Truman the Jewish voter finally found the powerful Christian leader who personified that sense of civilized world conscience which they had hopefully assigned to his predecessor, Franklin Roosevelt.

On the whole, it can be said that the liberal, "Fair-Deal" administration over which Truman presided from 1948 to 1952 remained popular with Jewish voters even when the tide of general public opinion began to run against it as a result of the Korean War. The Jews were the one constituent of the original New Deal coalition put together by Roosevelt to show practically no defection to the Republican camp during the Eisenhower-Stevenson campaign of 1952, a fact which reflected on Truman's ability to satisfy Jewish sentiments both in his policy toward Israel and his stand on domestic issues.

[Henry L. Feingold]

TRUMPELDOR, JOSEPH (1880–1920), soldier, symbol of pioneering and armed defense in Ereẓ Israel. Joseph's father, Ze'ev (Vladimir; 1830–1915), was a soldier in the army of Nicholas I. His son Joseph, born in Pyatigorsk (northern Caucasus), was sent to a religious school in Rostov-on-Don before he attended a Russian municipal school. Since, as a Jew, he could not attend high school, he studied dentistry. He was influenced by the idea of the collective commune as described by Tolstoy and practiced by the Tolstoyan settlers near his hometown. In Trumpeldor's mind, this ideal became intertwined with his concept of Zionism through the establishment of agricultural communes in Ereẓ Israel, which, if necessary, would be defended by armed force. In 1902 Trumpeldor was drafted into the army, volunteered for the 27th East Siberian Regiment, and was sent with it to Port Arthur. By volunteering for dangerous missions, Trumpeldor distinguished himself in the Russo-Japanese War (1904), in which he was severely wounded, and his left arm had to be amputated. Upon recovery, Trumpeldor asked his commanding officer to send him back to the front although he had the right to be demobilized. His request was granted and received mention in a special order for the day, in which he was promoted to the rank of a noncommissioned officer. When Port Arthur surrendered (late 1904), Trumpeldor was transferred to a prisoner-of-war camp in Japan, where he worked for the welfare of his fellow prisoners and devoted special attention to the Jews among them, organizing a Zionist group and a group of Jewish soldiers, whose aim was to go to

Ereẓ Israel and establish an agricultural commune there. In 1906 he was returned to Russia. Although a Jew, he received the rank of officer and was awarded several major decorations for distinguished service.

Trumpeldor entered the law faculty of the University of St. Petersburg, simultaneously working to form a group that would implement his idea of collective settlement in Ereẓ Israel. In 1911 Trumpeldor and his comrades, whose declared aim was the liberation of the Jewish people from national oppression through an independent existence in Ereẓ Israel, held their first meeting in Romny (Ukraine). In 1912, together with a group of his comrades, Trumpeldor went to Ereẓ Israel and worked for a time at the Migdal farm and the kevuẓah *Deganyah. He participated in the defense of the Jewish settlements in Lower Galilee. When World War I broke out, he refused to take Ottoman citizenship and was deported to Egypt. In Alexandria he advocated the establishment of a legion of volunteers from among the Ereẓ Israel deportees that would put itself at the disposal of the British to help liberate the country from the Turks. He accepted the British army's proposal to form the Zion Mule Corps (see *Jewish Legion), which he regarded as a first step toward the formation of a Jewish military force to liberate Ereẓ Israel. With the corps, of which he was deputy commander, Trumpeldor left for Gallipoli and between May and December 1915 took part in the major British offensive against the Turks. He set an example by his bravery and his willingness to undertake the most difficult tasks. After the Gallipoli campaign, Trumpeldor returned to Alexandria, and, after the corps' disbandment, proceeded to London, where he joined Vladimir *Jabotinsky in efforts to form a Jewish Legion from among the Russian Jews living in England, using a group of soldiers of the Zion Mule Corps as a nucleus.

In June 1917, Trumpeldor left for Russia to persuade the Provisional Russian Government to form Jewish regiments in the Russian army that could be sent to the Caucasian front and from there could break through to Ereẓ Israel. Trumpeldor was active in the Jewish Soldiers' movement in Russia and at its conference in Kiev, at which it was decided to form the General Federation of Jewish Soldiers in Russia and the General Federation for Self-Defense. He was elected commissar for Jewish Soldiers' Affairs. After the October Revolution Trumpeldor received permission to form the first Jewish regiment, whose chief objective was to combat the massacre of Jews; but the plan was canceled when Soviet Russia signed the peace treaty with Germany (January 1918). The regiment was disbanded and the Jewish defense organization outlawed; Trumpeldor was arrested at Petrograd but was soon released. He then devoted himself to the establishment of the *He-Ḥalutz movement in Russia, whose aim was to organize and prepare young Jews for settlement in Ereẓ Israel. He was elected chairman of He-Ḥalutz at its first conference in 1919, at which he demanded the introduction of military training for He-Ḥalutz members. He tried to gather groups of pioneers from various parts of Russia and to form centers for training and migration to Ereẓ Israel in Minsk and in the Crimea.

In 1919, Trumpeldor went back to Ereẓ Israel, stopping at Constantinople, where he founded an information office and a transit farm for immigrants and pioneers going to Palestine to the Jewish settlement Mesillah Ḥadashah. Upon arrival in Palestine, he proposed to the British military authorities to bring 10,000 Jewish soldiers from Russia as part of the Jewish Legion, and regarded the plan as a question of life or death for national existence in Ereẓ Israel. He also urged labor leaders in Palestine to unite into a single labor federation, which could efficiently absorb the new pioneering immigration. His proposal to form Jewish regiments was rejected. When news arrived of the danger facing the Jewish settlements in Upper Galilee, the scene of armed skirmishes between the French authorities and Arab rebels, Trumpeldor was asked to organize the defense of the settlements, and on Jan. 1, 1920, he reached *Tel Ḥai, which, together with the settlers and volunteers from the south, he began to fortify along with *Kefar Giladi and Metullah. On March 1, 1920, large numbers of armed Arabs attacked Tel Ḥai. During negotiations with their leaders, an exchange of fire took place in which Trumpeldor received a stomach wound. The battle continued all day. Toward evening, Trumpeldor was taken with other casualties to Kefar Giladi, but died on the way. His last words were, "*Ein davar, tov lamut be'ad arẓenu*" ("Never mind; it is good to die for our country"). Trumpeldor and five of his comrades were buried in the courtyard of Kefar Giladi; their remains were later removed to a new cemetery between Tel Ḥai and Kefar Giladi, where, in 1934, a memorial by the sculptor A. Melnikov was erected. The pioneers who arrived from Crimea shortly after Trumpeldor's death founded the Joseph Trumpeldor Labor Legion (*Gedud ha-Avodah), and named their settlement at the foot of Mount Gilboa *Tel Yosef in his memory.

The life and death of Trumpeldor became a symbol to pioneer youth from all parts of the Diaspora. Songs, poems, and stories were written about him. A collection of his correspondence, his diary, and memoirs, edited by M. Poznansky in 1922, became a standard text of the youth and pioneer movement. Trumpeldor inspired both the pioneering socialist movements and the right-wing youth groups. The movement Berit Trumpeldor (*Betar) concentrated on the military and nationalist aspects of his ideology and activity. A Trumpeldor House was established at Tel Yosef, and collects material connected with Trumpeldor's life and death and with the history of the Gedud ha-Avodah.

[Yehuda Slutsky]

TRUNK, ISAIAH (**Yesha'ah**; 1905–1981), historian in Poland and U.S. Trunk was the last major representative of the East-

ern European Jewish historians who were trained before the Holocaust and worked primarily in Yiddish.

Born in Kutno, Poland, he was a descendant of the Trunk rabbinical family of that city. He received his master's degree in history from the University of Warsaw in 1929, and joined the Warsaw "Circle of Young Historians" (later a branch of YIVO) led by Emanuel Ringelblum and Rafael Mahler. He taught history and Latin for the Central Yiddish School Organization in Bialystok and Warsaw until the German invasion of 1939. During World War II, he took refuge in the Soviet Union, and returned to Poland in 1946, serving as a leader of the Jewish Historical Institute in Warsaw from 1948 to 1950. Trunk lived in Israel from 1951 to 1953 and helped to found the research archives at Ghetto Fighters House. In 1953, he became director of the Peretz-Shul in Calgary, Canada. In 1954, he settled permanently in New York City, where he became a research associate and, later, chief archivist at YIVO.

Trunk's works reflect three areas of interest. In accordance with the research program of Ringelblum and Mahler, his earliest works are histories of Jewish communities in Poland, based on archival sources, including *A yidishe kehile in Poyln baym sof 18^tn^ yorhundert*: Kutno (1934), *Geshikhte fun di yidn in Plotsk*, 1237–1567 (1939), and monographs on Polish-Jewish history published in the leading Yiddish journals of pre-war Poland. A common feature is his emphasis on the "internal" aspects of Jewish life, including the economic, legal, cultural, religious, and social organization of Jewish communities.

After World War II, Trunk focused on Jewish life during the Holocaust. His research concerned daily life in the ghettos of German-occupied Europe and problems of health, education, social life, self-government, and resistance. These are exemplified by his "Shtudye tsu der geshikhte fun yidn in 'varteland' in der t'kufe fun umkum, 1939–1944" (1948) and *Lodzsher geto: a historishe un sotsyologishe shtudye* (1962).

Trunk is best known for his comprehensive study of imposed Jewish governing bodies, *Judenrat: The Jewish Councils in Eastern Europe Under Nazi Occupation* (1972), which won the 1973 National Book Award for history. Here, Trunk extended his research to continue a project commenced by his colleague Philip Friedman, who died in 1960. Trunk based his work on archival records of Jewish councils, Nazi government documents, and questionnaires of ghetto survivors. He dealt with the contentious moral issue of whether the Councils were complicit, from the time of their initial planning of ghetto life, in aiding in the destruction of Jews within their realms. Trunk found the actions of most Council leaders to rest on sound, but inapplicable, historical experience. He concluded that Jewish survival would not have been greater if Jews had refused to participate in the Councils. He wrote this work at a time when Hannah Arendt's *Eichmann in Jerusalem: A Report on the Banality of Evil* had charged that Jewish leadership enabled the Germans to annihilate the Jews.

This book was the subject of a symposium in 1975 in which the leading Holocaust historians of the time debated the role of the Councils (see bibl.: Bauer). Trunk also compiled and edited a collection of survivors' accounts in *Jewish Responses to Nazi Persecution* (1979). Additional Holocaust studies appeared in Yiddish and Hebrew journals and encyclopedias.

Trunk's third area of interest was Jewish historiography. He published studies of Russian-Jewish historiography and the role of YIVO in Jewish historiography as well as critical appreciations of many Eastern European Jewish historians of his and the preceding generation, including Simon Dubnov, Meir Balaban, Ringelblum, Mahler, and Friedman.

Trunk compiled three collections of his Yiddish historical essays: *Geshtaltn un gesheenishn* (1962), *Shtudyes in yidisher geshikhte in poyln* (1963), and *Geshtaltn un gesheenishn [naye serye]* (1983). His personal papers may be found in the YIVO special collections.

[Mark L. Smith (2nd ed.)]

TRUNK, ISRAEL JOSHUA (1820–1893), Polish rabbi and one of the early supporters of *Ḥibbat Zion. Born in Plock, Poland, Trunk soon developed a reputation as a prodigy and great scholar. He served as the rabbi of Szrensk (from 1840), Gabin (from 1847), Warka (from 1850), Poltusk (from 1853), and from 1861 to the end of his life he was rabbi of Kutno and was known throughout the Jewish world as Israel Joshua Trunk of Kutno. He was close to Ḥasidism, especially to the *rebbe* of *Gur, Isaac Meir. He joined the Ḥibbat Zion movement with the initial activity of Ẓevi Hirsch *Kalischer, whom he encouraged in his letters. In 1886 Trunk visited Ereẓ Israel and encouraged the pioneers who were then experiencing the initial difficulties of settlement. He was among the rabbis who permitted agricultural work during the sabbatical year in Ereẓ Israel. A halakhic authority, only one of his books on *halakhah, Yeshu'ot Yisrael* (1870), on Shulḥan Arukh *Ḥoshen Mishpat*, was published during his lifetime. The remainder were published posthumously by his grandson as *Yeshu'ot Malko* (1927–39), novellae, and *Yavin Da'at* (1932), on Shulḥan Arukh, *Yoreh De'ah* with responsa. His grandson, ISAAC JUDAH (1879–1939), was one of the leaders of the *Mizrachi movement in Poland. The best known of his books is the Bible commentary *Mikra Meforash* (1936). At the end of his life he drew close to Po'alei Agudat Israel.

BIBLIOGRAPHY: I. Judah Trunk, in: *I.J. Trunk, Yeshu'ot Malko*, 1 (1927), 154–6; D. Weissbrod (Halaḥmi), *Arzei Levanon* (1955), 126–31; Bath Yehudah, in: EẒD, 2 (1960), 433–9.

[Getzel Kressel]

TRUNK, YEHIEL YESHAIA (1887–1961), Yiddish essayist and writer. Born near Warsaw to a landowning family with rabbinic ancestry, his most popular work was his memoirs, *Poyln* ("Poland," 7 vols., 1944–53), a rich source of Jewish

folk-culture in Poland. He depicts his ḥasidic background grotesquely, satirically, but mostly lovingly. A member of the *Bund from 1923, he wrote many essays on socialism and Diaspora culture. His work reflects its classical, biblical, talmudic, kabbalistic, and European literary influences. As had many others, he shifted from Hebrew to Yiddish under the influence of I.L. *Peretz. He set a high level of literary criticism in *Idealizm un Naturalizm in der Yidisher Literatur* ("Idealism and Naturalism in Yiddish Literature," 1927) and in his analyses of the work of *Sholem Aleichem: *Sholem Aleykhem* (1937), *Tevye der Milkhiker* ("Tevye the Dairyman," 1939), and *Tevye un Menakhem Mendl in Yidishn Velt Goyrl* ("Tevye, Menakhem Mendl and Jewish Fate," 1944). He wrote in a light parodic vein in his works on Hershele *Ostropolyer, *Der Freylekhster Yid in der Velt* ("The Happiest Jew in the World," 1953), *Khelmer Khakhomim* ("The Wise Men of *Chelm," 1951), and *Simkhe Plakhte fun Narkove oder der Yidisher Don-Kikhot* ("Simkhe Plakhte of Narkove or the Jewish Don Quixote," 1951).

BIBLIOGRAPHY: LNYL, 4 (1961), 121–8. **ADD. BIBLIOGRAPHY:** D. Roskies, *A Bridge of Longing: The Lost Art of Yiddish Storytelling* (1995), 312–18; B. Davis, in: J Sherman (ed.), *Biographical Dictionary of Yiddish Writers* (2005).

[Barry Davis (2nd ed.)]

TRUTH (Heb. אֱמֶת, *ʾemet*). The Bible often speaks of God as "the God of truth" (e.g., Jer. 10:10; Ps. 31:6), as does the Talmud where this synonymity climaxes in the famous dictum: "The Seal of God is truth" (Shab. 55a; TJ, Sanh. 1:5). The same idea is also found in medieval Jewish philosophy (Maim., Yad, Yesodei ha-Torah 1:4; Joseph Albo, *Sefer ha-Ikkarim*, 2:27). In rabbinic theology "Truth" is one of the 13 attributes of God (cf. Ex. 34:6).

In Judaism truth is primarily an ethical notion: it describes not what is but what ought to be. Thus, in the Bible, truth is connected with peace (Zech. 8:16), righteousness (Mal. 2:6ff.), grace (Gen. 24:27, 49), justice (Zech. 7:9), and even with salvation (Ps. 25:4ff.; cf. Avot 1:18, "The world rests on three things – truth, justice, and peace"). In *Maimonides' and Hermann *Cohen's concept of God as the absolute paradigm of morality, from "the God of truth" follows the human virtue of "truthfulness" (H. Cohen, *Religion der Vernunft* (1929), index, s.v. *Wahrhaftigkeit*). Since God keeps truth (Ps. 146:6), only the man who speaks truth can come near Him (Ps. 145:18; Yoma 69b). Thus, also, Moritz *Lazarus (*Ethik des Judentums*, 2 (1911), 123ff.) and E. Berkovits (*God and Man* (1969), ch. 2) translate *emet* as "faithfulness" (*emunah*), identifying it ultimately with Jewish faith.

God acts truthfully in that He keeps His word. Human truthfulness is to be faithful to God and man. This is specified in many ways: to speak truth even in one's heart (Ps. 15:2ff.); always to quote correctly (Meg. 16a); to engage in commerce honestly (Mak. 24a); and to abstain from all deceit and hypocrisy (BM 49a; Yoma 72b; Maim., Yad, De'ot 2:6). In sum, as God is truth so Judaism as a whole is the practice of truth (BB 74a).

Jewish philosophers generally accepted the Greek notion of truth as "correspondence with reality" (*Saadiah Gaon, *Book of Beliefs and Opinions*, preface and 3:5; Abraham *Ibn Daud, *Emunah Ramah*, 2:3). Even such intellectualism, however, is ultimately superseded by biblical ethicism (e.g., Maimonides, *Guide of the Perplexed*, 3:53, end).

In modern Jewish philosophy, Hermann Cohen designates the normative unity of cognition and ethics as "the fundamental law of truth" (*Ethik des reinen Willens* (1904), ch. 1). Martin *Buber also identifies Jewish faith (*emunah*) with truth as interpersonal trust. Thus, truth as a human, ethical criterion is commonplace throughout the mainstream of Jewish thinking.

[Steven S. Schwarzschild]

TRZCIANKA (Ger. **Schoenlanke**), town in Poznan province, Poland. Jews were present in Schoenlanke from the first quarter of the 18th century; documentary evidence for the presence of a Jewish community dates from 1739 when the Jews of Schoenlanke were granted a privilege that secured for them certain trading and commercial rights. The privilege remained in force until 1756 when the town passed into the hands of Anton von Lasocki. It was then renewed, but at great cost and with highly restrictive conditions. After Poznan passed to Prussia (1772) the community (286 persons) successfully appealed the restrictions and their rights were reaffirmed. The synagogue burned down in 1779; a permanent one was built only in 1883. A *bet midrash* was functioning in 1772; in 1869 a new one was built but closed down in 1897 for lack of students. In 1790 there were 75 families in 31 Jewish-owned houses. The community was served by Rabbi Joel Meyer Asch (d. 1811) as well as his son Judah (d. 1831). The Jews, mainly large-scale wool merchants, were economically dominant and constituted a high but decreasing percentage of the total population: 863 in 1830 (23%); 584 in 1880 (14%); 590 in 1905 (8.1%); and 380 in 1932 (4.3%). Before the war the community maintained a school, library, *mikveh*, cemetery, and synagogue; its last rabbi was Curt Peritz (1932–36).

TSABAN, YA'IR (1930–), Israeli socialist politician and publicist, member of the Tenth to Thirteenth Knessets. Tsaban was born in Jerusalem to parents who had emigrated from Poland in the 1920s. After completing high school, in 1948 he joined the Palmaḥ. He participated in the burial of the Arab victims of the Dir-Yassin massacre committed by the IẒL in April 1948. In December 1948 he was one of the founders of kibbutz Ẓor'a, near Beit-Shemesh, which he left four years later.

In the War of Independence Tsaban fought in the Sixth Palmaḥ Brigade, participating in the unsuccessful attempt to conquer the Latrun area on the way to Jerusalem. During a course for company commanders he first met Moshe *Sneh,

who became his mentor. In 1952–54 he trained as a teacher at a kibbutz seminary, and started working as a teacher and youth instructor. In this period he became active in *Mapam. In January 1953 he left Mapam with Sneh, and for the next 27 years was active in various radical left-wing groups. He was a member of the Israel Communist Party (Maki) from 1954 to 1973, participating in various Communist youth delegations abroad. He also initiated opposition by the young guards of various political parties in Israel to the Statute of Limitations for Nazi Crimes, and to the establishment of relations with the Federal Republic of Germany. In 1969–72 Tsaban studied philosophy at Bar-Ilan and Tel Aviv universities. After Sneh's death in 1972, he served briefly as chairman of Maki's Political Bureau. He was later a member of Moked, and Maḥaneh Sheli. Over the years he represented Maki, Moked, and Maḥaneh Sheli in the Israel Executive of the World Jewish Congress, and in the Histadrut Executive Committee. In 1980 he returned to Mapam and was elected as its political secretary.

Tsaban was elected to the Tenth Knesset in 1981 within the framework of the Alignment between the *Israel Labor Party and Mapam. In 1984–92 he was a member of the Mapam parliamentary group in the Knesset, heading the list in the elections to the Twelfth Knesset. In 1992–96 he was a member of the Meretz parliamentary group, which Mapam had joined. In the governments formed by Yitzhak *Rabin and Shimon *Peres in the course of the Thirteenth Knesset, he served as minister of immigration absorption, and was a member of the Ministerial Committees on Absorption, and Political and Security Issues. In the Knesset he concentrated on social and humanitarian issues, initiating and supporting legislation affecting workers' rights and social welfare. He consistently supported peace initiatives with the Palestinians, and fought against religious coercion, and for the recognition of the non-Orthodox streams in Judaism. On several occasions in this period he appealed to the High Court of Justice on issues relating to the religious parties and personalities, and won.

In the Knesset he was noted for his diligence and graciousness.

After leaving the Knesset he was active in the meetings that led to the signing of the Geneva Initiative on December 1, 2003, and continued to campaign, together with others, for a variety of ideological and humanitarian causes. Since 1996 he has served as chairman of the College for Judaism as a Culture, and as chairman of the academic council of the Lavon Institute for Research on the Labor Movement, and has taught courses in public policy at Tel Aviv University. In 2000 he initiated the Encyclopedia of Jewish Culture in the Era of Modernization and Secularization and is a member of its editorial board.

Since 2002 he has served as a member of the Board of Trustees of the Jewish Agency.

[Susan Hattis Rolef (2nd ed.)]

TSALKA, DAN (1936–2005), Hebrew writer. Born in Warsaw, Poland, Tsalka spent the war years in the Soviet Union and lived up to the age of ten in Siberia and in Kazakhstan; in 1946 he returned to Poland. He studied philosophy and literature and immigrated in 1957 to Israel, where he continued his studies. Later on, he spent some time in Grenoble, France. His first book, *Doktor Barkel*, a collection of stories, appeared in 1967. This was followed by stories and novels, including *Si'aḥ ha-Beru'im* ("The Dialogue of Creatures," 1967), *Philip Arbes* (1977), *Yaldei ha-Shemesh* ("Children of the Sun," 1979), *Misḥak ha-Malakhim* ("The Angels' Game," 1986), and others. The novel *Ananim* ("Clouds," 1994; German, 1997), tells the story of a 13-year-old Jewish boy, the only survivor of a pogrom in a German town, who shares his fate with a German hangman. Set against the backdrop of medieval Germany, the relationship between the survivor and the executioner becomes a metaphor for Jewish-Christian history. Steeped in European culture, Tsalka developed an ambivalent attitude to the Hebrew language, which was not his mother tongue, and often focused on figures who opposed the Israeli mainstream and the Zionist narrative. His magnum opus is the novel *Elef Levavot* ("A Thousand Hearts," 1991; German, 2002), a sweeping epic about Jewish life in the 20th century. Oscillating between pre-state Tel Aviv, the Oriental Samarkand, and Poland, the saga presents a wide range of characters, following an intricate baroque-like structure. Tsalka published his autobiography under the title *Sefer ha-Alef Bet* in 2003. He taught at the Art Department of Tel Aviv University, and was writer-in-residence at the Hebrew University. He also published essays, poetry, books for children, and drama. Among the prizes he received are the Brenner Prize and the Sapir Prize (2004). A collection of stories in English, *On the Road to Aleppo*, appeared in 1999. Further information concerning translation is available at the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

TSANIN, (Yeshaye) MORDKHE (1906–), Yiddish writer. Born in Sokołów-Podlaski (Poland), he settled in Warsaw (1920), where he had a traditional and secular education and became a writer and cultural organizer (publications in *Oyfgang*, which he also edited, and *Naye Folksysaytung*) until the Nazi invasion, when he fled to Vilna (1939), Japan (1940), and Palestine (1941). After several years of manual labor, he worked full-time as a journalist and writer. His consistent and adamant advocacy of Yiddish in Israel was of signal importance. His *Iber Shteyn un Shtok: a Rayze iber Hundert Khorev-Gevorene Kehiles in Poyln* ("Through Thick and Thin: A Journey through 100 Destroyed Jewish Communities in Poland," 1952) collected his columns from the *Forverts* (for which he was also the Israeli correspondent, 1947–56), based on his postwar travels through Poland, posing as a gentile (1945–6). He con-

tributed to Yiddish newspapers and periodicals throughout the world, including *Tsukunft*, *Di Goldene Keyt*, *Davar*, and edited *Ilustrirte Veltvokh* (1956–) and founded and edited *Letste Nayes* (1949–), Israel's first Yiddish daily, where the first part of his *magnum opus*, *Artopanus Kumt Tsurik Aheym* ("Artopanus Comes Home") began to appear serially; it was published in six volumes: *Yerusholayim un Roym* ("Jerusalem and Rome," 1966), *Fremde Himlen* ("Foreign Skies," 1968), *Libshaft in Geviter* ("Love during a Storm," 1972), *Di Meride fun Mezhibozh* ("The Revolt of Mezhibozh," 1976), *Der Yardn Falt Arayn in Yam Hamelekh* ("The Jordan Flows into the Dead Sea," 1981), and *Der Gzar-Din* ("The Verdict," 1985). The epic series of historical novels traces the history of Jews and Jewish culture from the Roman conquest of Judea up to the present as a series of cycles of persecution, survival, exile, and personal memory that comes to function as cultural memory and cultural tradition, projecting a moral and intellectual code that transcends individuals and even historical periods. It is one of the great achievements of Yiddish narrative, especially in postwar literature. Among his other books are *Vivat Lebn!* ("Live!," 1933; stories), *Oyf Zumpiker Erd* ("On Swampy Ground," 1935; novel), *Vuhin Geyt Yapan* ("Whither Japan," 1942; journalism), *Shabesdike Shmuesn* ("Sabbath Chats," 1957; feuilletons), *Megiles Ruth / Shir Hashirim* ("Ruth / Song of Songs," 1962; Yid. tr.); *Oyf di Vegn fun Yidishn Goyrl* ("The Paths of Jewish Fate," 1966; also Heb., 1967; essays), *Der Dekadents fun a Meshiekh* ("Decadence of a Messiah," 1967; essays), *Grenetsn biz tsum Himl* ("Borders up to Heaven," 1969/70; autobiography), *Der Shlisl tsum Himl* ("The Key to Heaven," 1979; stories), *Fuler Yidish-Hebreisher Verterbukh* ("Complete Yiddish-Hebrew Dictionary," 1982), *Fuler Hebreish-Yidisher Verterbukh* ("Complete Hebrew-Yiddish Dictionary," 1983), *Fun Yener Zayt Tsayt* ("Behind the Times," 1988), *Zumershney* ("Summer Snow," 1992; stories, essays), *Herts Grosbard* (1995; biography), *Shluf Nit Mameshi* ("Do Not Sleep, Mama," 1996; stories), and *Dos Vort Mayn Shverd* ("Word My Sword," 1997; essays). For several decades Tsanin served as president of the Association of Yiddish Writers and Journalists in Israel.

[Jerold C. Frakes (2nd ed.)]

TSCHLENOW, JEHIEL (**Yefim Vladimirovich**; 1863–1918), Zionist leader. Born in Kremenchug, Ukraine, into a well-to-do ḥasidic family, Tschlenow studied medicine in Moscow where his family had settled in 1876. He graduated as a physician in 1888 and became a well-known practitioner. The pogroms of 1881 turned Tschlenow from a sympathizer with the revolutionary populists (Narodniki) into a Jewish nationalist. In 1883 he became active in the Moscow *Ḥibbat Zion group, Benei Zion (to which Menaḥem *Ussishkin, Jacob *Mazeh, and Abraham *Idelson belonged). After some hesitation, he joined *Herzl's Zionist Organization and attended Zionist Congresses. Tschlenow presided at the all-Russian Zionist Conference in Minsk in 1902. During the *Uganda controversy at the Sixth Zionist Congress (1903), Tschlenow left the hall after the vote in favor of Herzl's proposal and 128 other opposition delegates followed him. He published a series of articles in the Zionist press against the Uganda scheme entitled "Zion and Africa." At the *Helsingfors Conference (1906), he was an articulate promoter of the idea that the political goal of Zionism must be closely associated with immediate settlement work in Ereẓ Israel and particularly with large-scale purchases of land.

A visit to Ereẓ Israel in 1907 and the revolution of the Young Turks in 1908 strengthened his conviction. From 1908 he was head of the Zionist Movement in the Moscow district and developed extensive activities, including the arrangement of meetings and conferences, opening of information offices on questions of Jewish education, publication of programs for the study of Jewish history, and preparation of catalogues for Jewish libraries. In 1909 he organized a group of Russian Jewish investors that established the farm *Migdal on the shores of Lake Kinneret. He also actively supported the settlement work of the *Odessa Committee. Since the general trend in the Zionist Movement was in this direction, Tschlenow's role steadily increased. He was a member of the board of the *Jewish Colonial Trust. At the Tenth Zionist Congress he was elected to the Zionist Executive, and at the 11th Congress (1911) he was elected vice president of the Executive (under Otto *Warburg). He moved to Berlin and directed Zionist activities from there. In 1912 he again visited Ereẓ Israel. During this visit he laid the cornerstone of the Haifa *Technion, as a member of its governing board, and purchased the plot of land on which the Hadassah Hospital in Tel Aviv was later located.

Forced to leave Berlin at the outbreak of hostilities in 1914, Tschlenow returned to Russia (1915). By the end of that year he was in London for consultations with Naḥum *Sokolow and Chaim *Weizmann on the political situation and the program of the movement. During the war he was active in aiding Jewish refugees expelled from the front area by the Russian army command. After the February Revolution in Russia (1917) Tschlenow headed the all-Russian Zionist Convention in *Petrograd. In July 1917 he left for London, where he participated in the negotiations that led to the *Balfour Declaration. He died in London. In 1961 his remains were reinterred in the old cemetery in Tel Aviv. His Zionist writings included *The Second Zionist Congress, Zion and Africa* (in J. Tschlenow, *Pirkei Hayyav*… (1937), 101–302; on the Uganda project); *Five Years of Work in Palestine* (1913); *The World and Our Prospects* (1917). Tschlenow was known for his emotional warmth and sincerity, his deep devotion and gentle sagacity, and his ability to handle people and situations.

TSFASSMAN, ALEXANDER NAUMOVICH (1906–1971), Soviet jazz pianist and composer. Born in Zaporozhe (formerly Alexandrovsk), Ukraine, Tsfassman began to study piano at an early age, and in 1930 he graduated from the piano class of Feliks Blumenfeld at the Moscow Conservatory. While still a student he formed an ensemble of jazz orchestra and piano soloist, a novelty at that time in Soviet Russia, and it was attacked by the Association of Proletarian Musicians for introducing "decadent" Western music. From 1939 to 1946 he headed the large jazz orchestra of Radio Moscow. In later years he appeared mostly as a piano soloist with stage orchestras in performances of his own works or his piano arrangements of popular Soviet songs. In 1957 he was named "Meritorious Artist." His best known works are instrumental jazz music (including a piano concerto with jazz orchestra, 1941) and music written for choir, the theater, and films.

TSHEMERISKI (**Chemeriski**), **ALEXANDER** (**Solomon**; 1880–193?), leading member of the Russian *Bund and later of the *Yevsektsiya in the Soviet Union. Born in Bar, Podolia, in the late 1890s Tshemeriski worked as a photographer in Minsk, and ranked among the activists of the Bund. In 1901 he was among the founders of the *Independent Jewish Workers Party. When the party was liquidated, he once more became a revolutionary and conducted illegal propaganda among the peasants. After he addressed a letter of "confession" to the central committee of the Bund, however, he was again accepted within its ranks. As a committee member of the Bund in Lodz, he played an important role in the 1905 Revolution. During the years 1908–10 he was exiled to Siberia. Upon his return, he was the delegate for Lodz at the eighth (Lemberg, 1910) and ninth (Vienna, 1912) conferences of the Bund. He also represented Jewish workers of Lodz at the all-Russian convention of craftsmen (St. Petersburg, 1911), after which he was again arrested. During World War I he lived in Vienna and Geneva. Upon his return to Russia, he was arrested, but set free after the February revolution (1917). Tshemeriski was co-opted as a member of the central committee of the Bund, active in Yekaterinoslav (Dnepropetrovsk) and Kiev, and became a member of the central executive of the trade unions of Ukraine. At the 11th conference of the Bund (March 1919), having been nominated as a candidate for the central committee, he rapidly turned to the Bolsheviks and participated in the foundation of the "Komfarbund," which was the result of merging the "Kombund" with the United Jewish Communist Party (May 1919). At first a member of the head office of the Yevsektsiya in the Ukraine, he was subsequently appointed member of the central bureau of the Yevsektsiya and its secretary (1920). He wrote for *Emes* and was active in social and economic reconstruction and education among the Jews. In the mid-1930s he was arrested and tried on charges which included his previous affiliation to the "Independents." He apparently died in prison. Tshemeriski published memoirs in *Krasny Arkhiv*, no. 1 (1922), on the "Independents," and in *Royte Bleter* (1929), on his activities in Lodz in 1905. His publications of the Soviet period are listed in Ch. Shmeruk (ed.), *Pirsumim Yehudiyyim be-Verit ha-Mo'aẓot* (1961), index.

[Moshe Mishkinsky]

TSOMET (**Tzomet**), right-wing Israeli political party, founded in 1984, prior to the elections to the Eleventh Knesset, by Raphael *Eitan. In keeping with Eitan's views, Tsomet supported the concept of Greater Israel, compulsory military service for yeshivah students, and reduction of state financing for the yeshivot. Tsomet ran in a single list with Teḥiyyah, but only Eitan was elected to the Knesset from the party. In 1987 Tsomet broke away from the joint parliamentary group owing to differences of opinion between Eitan and Ge'ulah *Cohen. Tsomet ran independently in the 1988 election to the Twelfth Knesset, and gained two seats. After the *Israel Labor Party left the National Unity Government, Tsomet joined the narrow government formed by Yitzhak *Shamir in June 1990, and Eitan was appointed minister of agriculture. However, due to opposition to the Madrid Conference of October/November 1991, Tsomet left the government at the end of the year. Toward the end of the Twelfth Knesset Yo'ash Zidon of Tsomet was one of the four MKs who were responsible for the passing of the Law for the Direct Election of the Prime Minister. In the 1992 elections to the Thirteenth Knesset Tsomet ran under the slogan of "clean politics," and won eight seats, gaining many former *Likud votes. Tsomet opposed the Oslo Accords and the possibility of territorial concessions on the Golan Heights to Syria. In the field of economics it supported privatization. However, in 1995, in view of growing discontent in the Tsomet parliamentary group over Eitan's domineering leadership, Labor successfully wooed away three Tsomet members, two of whom were offered ministerial positions. In the 1996 elections to the Fourteenth Knesset, Tsomet ran in a joint list with the Likud and Gesher, and as part of the joint parliamentary group became a member of the government formed by Binyamin *Netanyahu. However, in March 1999 Tsomet broke away from the Likud. At the same time several of its members left to join other parties, either further to the Right or further to the Left. Tsomet was not elected to the Fifteenth Knesset, and of its eight members in the Fourteenth only one – Eli'ezer (Mudi) Sandberg – remained in the Knesset, as a member of Shinui. Eitan was killed in an accident during a storm in 2004.

TSUKUNFT (**Zukunft**), U.S. Yiddish monthly. Founded in New York in 1892 as an organ of the Socialist Labor Party,

Tsukunft was one of the first serious Yiddish periodicals to be published anywhere and the oldest still appearing at the turn of the 21st century. Despite a dwindling readership and an ever-declining group of potential writers, *Tsukunft* continues to appear, albeit approximately twice a year, publishing poetry, literary reviews, and essays in Yiddish under the editorship of Itzik Gottesman. Edited from the first by some of the most distinguished Yiddish literary figures in the U.S., including Philip *Krantz, Abe *Cahan, and Morris *Vinchevsky, *Tsukunft* quickly outgrew its original dogmatic base and opened its pages wide to all sectors of opinion in American Yiddish life, while itself remaining secularist and socialist. In 1912 it was acquired by the Forward Association, publishers of the **Forverts*. Under the editorship of Abraham *Liessin (1913–38) the magazine published the work of practically every Yiddish writer and thinker of note in the U.S. and of many others from all over the world. After Liessin's death, *Tsukunft* was edited by many prominent figures in the Yiddish world, including Hillel *Rogoff, David *Pinski, Nochum Boruch *Minkoff, Shmuel *Niger, Jacob *Glatstein, and Eliezer *Greenberg. From 1940 it was published by the Central Yiddish Cultural Organization.

[Hillel Halkin / Samuel Spinner (2nd ed.)]

TSUR (Tchernowitz), JACOB (1906–1990), Israel diplomat and Zionist leader. Born in Vilna, the son of Samuel *Tchernowitz, Tsur settled in Ereẓ Israel in 1921. He was educated in Jerusalem and the universities of Paris and Florence. In 1929–48 he was public relations officer and later director of the Information Department of the *Jewish National Fund in Jerusalem. He served as the liaison officer of the Jewish Agency headquarters with the British army in Cairo from 1943 to 1945, and in 1945 became head of the UNRRA, Israel relief mission to Greece. From 1949 to 1953 Tsur was the first Israel minister to Argentina, Uruguay, Paraguay, and Chile, and in 1953–59 he was Israel ambassador to France. During his term of office there, Israel-French relations achieved a degree of cordiality which became virtually an alliance. He served on the Jewish Agency Executive as head of its Information Department in 1960–61. From 1960 he was chairman of the board of directors of the Jewish National Fund and held the presidency until 1977. In the years 1960–68 he was chairman of the Zionist General Council. Tsur was the president of the Central Institute of Cultural Relations with Ibero America, Spain, and Portugal and active in a number of national institutions. His books include his memoirs *Shaḥarit shel Etmol* (1965; *Sunrise in Zion*, 1968), and *Yoman Paris (Ambassador's Diary in Paris*, 1968). His *Epopée de Zionisme*, published in 1975 in French, has been translated into English (*The Saga of Zionism*), German, Italian, and Portuguese. His sister is the Hebrew writer, Yemimah *Tchernovitz-Avidar.

[Benjamin Jaffe]

TUAT, with the Gurara, an oasis complex stretching over 360 mi. (600 km.) in the Algerian Sahara. Tuat's center was Tamentit, "the Jewish town." Traditions reported by Arab historians fix the arrival of the first Jews as early as 5 C.E., and in large numbers in the "year of the elephant" (570), which coincided with the foundation of settlements in the oasis. Hebrew inscriptions, dating from 1329, were discovered there. The artesian wells there are attributed to the Jews who planted palm groves and built fortified villages. A responsum of R. *Isaac b. Sheshet (end of 14th century) was sent to Tuat via Honain, the important port of the Beni Zayan. The Jews were largely landowners, farmers, and warriors and lived in peace until 1437 when they were besieged for four months. They were rescued by friendly Muslims. The nomads envied their wealth. The Jewish traders from Tuat controlled the gold traffic. The preacher al-Maghili who had been expelled from Fez (end of the 15th century) incited the people to revolt against the Jews, and a new synagogue was destroyed. The high *qadi* ("judge") of Tuat came out in defense of the Jews. When al-Maghili ordered war against the Jews, the tribes united and there was a general massacre in 1492. The tombs of the victims are still a place of pilgrimage for the inhabitants of Tuat-Gurara. The family name Tuati (Touati, Toaty) derives from Tuat.

[David Corcos]

TUBAL-CAIN (Heb. תּוּבַל־קַיִן), son of *Lamech. Genesis 4:22 states that "Zillah bore Tubal-Cain, who forged implements of copper and iron; Tubal-Cain had a sister Naamah." Various attempts have been made to identify Tubal-Cain as the name of an ancient tribe somewhere in the Near East. S. Mowinckel, however, followed by W.F. Albright, understands Tubal as a generic name for smith, derived from *ybl*, "to bring, produce." The second element of the name is universally connected with the Arabic *qāyin*, Aramaic *qaināyā* (*qainā'ah*), "smith, metalworker." In later times, Tubal-Cain was confused with the Tubal of Genesis 10:2, for example, and mistakenly identified with the Tuscans, well-known smiths of the ancient world. A. Dillmann pointed to the parallel between Tubal-Cain and his beautiful sister Naamah and the Greek smith-god, Hephaestus, and his sister Aphrodite.

[Daniel Boyarin]

In the *Aggadah*

The aggadic interpretation of the meaning of Tubal-Cain's name, is based upon the biblical record that he was "the forger of every cutting instrument" (Gen. 4:22). The *aggadah* teaches that by thus furnishing mankind with the means to repeat Cain's act of killing, with even more ease, he perfected (*tibbel*, תִּבֵּל) Cain's sin (Gen. R. 23:3).

TU BI-SHEVAT (Heb. ט״ו בִּשְׁבָט; Fifteenth of Shevat), name for the festival of the New Year of Trees. According to *Bet Hillel, the 15th of Shevat marked the beginning of the separation of the *tithes of fruit (RH 1:1). This date was chosen because most of the annual rain in Ereẓ Israel falls before the 15th of Shevat (RH 14a; TJ, RH 1:2, 57a); consequently the fruits of those trees which blossom after the 15th of Shevat are considered to belong to another year for the levying of tithes and for the prohibitions of *orlah* (see: Lev. 19:23–25; Maim., Yad, Terumot 5:11; *ibid.*, Ma'aser Sheni 19:9–10). The New Year of Trees is regarded as a minor or semi-holiday for liturgical purposes; no penitential prayers are said and fasting is not permitted. In the Ashkenazi communities in Europe it was customary to eat 15 different kinds of fruits on the 15th of Shevat; special preference was given to the kinds of fruit grown in Ereẓ Israel. The eating of fruits was accompanied by the recital of Psalm 104 and of the 15 "ascending" psalms (nos. 120–34). In many communities the children had no school on this day. The Sephardi Jews gave the New Year of Trees a greater significance. Under the influence of the kabbalists of Safed in the 16th century the Sephardi liturgy and customs for this festival were expanded. From Safed the liturgy spread to Sephardi communities in Europe (Turkey, Italy, Greece) and, finally, to Sephardi centers in other parts of Europe, Asia, and North Africa. Among Sephardi Jews this day was called the Feast of Fruits and the special poems sung were called "complas." A special order of service for the 15th of Shevat, *Ḥemdat ha-Yamim*, was believed to have been compiled by *Nathan of Gaza. It was modeled on the Passover *seder* and included drinking four cups of wine. This liturgy, expanded by additional poems, *piyyutim* for the *Amidah* on the 15th of Shevat, and readings from the Scriptures and midrashic literature, was collected and published under the name *Peri Eẓ Hadar* ("Citrus Fruit," 1753).

Since the establishment of the agricultural settlements in Palestine in the last decades of the 19th century, the New Year of Trees has acquired great significance symbolizing the revival and redemption of the land by the conquest of the desert. In Israel Tu bi-Shevat is celebrated with children's songs in honor of the feast of the trees and with tree-planting ceremonies by kindergarten schoolchildren and others under the auspices of the afforestation department of the Jewish National Fund.

[Meir Ydit]

TUCACAS, a town on the northern coast of Venezuela, surrounded by two rivers making access from the interior of Venezuela difficult. In 1693 a large group of Jews originally from Leghorn left Curaçao for Tucacas. With the settlement of Jews there, the place became a lively commercial center. The Jews built houses, grew cattle, erected a fortress, and built a synagogue. They began to purchase cocoa beans from the interior of Venezuela, and mule trains carrying cocoa from Colombia and Ecuador would arrive in Tucacas, sell their produce to the Jews, and purchase textiles and other European goods in return. The attempts by Spanish forces to attack the settlement failed, owing to the protection of Dutch naval units, the local Venezuelan population, and the defense by the Jews themselves. This Dutch enclave was under the command of Jorge Christian, Marquis of Tucacas, and Samuel Hebreo (Samuel Gradis Gabai), under the title Señor de las Tucacas. Samuel Hebreo was also president of the Hebrew congregation called "Santa Irmandad" (the Holy Brotherhood).

The Spanish provincial authorities collaborated with the Jews, since they saw them as an outlet for export and the suppliers of much-needed European goods, since the overextended Spanish fleet could not meet the demands of all its American colonies.

At the end of 1717, the province of Venezuela became part of the viceroyalty of "Nueva Granada," which also included Colombia and Ecuador. The Viceroy Jorge de Vilalonga, because of complaints from the Catholic clergy and from Spain, decided to eliminate Tucacas. Pedro Jose de Olivarriaga was nominated commissioner against the so-called Jewish "contraband trade." With special army units and 40 ships he attacked and captured the town in 1720. According to eyewitnesses the synagogue was destroyed, the Jews burned their own houses, and left for Curaçao on 30–40 ships.

Cardot, *Algunas acciones de los Holandeses en la region del oriente del Venezuela (primera mitad del siglo XVII)* (1962).

[Mordechai Arbell (2nd ed.)]

TUCHIN (Pol. **Tuczyn**), village in Rovno oblast, Ukraine, within Poland before 1772 and between the two world wars. Jews began to settle there at the beginning of the 18th century. There were 514 Jews paying the poll-tax in Tuchin in 1765. Jews of Tuchin in the 19th century were occupied in small-scale trade in agricultural products, the raising of livestock, and crafts. The establishment of an army garrison in the vicinity at the beginning of the 20th century brought improvements in the economic sphere. The Jewish population numbered 1,180 in 1847; 2,535 (67% of the total) in 1897; and 2,159 (73%) in 1921. During the civil war in 1918–20, the Jews in Tuchin suffered from the frequent changes of the forces in control of the area (Ukrainians, Soviets, and Poles). Within Poland, in the interwar period, Zionist parties were active in the community. The livelihood of the Jews in Tuchin was severely affected from 1925 by the support given by the Polish authorities to Poles who settled there.

[Shimon Leib Kirshenboim]

Holocaust and Contemporary Periods

The number of Jews in Tuchin increased to some 3,000 in 1941 when refugees from western Poland found temporary shelter there. Under the Soviet occupation (1939–41), the Jewish or-

ganizations were not permitted to function. Tuchin was captured by the Germans on July 4, 1941, and the signal given to the Ukrainians to carry out pogroms in which 70 Jews were killed. That month 20 Jewish leaders were arrested and shot. In the following years various forms of persecution including restriction of movement, the seizure of able-bodied people for slave labor, and the wearing of the yellow *badge were introduced. Some of the intelligentsia were murdered. A ghetto was established in August 1942. At this time, news reached the community about the wholesale murder of the Jewish population in the neighboring cities. On Sept. 23, 1942, an order was given for all Jews to assemble at the ghetto gate. The leaders of the community were aware of the impending disaster and a decision to revolt was then taken by the head of the Judenrat, Gecel Schwarzman, supported by his two deputies, Meir Himmelfarb and Tuwia Czuwak. The Jews themselves set fire to many houses in the ghetto for defense purposes when the Germans began to break into it. Some young Jews had managed to acquire firearms, and the Jews in the ghetto offered strong resistance. Many fell in the fighting that ensued. Subsequently some 2,000 Jews escaped to the forests, but many of them were delivered up by Ukrainian peasants to the Germans. The Nazi authorities issued a proclamation that those who returned to the ghetto voluntarily would be allowed to live on there. Approximately 300 Jews returned, and were immediately taken to the local cemetery and shot. Those who remained in the forests suffered from hunger and exposure and were harassed by the Ukrainian gangs of Stefan Bandera. A few Tuchin Jews managed to reach the Soviet partisans and joined them in their struggle against the Germans. The revolt of the Tuchin Jewish community was exceptional in that an entire and united community challenged the German forces.

After the war, the community was not revived. The survivors settled in Israel, the United States, and Canada. A memorial book, *Sefer Zikkaron li-Kehillot Tuchin-Krippe* (Heb. and Yid.), was published in 1967.

TUCHMAN, BARBARA WERTHEIM (1912–1989), U.S. author, journalist, and historian. Born in New York City, she was a daughter of Maurice *Wertheim and a granddaughter of Henry *Morgenthau, Sr. She engaged in journalistic and editorial work, including coverage of the Spanish Civil War and service as editor of the Far Eastern Desk of the U.S. Office of War Information (1943–45). One of her principal achievements was making scholarly history readable to the general public. Her best-known book, *The Guns of August* (1962), which won the Pulitzer Prize, is a dramatic portrayal of the diplomatic prelude to, and early days of, World War I.

Bible and Sword: England and Palestine from the Bronze Age to Balfour (1956) expressed strong sympathy for the Zionist cause and an appreciation of Palestine's role in world history. Her other works include *The Lost British Policy* (1938); *The Zimmerman Telegram* (1958), on German intrigues in Mexico during World War I; and *The Proud Tower* (1966), a study of the years 1890–1914, which includes a chapter on the *Dreyfus Affair.

[Catherine Silverman]

In 1972 Tuchman was the recipient of the Pulitzer Prize for the second time for her book *Stilwell and the American Experience in China, 1911–1945,* and her book *A Distant Mirror: The Calamitous 14th Century* (1978) was an outstanding best-seller. These were followed by *The March of Folly: From Troy to Vietnam* (1984) and *The First Salute: A View of the American Revolution* (1988).

In May 1978 she was awarded a gold medal for history by the American Academy and Institute of Arts and Letters and in February 1979 was elected its president, the first woman to hold this position. In April 1980 she delivered the Thomas Jefferson lecture, the highest award of the American government for intellectual achievement outside of science; her subject was "Mankind's Better Moments."

TUCHOLSKY, KURT (1890–1935), German satirist and journalist. Born in Berlin, Tucholsky was conscripted immediately after his graduation from law school in 1915. He spent most of World War I at the front and his experiences made him an ardent pacifist and socialist. In 1912 he had published *Rheinsberg*, a remarkably mature novella (which had its 100th edition in 1932). From 1913 he was encouraged by Siegfried *Jacobsohn to write for his periodical *Die Schaubuehne* (later called the *Weltbuehne*), one of the most aggressive and effective magazines of its time. His articles appeared under various pseudonyms (e.g., Peter Panter and Theobald Tiger), often side by side. He also wrote for many other newspapers and periodicals, publishing essays, stories, poems, and cabaret songs. Disillusioned with the Weimar Republic, Tucholsky moved to Paris in 1924, and worked as a foreign correspondent for the *Weltbuehne* and other publications. For six months after the death of Siegfried Jacobsohn he was the interim editor of *Weltbuehne* (1926–27). Tucholsky traveled throughout Europe and in 1929 settled in Sweden. Although he was drawn toward Communism, its excesses repelled him and the triumph of Nazism made him despair of Germany's future. He finally committed suicide in Hindas, Sweden. Tucholsky is considered one of the greatest German-Jewish satirists after *Heine, with whom in his apostasy and his ability to be witty and subtle in the German language he has often been compared. He was a man of the left, an ardent European, and an antinationalist. Tucholsky's satire was aimed at militarism, injustice, entrenched privilege, deep-rooted flaws in the German national character, stupidity, and greed.

His prose satire was collected in *Mit 5 PS* (1928), *Das Laecheln der Mona Lisa* (1929), and *Lerne lachen, ohne zu*

weinen (1931). An early volume of cheeky poems, *Fromme Gesaenge* (1920), was followed by light satirical verse, often using the Berlin dialect in which Tucholsky excelled. Other works include *Ein Pyrenaeenbuch* (1927); the controversial *Deutschland, Deutschland ueber alles* (1929), a volume of photos and photomontages containing his prose and poetry, which mercilessly pilloried the Germany of the Weimar Republic; and *Schloss Gripsholm* (1931). Having abandoned Judaism in 1911, Tucholsky presented in the figure of Herr Wendriner an assimilated, opportunistic, spiritually empty German Jew. After World War II his works were frequently reprinted in both East and West Germany. Two which appeared posthumously were *Politische Briefe* (1969) and *Briefe an eine Katholikin* (1970).

TUCK, RAPHAEL (1821–1900), British art and greeting card publisher. Born to a Jewish family in Germany, Tuck probably came to England at the time of the 1848 revolution, settling in London. He became a noted art publisher and, ironically in view of his religion, one of the earliest and most successful publishers of Christmas cards (which date from 1843). In 1880 he held a competition to design the best-looking card and did much to make them popular. Tuck employed a variety of famous artists to design his cards, including Sir Edward Poynter, and once paid Alfred Tennyson £1000 to write some verse for a card. His son SIR ADOLPH TUCK, FIRST BARONET (1854–1926) is often credited with introducing the picture postcard into England with a card showing Mount Snowdon in Wales and designed to be sold to tourists visiting the spot. He also introduced the first full-color postcards of fine art works, a set of Turner paintings, in 1898–99. Tuck, who received a baronetcy in 1910, served as treasurer of Jews' College, London, and was a member of the committee, founded in December 1917 and headed by Lord Rothschild, to further the policies of the *Balfour Declaration.

[William D. Rubinstein (2nd ed.)]

TUCKER, RICHARD (1914–1975), singer and *ḥazzan. Born in New York, Tucker sang in a synagogue choir and studied singing under Paul Althouse. From 1939 to 1944 he was *ḥazzan* at Temple Adath Israel, Brooklyn, and also appeared in concerts and on radio. In 1944 he was engaged by the Metropolitan Opera, but continued officiating as *ḥazzan* at the Brooklyn Jewish Center until 1947. At the Metropolitan he became one of the leading lyric tenors, specializing in French and Italian operas. Tucker was distinguished for the volume and quality of his voice, and sang in the world's leading opera houses. Throughout his career Tucker continued to perform occasionally as *ḥazzan* or in cantorial recitals, and also made several cantorial recordings.

TUCKER, SOPHIE (née **Kalish**; 1884–1966), vaudeville artiste. Tucker was taken as a baby from Russia to the United States. As a child in Hartford, Connecticut, she worked in her parents' kosher restaurant and rooming house, which catered to many show business professionals and stars of the Yiddish theater. She got her start in the profession by singing her heart out to the celebrated customers. Going to New York in 1906, she played the lesser vaudeville circuits, but by 1915 she was topping the bill at the Palace Theater. She toured frequently and presented her act in English and in Yiddish. Known as the "Last of the Red-Hot Mamas," she was described as "big, brassy, flamboyant, laughing and crying, if need be, so that audiences were swept up in an irresistible torrent of lush sentiment." Among her best-known songs were "A Good Man Is Hard to Find," "M-O-T-H-E-R," and "I'm the Last of the Red-Hot Mamas." The audience favorite in the U.S. and Europe was "My Yiddishe Momma," written in 1925 by Jack Yellen. After Hitler came to power in Germany, it was decreed that her recordings of that song were to be destroyed, and it was forbidden to sell them. Tucker's signature song was "Some of These Days," written in 1910 by Shelton Brooks, to which she purchased the excusive rights to sing.

Tucker appeared on Broadway in *Lulu's Husbands* (1910); *Earl Carroll's Vanities* (1924); *Leave It to Me* (1938); and *High Kickers* (1941). She also appeared in several films, among them *Honky Tonk* (1929); *Broadway Melody of 1938* (1937); *Thoroughbreds Don't Cry* (1937); *The Heart of Show Business* (1937); and *Follow the Boys* (1944). In the 1950s and 1960s she was a frequent guest singer on Ed Sullivan's TV variety show *Toast of the Town*.

The Sophie Tucker Foundation, which she established in 1945, distributed millions of dollars to various charities. In 1955 she endowed a theater arts chair at Brandeis University. She also set up two youth centers in Israel bearing her name – the Sophie Tucker Youth Center in Bet Shemesh and a youth center in kibbutz Be'eri in the Negev. In 1962 she sponsored the Sophie Tucker Forest near the Bet Shemesh amphitheater as well as funding many hospitals and homes for the aged.

Her autobiography, *Some of These Days*, appeared in 1945. The 1963 Broadway musical *Sophie*, written by Phillip Pruneau with music by Steve Allen, was based on the early years of Tucker's career.

[Lee Healey / Ruth Beloff (2nd ed.)]

TUCSON, city located in the S.E. part of Arizona. The 2005 Jewish population is estimated at somewhere around 25,000 (exclusive of about 3,000 university students and untold num-

bers of winter visitors). Although the general population, numbering about 750,000 in Pima County (Tucson is the county seat), keeps growing, the Jewish population fluctuates too much to make any kind of definitive statement. Of the Jews present in the city in 1994, 38% no longer reside there, while 24% of the Jews living in Tucson in 2005 did not reside there in 1994. In this sense, Tucson is a typical southwestern town where roots do not go back more than a generation or two because so much growth has occurred since the end of World War II.

Tucson was part of the Gadsden Purchase when a small area of land in southern Arizona and New Mexico was acquired from Mexico in 1854. At first there were relatively few people, Jews and gentiles, in the community, but some Jews came because of merchandising opportunities. Some opened general stores, others acquired Indian trading licenses, and some also served as contractors for the U.S. Army. The settlement in the 19th century consisted mostly of young men out to seek their fortunes. Marriages were made with Mexicans and/or Indians, or else with German or eastern Jewish women who some of the men went back to marry. The total Jewish population of Arizona in the 1880s was estimated at about 50 people, so the numbers in Tucson must have been fewer. A number of men from the city's pioneer Jewish families, the Drachmans, Franklins, Jacobs, Ferrins, Zeckendorfs, Steinfelds, and Mansfields, could be found in elected political positions: on the school board, on the county Board of Supervisors, and even as mayor. One Jew who represented Tucson in the territorial legislature, Selim Franklin, won the University of Arizona for his community in 1885 although at the time it was considered the "booby" prize. Prescott kept the state capitol, Phoenix was awarded the state insane asylum, and Yuma remained home to the state prison.

Almost none of the descendants of the pioneer families are counted among the Jews of Tucson today. Many of the original Jewish settlers fled to other parts of the West or the nation in the late 1880s and 1890s when an economic depression hit the Arizona territory. Moreover, those Jews who had already made money left the community because of the unbearable heat, often over 100 degrees Fahrenheit, which could last sometimes from May through October.

In the early 20th century a number of Jews remained in Tucson as is evidenced by the presence of a Hebrew Ladies' Benevolent Society and the building in 1910 of the first Jewish temple in Arizona: Temple Emanu-el (Reform).

Until World War II, and even among some of the pioneers, the Jews who arrived in Tucson came because someone in the family needed the dry air for his/her health. The whole Jewish population of Arizona, for example, increased from 1,150 people in 1920, to 1,847 in 1937. How many of these Jews lived in Tucson is difficult to judge but in 1940 census takers estimated their number at 480. The one new establishment in Tucson in the 1930s occurred with the founding of a second Jewish synagogue, Conservative, at the beginning of the decade. In 1939 this congregation, Anshei Israel, acquired its first small building.

During World War II the population grew because the United States government established an air force base in Tucson. After the war many of those whose first experience of the southwest occurred during the conflagration returned as settlers because during most of the year the daytime climate ranged from 50 to 80 degrees F. with cool nights except during the summer monsoon season in July and August. The impact of the influx on the city's Jewish community was enormous. In 1948 Tucson counted about 4,000 Jews. Within the next few years Jews in Tucson had established an Orthodox synagogue, a Jewish Community Council, and a wealth of organizations to provide a variety of social services to Jews in the city.

Growth spurts in Tucson occurred in the 1950s and thereafter. Air conditioning came into vogue in that decade which made the city a more tolerable place to live. The 1960s witnessed a depression in the city. At the end of the decade, however, the continued growth of the University of Arizona and the establishment of its medical college spawned a huge mushrooming of the population, Jewish as well as gentile. Whereas in 1970 the city had about 250,000 people and 6,000 or so Jews, today, as mentioned, there are 750,000 people, about 3–4% of whom are Jewish.

In the early 21st century Tucson and the Jews within the community were thriving. Most Jews who work were in professional occupations while a sizeable number were involved with real estate development. There was a host of cultural activities, both Jewish and in the greater community, a strong Jewish Federation with social welfare and social service groups that provide for the needs of every age group, and some indication that young Jewish adults, who in previous decades had to seek employment opportunities elsewhere, were remaining in the city and working in the community.

A community survey taken in 2002 revealed that fewer than half of all Tucson Jews participate in Jewish activities. The community was the second from the bottom among comparably sized Jewish communities whose Jewish respondents have attended synagogues only on special occasions; it had the highest percentage of Jewish single-family households under the age of 65; Tucson was fourth from the bottom in making donations to Jewish charities and fourth from the top (46%) in young adults marrying non-Jews. Forty-two percent of Jewish children under the age of 17 were being raised in households where one of the parents is not Jewish.

On the other hand, Tucson also had the lowest perception of antisemitism in its midst of any Jewish community in the United States. Jews did not find any kind of discrimination in the areas that were of concern in previous decades: housing, employment, areas of recreation. In the 1980s four of the seven members of the State Board of Regents were Jewish (these are gubernatorial appointees), and in the 1990s the chief justice of the Arizona Supreme Court was also Jewish. The year's major societal charity event in Tucson, the Angel Ball, is totally non-discriminatory.

Livingston (eds.), *Jews of the American West* (1991), 136–63; Jewish Federation of Southern Arizona, *A Roadmap for the Future: The 2002 Population Study & Tucson's Jewish Community Planning.*

[Leonard Dinnerstein (2nd ed.)]

TUDELA, city on R. Ebro, in Navarre, N. *Spain. Tudela was the most important Jewish community in the medieval kingdom of Navarre that remained independent until 1512. No information is available on the beginnings of the Jewish settlement in Tudela, which however appears to have been the most ancient of the communities of Navarre. In the period of Muslim rule Jews engaged in agriculture and international commerce, and owned and rented land in the area. Tudela was the birthplace of *Judah Halevi (at the latest in 1075), Abraham *Ibn Ezra (1092), and Shem Tov ibn *Falaquera. In this period there were around 1,000 Jews in Tudela. The Jews of Tudela dominated the life of Navarrese Jewry, both under Muslims and Christians.

With the end of Muslim rule (1115), Tudela passed to *Alfonso I (*el Batallador*), king of Aragon. Two treaties of the conquest period concluded by the king with the local Muslims and Jews have been preserved. With the Muslims, it was agreed that all those who desired to remain in Tudela once it passed under Christian dominion would leave their quarter, including their mosques, within one year and settle in the suburbs of the town. They were promised religious and national autonomy and were prohibited from bringing Muslim captives into the town in order to sell them to Jews; in the same treaty, Jews were forbidden to purchase Muslim prisoners of war. Jews who molested Muslims by word or deed would be prosecuted, and no Jewish officials were to be appointed with rights of jurisdiction over the Muslims or their property. However, the local Jews were granted several rights: Jews who had fled from the town during the siege or at the time of the conquest were authorized to return (there appears to have been some tension between them and the Muslims), their rights over their houses and property were guaranteed, and the Jews were required to pay to the Christian governor the taxes which they had formerly paid under Muslim rule. In the judicial sphere, the charters which had been granted to the Jews of *Nájera were also applied to those in Tudela, undoubtedly at their request. Comparison of the two treaties indicates that the Jews were more favored than the Muslims, especially as they were not required to leave their quarter within a year. According to F. Cantera, this quarter was situated within proximity of the cathedral, while in the opinion of L. Torres-Balbás, it lay in the southeastern part of the town (see bibliography). Jews owned a large number of estates, gardens, and vineyards in the district known as Mosquera, near Tudela. Occupations of the Jews in Tudela included *slave trading (already practiced under Muslim rule) in addition to spinning, trade in wool, the production of textiles, and various crafts, including gold- and silversmithing.

It was at the height of this period of prosperity, in the 1160s, that the traveler *Benjamin of Tudela left his city for the countries of the Orient and the Mediterranean basin. His account of the towns he visited included mostly information about the local Jewish community and the economy of the towns. He was most probably a merchant with a great interest in the Jewish world. His book, written in Hebrew, often provides the only information available on the Jews of the time. In 1170 Sancho VI "the Wise" granted the Jews of Tudela a privilege which did much to regularize community life. It permitted Jewish houses in the Jewish quarter, which was now established in the fortress, to be sold and transferred to any buyer, ratified the charters of Nájera, and granted a tax exemption on condition that the Jews of Tudela assumed responsibility for maintaining the fortress of Tudela (with the exception of the tower). A site was allocated to them for a cemetery. A year later Sancho granted the Jews of Tudela the charters applying in Funes and alleviated the severity of the Jewish *oath. The privilege of 1170 secured a place of residence for the Jews in the fortress of Tudela where they could protect themselves against rioters and attackers. Thus there were two Jewish quarters in Tudela. The first, the Vieja (the Old), existed during the Muslim period and continued to exist during the first 50 years of the Christian conquest. This quarter was in the southeastern part of the city, within the walls, in the area stretching from the Cathedral as far as the Queiles River, today El Muro street. The second quarter was established in the fortress in 1170. This new quarter, the Nueva, occupied part of Paseo del Castillo and San Miguel street. In the new quarter there were the following synagogues: the Sinagoga Mayor, the Sinagoga Menor, and the Bet Midrash of Bene Orabuena. We have no information about the locality of these synagogues or of other communal institutions of whose existence we know.

When Navarre passed to the house of Champagne in 1234, French rulers introduced their modes of behavior into the new possessions, while economic and religious rivalry between the Jews and the Christian townsmen also increased. The tax registers show the heavy burden of taxation imposed on the Tudela community. It was affected by the revolt of the townsmen against King Theobald I in 1235. R. Shem Tov *Falaquera, of a distinguished family of Tudela, still complained in 1264 of the situation in his *Ha-Mevakkesh*. Many Jews lost their fortunes, while the debts which were owed to Jews by the peasants could not be collected. The community administration was concentrated in the hands of several prominent families.

14th and 15th Centuries

The community regulations of 1305 show that the administration was modeled on the institutions of the municipal administration. The "Institution of the Twenty" was comparable to the institution of the 20 town notables found in the towns of Aragon by the beginning of the 12th century, and the 20 *jurados* who administered the town at the beginning of the 13th century; there were also the "Institution of the Eleven," by which several of the community's regulations were estab-

lished, and the *muqaddimūn*. Every regulation required the signatures of eight of the community's notables. Three of the community's leaders, Joseph b. Shem Tov Falaquera, Samuel b. Joseph Abbasi, and Ḥayyim b. Shem Tov Menir, were to be the decisive authority in matters connected with denunciations by *informers.

Like many of the communities of Aragon and Navarre, Tudela became a haven for the refugees from French territory after the expulsion of 1306. However, difficult times followed. In 1319 several *Conversos who had returned to Judaism were burned at the stake in Tudela. A year later the community was only spared a massacre by the *Pastoureaux (Shepherds) through the latter's defeat near the capital of *Pamplona. The community again suffered from the riots of 1328, and was not spared in the economic decline of the 14th century. Like the other communities of Spain, the Tudela community also appears to have suffered in the 1360s at the hands of the foreign armies which invaded Spain and Castile during the civil war between the brothers Pedro the Cruel and Henry of Trastamara.

During the 14th century Tudela had several outstanding personalities. In 1322 the infante Alfonso of Aragon conducted negotiations with Ishmael b. Joseph ibn Abbas (the same as Ishmael de Abelitas) concerning his settlement in Aragon. The members of this family were prominent merchants who controlled a large part of the trade of that period. R. Joseph *Orabuena, who acted as physician and confidant to Charles III of Navarre, and accompanied him on several journeys to France, presided over the community of Tudela after 1391. R. Shem Tov b. Isaac *Shaprut, a philosopher and a rabbinic authority, who was involved in a disputation with Cardinal Pedro de Luna (later Pope Benedict XIII) in Pamplona in 1375, was also a native of Tudela. There were also some Converso artists in Tudela, including Juan de Levi, whose paintings are to be found in the local church.

Hebrew sources found in the archives in Pamplona and Tudela show the extensive economic activities of the Jews of Tudela. These sources were mostly written in Hebrew, sometimes in Judeo-Navarrese, that is, in Navarrese dialect but in Hebrew characters. Some of these sources also provide information about the organization of the community.

In 1391 there were 90 houseowners in Tudela who paid taxes, but these represented only a remnant of the community's former population at the height of its prosperity, although Tudela was not itself affected by the 1391 persecutions. Subsequently the community continued to decline.

The phenomena characterizing the communities of Spain in the 15th century were also evident in the Tudela community, and a number of its members abandoned Judaism. The community was also depleted by a plague which struck the town during the 1430s. A Cortes convened in Tafalla in 1482 prohibited the Jews of Navarre from going out of their quarters on Christian festivals; they were forbidden to walk in the streets among the Christians who were celebrating until the conclusion of the prayer service. Only physicians and surgeons were authorized to visit the sick. After the assassination of the inquisitor Pedro de *Arbués in Saragossa the town of Tudela refused to deliver several Converso fugitives to the *Inquisition.

At the time of the expulsion of the Jews from Spain in 1492, about 2,000 refugees crossed the border of the kingdom of Navarre. Like the other communities in Navarre, the Tudela community ceased to exist after the expulsion of the Jews from this kingdom in 1498. Although the Spanish border was closed, a number of Jews moved to Provence. Tudela was included within the jurisdiction of the Inquisition tribunal of the kingdom of Navarre which was set up in 1512, whose seat was at first in Pamplona and subsequently in Estella. The tribunal established itself in Tudela in 1515 and was later incorporated within the tribunal which had its seat in Logroño. In 1521 the Conversos in Navarre rose in support of the French armies then invading the kingdom. When the invasion had been repelled, the Inquisition turned its attention to the Conversos, many of whom fled from Tudela and the other towns in Navarre. A list of those condemned in Tudela by the Inquisition, known as La Manta, still hung in the cathedral at the close of the 18th century.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

TUEBINGEN, city in S. Germany. The first mention of Jews in Tuebingen concerns a short-term guarantee in 1335 by the counts of Tuebingen, who sold the city to *Wuerttemberg in 1342, to their "burghers: clerics, laymen, Jews or Christians." The Judengasse was south of the town's bridge and is fortuitously mentioned only in 1398, but it dates probably from a much earlier period. A 1458 source, of which only a résumé is extant, speaks of the privileges of the Tuebingen Jews. In 1459 they were accused of charging higher interest than specified therein. The two major creditors, Kaufman and his wife Bela, were imprisoned by 14-year-old Count Eberhard V of Wuerttemberg, but they were released by his guardian Count Ulrich

v of Wuerttemberg, who ordered a three-year debt moratorium and interest annulment. In 1460 he helped them to move, under favorable terms, to the Black Forest town of Wildberg, and two other Jewish families followed them to this town. By 1471 five Jewish families remained in Tuebingen. The founding of the university at Tuebingen in 1477 occasioned the expulsion of the Jews from the city and a ban against doing any business there.

In 1815 the first Jewish student, Samuel Harum Mayer, was admitted to the university by special permission of the Wuerttemberg king; Jewish students were admitted generally from 1821. In the nearby village of Wankenheim, a Jewish community of peddlers and *livestock merchants started in 1775; a synagogue was built there in 1833, and a cemetery was acquired in 1845. By 1852 the Wankenheim Jews began moving to Tuebingen, a process nearly completed in 1882 when a synagogue was consecrated in the city; like the cemetery, it was used by Jews of Reutlingen and several other towns and villages. Seventy-five Jews lived in Tuebingen in 1875; 139 in 1910 (0.73 percent of the total population); and 90 in June 1933. The attorney Simon Hayum had a municipal position prior to 1933. With the rising of Nazism, a general boycott of Jewish establishments was initiated, and Jewish students had to leave the university. (The law office of Simon Hayum was maintained until November 1938.) Twenty Jews moved elsewhere after 1933, and 50 emigrated between 1933 and 1940. The synagogue was burned in November 1938, and the community was dissolved in 1939. Fourteen Jews were deported to the east in 1941–43.

[Toni Oelsner]

Contemporary Period

In 1968, eight Jews lived in Tuebingen. They were affiliated with the community in *Stuttgart. The university's theological faculty had an *Institutum Judaicum that conducted seminars and lectures, and published Judaistic works. The philosopher Ernst *Bloch taught from 1956 at Tuebingen University. In 1978/79 a memorial was inaugurated to commemorate the destroyed synagogue and the former Jewish community. In 2000 a new memorial was consecrated. About 1% of the members of the Jewish community of Wuerttemberg (2,881 members in 2004) live in Tuebingen.

TUGAL, PIERRE (1895–1964), French writer, born in Russia. In 1931 he was co-founder (with Rolf de Maré) and curator of the Paris Archives Internationales de la Danse until its dissolution in 1952. In 1935 Tugal was a founder of L'Association de la Presse Chorégraphique. Delegate to UNESCO, doctor of law, with a diploma in social and political sciences, Tugal devoted himself to literary and art research, specializing in the theater and dance. He engaged in research on the use of dance in rehabilitation of the handicapped and the mentally ill. He was the author of many articles and several books on dance, including *Initiation à la Danse* (1947), *Petite histoire de l'art et des artistes* (1952), *La Danse Classique sans Maître* (with Lucien Legrand, 1956); and a work on Noverre, an 18th-century French ballet master (1959).

[Naama Ramot (2nd ed.)]

TUGENDHOLD, JACOB (1794–1871), author and an early adherent of the Galician *Haskalah. He was born near Cracow, Poland and graduated from the University of Breslau. In 1819 he founded a model school in Warsaw, which aroused the antagonism of the Orthodox teachers, and a year later was appointed governmental vice censor of Hebrew books. He served as head of the governmental rabbinical seminary in Warsaw during its last years (1856–63). An author of many Polish books and pamphlets aimed at improving the lives of the Polish Jews, he also defended Judaism from hostile attacks.

Among his books are *Jerobaał* (Pol. 1831), and the leaflet *Koshet Imrei Emet ve-Shalom* (1844), on the attitude of Judaism toward people of other faiths. Tugendhold also wrote a Polish-Hebrew catechism titled *Ben-Yakkir* (1834) and translated into Polish *Beḥinat Olam* (1846) by *Jedaiah ha-Penini, *Vindiciae Judaeorum* (1831) by *Manasseh Ben Israel, in defense of the Jews against the blood libel, M. *Mendelssohn's *Phaedon* (1842), and other books.

[Yehuda Slutsky]

His younger brother WOLF TUGENDHOLD (1796–1864), born in Vilna, was an educator and author. In 1827 he was appointed government censor of Hebrew books at Vilna, using his office with particular severity against ḥasidic writings. His relations with the Vilna circle of *maskilim* were tenuous, as he advocated a germanizing Haskalah and had little interest in Hebrew culture. He also taught history at the rabbinical seminary in Vilna. His published works include *Der Denunziant* (1833; Heb. tr. by M.M. Bendetsohn, *Hamoser…*, 1847), a story of Jewish life in Poland; and *Der Mensch im Ebenbild Gottes* (1830).

°**TUKA, VOJTECH** (1880–1946), prime minister of Slovakia during World War II and one of those responsible for the deportations of Slovak Jewry. A professor of law at Pecs and later at Bratislava University, Tuka became secretary of the separatist Slovak People's Party and editor of its publication *Slovak* after World War I. He adopted a strong anti-Czech line, collaborated with the Hungarian Irredenta movement, and in 1923 established the fascist Rodobrana ("Homeguard"). In 1929 he was found guilty of high treason by a Czechoslovak court. In the pre-Munich days Tuka renewed his activity in the pro-German radical wing of the People's Party led by Hlinka. He became the ideologist of "independent" Slovakia, its prime minister (1939–44) and foreign minister (from 1940). Tuka acted as the moving spirit behind the persecution of the Jews, negotiating with the Germans for the deportations of Slovak Jewry and collaborating fully with Hitler and his officials in the "Final Solution." He opposed intervening against the expulsion of the Slovak Jews. He was condemned to death by the National Tribunal of Bratislava but died before the sentence could be carried out.

TUKUMS (Ger. **Tuckum**), city in Zemgale province, Latvia. In 1800 Tukums had a Jewish population of 272, of whom 17 were merchants. Records from the following year show that the Jewish community had a rabbi, a *ḥevra kaddisha*, a community council, and a minute-book (**pinkas*). In the late 1897 census Tukums showed a Jewish population of 2,561 (34% of the total population). After World War I there were 597 Jews in Tukums (13.4%) in 1920; 968 (12.6%) in 1930; and 953 (11.7%) in 1935. Most of the Jews were shopkeepers and artisans. Members of the Lichtenstein family served for several generations as rabbis in Tukums. In the summer of 1941 Tukums was occupied by the Germans. The Jews of the town, with those of surrounding smaller communities, were then all driven into the local synagogue and burned. Early in 1961 the synagogue of Tukums was closed by the authorities after pressure to resign had been brought to bear on its board. The Torah scrolls, religious articles, and hundreds of books were removed to the Riga synagogue.

In the late 1960s the Jewish population of Tukums was estimated at about 750, but it dwindled as a result of emigration and Soviet repression.

TULCHIN, city in Vinnitsa district, Ukraine. A Jewish community is first mentioned in 1648 when Tulchin was conquered by the Cossack forces of *Chmielnicki, who massacred the Jews of the town and those of the surroundings who had sought refuge in the fortress of Tulchin, as well as the Poles who were there at the time. According to two varying, widely circulated accounts the Poles betrayed the Jews to the Cossacks after fighting them together, but were in turn massacred by their common enemy in Tulchin. The massacre of Tulchin was the subject of a play written by the Jewish-Russian author N. *Minski under the title *Osada Tulchina* ("The Siege of Tulchin," in the monthly *Voskhod*, 1889). Shalom *Asch in his tale *Kiddush ha-Shem* (Eng., 1926) and A.S. *Friedberg in part III of his *Zikhronot le-Veit David* also wrote on the massacre of Tulchin. After the rebellion the Jewish settlement of Tulchin was renewed, but in 1743 and 1768 the community was again attacked by the *Haidamacks. In 1765 there were 452 Jews in Tulchin. At the end of the 18th century the *ẓaddik* R. Baruch, the grandson of *Israel b. Eliezer Ba'al Shem Tov, lived in Tulchin. The number of Jews in Tulchin increased during the 19th century, and with 10,055 Jews in 1897 formed 62% of the total population. During the civil war in the Ukraine at the end of World War I the Jews of Tulchin were attacked several times; the most severe pogroms took place on July 1, 1919, when about 170 Jews were massacred. In 1926 there were 7,708 Jews in Tulchin (44.3% of the total population). After the German occupation of the Ukraine in World War II, Tulchin was incorporated into the region of *Transnistria, which had been handed over to Romania. During the autumn of 1941 the 3,000 Jews who remained in Tulchin were transferred to the camp of Peczara. In 1959 there were about 2,500 Jews in Tulchin (21% of the total population). The last synagogue was closed by the authorities in 1959.

[Yehuda Slutsky]

ṬŪL KARM, Arab town in Ereẓ Israel 9 mi. (15 km.) E. of Netanyah. According to archaeological evidence, the place was inhabited in the Roman period. The Arabic name is derived from the Aramaic Tur Karma (טוּר כַּרְמָא) so-called by its *Samaritan inhabitants who constituted the majority of its population in the Middle Ages. Over the last few centuries, Ṭūl Karm was a small place, but expanded in the 20th century when through traffic increased, particularly with the building of a highway along the eastern rim of the Sharon and the construction of the Haifa-Lydda railway line. The planting of citrus groves and progress in other local farm branches also favorably affected its growth. Ṭūl Karm's development slackened somewhat in the 1930s when a main highway was completed further west, between Petaḥ Tikvah and Ḥaderah. In the armistice agreement with Jordan (1949), Ṭūl Karm was in Jordanian territory and the border was so drawn that it was separated from the railway and from certain landholdings. Nevertheless, the town resumed its growth as farming and administrative services provided new employment opportunities. A farm school was established in the 1920s through a contribution by Sir Elly *Kadoorie. Ṭūl Karm was taken by

Israeli forces in the *Six-Day War (June 7, 1967). According to the census of the fall of 1967, the town had 10,157 inhabitants, all of whom were Muslim Arabs, except for 103 Christians. Of the total, 5,020 lived in a refugee camp. The town's economy continued to be based mainly on intensive farming. In the wake of the Oslo II Agreement of September 1995, Ṭūl Karm was transferred to the jurisdiction of the *Palestinian Authority. In 1997 its population was 33,921, of whom 31.4% were refugees.

TUMARKIN, IGAEL (1933–), sculptor and painter. Tumarkin was born in Dresden, Germany, the son of Berta Gurevitch and Martin Hellberg, a German theater actor and director. His mother and his stepfather, Herzl Tumarkin, raised Tumarkin in Israel from the age of two. In 1955–57, after his service in the navy, Tumarkin traveled to Europe. In East Berlin he met his father and worked as a set designer for Bertolt Brecht's Berliner Ensemble. The sculptors Rudy Lehman and Itzhak *Danziger influenced his turn to the medium of sculpture, and his first iron sculptures appeared in the summer of 1956.

The landscape of the desert also inspired him. Tumarkin created reliefs made from sand using a unique spraying method. Through the 1960s Tumarkin turned to assemblage techniques and his sculptures were created from the junk of Israeli ships, weapons, and machines. Over time the weapons became integrated into figurative sculptures of males and females made from casts taken from show window mannequins (*He Walked in the Fields*, 1967, Tel Aviv Museum of Art).

Tumarkin's visits to New York in the mid-1970s influenced the composition of his sculptures. They became horizontal as counterpoints to the skyward orientation of modern architecture. The use of glass reflecting the environment was also based on the urban landscape. In 1974–75 he completed his monument dedicated to the Holocaust and renewal in Tel Aviv. With his interest in earth architecture he traveled to Egypt, Tunisia, Morocco, Senegal, and elsewhere. The works created under the inspiration of these trips were made of iron, earth, and fabric. The subject matter dealt with nature, religion, sacrifices, and the connection among them (*Bedouin Crucifixion*, 1982, Israel Museum, Jerusalem).

Iron became Tumarkin's main material, and from the 1990s he improved his technique, shaping the iron by himself at a temperature of 1200 degrees using heavy tools in a process that required the utmost concentration.

Tumarkin's sculptures were placed all over the world and he gained international recognition. In Israel he was one of the dominant figures in modern Israeli art. A feature of his art is its connection to the history of the country. Israeli ideals, wars, and the social situation were all part of his artistic content. The fact that his art involved controversial political statements created enormous objection to his being awarded the Israel Prize in 2004.

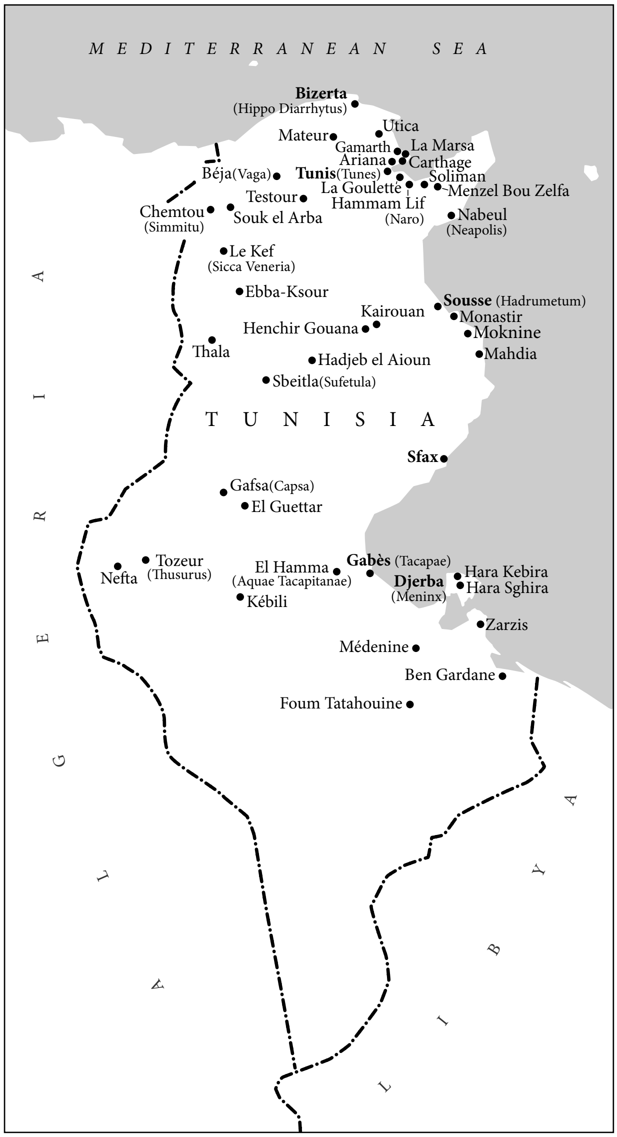
TUMIN, MELVIN MARVIN (1919–1994), U.S. sociologist. Born in Newark, New Jersey, Tumin first taught at Wayne State University, Detroit, and from 1947 was professor of sociology and anthropology at Princeton. Tumin specialized in race and intercultural relations. His book *Desegregation: Resistance and Readiness* (1958), based on survey data from Guilford County, North Carolina, is a careful account of a white population's attitude toward the American black.

Among his other works are *Social Class and Social Change in Puerto Rico* (1961), *Education, Social Class and Intergroup Attitudes in England, France and Germany* (1964), *Social Stratification: The Forms and Functions of Inequity* (1967), *Patterns of Society* (1973), and *Caste in a Peasant Society* (1975). In all these investigations, Tumin emphasized the correlation between social structure and intergroup attitudes. He was a consultant on race and intergroup relations to the Anti-Defamation League of B'nai B'rith, for which he wrote *An Inventory and an Appraisal of Research on American Anti-Semitism* (1961) and edited *Race and Intelligence: An Evaluation* (1963). Tumin also edited *The Research Annual on Intergroup Relations* of the A.D.L.

[Werner J. Cahnman]

TUNIS, TUNISIA, country in N. Africa between *Libya and *Algeria. After their conquest of the country, the Romans named it Provincia Africa, Africa Propria, or, more generally, Africa. Roman Africa included, in addition to the territories of present-day Tunisia, a large stretch of Algeria's territory to the west, which was called Numidia, and Libya's coast to the east.

Second Temple Period



As many scholars have often assumed, it is probable that Jews lived in Punic *Carthage; a Judeo-African legend has it that the Jews came to the island in the southeast (e.g., in the island of *Djerba (Jerba)) in King Solomon's time. Another legend relates that the kohanim, escaping from Jerusalem in the year 70 C.E., carried one of the Temple's doors to the island, and it is believed to be walled in the synagogue called *Ghriba* (the wondrous). However, there is no factual evidence positively stating that Jews lived in Punic Carthage or its territories. The "*Tarshish" of the Bible has nevertheless been identified with Carthage by the Septuagint and the Aramaic Targum of the prophets. On the other hand, for the Arab authors of the Middle Ages, Carthage – later confused with Tunis – has always been synonymous with "Tarshish." The Talmud echoes ancient traditions regarding the connection between, on the one hand, Punic Africa and Canaan's country and the Jewish world of Ereẓ Israel, on the other.

Under Roman rule the province of Africa included many Jewish communities whose existence has been proven by numerous texts and archaeological findings. From Cyrenaica

to *Morocco a series of Jewish communities have left their landmarks in these countries. Their center was Africa Propria, whose living conditions were well known in ancient rabbinic literature. The most important of these communities was Latin Carthage which from the second to the fourth centuries C.E. was the home of such sages as R. Ḥinna, R. Ḥanan, R. Isaac, and R. Abba, who are mentioned in the Talmud. A great number of Jewish lamps and many epitaphs, mostly written in Latin and accompanied by the seven-branched *menorah*, which were discovered in the cemeteries of Carthage, Marsa, Byrsa, or Gamarth, bear witness to the existence of a large population of the Jewish faith in Carthage. The extension of the Jewish necropolis at Gamarth indicates the importance of the community against which, Tertullian, who knew it intimately, wrote a special treatise (c. 200–06). Later, St. Cyprian, St. Augustine, and many other Christian authors of Africa Propria wrote against their Jewish fellow countrymen and the numerous Judaizing sects of ancient Tunisia.

Jews and Judaizers were widely scattered throughout the entire country, especially at Naro on the Hammam-Lif beach where a magnificent synagogue stood, the ruins of which are well known; at Hippo-Diarrhytus (present-day Bizerta), whose governor at the time of the Arab conquest was, according to the historian al-Qayrawānī, a Jew; at Utica; at Simittu (present-day Chemtou); at Hadrumetum (present-day Sousse); and at Henchir-Gouana, west of the site where the present-day Kairouan was to be built. On the Libyan littoral, included in Africa Propria, there was a Jewish community at Oea (present-day Tripoli); at Leptis Magna (present-day Lebda); and at Locus Judeorum Augusti, also called Scina (Iscina), whose Jews were among those sent by the Romans as slaves from Ereẓ Israel to Africa after the war of 70. After they were set free, they settled in areas granted to them by the Romans. Inland, according to Ibn Khaldūn, the tribe of Nefusa practiced the Jewish faith before the Arab conquest. It is known that there were Jewish communities in Numidia – which also belonged to Carthage – at Hippo Regius (present-day Bone), at Cirta (Constantine), and at Henchir-Fouara, not far from Souk-Ahras, the center of nomadic Jews called Baḥusim under Arab rule. Concentrations of Jews were also found at Thusurus (the present-day Tozeur), as well as Jewish tribes who lived before the Arab rule in the mountains of Aurès.

Living and economic conditions of Jews in Africa seem to have been satisfactory during the Roman era and before Christianity's triumph. In Carthage especially, the luxury of the decorations of most of the hypogea in the Jewish cemeteries of Gamarth bear witness to the prosperity of the community and to the wealth of certain families. It seems that most of the island Jews were engaged in agriculture. In the harbors many Jews were involved in maritime trade: trade relations between Rome and North Africa were of exceptional importance owing to the transport of foodstuffs to Rome, and later on also to Constantinople. This trade – as much evidence indicates – was almost completely in the hands of African Jews who lived in Rome on Mount Colius, in a special district between the Coliseum and the Appian Way. Jews were entrusted with the transport of foodstuffs destined for Rome (*annona urbis*), which consisted mainly of cereals and olive oil; at that time Africa was the main producer in the Mediterranean; they were then called *navicularii*. One of the main tasks of these Jewish owners of big vessels was to engage in transport for state requirements, for which they received official honors in Africa Propria, as elsewhere. Jewish *navicularii* formed a separate corporate body. When the Roman Empire became Christian, the state took advantage of the Jewish ship owners and misused them so that their task became an overwhelming burden. Mass arrivals of Jews to Africa were mainly the aftermath of the disasters they were subject to in Ereẓ Israel, Egypt, and Cyrenaica from 70 to 118 C.E.

Jewish communities in Tunisia. Names in boldface indicate those still in existence in 1971.

Their number increased as a consequence of the intense proselytic propaganda to which they dedicated themselves, first among the descendants of the Punics, then among the Berbers. The situation of the Jews facing Christians changed considerably after the time of Constantine, when triumphant Christianity became persecutor in Africa as elsewhere. When the Vandals dominated Africa Propria, the Jews were better treated but little is known about their true condition during that era. There is more information about their condition during the Byzantine period. In pursuance of the edicts of 535, applied by *Justinian at the same time to the Christian heretics, Jews were excluded from all public office, their worship outlawed, all meetings prohibited, and their synagogues transformed into churches. By the emperor's order the Jews of Borion, on Cyrenaica's frontiers, were forcibly converted, but toward the end of the sixth century the Byzantine administration slowly let the strictness of its rules lapse.

The persecutions by Justinian contributed to the expansion of African Judaism. Tracked down and sometimes even expelled, many Jews took refuge with the Berbers of the mountains and of the desert where they doubtlessly met coreligionists who had already settled there. In those regions the newcomers again took up their propaganda. This is probably how the great Judaized Berber tribes of Africa Propria were established, especially the Jarrāwas of the Aurès Mountains and the Nafūsas of Libya. According to some scholars other Jews left Africa for *Sicily and southern Italy. After the Arab conquest this latent immigration – started under Justinian – took the form of mass flight for the Jews of the African coast.

Tunisia under Arab Rule (to the Advent of the Hafsid)

The Arab conquest of this part of the world began in 643 when they took *Tripoli, but it did not take on a permanent aspect until the foundation of *Kairouan in 670. The resistance of the Byzantines rapidly decreased as the Berbers withstood the conquerors stubbornly. The *Berber leader Kusayla was a Christian. After having gained control of Kairouan in 688, he was defeated and killed. *Kāhina, who according to certain sources was a Jewess and whose life is surrounded in legends, then reigned over the powerful Jarrāwa tribe in the Aurès. Ibn Khaldun asserts that the Jarrāwas were Jewish. After the death of Kusayla, Kāhina – followed by all the Berbers – directed the military operations. A new Arab chief, Ḥassān ibn Nuʿmān, received a mighty army from the caliph *Abd al-Malik. Ḥassān seized Carthage and its inhabitants, doubtless including a number of Jews, and sailed for the islands of the Mediterranean. Kāhina advanced with her Jarrāwas on the Arab army, which she overwhelmed near Tebessa and drove out of Ifrīqiya. The Berbers then lived in security for a few years; once Ḥassān ibn Nuʿmān had received reinforcements, he launched another offensive in 702. Moreover, the Arabs found allies among the Greek inhabitants of the towns as well as the Berber farmers, who were opposed to Kāhina because she had destroyed their crops in order to prevent them from falling into the hands of the invaders. The old queen fought a desperate battle against Ḥassān ibn Nuʿmān but her army was beaten and pursued into the Aurès Mountains. In the wake of a second battle Kāhina was killed and her head was sent to the caliph ʿAbd al-Malik as a trophy. With the death of this woman, who was called the "Berber Deborah," the period of heroic defense was brought to a close.

The Arabs then subordinated the whole of North Africa. The "people of the Book" (see *Ahl al-Kitāb) and the Christians were authorized to live under their domination upon the condition that they paid the **jizya* (an annual poll tax, sometimes called also in the Maghreb (as elsewhere) *jawāli*, the tax of the expellees; see **Galut*). Although the Berbers converted to *Islam, they were also compelled to pay these levies. The demands of the Arabs soon incited large-scale revolt. In Ifrīqiya an Arab governor, Ibrāhīm ibn al-Aghlab, established the dynasty of the *Aghlabids, which reigned from 800 to 909. There is evidence that from this period important groups of Jews were found particularly in the towns, where the revenue of their poll tax constituted an appreciable income for the state. They coexisted peacefully with the Muslim masses. Muslim scholars maintained friendly relations with Jewish scholars and important Muslim merchants and ship owners were content to trade with their Jewish colleagues. Under the Aghlabids, their successors the *Fatimids (Fātimids), and the Zīrids, until the invasions of Ifrīqiya by the Bedouin in the mid-11th century, an exceptional prosperity was enjoyed, which was followed by a period in which remarkable intellectual activity prevailed. The Jews played an important role in this progress. In Kairouan, the leading city of an immense empire, there were famous yeshivot which were headed by eminent scholars who for a long time maintained relations with the **geonim* of the academies of *Sura, *Pumbedita, and Palestine. Shortly after the city's foundation the *Umayyad caliph of Damascus had 1,000 families – which are thought to have been Jewish – transferred from *Egypt to Kairouan. It was there that Isaac Israeli, the most famous physician of his day, studied in about 900. He became the private physician of the last of the Aghlabids, Ziyādat-Allah III, and held the same position under the first of the Fatimid caliphs, the mahdī ʿUbaydallah. The most famous of Israeli's disciples was *Dunash ibn Tamīm, who, like his teacher, left a number of valuable works including a treatise on astronomy which refuted the principles of astrology, a commentary on the *Sefer Yeẓirah*, and a textbook on Hebrew grammar. Jewish scholars who possessed a wide, profound, and diversified knowledge – as was customary in the Middle Ages – flourished in Ifrīqiya. In addition to Kairouan they were to be found in such important communities as al-Mahdiya and Gabès. Outstanding among the talmudists in Tunisia were the scholars of the Ibn Shahūn family: R. Nissim, his son Jacob to whom R. Sherira and R. Hai addressed their famous *Iggeret* (responsum concerning the history of the Oral Tradition), and his grandson *Nissim, author of many talmudic treatises. Not less important was R. Ḥushi'el (one of the *Four Captives), and especially his son R. *Hananel. The leading family of scholars in Mahdiya was the

Ibn Sīghmār (or Zūghmār), four generations of which served as *dayyanim*. But according to Abraham ibn Daud (*Sefer ha-Kabbalah*, 77–8) after the demise of R. Hananel and R. Nissim, the talmudic learning came to an end in Ifriqīya. Ibn Daud did not hold in high esteem later scholars in Mahdiya and in Galʿat Hammad.

From the thousands of documents preserved in the Cairo **Genizah* and recently studied it is particularly evident that the class of Jewish-Tunisian businessmen (which was also – as was almost always the case in North Africa – the intellectual class) was a factor of considerable importance at this time not only in Tunisia but also throughout the Mediterranean countries. The importance of these other merchants, whether indigenous or from places in the Maghreb – but who often established themselves in Tunisia – lay in the decisive role they played in the trade with *India and their dominant position in the trade of the western Mediterranean. A large number of the leading and most active merchants in Egypt – in Fostat, *Alexandria, the large textile centers of Bushir and Tinnis, and the smaller localities where flax and indigo were grown – were Tunisian Jews who stayed in the country or had recently established themselves there; their families generally remained in Tunisia. Others lived in *Aden or even further away, as in India.

Jewish *Jerusalem of the 11th century was also inhabited by many Jews from the Maghreb. The majority of the Jews of *Sicily, which had been conquered by the Muslim natives of Tunisia from the ninth century, were Tunisians. Their extensive activity on the island – in *Palermo, *Messina, and later *Syracuse – was felt as far as in northern *Italy and *Spain to the west. The principal goods which the Jews exported from Tunisia were linen and cotton textiles of every category, which they themselves occasionally manufactured, especially in the large industrial center of Sousse. Silk cloth and valuable brocades were also exported. Their carpets, manufactured in Tunis, Sfax, or Gafsa, and the canopies of Gabès, well-known in the Middle Ages, were much sought after. They exported many metals: copper from *Morocco, Spanish tin, lead, and mercury. The reexport of Spanish and Sicilian silks was practiced on a large scale. The agricultural products exported by the Jews included primarily olive oil and its by-product soap, beeswax, almonds, saffron, and occasionally wheat. They sent salted tunny (fish) to Egypt. One of their main exports was raw or tanned hides; they also exported coral, which was found abundantly along the African coasts, and all kinds of ornaments which were made from them. Finally, books, written in Hebrew in Kairouan, were a very important item in the export trade to the west.

The Jews of Ifrīqiya imported spices of every kind, Oriental perfumes, indigo, walnut peel for its dyes and varnishes, sugar, medicinal drugs and plants, jewelry, precious stones, and pearls. The most important import, however, was Egyptian linen. All these goods were mainly transported by sea. The Jews of Tunisia were occasionally ship owners or partners in this trade. The ships, however, were generally owned by the government or members of the royal family, who maintained excellent relations with the Jews and entrusted them with the administration of their wealth. This enormous traffic was largely controlled by powerful Jewish families. These families, only about 20 in number, were large, wealthy, and influential. They organized into clans, contracted marriages among themselves, and were also related to the distinguished families of other countries. Rivalry existed to a degree among these clans; thus, members of the family Majjāni (originally from Majzāna) were the antagonists of the powerful Tāhertis (from Tāherē), who were related by marriage to the Berakhias – all leading clans of merchants who also produced eminent scholars and community leaders especially known from the responsa of the *geonim* of Iraq. On their part, the Majjānis considered the Ben Allans their implacable adversaries. Whether they were related by blood or by marriage, or were enemies, other important families dominated the Tunisian trade. These included the Ibn Sighmārs (Zūghmār) of Mahdiya, the Nahrāys, among whom there were also prominent scholars and others who lived in the same centers.

It can be said that in general the Jews of Tunisia enjoyed a life of ease. Yet, among the masses as well as among the aristocracy – even among a number of scholars – there was such an exaggerated passion for music that the *gaon* *Hai addressed his famous responsa against instrumental music to the communities of Gabès and Kairouan. The Tunisian Jews also manifested a misguided enthusiasm for perfumes and some extravagance in their dress. Great prosperity obviously prevailed, and in spite of their status of **dhimmī*, their condition was excellent. They did not suffer from persecutions until about 1057, when Kairouan was destroyed by hordes of Arabs, and about 1087, when they were among the victims of the Christians who came from Italy and attacked Mahdiya and other coastal towns. On these occasions the Jews suffered the same fate as their Muslim compatriots. The Arab invasion of the 11th century marked the end of the golden era of the Jews of Ifrīqiya.

In 698 Ḥassān ibn Nuʿmān chose Tunis, a small and ancient townlet, to replace the fallen capital of Carthage, but it never attained the importance of Kairouan. In time, after the invasion of the Bedouins, it succeeded together with Mahdiya in overshadowing Kairouan. On the other hand, the closed towns of the coast escaped the Arab peril only to fall into the hands of the Christians. Roger II the Norman, who had conquered Sicily, attacked the coast of Ifrīqiya (1118–27) and seized the island of *Djerba (1134), Gabès, Sfax, and Sousse (1148), as well as Mahdiya (1156), in all of which there were important Jewish communities. It does not, however, appear that the Jews of all these ports suffered extensively under Norman rule. Those of Tunis, who were governed by the small and tolerant Banu-Khorassan dynasty, continued to control the large maritime trade of Tunisia. In 1159 the *Almohads invaded Tunisia. When they conquered Tunis, they confronted both Jews and Christians with the alternative of conversion to Islam or death. Other communities, also, suffered heavily as a result of this conquest. Thus, according to ancient additions to the famous elegy of Abraham *Ibn Ezra, the commu-

nities of Mahdiya, Sousse, Gafsa, al-Hamma, Gabès, Djerba, and the town of Tripolitania shared the same fate. Many Jews converted, while others fled and dispersed throughout the country or chose to die as martyrs. In the wake of this catastrophe, the strength of Ifrīqiya Jewry was impaired for a long period, and its social organization, economic situation, and intellectual and religious conditions greatly declined. In a letter attributed to *Maimonides, who left North Africa in 1165, it is said that between Tunis and Egypt, including Djerba, the standard of the Jews was very low. If this letter is authentic, it at least proves the presence of Jews in Tunisia who were able to remain there from 1165 onward.

Hafsid (Ḥafṣid) Rule (1228–1534)

In 1228 the governor of Ifrīqiya, Abu Zakariya, severed relations with the Almohad caliph of *Marrakesh, and in 1236 proclaimed himself emir and chose Tunis as his capital. It appears that from then onward many Jews who had been forced to convert were able to return to Judaism; from that date they lived under relatively normal conditions together with those who had fled from the towns. At least the constant threat to their lives and property was lifted. The synagogues, which were closed under the Almohads, were reopened. Although the Jewish communities of Ifrīqiya did not in general enjoy their former prosperity, a class of important merchants, which appears to have survived the Almohad conquest, succeeded in reassuming its earlier position. They resumed their maritime trade immediately after the consolidation of Almohad rule – well before the advent of the Hafsids. There is a mention in Maimonides' responsa of a Jew from Egypt who traveled to Tunis in the course of his affairs. The reign of Abu Zakariya and his successors was propitious, and the Jews of Tunisia once more developed their trade. In 1227 a detainer was lodged against them in a commercial lawsuit by the podesta of Pisa. In 1239 the Jews of Djerba established a colony in Sicily. Frederick II granted them a concession to cultivate indigo, which had until then been imported from the Orient, as well as henna, which only Tunisia supplied to Italy. The royal palm plantation near Palermo was also given to them as a concession. In 1257 the Jews of *Barcelona, who maintained permanent relations with their coreligionists on the Barbary Coast, demanded diplomatic intervention in Tunis so as to render their trade with Ifrīqiya more profitable. The expenses of the mission were included in the taxes which were paid by the Jewish community. From that time excellent relations existed between the king of Aragon and the Hafsid sultan, who recommended to Pedro III a considerable number of his Jewish subjects wishing to settle in Majorca and Catalonia (see *Spain). The king then granted them privileges and favors. Other Jews of Ifrīqiya established themselves in the Aragon states, having been encouraged to do so by Pedro III, who granted safe conduct to Ḥayon b. ʿAmar, Isaac b. Bul-Faraj, Ismael Ḥazzān, and the astronomer Isaac *Nifoci (Nafusi) among others.

There was constant movement of Jews between the Barbary Coast and the Aragon states (see *Spain), and they became useful and even indispensable intermediaries. The monarchy of Aragon maintained excellent relations with the Jews of southeastern Ifrīqiya; moreover, the king of Aragon showed special concern for the Jews of the Barbary Coast and accorded them particularly advantageous facilities to establish themselves in the Aragon states. In 1285 the Hafsid sovereign sent a delegation to Pedro III requesting that he grant the concession of all the *funduqs* (marts) which belonged to him in Tunis to one of his Jewish subjects, Solomon b. Zahit – probably one of his favorites. For a period of two years Solomon b. Zahit was able to appropriate for himself one half of the income of these *funduqs*, through which the majority of the goods imported from Europe passed in transit. A Jew of Djerba was entrusted with the proposal and the payment of a ransom of 14,000 dinars for the liberation of the Muslim ruler of the island, which was occupied by the Catalonians from 1286 until about 1335. Djerba then became the center of the trade between Catalonia and Ifrīqiya and Jews played the leading role in it. In 1308, when James II of Majorca decided to wage war against Tunisia, the goods of his Jewish subjects in Tunisia were seized by the Hafsid *makhzan*. All trade with Tunisia was prohibited, but the Jews, who had tremendous interests in Ifrīqiya, disapproved of this measure. As a result the Jewish community of Majorca did not contribute to the equipping of the fleet which was sent against Tunisia. A short while later, when negotiations were opened in order to resume cordial relations with the Hafsid state, a prominent Jewish merchant, Maimon b. Nono, assisted James III of Majorca's ambassador in the negotiations which led to the peace treaty of July 1329. In Tunis the collector of custom duties, an important official, was often a Jew. In 1330 Joseph Assusi, who held this position and was zealous in upholding the interests of his sovereign, sought to impose additional taxes on the Catalonian Christians and his Jewish coreligionists.

Alongside of these influential businessmen the Jewish masses engaged in peddling. These petty tradesmen carried textiles, leather, spices, and other goods from one village or hamlet to another; others joined caravans which went deep into the desert. A number were exceedingly wealthy and a very important factor in the trans-Sahara trade of Tunisia. Though its volume and importance could not be compared to the scope of that of the kingdoms of Tlemcen and *Morocco, they nevertheless greatly enriched the Hafsid sovereigns and their subjects. The Jews of Ifrīqiya thus earned their livelihood almost exclusively from their economic activity, a situation which prevailed throughout the Hafsid period and also later. However, there were probably also a number of physicians, and aside from their religious officials the Jews also had a few representatives in other liberal professions. They hardly engaged in manual occupations, with the exception of those connected with precious metals, an ancient Jewish craft in North Africa.

The great anti-Jewish persecution which broke out in Spain in 1391 deeply affected North African Jewry. The Jewish emigration from Spain which followed this persecution was

largely directed to the Barbary Coast. The eastern towns of Ifrīqiya, which form part of present-day Tunisia, received only a limited number of these emigrants. Their influx was felt to the greatest extent, in quality and quantity, in the territory of the kingdom of *Tlemcen. Many of the emigrants originated in the countries to which they now turned. In Tunisia, hostility which prevailed against the newcomers and their coreligionists who had left the country, was unknown. The influence of Jews of Catalonia and Majorca does not seem to have been as appreciable in Tunisia as in Algeria where more backward communities had benefited from their contact with the newcomers. Even so, Tunis, Sousse, and Bizerta, as well as the communities of the central Maghreb, often turned for orientation and leadership to Algiers, the center of such outstanding rabbis as R. *Isaac b. Sheshet Perfet and the *Duran family.

There were a number of rabbis and *dayyanim* in the communities of eastern Ifrīqiya. Although they were not as numerous, and especially not as influential, as those of the western part of the country – in Miliana, Bougie, Bône, or *Constantine – there were nevertheless some outstanding scholars among them, such as the *dayyan* of Tenes, Samuel Ḥakim, who was native born and had studied astronomy under the Spanish immigrant Abraham b. Nathan; the learned Isaac of Tunis; and the financier Ḥayyim Méllili, who was also from Tunis and corresponded with R. Simeon b. Ẓemaḥ *Duran. Occasionally however, such important towns as Tunis found themselves without a rabbi-*dayyan* and were compelled to seek them elsewhere. Although the Hafsids decreed that newcomers would not be taxed to the same extent as the native Jews, the number of immigrants does not appear to have increased. The local Jews always constituted a majority in Ifrīqiya. It seems that the interpreters and translators who maintained the contacts between the native Arab dynasty and the European authorities in the cities and ports were recruited from among Jewish immigrants. Such one seems to be Moses, who in 1267 was interpreter into Arabic for the Genoese merchants who had settled in Tunis. In 1421 a Jew, Abraham, was entrusted with the translation from Arabic into Italian of the peace treaty which had been concluded between *Florence and Tunis. In 1485 Abraham Fava drew up the Latin version of the Tunis-Genoa treaty.

European Jews were also raised to the rank of ambassador in the foreign relations of the Hafsids. In 1400 the physician *Bondavin was entrusted with a diplomatic mission to the king of Aragon; in 1409 Samuel and Eli Sala negotiated the peace treaty between Sicily and Tunis, which they signed themselves. The above examples of Jews who played an important role in the political life of Ifrīqiya were rare under the Hafsids. Even though Tunisia did not have eminent Jewish statesmen like those who flourished in Morocco during the same period, the community was at least spared bloody pogroms such as were perpetrated in *Fez at the beginning and the end of the Merenid dynasty (1269–1465).

The legal status of the Jews in the Hafsid State conformed to the legislation pertaining to the **dhimmi*, which tolerated and protected the "people of the Book" but at the same time looked upon them as inferior to Muslims. As in all Islamic countries, the Hafsids subjected the *dhimmi* to a number of restrictions: they imposed the payment of special taxes and, at the whim of the sovereign or his representatives, the obligation to wear distinctive garments or signs. As elsewhere, the *jizya* was the characteristic levy which was imposed on the *dhimmi*. Only rabbis who had achieved a degree of fame were exempted by the Hafsid government from its payment. The government also extorted arbitrary payments from the Jewish communities on fixed dates, or as exceptional measures. This category of imposition was known as *qānūn*. The community, in the person of its leaders, was responsible for its payment. The Jews of the Hafsid State were compelled as a matter of principle to distinguish themselves from the Muslims by the color of their clothes or the donning of a distinctive sign. The severity of the application of these laws varied widely. The decree of the Almohad al-Manṣūr which stipulated that the Jews were to wear a special costume and a distinctive sign called a *shikla* fell into disuse with time. In 1250 the Hafsid al-Mustanṣir reimposed this discriminatory measure. As late as 1470 the Jews of Tunis still wore special dress and displayed a piece of yellow cloth on their head or neck. At the same time, the Jews of the Hafsid State were not affected by any official impediment to their rights of ownership. They freely acquired and sold real estate everywhere, including houses which they erected, and thus were occasionally important landowners. They could also own non-Muslim slaves. The government authorities strictly protected the Jewish communities of Ifrīqiya, where anti-Jewish outbreaks of violence were unknown. In spite of the difference of religion and the feeling of contempt which was often expressed by the Muslim masses toward Jews, commercial relations were maintained on a permanent basis and both parties reaped benefits from them. Conflicts which arose were brought sometimes before the qadis. Occasionally, the qadi himself referred complicated cases to the *dayyanim* of Algiers. In fact, the rabbis of Algiers often campaigned against the exaggerated tendency of the Jews of Tunisia to resort to the tribunal of the qadi.

According to legend the Jews lived in the center of Tunis from the tenth century onward, when the Muslim mystic Sidi Mahrez founded the *Ḥāra* (*Ḥārat al-Yahūd*, i.e., the Jewish quarter of the town). In the Middle Ages the Jews concentrated themselves in a quarter of the town around one or several synagogues. On other occasions, they preferred to live in groups among the Muslim population. Foreign Jewish merchants used to live in a special *funduq* in Tunis.

The Jewish communities were granted official recognition and enjoyed a wide measure of administrative and cultural autonomy. They were headed by "notables" (*gedolei ha-kahal, ziknei ha-kahal*) who were – as in Morocco – a plutocratic oligarchy. This was in contrast to the leaders (*ne'emanim*) of the communities of Spanish or *Leghorn (Italy) origin – to be later established in the country – who were elected by all the members of the community. The *gedolei ha-kahal* were en-

trusted with the management of charitable funds, while others known as *parnasim* or *gizbarim* were responsible for the administration of the synagogues and religious funds. They held these functions – which were often financially burdensome – on an honorary basis and were referred to with confidence. The notables were headed by the *zekan ha-Yehudim* (elder of the Jews), who under Ottoman rule assumed the title of *qa'id*. This eminent personality was always feared when he was nominated by the sovereign and loved and respected when he was chosen by his coreligionists. He was always a native of the country, because, in the first place, he exercised his control over the destinies of the communities of the native Jews; his authority, however, also included the communities of foreign born Jews. Moreover, in Tunisia the native Jews were far more numerous than their coreligionists of European origin. As a general rule the rabbis, and particularly the *dayyanim*, played a role in the administration of the community.

In the wake of the expulsions from Spain and Sicily in 1492 and from Portugal in 1497, a number of Jewish refugees took refuge in Tunisia. They do not appear to have been very numerous; furthermore, many of them were only transients. There were several scholars among these refugees, including such highly eminent personalities as the commentator on Rashi, Abraham *Levy-Bacrat, the talmudist Moses *Alashkar, and the astronomer and historian Abraham *Zacuto, who completed his *Sefer Yuḥasin* ("Book of Genealogy") while in Tunis in 1504.

Tunisia under Ottoman Rule

The anarchy which prevailed in North Africa during the late 15th and early 16th centuries facilitated the Portuguese invasions of Morocco and the Spanish invasion of Algeria and Tunisia. Only the unexpected intervention of the Ottoman Turks in the latter two countries finally spared them from Spanish occupation. In the meantime the menace of anti-Jewish Spain overshadowed the Tunisian communities. In 1515 the Spanish fleet raided Djerba and the Jews suffered extensively. In 1535 Charles v occupied Bizerta and La Goulette, their small communities being expelled or massacred. When the emperor occupied Tunis, he immediately turned the town over to his soldiers who ransacked it and massacred 70,000 persons, including a large numbers of Jews, while others were sold as slaves. Several Tunisian ports were taken, liberated, and retaken by the Spaniards until 1574, when Turkish military victories finally brought these attacks to an end. As a result of this climate of insecurity and constant danger, the Jewish communities of the coast were almost completely depleted of their members; many of them, natives and Spanish expellees, left for the Orient or Italy.

When the grand duke of Tuscany called upon the Jews to establish themselves in his ports of Pisa and Leghorn in 1593, the many Conversos and Jews from various Mediterranean countries who immediately settled there were joined by African Jews who had already taken refuge in Italy and sought a permanent home there. Leghorn thus became a large Jewish center and its trade underwent considerable expansion. The Jewish community soon sent representatives to Africa, and from the early 17th century there was a sizable number of Leghorn Jews in Tunis, where they were known as "Grana" from the Arab name for Leghorn – "Gorna." All the foreign Jews, former Marranos, or Tunisians who returned to their native country after spending one or two generations in Italy were gradually integrated among the Jews of Spanish or Sicilian origin remaining in Tunisia, as well as those who had recently arrived from Algeria or Morocco. In fact, those people who possessed a common language – Spanish or Italian – customs, and ways of life which were more or less similar were called "Granas" or "Gornim." From 1685 they designated themselves as "la nation livornese [from Leghorn] ebrea en Tunes," although many of them had never set foot in Leghorn.

From the beginning, the Jews known as "Touansa" (natives of Tunisia), who formed the overwhelming majority of the community, looked upon the "Grana" with suspicion. Although both groups lived together in the *Ḥāra* for a long time, their relations continually deteriorated until they bordered upon hatred. Indeed, in the middle of the 17th century Hamūda Pasha prohibited all the Jews, whether "Grana" or "Touansa," to own real estate; they were confined to residential quarters where they could only be tenants. As a result of overcrowding, rents soared. The rabbis then decided that anyone who was the first tenant of a house thus acquired the right of *ḥazakah* (possession). No other Jew could have the first tenant evicted by offering a higher rent. The right of *ḥazakah* remained in force for a long time among Tunisian Jews, only falling into disuse when the government of Muhammad Pasha authorized the Jews to acquire real estate in the wake of the Pacte Fondamental of 1857. The decrees which prohibited Jewish ownership of real estate or confined them to a special quarter were by no means generally observed in Tunis. In fact, after having coexisted for several generations the "Touansa" realized that they were despised by the "Grana," whose religious practices differed from their own; they subsequently assigned them special places in their synagogues, as a result of which life in common became unbearable. The "Grana" finally separated from their native-born coreligionists completely and established an independent community which possessed its own administration, cemetery, slaughterhouses, rabbinical tribunal, *dayyanim*, and chief rabbi. This secession, in 1710, prevailed until 1899 when the authorities issued a decree calling for an official merger of the two communities. From that time there was a single chief rabbi for the whole of Tunisia, one rabbinical tribunal and one slaughterhouse in each town, and a single delegation within the council of the community and the cabinet of the Tunisian government. In practice, however, the schism persisted and the authorities were compelled to issue a further decree of amalgamation in 1944.

After 1710 the "Touansa" waged a veritable holy war against the "Grana," going so far as to treat them as false Jews in light of their pride. They finally succeeded in having them

expelled from the *Ḥāra*. The "Grana" then founded the *sūq al-Grana*, the commercial artery of the old part of Tunis, and opened three new synagogues and two houses of prayer, one of which was situated in the heart of the Christian quarter of that period. The struggle between the groups continued and the "Grana" of Tunis attracted every newcomer in the town to their community, whether he was of European, African, or Asian origin. Moreover, their slaughterhouses, which were more popular, also sold meat to the "Touansa," thus depriving this ancient community of a part of its meat taxes, raised for the benefit of its poor. An arrangement became imperative, and in July 1741 a *takkanah* was signed by the rabbis of the two communities under the supervision of R. Abraham Tayyib, their leader. The following agreements were reached: (1) that all Jews who had originated in Christian countries would form part of the community of the "Grana," while all those who had originated in Muslim countries would belong to the community of the "Touansa"; (2) that two-thirds of the general expenses of the community would be covered by the "Touansa" and one-third by the "Grana"; and (3) that the "Touansa" could not buy meat in the "Grana" slaughterhouses. This prohibition was not observed and had to be renewed in 1784.

The community organization of the Tunisian Jews remained unchanged for several centuries, with only a single leader, the *qaʾid* of the Jews. This leader wielded extensive powers and was responsible for the collection of taxes – an honorary position of considerable importance with material advantages. He was generally a member of the ancient community. Thus, for the most part the "Touansa" dominated the "Grana." Moreover, the bey regarded both as his own subjects. This state of affairs was even maintained during the first half of the 19th century – when there was an intensified immigration of Leghorn Jews – by the inclusion of a number of clauses in the treaty signed in 1822 between Tuscany and the regency of Tunis. In fact, it was anticipated therein that Leghorn Jews who settled in the regency would always be considered and treated as subjects of the country and would enjoy the same rights as the native-born Jews. Occasionally, the authorities even adopted policies toward the ancient community differing from those for the new one, which was thus discriminated against. In 1686 the latter – through the intercession of their leaders Jacob and Raphael Lombroso, Moses Mendès Ossuna, and Jacob Luzada – requested a loan from the consul of France in order to pay a huge tax imposed on them by the Muslim authorities. They then informed the consul of the extreme poverty to which the "Leghorn nation" had been reduced. They claimed that the extortions and assassinations, both past and present, had impoverished them and that it was their intention to seek the assistance of their coreligionists of Leghorn in order to repay the loan which "with tears in their eyes, they now solicited for the love of God so as to redeem a nation and a community." Under these circumstances, as others, the "Touansa" supported the "Grana." Moreover, it was a rule among the Jews of Tunis to redeem their coreligionists who had been captured by pirates.

There were instances when a single spiritual leader headed both communities at the same time. In such a case the chief rabbi was always a native of the country or a personality whose ancestors were of African origin. There was, however, one exception: the renowned talmudist R. Isaac Lombroso, who was born in Tunis but was of Leghorn parentage. His teachers, however, were Tunisians: R. Ẓemaḥ Serfati and R. Abraham Tayeb (d. 1714), the famous "Baba Sidi" who exerted a great influence on the whole of Tunisian Jewry. The grandson of the latter, also named R. Abraham, wrote *Ḥayyei Avraham* (1826), a voluminous commentary on the Talmud accompanied by important notes on *Alfasi, *Rashi, and *Maimonides. His son R. Ḥayyim Tayeb wrote *Derekh Ḥayyim* (1826) and R. Isaac Tayeb (1830) was also the author of several valuable works. The Bordjel family were Leghorn Jews of Tunisian origin. Their ancestor, R. Abraham *Bordjel (d. 1795), was a well-known author and *dayyan* in Tunis. Members of this family ranked among the leaders of Tunisian Jewry for two centuries. The most famous, R. Elijah *Bordjel, simultaneously held the positions of chief rabbi and *qaʾid* of the Jews. From 1750–1850 the Bonan family, Leghorn Jews of African origin, presided over the destinies of the "Grana" of Tunis, who were also headed by other Africans, such as members of the Darmon family. In the sphere of learning and Jewish studies all enmity between the two factions disappeared.

The authority of the rabbis of Tunis was very broad: they supervised the strict observance of religious precepts and the moral conduct of the individual, also issuing regulations pertaining to clothing and condemning the fancy of young women for elegance, jewelry, and fineries. These rabbis were widely known and were consulted from Ereẓ Israel and other countries. They were the first to abolish flogging in Tunis, substituting a heavy fine on behalf of the poor for it; they also compelled the members of all the communities to donate one tenth of their annual profits to charitable and religious institutions. Furthermore, they encouraged marriage between the "Grana" and the "Touansa." From the 17th century Tunis became an important center of Jewish learning: there was a particularly brilliant revival of the study of *Talmud and *Kabbalah. Ḥ.J.D. *Azulai, who visited Tunis in 1773, was impressed by the extensive learning and piety of Tunisian scholars, such as that of his hosts the Cohen-Tanoudjis family, among whom there were scholars and *qaʾīds*. He also became acquainted with the chief rabbi of Tunis, R. Masʿud Raphael al-*Alfasi (d. 1776), author of the novellae *Mishnah de-Revuta* (1805), and his two sons, Solomon (d. 1801) and Ḥayyim (d. 1783), author of *Kerub Mimeshaḥ* (1859). In Tunis there were other eminent scholars, such as R. Uzziel Alʾ-Haik (*Alhayk), the author of *Mishkenot ha-Roʾim* (1760), a rabbinic code in the form of an encyclopedia which deals with every category of problem encountered in the internal and public life of the Jews of Tunisia during the 17th–18th centuries and thus constitutes a valuable source of information that is indispensable to the writing of the history of the Jews of Tunisia. R. Mordecai *Carvalho (d. 1785) was a wealthy merchant in

Tunis who devoted a large part of his life to rabbinical studies. In 1752 he was appointed rabbi of the Leghorn community and as such was widely known as a rabbinical authority. Of his works, the *To'afot Re'em* (1761), a commentary on the works of R. Elijah *Mizraḥi, is the best known. R. Abraham Boccara (d. 1879), author of *Ben Avraham* (1882), was also a leader of the "Grana."

The Jews of Tunisia occasionally played important roles in diplomatic capacities: in 1699 Judah *Cohen was sent to Holland as ambassador in order to negotiate a peace and commercial treaty; in 1702 he was the intermediary between Tunisia and the States General of the United Provinces, which ratified the secret decisions pertaining to their relations with the Barbary states. Moreover, Tunisian Jews were often appointed by the Christian powers to official positions in the capacity of interpreters or vice consuls. In 1814 Mordecai Manuel *Noah arrived in Tunis to fulfill the function of consul of the United States; upon his return he wrote a work on his travels which includes information on Tunisian Jews – yet, he never maintained relations with them as he sought to conceal his Jewish identity. It was, however, precisely because he was a Jew that the president of the United States, James Madison, relieved him of his functions. In a letter which he addressed to the president, Noah declared that his Jewish identity – when it became known in Washington – had left an unfavorable impression and he was therefore asked to leave the U.S. consulate in Tunis.

Their capacity as merchant magnates enabled the Jews of Tunisia, who were particularly well placed, to redeem Christian captives. In their trade with France, Italy, and the Orient these merchants employed bills of exchange and controlled the maritime trade in spite of the fact that the bey imposed higher export and import duties on them than on the Christians. For the latter the duty was 3% of the value of the goods, while for Jews it was 10% – reduced to 8% in the 18th century. Many Tunisian Jews were treasurers or bankers; they were employed at the mint; and it was to them that the authorities assigned the monopolies on fishing of tunny and corals and the trade in ostrich feathers, tobacco, wool, and the collection of customs duties. In 1740 the customs duties of Tunis were leased to the "Grana" for an annual payment of 80,000 piasters. In 1713 the bey sent a Jew from Bizerta to Sicily to sign a treaty on coral fishing. By this treaty the Sicilians committed themselves to bring in their haul of coral to Bizerta, where it would be sold to the Jews who had signed the treaty. From the 17th century to 1810 the Jews manufactured over 20,000 shawls of wool or silk in Tunis. More than one half of these were *tallitot*, which were sent to the Jews of *Trieste and Leghorn, from where they were exported to Poland for the religious requirements of the Jews of that country. The bey defended the interests of the Jewish merchants. In 1784 he declared war on the Republic of *Venice as it had not indemnified them for the loss of several cargoes in which the Venetian fleet was involved. Yet, during the same century the Jews of Tunis were the victims of pillaging on two occasions: in 1752 by the troops of the bey himself, when he was deposed from the throne for a time by a marabout; and in 1756 by Algerian troops who took the lives of thousands of Muslims and committed the worst outrages on Jewish women and children.

In contrast to the information on the Hafsid period, the Jews of Tunisia from the 16th century onward engaged in a variety of crafts. They were clock makers, artistic ironworkers, smelters, and joiners; others were glaziers, tailors, lace makers, shoemakers, and the only ones who worked with precious metals. They also manufactured musical instruments. Moreover, many of them were musicians, particularly on festive occasions. The members of every craft, as well as the petty tradesmen, were organized in guilds, presided over by a Muslim *amīn* (chief of the corporation) appointed by the authorities. All controversies between Jewish businessmen, industrialists, craftsmen, or workers, and all disputes over salaries, the price charged for the execution of a piece of work, and the like, were settled by three competent Jewish colleagues who were designated by their coreligionists. Occasionally the parties concerned challenged these persons and demanded the intervention of the *amīn*. The rabbis and the leaders of the community were then compelled to accept his judgment and enforce it under the threat that a ban would be issued against the parties involved if they bribed the *amīn*.

The native adult Jews of Tunisia wore a kind of small violet turban which was wound around a black skullcap, while the remainder of their dress was patterned after the Turkish fashion. During the 18th century the Leghorn Jews wore hats and wigs like the Europeans of the West. Until the beginning of the 19th century the "Grana" and a large number of "Touansa" merchants had the habit of wearing European clothes and round hats as a result of their trade, which required them to stay in Europe for various periods of time. The authorities shut their eyes to this departure from the Covenant of Omar. In the end this tolerance gave rise to abuses when a number of Jews, under the cover of their European dress, sought to evade certain obligations to which they had been subjected. The bey then decided to compel all Jews, whether "Touansa," "Grana," or foreigners, to wear a cap or a three-cornered hat. This decree was at the source of the so-called "affair of the hats" which took place in 1823 and almost caused the breaking off of diplomatic relations between Tunisia and the European states. The execution of the bey's orders was accompanied by many acts of cruelty and extortion perpetuated by the officers responsible for their application.

From the beginning of the century the Jews of Tunis manifested their approval of the French Revolution, whose armies emancipated the Jews of Europe in the name of human rights. They all wore the cockade. One of them, who appeared before the bey with this badge, received the bastinado. The Jews subsequently became ardent supporters of Napoleon and the "Grana" returned to wearing the French cockade. In order to restrain them the bey wanted to have one of them burned alive; he was only saved through the intervention of the consuls. The bey Aḥmad (1830–55) treated the Jews favorably on

every occasion. When he visited the king of France, many Jews formed part of his retinue. He bestowed many honors on his Jewish private physicians, the baron Abraham Lombrozo, Dr. Nunez Wais, and the baron Castel Nuevo, all of whom endeavored to improve the status of their coreligionists. The Muslims referred to the bey Aḥmad as the "bey of the Jews." During his reign and those of his successors, a large number of Jews held important positions in his government. The bey Muhammad (1855–59) abolished the collective responsibility of the Jews in the sphere of taxation, exempted them from all degrading tasks, declared that they would pay the same duties on goods as Muslims and Christians, and attempted to include them in the common law. In 1857, however, a Jew, Batto Sfez, who had quarreled with a Muslim, was accused of having blasphemed Islam. The mob dragged him before the qadi, who condemned him to death. In spite of a vigorous protest by the consul of France, the bey Muhammad ratified the sentence and Batto Sfez was executed; the promises which were given to the consular authorities and the Jewish population that his life would be spared were disregarded. A squadron of Napoleon III's then took up positions in front of La Goulette so as to coerce the bey to apply the principles of equality and tolerance toward all the inhabitants of the regency. The equality of all Tunisian subjects of every religion was then proclaimed in a kind of declaration of human rights known as the Pacte Fondamental (September 1857). All the laws which discriminated against the Jews were repealed.

In 1861 Muhammad al-Ṣadiq-Bey (1857–82) promulgated edicts for drawing up civil and penal codes to be applied by the newly constituted tribunals. There was widespread discontent among the Muslim masses as a result of these laws. The government was reproached for favoring the infidels and raising the taxes paid by the Muslims, while the ministers were accused of having ruined the state. This was during a period in which the minister of finance, the *qa'id* Nissim Samama, contracted onerous loans in Europe. An insurrection of the tribes broke out. In the north of the country the ill-treated Jews were convinced that their salvation only lay in the intervention of European warships, whose presence indeed restrained the rebels. In the south, pillaging against the Jews of Djerba and Sfax took place. In 1864 the bey was compelled to abolish the new constitution, but the abuses which it had suppressed did not reappear. The bey ordered that the Jewish victims of the insurrection be indemnified. The International Financial Commission, imposed on Tunisia in the wake of these financial upheavals, received the collaboration of the Jews and succeeded in its mission. From then on the French found in the Jewish population a very useful instrument for support of its policy, while the "Grana" remained the champions of the Italian presence in the country.

In 1878 the *Alliance Israélite Universelle founded its first school in Tunis. The French Protectorate, which was established in 1881, brought considerable changes in the material life of the Jewish masses of Tunisia. During the 19th century the Jewish population of the country was mainly concentrated in the towns: there were 60,000 Jews in Tunis in 1786, 30,000 Jews in 1815, but only 15–16,000 in the following years; Jews also lived in Matra, Le Kef, Nefta, Gafsa, Gabès, Sfax, Sousse, Naloeul, Mahdiya, and Testour. There were also many Jews in the villages and on the island of Djerba. The total Jewish population of Tunisia at the end of the 19th century was estimated by some scholars as 50,000 persons, by others as 60,000, and still others as 100,000, but all estimates were tentative only.

[David Corcos]

Changes on the Eve of the French Protectorate

The interference of France and Great Britain in Tunisia's internal affairs and the relations between the Grana and Italy were not the only examples of the involvement of external elements in Tunisian and Tunisian Jewish affairs. The opening of the Alliance Israélite Universelle school in 1878, 12 years after the foundation of the first such school in Morocco, was an important factor that influenced Jewish life. The Bey did his best to prevent the foundation of the first school but he could not resist French pressure. Those schools were not only a framework for learning, but also a challenge to the Jewish community because they offered new opportunities for social and economic improvement. An agreement, which insured that Jewish and religious materials would be part of the school curriculum was signed between the representatives of the Jewish community and of the Alliance Israélite Universelle in Tunisia.

Another change at the end of the 19th century was the activity of Jewish scholars ("*maskilim*"). This activity was mainly intellectual: they wrote letters and reports to the international Jewish newspapers of that time such as *Ha-Maggid, Ha-Ẓefirah, Ha-Levanon*, and others. Despite the fact that these reports constitute important historical material due to the descriptions of the Jewish community of that time, the main objective of the *maskilim* was to arouse the awareness of the Jewish leaders in Europe and encourage them to became involved in Tunisian affairs and to improve Jewish life there. One of the famous scholars was Shalom Flach who wrote Hebrew text books and history books such as *Ẓedek ve-Shalom* ("Peace and Justice") about the relations between the Grana and Touansa. The *maskilim* published newspapers and also books of Jewish enlightenment from East Europe in Judeo-Arabic. Until World War II this would be one of the main sources of conflict between them and the Alliance Israélite Universelle school director. At that time, the Alliance school was a cornerstone of French influence and an opportunity for youth to bring about social and cultural changes.

The Tunisian Jews in the French Protectorate (1881–1956)

Tunisia was conquered by the French in 1881. From that year on, it was the French – both in theory and in practice – who molded the development of modern Tunisia. Freedom from the restrictions of traditional society, new opportunities for the improvement of their economic situation, new modes of expression and activity that became possible for Jews through French acculturation, all of these were part of the modernization process. Three basic factors characterized modernization

under colonial rule. First, the patterns of modernization were set by colonial rule. The modes were political, economic, or social or a combination of the three. French colonialism was assimilatory: it sought to instill French values and mold the ruled society by the standards of the ruling society according to its perceptions. Second, the pace of modernization was set by the considerations and needs of the French colonial powers. Third, the relationship between the colonial government and the local population lacked equality and was based on the exploitation of the ruled. The major basic problem of the Jews in this colonial society was the fact that they lived within a Muslim majority with very set patterns for Jewish existence. In the past a Jew had been obliged to be part of an autonomous Jewish community, living side by side yet in the shadow of Islam. The new colonial society gave the Jew the freedom, within certain limitations, to choose how he desired to identify himself. French culture presented a challenge which was irresistible. French rule was both the source of the Jews' security and their means of release from the degradation of Islam. Consciously – but not necessarily by choice – the Jews tied their fate with that of French colonial rule. Naturally, this process distanced them from the Muslim majority in Tunisian society.

Demographic Aspects

Before the mass emigration of Tunisian Jews the Jewish population was estimated at around 105,000 people, which means that in less than 100 years the Jewish population had increased more than fourfold. Most lived in Tunis, the capital. As a result of the modernization process the Jews left the small villages and immigrated to larger centers; the capital was the most attractive as it offered the Jews new employment opportunities. Changes were also felt in the Jews' occupations, since the opportunities or options for employment had grown. Jews, who were no longer restricted in their choice of occupation, entered the liberal professions and the French administration, playing a significant role in clerical work. Salaried work, which was the basis of union organizations and syndicates, where Jews played an important role, spread. The working Jewish population increased with the years, women workers were more common than in the past, and children rarely worked. In the peripheral towns and villages those changes were not as intense as in the capital.

Naturalization and Emancipation

One of the issues concerning the Jewish community was the question of French citizenship, since, at least in the case of Algerian Jewry, French citizenship was forced upon them. In the case of Tunisia, there was a small group of Jews which tried to force the French authorities to duplicate the Algerian experience with Tunisian Jewry. Mardochee Smadja was born in Tunis in 1864 and educated at the Alliance schools. His grandfather was one of the rabbis who had signed the agreement with the Alliance Israélite Universelle in 1874. Smadja was the leader of the campaign to encourage the French to grant Tunisian Jews the same rights as those awarded to Algerian Jews. He published the first manifesto of that group ("L'extension de la jurisdiction et de la nationalité françaises en Tunisie") in 1905 and was the publisher of the important newspaper *La Justice*. Smadja also represented the group at the Colonial congress held in Madrid and organized the mass demonstration in Tunis in 1910. All these efforts were not in vain. The demands presented the French general resident with a dilemma. The case of Tunisia was not similar to that of Algeria. First, Tunisia was only a protectorate while Algeria was annexed to France. Second, the existence of a considerable colony of Italian Jews who had Italian citizenship and no desire to renounce it posed a particular problem. Third, the French general resident was afraid of Muslim reactions as had occurred in Algeria following the law of 1870. After taking everything into consideration, the French authorities in Tunisia decided to naturalize the Tunisian Jews on an individual and selective basis. Thus, every Jew who wanted to acquire French citizenship was asked to demand it personally and to prove that he answered all the French conditions such as special service to France, knowledge of the French language, and French education. In the beginning of the French Protectorate, only a few Jews could be naturalized, but as a result of Jewish pressure the French general resident agreed to facilitate the conditions of naturalization. This was the background to the laws of 1910 and 1923. In the 1920s and 1930s, Jews acquired French citizenship in large numbers. For example, 1,222 became French citizens in 1926, 747 in 1928. However, in the 1930s there was a decrease in the naturalization of Tunisian Jews owing to French antisemitism and influences from Germany. The consequence of this naturalization policy was that the Jewish population was divided into three main categories: French citizens, Tunisian subjects, and Italian ones. Moreover, the second group, which constituted the majority of the Jewish population, was subdivided according to its acculturation to French culture. In Djerba, the most religious town of Tunisia, Jews did not want to have any connection with French culture, while in the capital most of the Jews were assimilated into French culture even if they were not French citizens. The second consequence was that the struggle for French naturalization proved that the French general resident would agree to change his policy under concrete pressure and defined goals. Tunisian Jews became more active and politically involved in order to achieve social change.

Communal Organization

The function of the Jews' *qa'id* was gradually abolished and its seems that Michael Uzan was the last one. At the beginning of the French protectorate, the French created a new institution, L'Assemblée des Notables. Furthermore, there was also a president and a chief rabbi for both the Touansa and the Grana. The chief rabbi of Tunis represented all the Jews, including the Grana, and received his salary from the French treasury. More important and durable was the creation of the Caisse de Secours et de Bienfaissance, which consisted of nine people who were nominated by the French, and which re-

placed all the traditional functions of the Jewish community. In order to adequately solve all the needs of Jewish society, a solution was devised: more than ten voluntary organizations, such as Société de l'Asile de Nuit (1909), Caisse de Secours et d'Habillement des Ecoles de l'Alliance (1904), were created under the patronage of Jewish notables. The most important change occurred in 1921 when the French decided to create the Conseil de la Communauté Israélite. It is not clear what the exact reasons were for that change. Perhaps the contribution of the Jewish volunteers in World War I or the desire of the French to conciliate the Jews after their refusal to legislate in their favor regarding naturalization contributed to this. The Conseil de la Communauté Israélite was elected quite democratically: a secret ballot was held every four years, but only the men who had paid their taxes to the community were eligible to vote. There were separate elections in each part of the community. The electoral campaign was the stage for debates which reflected struggles between political parties. Zionists tried to insure the Zionization of the council's activities, while the La Justice party hoped to use the power of that institution to persuade the French authorities to exert French influence over the Jewish community. The fighting over the character of the Jewish council was further proof of the political and social awareness of the Jewish community.

Intellectual and Spiritual Activity

Other expressions of political and social awareness may be found in the enormous number and variety of newspapers and periodicals that were published in Tunisia. From R. Attal's works it can be noted that about 160 periodicals, newspapers, and year books were published in Tunisia between 1878 and 1962. Seventy-eight were written in Judeo-Arabic, 65 in French, and 16 in Hebrew, most of the latter in Djerba. The majority of the newspapers in Judeo-Arabic were issued during the first generation of the French occupation. During the second generation, the domination of the French language was absolute and was also an expression of the community's assimilation to French culture. Forty-six of them could be defined as informative in character, 30 of them were Zionist–oriented newspapers, 15 were political, 12 rabbinical, and about 27 were literary. Some of the newspapers appeared for more than ten consecutive years; the most famous and important papers were *La Justice* (1907–14, 1923–33), *L'Egalité* (1912–32, 1940), *Le Réveil Juif* (1924–35), *La Gazette d'Israël* (1938–39, 1945–51), and *El-Najma* (1920–61). These newspapers, like the elections for the community, were the stage for the political, social, and intellectual struggle within Jewish society and of the Jews with the Muslims and the French in Tunisia. Jews were also employed by French newspapers as journalists, editors, and publishers. In 1921 out of a total workforce of 13,303, some 1,079 Jews declared that they were journalists, while in 1936, 3,114 Jews out of 15,928 made the same declaration, i.e., about 20% of the Jewish working population. As regards Jewish intellectual and spiritual life, it should be added that hundreds of Jewish books, mainly from East Europe, were translated into Judeo-Arabic by Jewish scholars, and the rabbinical literature in Djerba and the capital ran into hundreds of volumes of religious commentaries and interpretations.

Jewish-Muslim Relations

French domination in Tunisia slowly changed the pattern of Muslim-Jewish coexistence. The Jews' process of assimilation to French culture gradually detached them from the Muslim society with which they had lived for hundreds of years. From the beginning of the French protectorate, a new ethnic element – the French settlers – was added to Muslim-Jewish relations. Those three ethnic elements had different, and occasionally opposing, interests. Owing to the increasing Tunisian national struggle, tension between the French and the Muslims was more obvious and understandable than between French and Jews, and even Muslims and Jews. As far as is known in the collective memory of Tunisian Jews, Muslim-Jewish coexistence was convenient and tranquil. This is not an idyllic, nostalgic point of view. Most Tunisian Jews do not remember any of the violent outbreaks that occurred in Tunisia. Apart from the three days in August 1917 and fragments of information in the Jewish newspapers about violent incidents or outbreaks in the early 1920s, one does not know of any significant outbreaks of violence. At the end of the 19th century, a short wave of French antisemitism influenced French-Jewish relations. This wave reappeared in the 1930s, but by then it was more aggressive. From this relatively favorable atmosphere, the Palestinian issue emerged as a new factor in the relations among the three ethnic groups. The Palestinian issue concerned all the aspects of the relations and connections between the Palestinian national movement and the Arab world, and in the Jewish case, with the Tunisian national movement.

In society at large, an interesting struggle developed during the 1930s between the Tunisian national movement, the Destour, and the Zionists. The Destour took advantage of French sensitivity to public order and thereby prevented the Zionists from parading their strength and their victories publicly. For example, the Destour prevented *Jabotinsky's appearance in Tunisia in 1932 and the screening of the film *The Promised Land*. They sabotaged the visit of Betar's study ship, *Sarah A*, in 1937, and condemned the Zionists at every opportunity. A close examination of the relations between the Zionists and the Destour shows that, in spite of the attitude of the Destour towards Zionism, the Zionists were not significantly harmed. The reason for this is simple. The Tunisian national movement's struggle was primarily directed against French rule, and it used Zionism only as a means by which to attack the French. For example, the denunciation of British colonialism in Palestine could be taken as a condemnation of French colonialism, if only indirectly. The damage done to Zionism was an indirect indication of the level of relations between the French administration and the leaders of the Tunisian nationalists. In this manner the Muslims learned how far they could strain relations with the French without significantly harming themselves. Moreover, such activity allowed

them to test their ability to organize the Muslim crowds, to consolidate movement cells, and to prepare movement leadership. In spite of attacks of the Destour on Zionism, the fact that both were nationalist movements prevented the Destour from condemning the right of free speech and the self-determination of the Zionists. A negation of such rights would have been self-defeating. As far as is known, the relationship between Jews and Muslims did not deteriorate in the following years. During the period of Vichy and the German occupation of Tunisia the relations did not change, and the Muslims did not turn the situation to their advantage. While in most of the Arab world violent eruptions between Jews and Muslims occurred, Tunisia experienced no more than attacks in the newspapers or public demonstrations.

Zionism and Political Activity

Zionism was one response of Tunisian Jews to French colonialism and the modernization processes which affected them. Zionism was not only a reaction to modernity, but also an expression of modernity. The influence of Zionism increased over the years. The internal dynamics of the colonial situation on the one hand, and the possibilities for achieving the aims of Zionism, on the other, were principal factors in the development of Zionism in Tunisia. Tunisian Zionists saw in their movement a means to achieve political and social expressions, adapted to the spirit of the times.

Expressions of Zionism appeared at the end of the 19th century. Organized Zionism began only in 1910 with the foundation of the first Zionist society, Agudat Zion ("Society of Zion"). The French authorities legalized Zionism, but restricted it to cultural activities. Zionist political activity was forbidden. French authorization of Zionism was part of the colonial policy towards a plurality of cultural activities. During this period there was almost no opposition from other social groups in Tunisian Jewry. Zionism had been established, but was not yet an important factor in the social and political fabric of Tunisian Jewry. By World War I, other organizations had been founded in all the major cities of Tunisia. Agudat Zion published a Zionist newspaper, *Kol Zion*, collected the Zionist tax (the shekel), sent a representative to the Tenth Zionist Congress, contributed to Keren Kayemet (the Jewish National Fund), and held Zionist propaganda meetings. World War I interrupted Zionist activity, which virtually ceased until the end of the war.

Zionists participated fully in all major activities of the Jewish community of this period. During 1898–1918, Zionism reinforced individual interest in the general political movement, and defined itself on the social and political landscape of the Jewish community. This process of consolidation emerged from a stage of individual interest in Zionism to prominence in the public sphere and finally to a basis for activity. Zionism in this period established itself throughout Tunisia, and relationships were formed between activity in the periphery and in Tunis, the center. Zionists understood that without their own newspaper, they could not maintain themselves in the struggle against other political camps. The years 1918–26 were the formative years of Zionism in Tunisia. During this period the Tunisian Zionist Federation was established (October 1920) as an organizational framework for all Zionist activities. The founding of additional Zionist organizations, their geographic dispersion, and the policy of the World Zionist Organization made the establishment of the Federation compulsory. The Federation dealt with all necessary organizational matters – the collecting of money, propaganda, Zionist newspapers, elections to the Zionist congresses, and the struggle against other ideologies. However, the Federation did not succeed in rising above internal problems and leading Tunisian Zionism. Its weakness stemmed from its inability to impose its authority upon its constituent components, its lack of a fixed budget and, therefore, a good, regularly published newspaper, and the disregard and neglect on the part of the World Zionist Organization. In addition, opposition to Zionist activities by various sections of the Jewish community increased the difficulties.

Opposition to Zionism stemmed from two sources. Foremost was that of the Alliance Israélite Universelle. Its opposition was ideological. Zionism was nationalistic, whereas the Alliance presented an emancipatory ideology, seeking to integrate Jews into the general society in which they lived. In the Tunisian framework this meant integration into the French colonial society. The Zionists demanded that more Jewish history and Hebrew, as a living modern language, be taught in the Alliance schools, whereas the Alliance emphasized a deep attachment to French culture, based on the emancipatory model of French Jewry. The forces behind the struggle were not equal. The Alliance had a strong organization, considerable financial backing, and the support of the French authorities. Zionism, on the other hand, was in its initial stages of establishment. In spite of this, the Zionists succeeded in their struggle against the Alliance, at least in respect to the social legitimization of Zionism as a viable Jewish cultural, social, and communal alternative.

By actively participating in all aspects of Jewish communal life, the Zionists compelled the various communal groups to publicly recognize their presence. In addition to their struggles within the Jewish community, Zionists strove to make a place for themselves among the other social movements of the time, particularly vis-à-vis the socialist movement and the communist party, which were strongly attractive to Jewish youth. These struggles, however, were general and ideological in character and, because of this, their impact on Zionism was minimal. During 1926–39 Zionism was at the forefront of the struggle to define the character of Jewish life and its position in society. Two major changes occurred during this period. One was the creation of Zionist youth movements, the Eclaireurs Israélites de France (EIF), the Union Universelle de Jeunesse Juive (UUJJ), Ha-Shomer ha-Ẓa'ir, and Betar. The youth movements brought an element of vitality to the full range of Zionist activity. Education, an important and central element of the youth movements, was accompanied by Zionist indoc-

trination. A child educated in one of these youth movements had a deep Zionist consciousness and commitment. The youth movements lowered the age level of Zionist activists. The frameworks for activity were more rigid in the youth movement than in the former Zionist organizations. In addition, youth movements made it possible for girls to participate in Zionist activity, which had formerly been impossible.

Another change in Tunisian Zionism during this period was the penetration of world Zionist political parties: the Revisionists accompanied by the Betar youth movement, and Ha-Shomer ha-Ẓa'ir. Bitter struggles took place between the two ideological approaches to Zionism: the integral Zionist program of the Revisionists versus the Marxist Zionism of Ha-Shomer ha-Ẓa'ir. The struggle culminated when the Revisionists accused their rivals of atheism, destroying family life, a bias towards communism, and aspirations to be fulfilled only in a kibbutz. Ha-Shomer ha-Ẓa'ir was forced to defend itself against harsh attacks and retaliated by accusing the Revisionists of fascism and Hitlerism. This contest could be seen in public demonstrations as well as in newspapers and was also reflected in information passed on to the police by informers. Ha-Shomer ha-Ẓa'ir was forced to disband in 1935. The Revisionists' victory was a result of having a strong newspaper, a simple ideological ethic, being well-suited to a society in transition, and effective meshing between the party and its youth movement.

The greatest importance of Tunisian Zionism during this period was its primary position in the struggle against all antisemitic manifestations in the country, both that of the French colonists and of the Italian ones. Tunisia did not escape the world-wide wave of antisemitism in the 1930s. The Zionists initiated and encouraged the Jewish community to boycott German, Italian, and Japanese goods. The Zionists called for public demonstrations against German antisemitic outbreaks. In this way, they both paved the way for themselves within the Jewish society and took a stand on behalf of the Jewish community among the various social elements.

The war years in Tunisia, 1939–43, totally changed the character of local Zionism. Until World War II, the importance of Zionism was within Jewish society. Zionism made possible a modern mode of expression and activity for Jews who had not received French citizenship, yet wished to express their aspirations without violating the Jewish character of their society. After World War II, Zionists understood that without *aliyah* to Ereẓ Israel, without severing themselves from life in Tunisia, there was no meaning to Zionism. Therefore the period between the end of World War II and the creation of the State of Israel is characterized as "A Time of Achieving Zionism."

Ideologically, all the various Zionist streams believed in the fulfillment of Zionism as an obligation of the individual to the movement. There were arguments between the various streams of Zionism about the character of fulfillment, for example whether to live in a kibbutz or a city, but none about the need for its realization. Preparation was now required prior to embarking on a new life in Israel. Hebrew became significant and a Zionist was required to invest time learning the language as part of his preparation for *aliyah*. No less important for the Zionists were the attempts to establish preparatory camps in Tunisia and elsewhere. However, the number of Zionists who succeeded in completing this preparation was small. One particular aspect of this ideology was the mission of Tunisian Zionism in North Africa. Almost all the Zionist parties saw Tunisia as the base for overall activity in North Africa. The strength and importance of Zionism in Tunisia led to its primary position in all Zionist activity in North Africa. The significance of achieving Zionism was practical. During this period the immigration of Tunisian Jews to Israel began. At first immigration was legal, but it was small in numbers, encompassing not more than several dozens. The gap created between the desire to immigrate and the possibilities for legal *aliyah* in 1947–48 forced the Zionists to turn to illegal immigration. Tunisian Zionists were among the planners and implementers of the Ha'palah (*"illegal" immigration movement). Only some 300 Jews left Tunisia illegally during this period, but in terms of responsibility, the role of Tunisian Zionism was more significant.

The war years were characterized by an increase in the number of ideological parties, particularly those connected to world movements. The Revisionists still enjoyed Zionist hegemony as exemplified in the results of the elections to the Zionist Congress in 1946 and in its strong Zionist and Revisionist newspaper. Among the other movements, which combined socialism and Zionism, were Ẓe'irei Zion, which was aligned with the Kibbutz ha-Meuḥad, and Ha-Shomer ha-Ẓa'ir, which renewed its activities in 1946. Among the religious movement, two trends were established. One was aligned with Torah va-Avodah and the Mizrachi party, and the other, religious Zionists, such as the Ateret Zion in Djerba, were without any affiliation. Other groups remained politically neutral. In this period, it is significant that the Zionists were the first to understand that the Jewish community under French rule was at its end. Restricted modernization under colonial rule had brought about the end of Jewish existence in Tunisia. Such was the Zionists' advantage in the colonial drama.

World War II

Tunisian Jewry was influenced during World War II by developments which had taken place mainly in France. French territories, including Tunisia, were under Vichy government rule and all its anti-Jewish legislation was applied there. The laws and decrees published by the Vichy government concerned three main areas: the legal status of the Jews, the *numerus clausus* in education, and the measures that were taken against the Jews' economic influence. The Jewish Statute was published in Tunisia on November 30, 1940, but its implementation was only partial because of the small number of French Jews and their importance in the economy, the positive attitude of the French résident général towards Tunisian

Jews, and the involvement of the Italian government representative in Tunisia who looked after Italian interests. In Tunisia, the Italian representative strongly opposed all French attempts to aryanize Jewish property as part of Italy's policy to protect the Italian colony in Tunisia.

During a period of six months, between November 1942 and May 1943, the situation of Tunisian Jewry steadily deteriorated as a result of the German occupation which was a counter-attack against the American Operation Torch and also the British military campaign from Libya. The Jews suffered from the aerial bombardment of the Allied Forces as well as that of the German ones. As far as is known, most of the Jews who died during the German occupation were killed by these bombings. The Germans created a new Jewish communal committee most of whose functions were similar to the *Judenrat. The most important task of the community was to supply forced labor for military purposes. It is estimated that approximately 5,000 young Jews were sent to forced labor. The recruiting of the Jews was carried out by a special Comité de Recrutement de la Main d'Oeuvre which was headed by Paul Ghez, a famous lawyer. The Jewish workers were interned at about 30 military camps along the battle fields. The dissatisfaction of the Jews with the work of this committee was natural and understandable, because they had to take care of all the workers' necessities, such as food, clothes, transportation, links with families, etc. The Germans confiscated Jewish property, houses, cars, blankets, radios, public buildings such as the Alliance school, etc., for their own purposes. They imposed a 53 million franc fine on the community. The French résident général, did not, and probably could not, help the Jewish leaders to argue with, or at least to minimize the Germans' demands. Thus, Jewish feelings of isolation, abandonment, and disappointment with France as a Protectorate, were quite understandable. As far as is known, the Tunisian Muslims did not harm the Jews during this tragic period and no incidents occurred between Jews and Arabs. On the contrary, Arabs offered shelter to Jews in their villages until the German threat passed. On July 7, 1943, Tunisia was liberated from Nazi occupation by the Allied Forces. A new era began, while in Europe the destruction of the Jewish communities was still going on.

The period of Vichy and the German occupation was a turning point in the history of the Tunisian Jews and proved that the attempts to assimilate to French culture were an illusion. Not only did France fail to protect the Jews against harsh attacks, but it also initiated antisemitic activity itself. The process of decolonization, disappointment in France, and the rise of Tunisian national aspirations for independence were among the major factors in the change in the view of France. French military and economic power was reduced to such levels that the Jews lost their confidence that France would help them when necessary. The alternatives to a French protectorate were Zionism and immigration to Israel, communism, or waiting for other developments. In addition to the disappointment with France there was also disappointment with the leaders of the Jewish community who were accused of nepotism as well as cooperation with the Germans. They had to submit their resignation and a provisional committee was established. The economic situation deteriorated due to the war and the German oppression. Moreover, France could not give any economic assistance to Tunisia because of its economic situation after the war.

From World War II to Independent Tunisia

The main development after World War II was the emigration from Tunisia which was due partly to the disappointment with France and the decline of colonialism, partly to the fear of an independent Tunisia, and above all to the creation of the State of Israel. As mentioned before, the first stage of *aliyah* was the illegal immigration of 1947–48. The second stage began with the creation of the State of Israel with more than 4,000 immigrants in 1951, and 2,500 in 1952. But the two following years were marked by a strong decrease in immigrants: about 600 in 1953 and 2,600 in 1954. The political autonomy given to them by the French and the forthcoming independence influenced the Jews' decision to leave the country. More than 6,000 Jews immigrated to Israel in 1955 and 6,500 in 1956. The *aliyah* was organized by the Jewish Agency which sent emissaries to Tunisia. This was the period when the Tunisian Jewish leaders lost their standing in the community to the Israeli emissaries and Israeli political party representatives. One such expression of this was the decrease in the number of Jewish newspapers published in Tunisia.

Jews in Independent Tunisia until the Six-Day War

The character and attributes of independent Tunisia were influenced by several basic factors: the nature of the party in power (Neo-Destour), the almost bloodless struggle for independence, Tunisia's role in the Maghreb states and in the Arab world, its pro-Western inclinations, and the domestic problems it faced during the first years of independence. These factors had a consequential influence on the character of Tunisian Jewry and on the manner in which Israel handled the issue of immigration from Tunisia.

Independent Tunisia's policy vis-à-vis its Jews favored their full integration into the new Tunisian society. Thus, for example, all Tunisians were given the franchise in elections to the Constituent Assembly, ten Jewish judges were appointed to the country's courts to decide cases dealing with Jewish litigants, and though the rabbinical courts were abolished, special courts dealing with matters of personal status were established within the Tunisian legal system that were open to Jews just as they were to all other Tunisians. The Jewish community council was disbanded and replaced by an "Interim Committee for the Management of the Affairs of the Jewish Community" until "associations for religious matters" would be established.

Two of the steps taken by the authorities for the development of the capital city of Tunis proved detrimental to the Jewish community: the transfer of the old Jewish cemetery to another site and the razing of *Ḥārat al-Yahūd*, the Jewish quar-

ter. These were carried out as part of an urban renewal plan in which the Muslim cemetery was also removed to a new location. Aware of the Jews' sensitivity, Habib Bourguiba personally supervised all work related to the transfer of the Jewish cemetery, during which the Tunisians displayed a reasonable degree of consideration for Jewish feelings.

The years from Tunisian independence until the events in Bizerta in 1961 were marked by a decrease in tension between those Jews who remained in the country and the authorities. Jews were appointed to some of the positions vacated by the French, and Yom Kippur was proclaimed an official holiday, enabling Jews to absent themselves from work. The Jews' sense of security and the degree of their identification with Tunisia are exemplified in the role they played in the "Campaign for the Dinar" (in which all Tunisians were called upon to shore up the declining value of the Tunisian dinar). The extent of *aliyah* to Israel in these years also reflects the general climate of opinion in Tunisia. In 1955, over 6,000 Jews immigrated to Israel, while in 1956 – the year of Tunisian independence – another 6,500 arrived. In the year following independence, however, the figure dropped to about 2,600 and was even lower in the succeeding years until the fighting in Bizerta in 1961 between the French and the Arabs. The events in Bizerta increased the Jews' doubts as to their future in Tunisia. French military presence, limited as it was, was a sort of lifebelt for them and made them feel more secure. The best proof of their sense of insecurity lies in the figures for Jewish emigration during these years. Of the 65,000 Jews in the country in 1960, 60,000 remained in 1962, while in 1965 the Jewish population of Tunisia amounted to no more than half of that of 1962. In less than five years, over 30,000 had left the country, most of them professionals or businessmen. The extent and character of emigration during these years are quite similar to that of the period which immediately preceded Tunisian independence. Those who remained were primarily the elderly.

In the interim period between the Bizerta affair and Bourguiba's proposals in 1965 for a peaceful solution of the Arab-Israeli conflict, the condition of Tunisia's Jewish community deteriorated. After a plot to assassinate Bourguiba was uncovered in 1962, many Jewish families closed down their businesses and immigrated to France. Gradually, it was forbidden to send letters and parcels to Israel, and direct telephone communications between the two countries were cut off. Only Jews bearing French citizenship were allowed to leave with their belongings, and this only if they were able to present proof of their citizenship and an affidavit certifying their destination as France. Jews holding Tunisian citizenship could leave the country without their property, except for 30 dinars and some clothes. Thirty-five Jews from Djerba were arrested on suspicion of trying to smuggle gold from Tunisia to Libya. They were imprisoned, tortured, and tried in court, where they were very heavily fined. Only intervention by the community leadership managed to alleviate their condition somewhat. Eyewitness accounts from the time of the Six-Day War in Tunisia talked of anti-Jewish demonstrations in Tunis, heavy damage done to Jewish retail establishments throughout the city, where more than 100 shops were looted and smoke poured out of scores of Jewish establishments. Only intervention by President Bourguiba brought the demonstrations to an end. In a speech broadcast over the radio and the television, he called on the mobs to stop the riots and denounced them severely. His action prevented even more severe attacks on the Jews, especially in the smaller towns.

Since the Six-Day War

The character of this period was influenced by the Arabization of the new state including its relations with the Arab world and the effect of the Israeli-Arab conflict, the economic situation, and the size of the Jewish population. These years can be divided into three main periods: from the Six-Day War to the Lebanese War (June 1982, known as Peace in Galilee); from the Lebanese War to the beginning of the Zin Ben-Ali regime in 1987; and from the beginning of the Zin Ben-Ali regime until the early 21^{st} century.

In 1966 only 23,000 Jews lived in Tunisia. Two years afterwards, the Jewish population was estimated at about 10,000, which means that more than 13,000 Jews had left Tunisia, most of whom emigrated in the six months after the end of the Six-Day War. From 1965 to 1971, 7,753 Tunisian Jews immigrated to Israel, in 1972–79 only 2,148 did so, and 1,232 left for Israel in 1980–84. Most of the Jews who left Tunisia after the Six-Day War immigrated to France and created a Tunisian colony there which exerted considerable influence on French Jewish life. Under the Bourguiba government the situation of the Jewish community did not deteriorate; it was a time of relative calm for those Jews who preferred to stay in Tunisia.

During the Lebanese War, June 1982, and especially after the events in Sabra and Shatilla, some incidents occurred in the south of Tunisia. On September 23, 1982, the daily journal *al-Sabach* denounced the chief rabbi of Tunisia for his unclear position on the events in Sabra and Shatilla. Some days afterwards, and in accordance with Bourguiba's position, which called for an Israeli-Palestinian dialogue, the chief rabbi dedicated a place in his prayers for the innocent victims of Sabra and Shatilla. This declaration, however, did not prevent riots against Jews in the small towns of Zarzis and Ben-Garden which caused much damage to Jewish property. The authorities arrested those responsible for the incidents and put them on trial. The Lebanese War changed the Tunisian Jews' situation as a result of the transfer of the Palestinian Liberation Organization's headquarters and the Arab League bureau after the Camp David agreements. Consequently, Tunisia became a center for anti-Jewish and anti-Israel propaganda. Other elements that influenced the Jews' situation were the fundamentalist activities which were encouraged by the Khomeini Islamic revolution and its impact on Muslims in Libya and Algeria. On October 1, 1985, an Israeli aircraft bombed the Palestine Liberation Organization's headquarters. Fifty-six Palestinian were killed and about 100 injured. The steps which were taken by the Tunisian authorities failed to protect the Jews.

Some Jews were killed in the synagogue of Djerba. The Israeli bombings caused a wave of Jewish emigration from Tunisia. More than 700 Jews left Tunisia during the years 1985–89; thus only 2,500 Jews continued to live in Tunisia, most of them in Djerba and Tunis.

Zin Al-Abidin Ibn-Ali took power in Tunisia on November 6, 1987, after the dismissal of Bourguiba. His internal policy improved the economic situation and opened the country to a democratic process. During 1987–91 the Jews expressed their fear and increasing doubts regarding their future in Tunisia. The assassination of Abu Jihad, one of the most important commanders of the PLO, in April 1988, in his house in Tunisia, and the Gulf War in February-March 1991 contributed to those fears and doubts. However, since the Oslo agreements there has been a gradual improvement in the Jews' situation due to the significant part played by Tunisia in those agreements. Tunisia opened its borders to Israeli tourists and most Palestinians were evacuated from Tunisia, as was the Arab League bureau, and diplomatic relations were established with Israel.

As of 2005 the Jewish community consisted of about 1,500 Jews, most of them living in Tunis and Djerba, which is a religious center and very attractive to tourists. Jews have all the requisites for leading a religious life. Relations with Israel are still at a very low level and are influenced by the progress (or its absence) in the peace process and also by Tunisia's position in the Arab world.

TUNKEL, JOSEPH (**Yoysef Tunkl**; pseudonym **Der Tunkeler**; 1881–1949), Yiddish humorist, satirist, and cartoonist. Born in Bobruisk, Belorussia, he immigrated to New York in 1906, where he founded and edited the satirical weeklies *Der Kibitser* (1909–10) and *Der Groyser Kundes* (1910), but in 1910 returned to Warsaw, where he edited *Der Krumer Shpigl* ("The Crooked Mirror"), the weekly humor supplement of the Yiddish daily *Der *Moment*. In 1939 he succeeded in escaping to France and, in 1941, to the U.S., where he wrote for the Yid-

dish daily **Forverts*. *Der Tunkeler* was popular in the Yiddish press. His humorous pamphlets and books were widely read, his one-act plays often performed, and his comic sketches recited by many artists. His humor was good-natured and his satire was mild. A sharp social and cultural critic, he was a master of the spoken idiom of his day and can be read with profit for his literary parodies in particular.

TUR BROTHERS, pseudonym of **Leonid Davydovich Tubelski** (1905–1961) and **Peter Lvovich Ryzhey** (1908–), Soviet Russian playwrights. Both were originally newspapermen, and some of their plays were written in collaboration with Lev Romanovich Sheinin (1906–1967), a lawyer by training. Most have swiftly moving plots, and many deal with political intrigue and the struggle against criminal elements. A number of their plays have Jewish protagonists. Noteworthy among these is *Komu psodchinyayetsya vremya* ("To Whom Time Bows," 1946), written by all three authors, which portrays a Jewish watchmaker in Nazi-occupied Russia. This central character, an anti-Nazi resistance fighter, is deeply attached to Jewish tradition and is shown observing the Passover festival. An earlier play by the same authors (*Neravny brak*, "The Misalliance," 1940), was set in what had been a Jewish **shtetl* in the Pale of Settlement. A visiting American millionaire does not recognize the town which his father has described to him: gone are the traditional Jewish occupations, even the matchmaker has become a bookkeeper in a collective farm, and no Soviet Jewish girl is interested in marrying an American Jewish capitalist.

[Maurice Friedberg]

TURDA (Ger. **Thorenburg**; Hung. **Torda**), town in Transylvania, N.W. Romania; until the end of World War I within Hungary. Jews began to settle there at the close of the 18th century although individual Jews had visited the locality earlier. A document of 1669 mentions a Jew of *Alba Iulia who had stayed in Turda in order to sign an agreement with the local inhabitants. A community was organized between 1830 and 1840. There were already houses of prayer during that period. The community remained Orthodox throughout its existence, but there were also many *maskilim* in Turda who had an affinity for the Western trends promoted by the Neolog communities in Hungarian-speaking Transylvania. The Jewish population numbered 48 families (175 persons) in 1866; 203 (2.1 percent of the total) in 1870; 326 (3.5 percent) in 1900; 482 (3.5 percent) in 1910; and 852 (4.2 percent) in 1930.

The community, which was wealthy and well organized, employed some distinguished rabbis, among them Ben-Zion Albert Wesel (1900–38) and Joseph Adler (1938–44). For most of the period between the two world wars these two rabbis also held the position of president of the central office of the organization of Orthodox communities of Transylvania, and the community thus played a leading role among Orthodox Jewry in Transylvania. An Orthodox Hungarian-language weekly, *Hoemesz*, was published in Turda from 1933 to 1940. A large synagogue was erected in 1932. Zionist activities were also organized, and there was a group of Jews which supported the Hungarian minority movement in Romania; a Jewish club, established in 1936, played an important part in Jewish life.

Holocaust and Contemporary Periods

There were 726 Jews in Turda (2.2 percent of the total population) in 1940. Their numbers increased to 1,805 in 1942 after Jews from the surrounding areas were concentrated in Turda by the Romanian Fascist authorities. From 1940 to 1944, because of the location of Turda near the Romanian-Hungarian border and within 18 mi. (approx. 30 km.) of *Cluj, the capital of northern Transylvania, Jews of Turda played an important role in underground rescue activities among the Jewish population. Members of the community collaborated with the representatives of the Zionist youth movements in contact with the rescue centers in Bucharest and Budapest and rescue workers in Palestine through their center in Istanbul. They organized secret routes for the transfer of refugees from neighboring Hungary to Romania, where the situation of the Jews was less dangerous, subsequently directing the refugees toward Bucharest, from where most of them reached Palestine. Hundreds of refugees passed along this escape route, most of them from Hungary, some from Slovakia, and even a number from Poland. In the fall of 1944, the town was taken by Hungarian forces. However, they were defeated by the Russians about five weeks later before they had succeeded in organizing the deportation of the local Jews.

After World War II the community continued activities but its institutions lost their importance with the decline of the Jewish population as a result of emigration to Israel and elsewhere. There were about 150 Jews living in Turda in 1971, and their numbers continue to dwindle into the 21st century. Prayers were still held in the Great Synagogue on Jewish festivals.

TURECK, ROSALYN (1914–2003), U.S. pianist. Born in Chicago, Rosalyn Tureck played with the Chicago Symphony Orchestra at the age of 11, studied at the Juilliard School of Music, and specialized in the performance of Bach's keyboard works. In 1937 she gave the first of her Bach concerts in New York, and in 1947 set out on the first of her extensive European tours. She was a faculty member of the Juilliard School of Music (1943–53), lecturer at Columbia (1953–55), and Regent's Professor at the University of California (1966). She founded the Society for the Performance of International Contemporary Music (1951–55), the Tureck Bach Players (1959), and the International Bach Society (1966). She published many Bach works in pedagogical editions.

TURIN (It. **Torino**), city on the Po River, N.W. Italy. Turin was the capital of the duchy of Savoy and later of the kingdom of Sardinia; it is now the capital of Piedmont province. The presence of Jews in Turin was recorded by Bishop Maximus of Turin in the fourth century, but thereafter there is no evidence of Jews until 1424 when the French Jewish physicians and bankers Elias Alamanni and Amedeo Foa moved there with their families. They received a ducal privilege and a pontifical patent. The Turin Communal Council gave them the final authorization to settle there. Two documents dated to 1424 confirm it. The first document is a permission to live in the city and open a bank. The second mentions that the Jews could not be injured or insulted. Also a plot was purchased for a burial ground. Other Jewish bankers followed and a small group was formed. In 1425 the Jews were compelled to live in a restricted area where they could be watched more easily and prevented from lending money at excessive rates of interest. In 1430 Duke Amadeus VIII of Savoy issued statutes regulating Jewish residence, synagogues, civil and criminal jurisdiction, and relations with Christians. In addition, the statutes required Jewish men to wear a *badge in the shape of a disk, four fingers in width and red and white in color. For the following four centuries the interpretation of these regulations by the various rulers of Savoy ranged from literal to lenient. When in 1436 Ludovico of Savoy had the *Studium*, or university, erected, he decreed that the mansions of the Jews would be used by the students. At the same time the Jewish scholar and banker Bonafé de Chalon was invited to make low-interest loans to the university's students. During the pestilence of 1450–51 the care of the sick was given over to a Jewish doctor, Bono.

Jewish moneylending was permitted in Turin for a longer time than anywhere else in Italy. The taxes paid by the Jews were particularly high and the imposition of new taxes threatened the Jews with ruin or expulsion. In 1560 and 1566 Duke Emmanuel Philibert decreed that the Jews be expelled, but the decrees were canceled because of the intervention of influential people and the annual payment by the Jews of 20,000 florins.

From 1561 a guardian (*conservatore*) was given jurisdiction over the Jews and in some cases also represented them. The duke chose the guardian from among the senators from 1603 to 1626: thereafter he chose him from the names of three senators submitted by the Jews. Charles Emmanuel I (1580–1630) allowed the monopoly granted to Jewish moneylenders to remain in force, and he rejected Cardinal Carlo *Borromeo's demands for the expulsion of the Jews and the establishment of a ghetto in Turin. The most outstanding rabbi in the 16th century was Nethanel b. Shabbetai ha-Dani.

The majority of the Jews engaged in moneylending and were in close economic cooperation with the dukes of Savoy, extending to them large loans. In 1624 there were nine Jewish banks in Turin. The Talmud Torah Fraternity was founded in 1662. In 1679, after the death of Charles Emmanuel II, the reigning duchess, Maria Giovanna of Nemours, guardian of Duke Victor Amadeus II, decreed the establishment of the ghetto. Thus in 1680 the approximately 750 Jews of Turin were collected in one building which had been used as a hospital for beggars. The most important rabbis of 17th century Turin were Joseph Calvo, Daniel b. Joseph Calvo, and Joseph b. Michael Ravenna.

In 1702 there were 800 Jewish residents in Turin. In 1720 Victor Amadeus II transferred the Jewish codices that had been collected by his ancestors to the library of the University of Turin. These codices were described by Pasini Regi in the 18th century, B. Peyron in the 19th, and E.S. Artom in the 20th (*Soncino Blaetter* (1925), 43–70). However, at the beginning of the 20th century, they were almost entirely destroyed by fire. In the 17th and 18th centuries the Jews were urged to engage in the production and sale of fabrics.

Victor Amadeus II issued new statutes in 1723 and 1729 that substantially renewed those of 1430. The Jews were forbidden to own real estate and it was stipulated that they should live in the ghetto. Despite the trade in woolen and silk fabrics, the economic position of the Jews deteriorated. There are, however, no records of complaints; in fact, the Jewish population increased to about 1,300 by 1794. This implies that the Jews were better off in Turin than in other parts of Italy, both because of the comparative prosperity and the greater liberality of King Charles Emmanuel III. Turin continued to produce outstanding scholars. Eighteenth-century rabbis from Turin were Joshua Colon, Isaac Formiggini, Abraham Sanson b. Jacob ha-Levi Fubini, Michael Solomon Jonah, Gabriel Pontremoli, Jacob b. Joshua Benzion Segre, Abraham b. Jehuda Segre, and Daniel Valabrega.

The first real breath of liberty came with the French Revolution. Following the annexation to France in 1798, the Jews of Turin enjoyed greater liberty and were no longer compelled to live in the ghetto. Thus in 1797 a group of Jews, Ghidiglia, Guastalla, Treves, Nizza, Todros, and Malvano, bought a palace in front of the ghetto. In 1799 the Austro-Russian allies reconquered Piedmont from the French Republic, and the ancient statutes were reestablished. However, after Napoleon's victory at Marengo in 1800, Piedmont was annexed to France, and Turin became the capital of the new department. Turin's Jews were well established in the Napoleonic period and continued to purchase real estate outside the ghetto. Moreover, some of the Jews from the most prominent families were selected as guards of honor for Napoleon's visit.

With the fall of Napoleon in 1814, Victor Emmanuel I reenacted all the previous regulations. In theory the Jews had to go back to the ghetto and wear the badge. However, the reality was different. The Jews were soon exempted, in 1816, from wearing the yellow badge. Moreover the Sardinian government found it impossible to force the Jews to sell their land outside the ghetto and reside inside the ghetto only. A series of extensions and respites continued under the rule of Carlo Felice, until the Emancipation in 1848 under Carlo Alberto. Some of Turin's Jews took part in the 1821 *carbonari* insurrection, such as the banker Davide Levi. In 1848 there were 3,200 Jews living in Turin. By this time, however, the spirit

of liberty was asserting itself as the voices of Gioberti, Franchi, Maffoni, Romagnosi, *Cattaneo, and Roberto and Massimo D'*Azeglio were raised in favor of the emancipation of the Jews everywhere in Italy. In 1848 M. D'Azeglio published his booklet *Dell'emancipazione degli Israeliti*. In the same year King Carlo Alberto, on March 29, granted the Jews full emancipation, and hence liberation from the ghetto. The wealthier families left the ghetto immediately. Encouraged by the rabbi of Turin Lelio *Cantoni and the poet David Levi, the Jews of Turin participated in the First Italian War of Independence, and 65 Jews volunteered for the Sardinian Army. After the defeat in 1849, under the strong hand of Vittorio Emanuele II, the legal situation of the Jews living in the Kingdom of Sardinia became a model for the Jews living in the other states of Italy, which still lacked full emancipation. Jews had access to the administration and the diplomatic corps as well as the army. In 1852 Cavour, a friend of the Jews who had at one time asked for their emancipation became the prime minister under King Victor Emmanuel II. Cavour was aided by the Jews Isaac Artom, his secretary, and Giacomo Dina, director of *L'opinione*, a newspaper backing Cavour's policy.

Piedmont having become the center of Italian unification and the symbol of Jewish emancipation attracted some Jews to Turin. In 1871 4,500 Jews lived in Turin. In 1859 the Jewish community commissioned the architect Antonelli to plan a monumental synagogue, the tangible symbol of the emancipation. However the building, the so-called Mole Antonelliana, was so expensive that the Jewish community donated it to the Turin Municipality. The main synagogue of Turin was erected in 1884 in Moorish style on St. Pius V Street. Various Jewish scholars lived or worked in 19th century Turin, such as Abraham de *Cologna, a member of Napoleon's Sanhedrin, Felice Bachi, Elijah Aaron Lattes, Samuel Solomon Olper, Isaiah Foà, Lellio *Della Torre, director of the Rabbinical College of Padua, Sabbato Graziadio Treves, Giuseppe Lattes, and Samuel Ghiron. Rabbi Olper's decision in 1865 to shorten the period of mourning aroused controversy among Italian rabbis. The decision was accepted only within Turin, where it was carried out until the beginning of the 20th century.

Although the capital of Italy moved to Florence in 1861 and to Rome in 1870, Turin Jewry still played a disproportionate role in Italy's cultural history. Among Turin's outstanding Jewish personalities during the following period were E.S. *Artom; R. *Bachi; S. *Foa; and B. *Terracini, who studied the history and dialect of the Jews of Piedmont. Other notables included G. Bolaffi, the jurist M. *Falco, the writers *Carlo and Primo *Levi, the historian A. *Momigliano, E. *Artom, and Senator U. *Terracini.

A Hebrew printing establishment existed in Turin in the 18th century (E.S. Lattes, in *Mosè* (Corfu, 1879), 263–5). In the 20th century the Marietti graphics company published, under the guidance of Rabbi Disegni, the Bible and some *maḥzorim* with Italian translation; and, under the supervision of R. Bonfil, a Passover *Haggadah*.

[Alfredo Mordechai Rabello / Samuele Rocca (2nd ed.)]

Holocaust and Contemporary Periods

In 1931 4,040 Jews lived in Turin. In 1938 the Racial Law particularly affected the Jewish community of Turin, much assimilated to Italian life. In 1942 a bomb destroyed the interior of the synagogue. In November and December 1943, the Germans began to deport the Jews of Turin. A total of 246 Jews were deported to Auschwitz. Only 21 came back. One of them was the writer Primo Levi. Various gentiles helped the Jews in ingenious ways. Thus Dr. Coggiola of Mauriziano Hospital organized a "quarantine section" housing Jews, and the judge Germano subpoenaed Jews as witnesses in various legal processes. Jews joined the local partisan movements, such as E. Artom, political commissar of the 5th Regiment of the Giustizia and Libertà brigades, and G. Bolaffio, who was the commander of the 4th Regiment of Giustizia and Libertà. At the end of World War II 2,885 Jews were left in Turin, apart from numerous refugees who were temporarily housed in the surrounding districts. The Jewish Brigade helped restore the confidence of the community. In 1949 the synagogue was repaired.

Various rabbis dominated Jewish life in Turin in the 20th century, such as Giacomo Bolaffio; Dario *Disegni, chief rabbi of Turin from 1924 to 1960, founder of the Margulies Rabbinical School, and editor of a translation of the Pentateuch and of the Bible; and Sergio Joseph *Sierra.

Due to a high mortality rate (as compared with their birthrate) the Jewish population of Turin in 1970 was around 2,000 (only 0.16% of the total inhabitants). Educational institutions included a school for higher Hebrew studies, the Margulies Sierra Rabbinic School, a kindergarten, an elementary school, and a Jewish high school. The other institutions included a rest home for elderly people and an orphanage. The Jewish community of Turin continued to publish a monthly newspaper, *Notiziario della Comunita' ebraica di Torino*. In 2005, 924 Jews lived in Turin. The chief-rabbi was Alberto Somech.

TURKA, city in Lvov district, W. Ukraine. Jews first settled in Turka in the early 19th century when the city was under Austrian rule. They engaged in trading in forest products, the

manufacture of building materials, shopkeeping, and crafts – tailoring, shoemaking, carpentry, and transportation. In the second half of the 19th century the ḥasidic groups of *Belz and Sadgora had great influence within the community. On the eve of World War I, M. Landes, the Jewish representative on the city council, was mayor. Between the two world wars, when Turka was incorporated into Poland, Zionist parties were active, including Agudat Israel, Ha-Shomer ha-Ẓa'ir, and Agudat Akiva. Among Jewish educational institutions were the Degel Torah yeshivah, and *Tarbut and *Beth Jacob schools. The community founded a new orphanage in 1927. The Jewish population numbered 2,368 (51% of the total) in 1890, 2,892 (48%) in 1900, 4,887 (45%) in 1910, 4,201 (42%) in 1921, and 4,117 in 1931. The mayor of Haifa, Abba *Khoushi, was born in Turka.

[Shimon Leib Kirshenboim]

Holocaust Period

Before the outbreak of World War II, there were about 6,000 Jews in Turka. On Sept. 17, 1939, the Red Army entered the town and a Soviet administration was established there until the outbreak of the German-Soviet war in June 1941. The Germans occupied the town at the beginning of July 1941. The first *Aktion* took place in January 1942, when about 500 Jews were killed. In August 1942 about 4,000 Jews were deported to the *Belzec death camp. The Jewish community was liquidated in December 1942, when the Jews were transported to the *Sambor ghetto, where they were killed together with the local Jews. After the war, the Jewish community was not reconstituted. An organization of former residents of Turka is active in Israel.

TURKEY, modern republic in Asia Minor and S.E. Europe (see *Ottoman Empire for previous period). In the peace treaty of Lausanne (July 24, 1923), Turkey established complete sovereignty in Anatolia, the southeastern part of Thrace, and some islands in its territorial waters. The international status of the Turkish republic established in 1923 was secured, and in the following year the caliphate was abolished. The Treaty of Lausanne secured the rights of the religious and ethnic minorities (par. 39), who were permitted to have their own social institutions, funds, and schools (par. 40). In paragraph 41 the Turkish government assured the minorities their personal status as provided by their religious canons. The Jews showed their Turkish patriotism in the new republic: they relinquished the claims connected with their rights as a minority, and many renounced their foreign nationality and became Turkish citizens. Turkish Jewry was represented in parliament by Solomon Adato (from 1946 until his death in 1953) and by Henry Suriano (from 1954). The Turkish republic was declared a secular state, and Mustafa *Kemal Atatürk, its founder, attempted to erase all signs of the religious-institutional influence of Islam and also to maintain equality of Christianity and Judaism in public life. Even the wearing of "clerical" garb was prohibited and permitted only to the heads of the autonomous churches. For the Jews the prohibition on teaching Hebrew in schools was a hard blow. After Atatürk's death in 1938 many of the prohibitions he introduced were eased (e.g., the use of Arabic during the call for prayer in the mosques), but the general attitude toward religious minorities remained unchanged.

Economic Activities

In 1926 G. Bie Raondal, the U.S. consul general in Istanbul, wrote: "In the former Ottoman Empire they [the Jews] occupied important government positions, but the tendency of the new nationalism, ushered in by the republic, has been to put them in the same relative position as other non-Muslims, although they have never been persecuted in Turkey. [Now they] have carved out for themselves a place in every branch of the national life and are found as traders, bankers, professional men, office workers, and even laborers" (*Turkey*, 1926). Since 1926 many changes have occurred in modern Turkey, and the Jewish community has dwindled to an almost insignificant minority from the economic aspect. Although the severe blow of the capital tax (see below) was only temporary, it had a psychological effect on the Jewish community and was one of the causes of Jewish emigration from the country.

Jewish national life did not develop in *Istanbul and the towns which remained within the boundaries of Turkey; the Zionist idea had only few followers in the capital. The negative attitude of the Turkish government to Zionism was a heritage from Young Turk and Ottoman times, and influenced Turkish Jews. However, the idea of full integration in the Turkish state appeared to be unrealistic. The Jews, like the Greeks and the Armenians, unofficially remained second-class citizens. This was both demonstrated and felt in particular during World War II, so long as Hitler's antisemitic propaganda gained ground and it seemed that the Axis powers were moving toward victory. To meet wartime needs in the neutral Turkish republic a capital tax (*varlik vergisi*) was approved (1942) which was to be levied on owners of large farms (Muslims) and other taxpayers. However, it soon became apparent that the really important determinants of a taxpayer's assessment were his religion and nationality. The taxpayers' lists were prepared according to denominational indications. M (for Muslims) had to pay 5% of their capital or income (the same grade was accorded to foreign citizens); the tax rate for D (*Doenmeh) was about twice as much as for Muslims; for G (Gayri Muslims, non-Muslims) assessments would be made by special commissions, in accordance with their opinions. In fact the poorest among the non-Muslims, especially Jewish artisans, wage earners, and others, were taxed at figures wildly beyond their ability to pay. Members of the minorities who had retained or obtained foreign protection at the time of the armistice and Allied occupation (1919–23) were able to have their assessments reduced to the Muslim level. The Jews who had trusted

Jewish communities in Turkey in 1930. Names in boldface indicate those still in existence in 2005.

in the new republic and thrown their lot in with it were subject to victimization and punishment. Through the spring and summer of 1943 the continuing arrests, seizures, and deportations to labor camps were almost all of non-Muslims, the majority of whom were Jews. Many businessmen were ruined by assessments higher than their total possessions; others, though wealthy enough to pay, went bankrupt because no time was allowed them to find sufficient liquid money. The pro-Axis press expressed cordial approval of these developments, and denounced people of "alien blood," "Turks by name only," who should be punished for their disloyalty and ingratitude. With the decline of German power, as the downfall of the Axis became evident, a law was passed (1944) releasing all defaulters still detained and canceling all amounts still unpaid. The Democratic Party even promised compensation for damages caused to health and wealth.

After the end of the war the general economic situation and its structure changed for the better. Primarily, the reforms introduced after the establishment of the republic began to be felt. In addition, the aid given by the United States, aimed to strengthen the social structure of the population and hence the strategic value of the country, showed its efficacy. The Jewish population also took part in this recovery. In 1968 the economic situation of Turkish Jewry was good and the community contained some wealthy men. Most Jews were merchants, employees (very few of them in government service), or artisans. There were few underprivileged since most of the needy had settled in Israel soon after the establishment of the state.

Minor discrimination against Jews in Istanbul occurred, however, influenced by the tension between Turkey and Greece over Cyprus. During the anti-Greek riots in 1955 and 1964 the Jews were among the victims. The *Six-Day War (1967) also aroused anti-Jewish feelings and led to some small-scale incidents. The Turkish government, which had established diplomatic relations with Israel in 1949, always attempted to quell mob turbulence, but not with full effect. As the government's attitude toward Muslim religious activities became more tolerant, the rightist parties used it as a cover for anti-Jewish propaganda. Antisemitism being prohibited by law, anti-leftist and anti-Communist slogans were employed demagogically. By use of these tactics a small daily, *Bugün*, raised its circulation from 10,000 copies to 60,000. Some Turkish newspapers published articles in 1948 and later condemning emigration to Israel, and a few attacked the government for allowing it. They argued that the exodus of Jews would undermine the economy, and that communists were helping to organize emigration. Later, the amount of anti-Jewish material published in Turkey was reduced. Among those continuing to publish such material was Cevat Rifat Atilhan, who wrote *Le Sionisme, Danger pour l'Islamisme* (1951; almost all copies were seized by the authorities) and "Turks, Here is Your Enemy" (Turkish, 1959). Atilhan also wrote anti-Jewish articles in the newspaper *Yeni Istiklal*. Between 1951 and 1961 the newspaper *Büyük Doğu* ("Great East"), whose editor was Necip Fazil Kisakürek, printed many anti-Jewish articles.

Demography

The first census of the Turkish republic, held in 1927, showed some 79,454 Jews in a total population of over 13.5 million (see Table: Distribution of Jewish Population in Turkey), of whom half were in Istanbul. By 1945, the total Jewish population had decreased to 76,965, and in 1955 to 40,345. Immediately after the establishment of the State of Israel there was large-scale

emigration of Turkish Jews. However, in November 1948, as the result of pressure exerted by the Arab states, emigration was forbidden until early 1949. Later in that year Turkey recognized the State of Israel *de jure*, and Jews were again permitted to emigrate. The government even put ships of its merchant shipping line at the disposal of the emigrants, but forbade Israel representatives to organize emigration (until 1950). A total of 4,362 Turkish Jews went to Israel in 1948, and 26,295 in 1949–50. After 1950 the number of emigrants fell, although the Turkish government made no difficulties for those wishing to leave, except for the prohibition of taking out money. Between 1952 and 1955 only 2,182 Jews went to Israel. It is presumed that about 37,000 Jews left Turkey for Israel between 1948 and 1970; however about ten percent of these, principally from Istanbul and Izmir (peddlers, bootblacks, small wage earners, etc.), returned to Turkey, as conditions had improved in the country. Since 1960 the official Turkish census commission has not compiled statistics by religion, hence it is impossible to know precise figures for Turkey's Jews. Estimates are 38,000 for 1965, and about 20,000 in 2005: some 17,000 in Istanbul, 2,000 in Izmir, and smaller groups in Ankara, Adana, Çanakkale, Bursa, and Kirklareli.

Distribution of Jewish Population in Turkey

	Year 1927 official census	Year 1965 chief rabbinate estimates[1]	Year 1965–70 Jewish institutions estimates[2]
1. Adana	159	60	70
2. Ankara	663	800	3,200
3. Antakya (Antioch)	–	100	6
4. Bursa (Brusa)	1,915	350	400
5. Çanakkale	–	420	300
6. Çoclu	592	40	20
7. Dardanelles	1,109	–	–
8. Edirne (Adrianople)	6,098	400	120–400
9. Gallipoli	736	200	200
10. Gaziantep	742	160	–
11. Iskenderun	–	60	60
12. Istanbul	47,035	35,000	30,000
13. Izmir (Smyrna)	17,094	5,000	4,800–4,000
14. Kirklareli	978	90	67–35
15. Mersin	122	90	50
16. Milas	259	–	79
17. Tekirdag (Rodosto)	889	170	120
18. Tire	1063	–	100
Total	79,454	42,940	40,000

Cultural, Religious, and Social Life

There was a dramatic decline of interest in Judaism and Jewish culture among Turkish Jewry in the period between the two world wars and for a few years after it. The last Hebrew press closed in 1944, when its proprietor emigrated to Ereẓ Israel. After the death in 1931 of the *ḥakham bashi* R. Bekhor Ḥayyim *Bejarano, the official representative of Turkish Jewry, the community did not even feel an immediate necessity to appoint a successor. This absence of a spiritual leader not only led to religious indifference but also to apathy. As the *ḥakham bashi* was responsible for leading all activities of all Jewish communities in the Turkish republic, his absence was felt in every field of Jewish life. After a long interval Turkish Jewry decided to elect another *ḥakham bashi*, and R. Raphael David Saban was appointed to head the chief rabbinate (1953–60). He was succeeded by R. David *Asseo in 1960 and R. Isak *Haleva. The *ḥakham bashi* is assisted by a religious council consisting of a *rosh bet din* (also bearing the title *mara de-atra*) and four *ḥakhamim*. The lay council of the *ḥakham bashi* deals with secular-social matters concerning the Jewish community; it consists of 19 members (Sephardim and Ashkenazim). Together they support communal institutions such as synagogues, hospitals, cemeteries, old age homes, and schools.

Jewish Communal Schools

Turkish Jewry maintained its own educational institutions. However, the syllabus in all of them was the same as in government schools. When state opposition to religion was reduced (1948), Jews were permitted to teach Hebrew and religion in their schools (for following the prayers). The Turkish government forbade all Zionist activity as well as the existence of organizations with centers abroad which propagated non-Turkish nationalism. Since most Jewish children attended school, illiteracy fell, and almost all of them spoke and read Turkish, although most of them also spoke Ladino.

In the 1920s and 1930s Istanbul had eight Jewish communal schools for boys and girls together and one high school (founded in 1922 as Lycée Juif by the *B'nai B'rith Lodge); their number has decreased since. The Turkish language was the compulsory medium of instruction in all state schools, and in private schools at the primary level. The Jewish schools obtained permission to give one course in elementary Hebrew, needed for reciting the prayers, but not to give instruction in Jewish history and literature. Hebrew studies were de-emphasized as a result of a 1932 law which forbade religious instruction in all Turkish schools.

Abraham *Galanté was one of the enthusiastic supporters of the spread of Turkish and one of the sponsors of replacing the Arabic script by the Latin alphabet (1928). Ladino periodicals, which had previously appeared in Hebrew script, began to be printed in Latin characters; one, in Istanbul, was *La Vera Luz* (edited by Eliezer Menda), later closed down. *Shalom*, first edited by Avram Leyon, continues, but only some of its articles were in Ladino, the rest in Turkish. A third, *Etoile du Lévant*, published in French, ceased in 1948. The monthly periodical (later a quarterly) *Hamenorah*, published by the B'nai B'rith (1923–38) and edited by David Marcus in three languages (Hebrew, Ladino, and French), carried many important articles concerning the history of Ottoman Jewry. Present-day Jewish writers publish their works in Turkish or French. The Jewish

poet Joseph Habib *Gerez wrote in Turkish and described the glories of Istanbul. The library of the chief rabbinate was little used, and Italian Jews made efforts to promote interest in religion and culture. The Turkish authorities did not hinder Jews from religious observance. Nevertheless, most of the younger generation by the 1960s was not observant, and some young people were entirely ignorant of Judaism. The number of marriages to non-Jews increased too.

The Maḥazikei Torah institutions provided religious instruction (and elementary Hebrew language courses) in the evenings and Sunday mornings (Sunday being the official rest day in the Turkish republic) for Jewish boys and girls who attended the Turkish state schools where no Hebrew was taught. There were about 2,000 pupils in these institutions. The Maḥazikei Torah also trained religious functionaries: *ḥazzanim, shoḥatim, mohalim*. Turkish Jewry also had a rabbinical seminary. It was established in Istanbul in 1955, and about 50 students were registered in the mid-1960s, some of whom were awarded rabbinic ordination. After years of general decline in Jewish life this indicated noticeable progress and a reaction to the general apathy in Jewish education. Izmir is the second largest Jewish community in modern Turkey, with approximately 2,000 Jewish inhabitants (2005). It had two Jewish elementary schools and a secondary one. Other communities were too small to have their own schools.

The usual Jewish philanthropic and social institutions also existed in Istanbul and Izmir: orphanages, hospitals, assistance for poor, etc., all supervised by the Türkiye Hahambashiliği, the chief rabbinate of Turkey (letter from the *ḥakham bashi* dated Aug. 3, 1965).

Ashkenazim and Sephardim

Of Turkey's Jews in 1969, about 95 percent were Sephardim, the rest Ashkenazim, called *lehli*, the Turkish name for Poles, because during the 17^{th} and 18^{th} centuries the Ashkenazi immigrants had come from Poland. Later, however, there was Ashkenazi immigration from Austria; the German-speaking Austrian Jews formed the elite of the community, and the Great Synagogue built by them became known as the "Oesterreichischer Tempel." Their last officiating rabbi, David Marcus, was born in Russia, studied in Germany, and then settled in Istanbul (1900–44). After his death the congregation remained without a rabbi and went into a decline, being in danger of complete disintegration, although their percentage in the Jewish population increased somewhat. The older generation of Sephardi Jews continued to speak *Ladino, in which language they produced sacred literature, and since the 19^{th} century published many periodicals. In the 1955 census 64 percent among the Jews declared that their mother tongue was Yahudice (Ladino) compared with 84 percent in 1927, but knowledge of Ladino decreased. Neither the Jews nor the Greeks mastered the Turkish language until, under the new regime, it was introduced into the schools and the younger generation learned to speak, read, and write it fluently.

Karaites

Since all the *Karaite Jews of Egypt left for Israel during the 1950s, as did the remnants of the Karaite community in Hith (Iraq), the Karaite community in Istanbul remained the last in non-Communist Europe. There were about 200 Karaite families (1,000 persons) in Hasköy, a suburb of Istanbul, whose forefathers settled in the city in Byzantine times. They established their own synagogue and cemetery and were completely separated from the Jewish Rabbanite community. They did not intermarry with Rabbanites, with whom the only link was a Rabbanite *mohel* whom they too employed for circumcisions. Their rabbi, Isaac Kerimi, came from the Crimea. Many Karaites spoke Greek. Their attitude toward Israel was neutral, or even unfriendly.

[Haïm Z'ew Hirschberg and Hayyim J. Cohen]

Later Developments

In general, the 1980s were a period of well-being for the Jewish community in Turkey. In spite of increasing Islamic fundamentalist trends and economic difficulties due to high inflation, the Jews of Turkey witnessed a demographic growth, an improvement of the relations between the authorities and the community, and a visible awakening of Jewish identity among the members of the community.

The traumatic event of the decade to hit the community, which is usually out of the spotlight, occurred on September 6, 1986, when Arab gunmen attacked worshipers in Istanbul's Neveh Shalom synagogue during Sabbath morning services. Nineteen of the congregation, two of them Israelis, were killed in the massacre, as were the two gunmen who apparently blew themselves up. A wave of horror ran through the world and condemnations were heard on all sides, while the subsequent funeral became a protest demonstration. The Turkish prime minister, Turgut Özal, immediately called an emergency cabinet meeting and sent a message of condemnation and sympathy to the chief rabbi of Turkey, David Asseo. A subsequent government statement linked the murderers to *Iran and pro-Iranian terror organizations. The synagogue was restored and reinaugurated the following year. A monument in memory of the victims was dedicated at the Ulus/Istanbul cemetery in 1989. In another bomb outrage in 1992, an Israeli diplomat was killed.

In spite of pressures created by the gradual revival of the Islamic spirit in the country, the Turkish government has shown a close interest in the problems of the Jewish community and encouraged direct personal contacts to develop between it and the leaders of the community. Unprecedented permission was granted to Jews by allowing members of the community to take part in the meetings of the World Jewish Congress (WJC). However, this permission marks the only instance, with the exception of *Morocco, of a Muslim government allowing its Jews to participate in a worldwide Jewish activity; it is valid solely for the WJC but applies to no other international Jewish organization, and has been granted on condition of the Turkish community's not

becoming a full member but being present only as an "observer."

Synagogues, as well as property owned by the community, are considered as *vakif* ("foundations") by Turkish law, and all foundations in Turkey, non-Muslim and Muslim alike, are subject to the control and regulations of the *vakif.* Jewish communities have felt the effect of these regulations in their efforts to obtain firm and autonomous possession of their patrimony. By the existing regulations, communities are regarded merely as administrators and not as absolute owners of their immovable property. In the event of Jewish population movement, either within the cities or to the suburbs, if Jewish community real estate remains in the area where Jews no longer live, it is forfeited by the community to the *vakif* administration.

Two main events marked Jewish communal life during the latter part of this period: the reorganization in March 1989 of the Lay Council of the Chief Rabbinate and the positive approach of the Turkish authorities to Jewish communal problems.

Through the reorganization of the Lay Council, communal affairs have been taken over by a younger and more dynamic group which adopted a bolder attitude in solving problems. Both the 80-member General Assembly of the Council and its 15-member Executive Committee include representatives from even the smallest Jewish congregations all over the country. The Chief Rabbinate has thus gained authority and jurisdiction over all the Jews of Turkey; previously its authority was practically limited to Istanbul and was often subject to the whims and goodwill of the communities in other cities.

The new Lay Council also succeeded in establishing closer relations with the authorities which, parallel to the changing international political developments, have been inclined to view the problems of the Jewish community from a more positive angle. As a result of this approach a number of developments beneficial to the community have been achieved: the permission to transfer the Jewish lycée and primary school in Istanbul to an area where Jews had moved during the last 20 years, for which permission had been requested ten years ago and been left pending, was granted; a law passed six years earlier rendering the teaching of Islamic religion an obligatory part of the curriculum in all primary and secondary schools was abolished; *talmud torah* education in synagogues was officially allowed; a special foundation to commemorate and celebrate the 500th anniversary of the arrival on Turkish-Ottoman soil of Jews fleeing the Inquisition was created jointly by Muslim and Jewish citizens with the support of the government; and a disused synagogue, the Zülfaris, is being turned into a Jewish museum, the only one of its kind in a Muslim country, where Jews constitute less than 5 per 10,000 of the general population; and for the first time ever, Jewish sportsmen were officially authorized to take part in the 1991 Maccabi games in Marseilles under the Turkish flag.

Immigration to Israel has almost ceased while the number of Jews who had moved to Israel but decided to return to Istanbul in particular has increased considerably. Further, the improved political and social conditions in Turkey have resulted in a sense of security for Jews, and the number of births has risen. The Jewish population grew from 22,000 to 27,000, of whom 2,000 live in Izmir; a few hundred are scattered over western Turkey; and the rest reside in Istanbul. (Censuses do not state the religion of citizens so it is difficult to determine exact figures.) Roughly 1,000 Turkish Jews are Ashkenazim; the rest Sephardim. The two groups live in complete harmony and all communal welfare institutions are administered jointly by members of both rites. There is only one Ashkenazi synagogue in all Turkey. The religious activities of the two rites are run by the Sephardi chief rabbinate and *bet din* which satisfactorily fulfill Ashkenazi needs.

Economically most of the Turkish Jews continued to be rather well off, except for some 300 families who were partly or totally supported by the community. However, Jews in general suffered due to the rampant inflation in the 1990s (a limited number of prominent businessmen constituting an exception).

Members of the community have displayed a marked return to religion and traditions and a keener Jewish consciousness. The number of people who have voluntarily offered to take an active part in communal work and assume their obligations toward the community has grown. The weekly paper *Shalom*, the publication of which had been stopped as a result of its former owner's illness and death, has been taken over by a group of young people who have succeeded in increasing its circulation to 5,000 (thus turning it into a paper read in almost every Jewish household) and giving special emphasis to the revival of Ladino. About one third of the contents of the paper is in *Ladino and the younger generation has begun to show a greater interest in the language.

A new club was founded to serve the Jewish residents of fashionable quarters on the Asian coast of Istanbul, where almost a fourth of the Jewish population lives, and its new building with sports, recreation, and cultural facilities was inaugurated in 1987. A trend of more intense searching for a Jewish identity has emerged among the younger generation and a greater number of people of all ages are volunteering for communal work. However, in spite of the sociocultural revival, the number of intermarriages has increased and has been put at ten percent.

The chief rabbi (*ḥakham bashi*) is the official leader and representative of Turkish Jewry. He is assisted by a Religious Council (*bet din*) and the Lay Council. In contrast to its glorious past of world-famous rabbis and religious scholars, the community is beginning to feel the shortage of qualified rabbis and other religious functionaries. The only *kasher* restaurant closed when its owner retired.

Jews continue to be politically inactive in the country. As in the past, this is due both to their insignificant numbers as well as to their reluctance to take part in politics. While the majority of Jews voted for the middle-right Motherland Party in power during the 1986 elections, a religious party advocat-

ing antipathy and even hostility towards Israel and the Jews grew much stronger. Occasional incitements by this party have caused the Jewish community anxiety.

The approval by the authorities and their encouragement of the decision to celebrate the 500th anniversary of the settling of the Sephardi Jews on Turkish-Ottoman soil in 1492 was a high point in Jewish communal life. To celebrate the anniversary a series of national and international symposiums, publications, the creation of a Jewish museum and concerts of local Jewish music were prepared for 1990, with the climax in 1992. (See also *Sephardim.)

[Hanri Yasova]

Relations with Israel

In the 1947 UN General Assembly, Turkey voted against the partition of Palestine and the creation of a Jewish state out of Muslim solidarity and also because of its interest in the continued existence of British positions in the Middle East in the event of a Soviet attack. When the State of Israel became a reality, however, Turkey extended to Israel *de jure* recognition in November 1949, and agreed to the establishment of diplomatic relations. Legations were established and relations between the two countries developed satisfactorily. A commercial agreement in July 1950 facilitated trade relations based on the complementary character of the two countries' economies. An air-transport agreement was signed in February 1951 inaugurating regular Lydda-Istanbul flights by El Al and Turkish Airlines. The Turkish maritime company also initiated passenger and cargo lines to Israel. Israeli contracting firms started working in Turkey, and cultural relations also developed.

The Democratic Party, which came to power in May 1950, slowed down (especially from 1952) the pace of strengthening relations with Israel. It initiated a policy of rapprochement with the Arab countries in order to form a regional defense treaty and to please religious elements within Turkey. The level and scope of relations with Israel were reduced mainly after the signing of the Baghdad Pact with Iraq in February 1955. In December 1956, a few weeks after the *Sinai Campaign, Turkey recalled its minister from Israel, leaving its legation under a chargé d'affaires, and asked Israel to reciprocate. This step was a compromise, as Turkey resisted Arab pressure to sever diplomatic relations with Israel. When Iraq withdrew from the Baghdad Pact in 1959 after the revolutionary coup of 1958, Turkey again changed its attitude vis-à-vis Israel. The ousting of the Democratic Party from power in May 1960 also contributed to the improvement of relations between the two countries. Official visits, some of them at the level of cabinet ministers, were exchanged, and close cooperation began in technical assistance. This stage came to an end following the intercommunal riots in Cyprus in 1963–64. Turkey needed Arab support at the UN and decided to reduce its relations with Israel to a minimum, limiting them mainly to the economic sphere. (In 1969, for example, Israel exported $2,000,000 worth of chemicals, medicaments, and paint to Turkey and imported $4,700,000 worth of sugar, dried fruits, and lentils.) After the Six-Day War (1967), Turkey called for "the establishment of a just and lasting peace" in the Middle East, declaring its opposition to the acquisition of territories by force. It demanded that Israel withdraw from the occupied territories and that there be no change in the status of *Jerusalem. In 1971, the Israel consul in Istanbul, Ephraim Elrom, was kidnapped and after a few days was found murdered. The Turkish government ascribed the crime to extreme left-wing circles whose action was directed not only against Israel but also against the Turkish regime.

[Baruch Gilead]

The years from 1967 to the present may be divided into two: the period which ended in the late 1980s and the second one that continued into the early 21st century. The first period was characterized by official alienation towards Israel by Turkey, culminating in November 1980 in the downgrading of diplomatic relations to the level of junior chargés d'affaires. This happened as a result of the Israeli Knesset's decision to apply Israeli law to the eastern parts of Jerusalem (held by Israel since the 1967 Six-Day War). The pressure of Arab countries, loans and credits from *Saudi Arabia, and large quantities of cheap oil from Iran, *Libya, and *Iraq persuaded Turkey to adopt this position. Turkey supported the Arab position that the occupation of lands in the June 1967 war, including East Jerusalem and the Muslim holy places, amounted to aggression. In October 1973 Ankara refused to grant the right of passage through its airspace, and landing facilities, to American cargo planes that carried urgent supplies to Israel during the October 1973 war; Turkey did, however, allow Russian weapon convoys to cross its territory on their way to *Syria.

This pattern of relations continued until the late 1980s. However, three processes helped change the relations and the atmosphere of alienation. A sharp decrease in energy prices resulted in the Arab countries' losing their ability to exert pressure on Turkey's foreign policy. The second process was the collapse of communism and the disintegration of the Soviet Union. Thus, relations with Israel were no longer a component of the Cold War, to be used as an asset for communism or the Arab states against anybody who had decided to improve relations with Israel, or as a threat of punishment against anyone upgrading relations with Israel. The third process that encouraged Turkey to improve relations with Israel was the withdrawal of Israel from much of southern Lebanon (1985), the Madrid Conference (1991), and the ensuing thaw in Arab-Israeli relations, culminating in the Oslo accords (1993) between Israel and the Palestinians and the peace agreement between Israel and Jordan (1994). Another component that brought about greater cooperation between Israel and Turkey was the growing influence of Muslim radicalism and threats to the Middle Eastern status quo emanating, respectively, from Iran and Iraq. As a result the 1990s were marked by dramatic changes in Turkish-Israeli relations. Cooperation and contacts were conducted openly, a sharp contrast to the previous period, which was marked mostly by secret and clandestine

relations. Diplomatic relations were elevated to ambassadorial level (December 2001). A military agreement (February 1996) resulted in intensive cooperation between the armies, navies, air forces, and weapons industries of the two countries. Growing numbers of Israeli tourists visit Turkey (more than 300,000 annually since the mid-1990s, about five percent of Israel's population). Cultural contacts have also increased resulting, among other things, in the teaching of the Turkish and the Hebrew languages in Israeli and Turkish universities, respectively. Thus, mutual civilian trade of all kinds, tourism not included, has amounted to more than $2 billion a year since the early 21st century. Roughly speaking, the entire volume of trade can be divided into one-quarter military contracts and three-quarters civilian. The two countries signed an agreement (March 2004) according to which Israel would purchase annually, for a period of 20 years, the amount of 50 million cubic meters of Turkish fresh water. The upshot of all the above is that Turkey and Israel have a greater volume of civilian trade than between any two states in the Middle East.

The coming to power in Turkey of the Muslim Justice and Development Party (AKP) in November 2002, the war in Iraq which erupted in March 2003, and the December 2004 decision of the EU to conduct membership negotiations with Turkey (to begin in October 2005) provided new inputs to Turkish-Israeli relations. The worsening of relations (as from the year 2000) between Israel and the Palestinians also detrimentally affected Turkish-Israeli relations. Unlike Israel, which supported the American war in Iraq, Turkey opposed it and looked with great concern at the Iraqi mayhem and the possible disintegration of that country into its ethnic components. Turkey repeatedly voiced concern lest a Kurdish entity be established in northern Iraq. Even more, the growing interaction between Ankara and the EU resulted, inter alia, in Turkish policies and statements vis-à-vis Israel and the Palestinians which resemble those of the EU. And while the basic pattern of the bilateral cooperation has not changed – economic, cultural, and military contacts continue to improve, even to thrive; Ankara supported the Israeli disengagement from the *Gaza Strip; high-level contacts are routinely conducted (in August 2005 Turkey used its good offices to mediate between Israel and Pakistan and arranged the first public meeting between the foreign secretaries of the two states) – still, occasionally, Turkey openly criticizes certain Israeli measures in the Israeli-Palestinian conflict.

[Amikam Nachmani (2nd ed.)]

Jewish Musical Tradition

The arrival of the waves of Jews expelled from Spain in the newly established Ottoman Empire marks a turning point in the history of this country's Jewish musical life. The newcomers brought with them a rich musical tradition, which they continued to preserve and cultivate jealously in the new environment. Their contact with the highly developed Turkish art music as well as with the vestiges of the Romaniot-Byzantine musical style gave rise to an interesting situation in which the Turkish and Sephardi styles became subsequently the two dominant strains of the diverse musical activities in the major cities of the Ottoman Empire. The Byzantine style that characterized the music of old Romaniot communities of Constantinople, Bursa, Adrianople and others continued to be preserved among the Karaites of the Hasköy district of Constantinople and much more overtly in the area where Greek is still the spoken language: at Ioanina, Chalkis, Arta, and Patras. One may even assume that even after the great changes the Byzantine style did not disappear without leaving some traces.

THE COEXISTENCE OF TWO DIFFERENT STYLES. The Spanish Jews continued to maintain a distinctive Judeo-Spanish idiom for secular purposes and Hebrew and Ladino for liturgical functions, and maintained the musical repertory of the Spanish tradition with a remarkable persistence. The latter has been prominent mainly in secular life, and to a lesser extent in liturgical and paraliturgical instances, and essentially became the province of women in the new environment. Jewish women were not involved in the performance of Turkish classical music, and as a rule they did not take part in the liturgical practice. Nevertheless, some daughters of rabbis and cantors involved in the religious activities of their fathers were proficient in the singing of synagogal pieces in the men's ornamented and nasalizing Turkish style.

THE TURKISH STYLE IN SYNAGOGAL MUSIC. The fervent identification of the Jews with the Turkish art music style as a vehicle leading the worshipers to religious elevation and compassion, known as *ḥizzun* (a derivative from the Arabic *ḥuzn*, meaning sadness and introspection), appears in a statement made by the religious scholar, kabbalist, and talented poet-musician rabbi Menahem di *Lonzano (1550–before 1624). In the preface to his collection of *piyyutim* set to Turkish tunes (published about 1575 in Constantinople, probably his birthplace) he claims that he found the Turkish tunes "to be the expression of a broken and contrite heart." In the 19th century, Rabbi Moses Hazzan, who served in Jerusalem's High Religious Court, reports in his book *Kerekh shel Romi* (Livorno, 1886, fol. 72) the following astonishing testimony, which may imply the influence of Turkish-Byzantine style:

> And I testify by heaven and earth that when I was in Izmir, the great city of scholars and mystics, I saw some of the most outstanding religious authorities who were also great creators of the science of music, headed by the wonderful Rabbi Abraham ha-Cohen Ariash of blessed memory, who secretly used to go (behind a screen) in the Christian church on their holy days to learn the special melodies from them and to adapt them to the High Holidays prayers which require great humility. And from those same melodies they would arrange the most remarkable blessings and holy prayers.

Interestingly, the aforementioned Rabbi Abraham Ariash made a name as a composer of 80 Turkish musical pieces in different modes and was known as *hadje-i beskusar* ("a consummate master").

The singing of *piyyutim* in the framework of the normative liturgy music as well as all other types of religious rituals, such as that of the *maftirim* (see below), is only one aspect of synagogal music; the other concerns the recitation of the prayer and the cantillation of Holy Scriptures. While the latter realizes only partially and in a floating manner the melodic content of the *Maqam principles, such as the use of *Maqam Sika* for the reading of the Torah and various other *maqamat* for the Sabbath prayers' recitation, the singing of the *piyyutim* fully adheres to the Turkish *maqam* system. The Jews also adhere to the related doctrine of ethos and its psychological influence; cantors and readers of the sacred texts frequently relate the tune to an emotive term, and to the typical intonations characterizing the voice inflections and timbres of the Turkish performing style.

Solomon Mazal Tov published the earliest Hebrew collection of sung *piyyutim*: *Shirim u-Zemirot ve-Tishbaḥot* (Constantinople, 1545).

The Maftirim. At Edirne (Adrianople), a choral society of *Maftirim* was founded in the 17th century; it developed an extensive repertoire paralleling the **Bakkashot* tradition of the mystic circles in Aleppo, Morocco, and elsewhere. They used in their celebrations of the Sabbath a book of *piyyutim* called *jonk,* the term being derived from Turkish/Persian *conk,* which is similar to the Arabic *diwan*, meaning a collection of poetry. The activity and the reputation of the *Maftirim* society helped Adrianople become a center for hymn writers and composers. Among the best known were composer Aaron ben Isaac Hamon (18th c.); Joseph Danon (d. 1901), who collected and published in 1896 a large repertoire of Ladino folksongs from Adrianople; and Isaac Eliahu Navon (b. 1859). Navon was a prominent personality in the community and a member of the choir society of the *Maftirim*. He moved with his parents at the age of 18 to Istanbul where he composed poems and hymns; he gathered and edited a collection of old *piyyutim* of Jewish poets, *Shirat Ẓiyyon be-Ereẓ ha-Kedem* (Istanbul, 1921), which reflects the choral repertory of the *Maftirim* from Edirne. At the age of 70, Eliahu Navon immigrated to Ereẓ Israel where he published his collection *Yinnon* (Jerusalem, 1937), including both religious and secular compositions; some of his songs became part of Israeli folk song.

The repertory of the *Maftirim* is modeled after the Turkish classical multisectional *fasil* (lit. "section"). This prestigious form seems to have grown from the eastern *nawba*. It was customary to perform a fixed sequence of pieces of different genres, allowing a certain amount of freedom to introduce new combinations.

THE MUSICAL ACTIVITY IN IZMIR. Izmir was an important center of a rich Jewish musical life from the 17th through the 20th century. In his book *Histoire des Juifs d'Anatolie* (vol. 1, 163–67) Abraham Galanté mentioned several Jewish musicians who made a name as proficient composers and performers in the Turkish society. They include Hakham Yomtov Danon (17th century) known among the Turks as "the little *Hakham*"; the aforementioned Rabbi Abraham Ariash; the composer and *santur* (trapezoidal cithara) player Elia Levy; the violinist Isaac Barki; composer Shemtov Shikiar, known among the Turks as Hodja Santo; and Salomon Algazi, a noted *ḥazzan* and composer known among the Turks as Salomon the Nightingale, thanks to his most beautiful voice. He is the father of the famous *ḥazzan* and composer Isaac *Algazi (1882–1964). At an early age Isaac joined the *Maftirim* Choir led by his father and served as *ḥazzan* in his native town. His performing style as a *ḥazzan* and singer of secular pieces was highly expressive, enhanced by a moving and pleasant voice. He also became proficient in Turkish art music and a noted performer of classical Turkish music; Ataturk invited him to sing at his palace. Among his pupils was another native of Izmir, composer and musicologist Alberto *Hemsi who published in 1924–5 five notated groups of *piyyutim* organized in the form of *Fasil* (a Turkish suite). Isaac Algazi ended his life in Uruguay. A selection of Isaac Algazi's poetry has been published in *Shirei Yisrael be-Ereẓ ha-Kedem* (1921).

In dealing with the various Jewish societies in Izmir, Galanté refers to the activity during the 18th and 19th centuries of a unique society, largely supported by charity, called *La Dansa*. It involved a group of singers and dancers whose function was to gladden poor newly married couples in their house on Sabbath afternoon. To avoid the interdiction of playing instruments on the day of Sabbath, they used to accompany their singing and dancing with a copper plate on which they beat the rhythm. Some religious authorities expressed dissatisfaction with this practice, while others justified it by virtue of the *mitzvah* "To gladden the bridegroom and bride" (*ibid*., p. 93).

TURKOW, Polish family originating in Warsaw. ITZḤAK TURKOW (pen name Grudberg; 1906–1970), Yiddish actor and writer. From 1925 to 1957, Itzhak Turkow worked with the Yiddish Art Theater in Warsaw, the Vilna Troupe, and the Jewish State Theater. From 1946 to 1950 he also edited a weekly "Lower Silesia." He settled in Israel in 1957, edited the weekly *Folksblat* (1958–68), and was the author of *Yidish Teater in Poyln* (1951), *Mame Esther Rachel*, a biography of Esther Rachel *Kaminska (1953), *Varshever Purim-Shpiler* (1957), memoirs *Oyf Mayn Veg* (1964), *Geven a Yidish Teater* (1968), and monographs on Peretz, Asch, Goldfaden, and Gordin. He was director of Bet Shalom Ash in Bat-Yam from 1959.

ZYGMUNT TURKOW (1896–1970), Yiddish actor and director. Turkow toured with Rachel Kaminska, and with her founded the Jewish Art Theater, Warsaw, 1929. He toured widely playing in Molière, Shalom Aleichem, Gogol, Goldfaden, and the early Yiddish play *Serkele* by *Ettinger. He went to Brazil after World War II and was co-founder of the Brazilian National Theater. He also directed and acted in Yiddish films. He settled in Israel in 1952, founded Zuta, a traveling theater, in 1956, and directed it until it disbanded in 1967. He also wrote plays and four volumes of memoirs.

JONAS TURKOW (1898–1988), actor, in charge of theatrical entertainment in the Warsaw ghetto during World War II. He started his career with the Kaminska Theater in Warsaw, and managed theaters in Vilna, Warsaw, and Cracow. He took part in several Yiddish films, playing the title role in *Lamed-Vovnik* and directing J. Opatoshu's *In Poylishe Velder* (1929). He and his wife, Diana Blumenfeld, were in the Warsaw ghetto until 1943 and were the only two actors to come out of it alive. In his book *Azoy Is Es Geven* ("That's How it Was," 1948), Turkow describes ghetto life in much detail and explains how the theater he organized functioned amid want and peril. After the war he toured the Displaced Persons camps and continued writing of his wartime experiences: *In Kamf farn Lebn* ("Fighting for Life," 1949), *Farloshene Shtern* ("Stars Extinguished," 1953), and *Nokh der Bafrayung* ("After the Liberation," 1959). Settling in New York in 1947, he became archivist for the theater department of *YIVO in 1958. He settled in Israel in 1966.

Marc *Turkow (1904–1983) was a Yiddish journalist and writer in Warsaw and Buenos Aires.

BIBLIOGRAPHY: LNYL, 2 (1958), 369–70; 4 (1961), 56–62.

TURKOW, MARC (1904–1983), journalist and writer in Yiddish and Spanish. He was born in Warsaw, Poland, where he was a journalist and started his public career. Turkow settled in Buenos Aires, Argentina, in 1930. From 1946 he headed the bureau of HIAS. From 1954 he was the representative of the World Jewish Congress for Latin America. One of his contributions to Jewish culture in Spanish in Argentina was the publication of dozens of booklets on distinguished Jewish intellectuals and spiritual leaders under the name Biblioteca Popular Judía (Jewish Popular Library). The Centro de Documentación e Información sobre Judaísmo Argentino (Documentation and Information Center on Argentinean Jewry), established in 1983 under the auspices of AMIA – the Ashkenazi Jewish Community of Buenos Aires, was named after him.

[Efraim Zadoff (2nd ed.)]

TURNER, YA'AKOV (1935–), 10th inspector general of the Israeli police and mayor of Beersheba. Turner joined the IDF in 1953 and served for 32 years in the Israel Air Force, flying over 300 combat missions and serving as a squadron commander in the Six-Day War and afterward as commander of the IAF flight school. In 1977 Turner was named commander of one of the major bases of the Israel Air Force, a position he held until 1981, when he became head of the human resource department of the force. During his military service he graduated in human behavioral sciences from Ben-Gurion University. He was one of the founders of the Air Force Museum, becoming its head. In 1985 he joined the Israeli police as head of the human resource section. In 1989 he was promoted to head the Central District and in 1990 he became inspector general, a position he filled until 1993. Under his leadership, the police faced the first Intifada. He also created a number of important units: the traffic police to deal with traffic problems and felonies; the helicopter unit aimed to assist forces on the ground; and the Southern District with headquarters in Beersheba. Six years after his retirement from the police, in 1999, he was elected mayor of Beersheba.

[Shaked Gilboa (2nd ed.)]

TURNOV (Ger. **Turnau**), town in N. Bohemia, Czech Republic. Jews are first mentioned in Turnov in 1526. The town manual of 1568 lays down regulations on Jewish-gentile relations. When the community increased during the 17th century, a cemetery (still in existence in 1969) was consecrated. After the wooden synagogue burned down in 1707, the authorities ordered the community to rebuild it in stone. In 1717 there were 23 Jewish houses in the town. The Jewish population numbered 280 in 1880 and 478 (2.9% of the total population) in 1910, but by 1930 had fallen to 110 (1.4%). In 1942 all Jews were deported to the Nazi extermination camps. The synagogue equipment was transferred to the Central Jewish Museum in Prague. Most of the members of the small congregation organized in 1945 were from *Subcarpathian Ruthenia; it was administered by the *Liberec community. In 1952 a memorial tablet to Nazi victims, with 93 names from Turnov and 25 from the surrounding area, was unveiled in the cemetery. Author Ivan Olbracht (1882–1952), known for his

stories about Jews in Carpatho-Rus, was born in the neighboring town of Sedlice.

TURÓCZI-TROSTLER, JÓZSEF (1888–1962), Hungarian literary scholar, critic, and translator. Born in Moskóc, then Hungary, Turóczi-Trostler became a high school teacher. Between 1917 and 1943, he was literary critic of the German-language newspaper, *Pester Lloyd*. During the revolution of October 1918, he became a senior official in the Hungarian Ministry of Education, and, following Béla *Kun's Communist revolution, was professor of world literature at Budapest University. Removed from his post by the counterrevolution, he became a teacher at the Jewish *Neolog community's girls' high school in Budapest. From 1945, Turóczi-Trostler was a member of the Hungarian Academy, a member of the Hungarian parliament, and professor of world literature at Budapest University. In 1947, he was made professor of German literature. He edited an anthology of German literature in Hungarian translation and translated works by German authors. His Jewish sympathies and associations declined over the years.

As a young man he contributed poems to József *Patai's periodical, **Mult és Jövő*; following his expulsion from Budapest University he wrote several works on Jewish themes; but, when he returned to academic life after World War II, he severed all connection with Judaism. Turóczi-Trostler's major studies include *Magyar Simplicissimus* (1915), *Stefan George* (1920), *Wassermann* (1927), *A magyar nyelv felfedezése* ("The Discovery of the Hungarian Language," 1933), *Thomas Manns Weg zum Mythos* (1936), *Stefan Zweig* (1942), *A magyar irodalom európaizálódása* ("The Europeanization of Hungarian Literature," 1946), and "Wassermann Literature," (2 vols., 1961), selected research.

TUROW, SCOTT (1949–), U.S. novelist. Turow, who was born in Chicago, graduated from Amherst College. On a fellowship he attended Stanford University's Creative Writing Center for two years and then taught there for three years. In 1975 Turow entered Harvard Law School and graduated with honors in 1978, but not before publishing *One L,* a book about his first year there. From 1978 to 1986 Turow was an assistant United States Attorney in Chicago, where he prosecuted several high-profile corruption cases, including the tax-fraud case of the state attorney general. Turow was also lead counsel in the federal prosecution of Illinois judicial corruption cases. After leaving the U.S. Attorney's office, Turow became a novelist, achieving his greatest success with legal thrillers like *Presumed Innocent* (1987), *The Burden of Proof* (1990), *Pleading Guilty* (1993), *The Laws of Our Fathers* (1996), *Personal Injuries* (1999), and *Reversible Errors* (2002). His books were translated into 20 languages, sold more than 25 million copies worldwide, and won many literary awards. The film based on *Presumed Innocent* (1990), starring Harrison Ford and directed by Alan J. Pakula, was also a major box-office success. Turow sought to make a break from the courtroom fiction genre with *Ordinary Heroes* (2005), a story set in World War II in which the major characters are Jewish. In addition to his writing, Turow continued to practice law. He was a partner in the Chicago office of Sonnenschein, Nath & Rosenthal, a national law firm. His practice centered on white collar criminal litigation, but he devoted a substantial part of his practice to pro bono work, including representing defendants facing the death penalty. In one of those cases, a prisoner was exonerated after 11 years in prison. In 2003, Turow published *Ultimate Punishment: A Lawyer's Reflections on Dealing With the Death Penalty.* He served as president of the Authors Guild, the national organization for professional writers, and was active in a number of public bodies and charitable causes, including Literacy Chicago and Illinois's Executive Ethics Commission.

[Stewart Kampel (2nd ed.)]

TUR-SINAI, NAPHTALI HERZ (**Harry Torczyner**; 1886–1973), Hebrew philologist and Bible scholar. Born in Lemberg, Tur-Sinai was raised in Vienna. He studied at the University of Vienna, 1905–09, and the Rabbinical Seminary, where his teachers included Meir Friedmann and Heinrich Mueller. His first teacher, however, was his father, an important patron of Jews in science, literature, and art and among the first active Zionists. In 1910 Tur-Sinai was appointed lecturer at the University of Vienna on the basis of his work on accents and vowels in Semitic languages. That same year he went to Jerusalem where he was elected a member of the *Va'ad ha-Lashon and taught Bible and Hebrew at a high school. From 1913 to 1919 he lectured in Semitic languages at the University of Vienna, and from 1919 to 1933 taught Bible and Semitic philology at the Hochschule fuer die Wissenschaft des Judentums in Berlin. In 1933 he settled in Jerusalem and was professor of Hebrew language at the Hebrew University. He was one of the presidents of the Va'ad ha-Lashon and president of the *Academy of the Hebrew Language from its founding in 1953. The following are among his publications: *Deutsch-Hebraeisches Woerterbuch* (together with S.M. Laser; 1927); substantial contributions to the new Jewish translation of the Bible into German (1935–37; see *Bible: Translations); commentary on the Book of Job (1941; 1954^2); and *The Lachish Letters* (1938), a deciphering of the Lachish letters. In addition to editing the periodical *Leshonenu* from 1934 to 1954, he edited and completed E. *Ben-Yehuda's dictionary from vol. 10 (1944), and translated essays by *Aḥad Ha-Am into German (1916; 1923). Among his works in German are *Das Buch Hiob* (1920); *Die Bundeslade und die Anfaenge der Religion Israels* (1922; 1930^2); and *Die Entstehung des semitischen Sprachtypus* (1916), where he sought to establish new origins of the Hebrew language, and which met with the opposition of most scholars.

In his writings, Tur-Sinai did not shrink from daring conjectures, but at the same time he continually criticized his own views and publicly repudiated assumptions of whose invalidity he had become convinced. A summary of his studies is given in the three volumes of *Ha-Lashon ve-ha-Sefer* (1951–56), and a collection of his expositions on the Bible are published in *Peshuto shel Mikra* (1962–68). Tur-Sinai's approach to the problems of the Bible was formed against the background of the documentary theory in its classical form, which, however, he explicitly rejected. In his view the Bible in our possession is merely a collection of remnants of ancient works that spoke of early times. Within the framework of these ancient stories the laws, parables, poems, and prophecies were interwoven. Accordingly, the life of David was intertwined with the Psalms, and the life of Solomon with apothegms from the Books of Proverbs and Ecclesiastes and with poetry from the Song of Songs. Our Book of Job is an adaptation of ancient stories about Job and his friends (who lived in Edom). The skeleton of the story was fleshed out by many poetic sections in the form of polemics placed in the mouth of Job and his comforters. Tur-Sinai maintained that the original language of the book was Aramaic and that our Hebrew translation was made by one who did not sufficiently understand Aramaic. He believed, moreover, that anonymous texts, fragmentary and corrupt, formed the bases for fixing the biblical texts and assembling the canon during the Babylonian exile and later. Hence, in an effort to reconstruct the original version, his many bold suggestions for textual emendation derived from linguistic novellae – the majority of which did not gain acceptance. From his research in the Ugaritic writings, Tur-Sinai concluded that the content of the Bible is very ancient.

Klausher, in: *Leshonenu*, 15 (1947), 3–9, bibl. of his writings; *ibid.*, 10–26, 21 (1957), 149–54; *Pirsumei ha-Ḥevrah la-Ḥakirat ha-Mikra be-Yisrael*, 81 (*Sefer Tur-Sinai*; 1960), 7–10 (first pagination).

TURTLE DOVE (Heb. תּוֹר, an onomatopoeic word), the *Streptopelia turtur*. Large flights arrive in Israel in spring, and their cooing, which fills the wood, heralds the advent of spring (Song 2:12). It nests in trees and lays two clutches of eggs. In October it migrates to southern countries, returning in the spring, and Jeremiah states that the exact times of its migrations were known (8:7). Like the dove, the turtle dove was used for various sacrifices (Lev. 5:7; 12:6; Num. 6:10). It was included among the birds Abraham offered at the covenant between the pieces (Gen. 15:9). It symbolizes the innocent Israelite nation against whom its enemies plot (Ps. 74:19). In a passage which advocates that "one should be ever of the persecuted, but not of the persecutors," the Talmud states that no birds are more persecuted than turtle doves and young pigeons – yet the Bible regarded only them as worthy of being offered upon the altar (BK 93a). The turtle dove, a beautiful bird with colorful feathers, is recognizable by the bright stripes at the side of its neck. A closely related species, *Streptopelia senegalensis*, the palm dove, is found in Israel throughout the year, and lays its eggs on roofs and eaves.

[Jehuda Feliks]

TUSCANY, region in central Italy. No information on Jews in Tuscany during the Roman era is available but it is likely that a Jewish community existed then at least in *Florence. The first reliable data comes from Benjamin of *Tudela who found Jews in *Pisa and in *Lucca (c. 1159). There were Jews in *Siena by 1229. Jews presumably engaged in moneylending in Tuscany in the 13th century. In 1309 three Jewish loan bankers were invited to San Gimignano; the negotiations with them and others did not succeed, but in 1392 the first agreement regulating Jewish loan banking activities (*condotta*) there was concluded. Until 1437 Jewish moneylenders were excluded from Florence itself, but not from the provincial cities under its sovereignty. In 1393 a *condotta* was concluded at San Miniato with a group of Jewish bankers headed by members of the Min ha-Keneset or Min Bet-El (Della Sinagoga) family of Rome. A concession to maintain a loan bank in San Gimignano was granted in 1410, and in 1423 a similar license was extended to the city of Pisa, again to this family. At the beginning of the 15th century the family also engaged in moneylending in Pescia, Prato, Colle Val d'Elsa, and perhaps in Pistoia; authorization to permit Jews to engage in moneylending was also extended to the cities of *Arezzo, Montepulciano, Castiglion Fiorentino, Volterra, Castrocaro, and Empoli. In exchange, the central authorities demanded a tax which varied between 50 and 250 florins yearly, according to the importance of the locality.

In 1416 representatives of the communities of Tuscany took part in the Council of *Bologna. The establishment of Christian loan banks (*Monti di Pieta*) in the 16th century caused some difficulty to Jewish moneylenders in Tuscany, but there was no conspicuous change in their situation, though there was an unsuccessful attempt to excommunicate the Jews of Empoli. The reign of Duke Cosimo de' Medici was originally beneficial for the Jews. In 1553 however he yielded to papal pressure and ordered the burning of the *Talmud. In 1551 he had issued an invitation to merchants from the Levant, including Jews, to settle in Tuscany and do business there; previously, Marranos also had been permitted to settle in Tuscany. In 1557 and before, he gave asylum to Jewish refugees from the Papal States. The same year he refused to implement the anti-Jewish restrictions issued by Pope *Paul IV or to hand over the Jews to the jurisdiction of the Inquisition. But when Cosimo wished to gain the support of Pope *Pius V for his aspirations to the title of grand duke, his attitude toward the Jews changed. In 1567 he rigorously applied the obligation to wear the Jewish *badge. Refugees from the Papal States who wished to settle in Volterra were not accepted. In 1570 information was collected on the Jews in Pisa, Cortona, Foiano, Pieve-Santo-Stefano, Arezzo, Prato, Anghiari, Cas-

trocaro, Modigliana, Bibbiena, and Montepulciano, apparently as a preliminary to concentrating them in Florence. On the pretext that Jews had violated some of the articles of their moneylending concessions, all their agreements in Florence were abrogated in 1570, and in the district of Siena in 1571. Subsequently the expulsion of the Jews from all cities excepting Florence and Siena was ordered. In these cities the Jewish inhabitants were segregated in a ghetto along with refugees from other localities. At the end of the century, however, the Grand Duke Ferdinand I (1587–1609) invited Jews, including Marranos, to settle in Pisa and the free port of *Leghorn, which before long became one of the great Jewish centers of the Mediterranean area. The Lucca community, however, had ceased to exist.

At the end of the 16th century a new community was established in Pitigliano, which served as a haven for the Jews from the Papal States. This community prospered mainly in the 18th century, when the Jewish population reached 300. In the 17th century Jews settled again in Arezzo, Monte San Savino, Borgo San Sepolcro, and Lippano, although in 1680 Cosimo III intensified the papal anti-Jewish restrictions which were now strictly enforced. At the end of the 17th century the preaching of the apostate Paolo Medici led to anti-Jewish riots, and serious disturbances occurred in Borgo San Sepolcro. A marked improvement in the conditions of the Jews in Tuscany began in the 18th century under the Lorraine dynasty. Leopold I (later Emperor Leopold II of Austria), who reigned in Tuscany from 1765 to 1790, granted all the Jews there the same rights as the Jews of Leghorn. In 1779 he permitted Jews to sit on the municipal councils, and in 1789 to hold official positions.

In 1798 the French occupied Tuscany and granted the Jews full rights of citizenship. These were abrogated in 1799 after the retreat of the French forces. In the wake of the reaction, there were serious anti-Jewish disturbances, especially in Siena and in Monte San Savino and the community ceased to exist. In 1801, on the establishment of the kingdom of Etruria by Napoleon, the Jews in Tuscany were again granted full rights. Between 1810 and 1814, when Tuscany was incorporated in the French Empire, the communities were organized on the lines of the French *Consistory. Jews began to acquire land and to enter middle-class society.

After the Restoration, however, the situation reverted to much the same as before, but Jews were no longer required to live in the ghettos, although most continued to reside there. The House of Lorraine continued its liberal policy, and consequently Tuscany attracted many Jews in poor economic circumstances from Rome. Jews were permitted to attend public schools and universities in Tuscany. They took part in all branches of the economy in business and industry. Only government positions, military service, and the legal profession remained closed to them. On April 30, 1859, Tuscany was incorporated in the kingdom of Sardinia (later the kingdom of Italy) and the principle of equal rights without discrimination on religious grounds was introduced there also. Henceforth the history of the Jews of Tuscany does not differ from the general history of Italian Jewry. Concerning the organization of the communities, legislation of the House of Lorraine remained in force. This obliged every Jew to belong to the community and pay dues to it. However, between 1865 and 1905 the communities successively dispensed with levying compulsory dues. The Italian law of 1931 regulating the organization of the Jewish communities applied to Tuscany, and the principle of compulsory taxation was again introduced. The provincial Tuscan communities dwindled in the 19th century like most of the small communities of Italy. In 1969 there were only a few fully organized communities in Florence, Pisa (including Viareggio and Lucca), and Leghorn (Livorno), and partially in Siena.

[Menachem E. Arom]

TUSKA, SIMON (1835–1871), U.S. rabbi. The son of the Reverend Mordecai Tuska, Tuska was born in Veszprém, Hungary. He went to the U.S. with his parents in 1849 and his father then became "rabbi, Reader … *shoḥet* …*mohel*" in Rochester, New York. After two years of U.S. schooling Tuska was awarded one of the first scholarships to the University of Rochester, founded in 1850. Although he specialized in Greek and Latin, his chief interest was Judaism. While still a student, he wrote and published "The Stranger in the Synagogue" to explain Jewish rites and ceremonies to both his Christian colleagues and the Jewish public. He was warmly praised by Isaac Mayer *Wise, but his critique of talmudic law drew the censure of Isaac *Leeser. Tuska wrote letters and articles for both *The Israelite* and *The Occident*, and Wise encouraged him to pursue the rabbinate. Upon graduation in 1856 Tuska attended courses at the Rochester Theological Seminary. He did not seek a pulpit because of his youth and the fact that most Reform congregations of the day required a German-speaking rabbi. However, as a result of Wise's constant urging, he decided in 1858 to go to the Breslau seminary to prepare himself for the rabbinate. In 1860 Tuska tried unsuccessfully to become English lecturer at Temple Emanuel in New York. He subsequently was also rejected by Congregation Berith Kodesh in his hometown, Rochester, because of his radical religious views. Shortly thereafter he was elected to the Reform pulpit in Memphis, Tennessee, where he served until his death. Tuska's importance lay in the pattern he set for the training of U.S. rabbis – English-speaking, with university degree plus theological training.

TUSSMAN, MALKA HEIFETZ (1893–1987), U.S. Yiddish poet and teacher. Born in Ukraine, the second of eight children, Tussman, who came to the United States in 1912 to join family members in Chicago, married cantor Shloyme Tuss-

man soon after her arrival. She and her husband, who had two sons, lived in Milwaukee and later in Los Angeles. Tussman studied at the University of Wisconsin and briefly at the University of California at Berkeley. She taught for many years in Yiddish secular schools and in 1949 became an instructor in Yiddish language and literature at the University of Judaism in Los Angeles. After spending 1971–72 in Israel, following her husband's death, she lived for the rest of her life in Berkeley, Calif.

Tussman began publishing poems, short stories, and essays in Yiddish newspapers and journals in 1918. She published six volumes of poetry in Yiddish between 1949 and 1977; her poems appear in many anthologies. She also translated poems by a wide range of writers into Yiddish. Tussman was a mentor for a number of younger poets, some of whom translated her works into English. She thus "served as a bridge between the generations of Yiddish poets who emigrated from Eastern Europe and of those American-born Jewish poets who have taken up the task of making Yiddish poetry known to a readership that knows little Yiddish" (Hellerstein). Her works include *Bleter Faln Not* (1972); *Haynt Iz Eybik: Lider* (1977); *Lider* (1949); *Mild Mayn Vild* (1958); *Shotns fun Gedenkn* (1965); and *Unter Dayn Tseykhn: Lider* (1974). *With Teeth in the Earth: Selected Poems* (1992) is an English translation of some of her poetry, edited and with an introduction by Marcia *Falk.

TUTSI. Since the late 1990s, a group of Tutsi, who have their origin in the Great Lakes area of Africa (Burundi and Rwanda), claim that this region was the home of a Hebraic community in ancient times, and claim a Jewish identity. Their homeland, supposedly extending far beyond the regions where the Tutsi now reside, is called *Havila* by them, according to the name applied in Genesis 2:11 to the legendary territory watered by the Pishon River. The Tutsi claim to perpetuate either the pharaonic monotheism of the 18th dynasty of Egypt or Moses' faith as transcribed in the Hebraic Torah. The Hamitic-Semitic myth of the origins of these Tutsi, which was largely inspired by missionaries and colonists of the 19th century, now appears to be strongly reinforced by the symbolic uses they make of Judaism. Following their terrible suffering during the genocide of 1994, these Tutsi have increasingly claimed a Jewish identity and describe their history as a microcosm of World Jewish history, evoking the common experience of persecution to give more weight to their Jewish identity claim. The group is based in Belgium, where its president, Professor Yochanan Bwejeri, and the Havila Institute call upon Israel and the international community to condemn and take measures against the "antisemitic" violence in Africa towards the Tutsi ethnic group.

[Tudor Parfitt (2nd ed.)]

TUWIM, JULIAN (1894–1953), Polish poet. Tuwim, who was born in Lodz, was one of the outstanding Polish poets of the first half of the 20th century. His family background on his father's side was strongly Jewish; and, in fact, his father's relatives included several Zionists prominent in Russia and later in Ereẓ Israel. His mother, an assimilationist, educated him in a staunchly Polish spirit. Tuwim studied in Warsaw and was one of the founders of the literary group associated with the *Skamander* monthly. His early verse collections – *Czyhanie na Boga* ("Lying in wait for God," 1918), *Sokrates tańczący* ("Socrates the Dancer," 1920), and *Siódma jesień* ("The Seventh Autumn," 1922) – were full of youthful enthusiasm and vigor, expressing the poet's faith in the newly liberated Poland. Harsh realities soon disillusioned him, provoking his angry criticism of the rich and the "profiteers" in the epics *Słowa we krwi* ("Words in Blood," 1926) and *Rzecz czarnoleska* ("The Czarnolesie Affair," 1929). Here his hero was the ordinary man suffering from poverty and oppression. Tuwim eventually turned to socio-political themes, vehemently attacking Poland's militarist and capitalist regime in *Biblia cygańska* ("The Vagabonds' Bible," 1933), *Treść gorejąca* ("Burning Contents," 1936; Heb. tr., *Tokhen Lohet*, 1954), and *Bal w operze* ("The Opera Party," published in part in 1936). The last work appeared in full ten years later in 1946. Despite his clearly expressed sympathy for the poor, Tuwim was remote from the proletarian revolutionary movement at this period, his poems merely voicing an isolated intellectual's protest against the grim effects of the capitalist system.

Tuwim never attempted to conceal his Jewish identity and upbringing, and was subjected to vicious attacks by extreme Polish nationalists during the years preceding World War II. As an exile in France, South America, and the United States during the Nazi era, he was an active anti-Fascist and his outspoken declarations about the fate of European Jewry were heard throughout the free world. During the war years he wrote the epic *Kwiaty polskie* ("Flowers of Poland," 1940–44), one section of which, "Modlitwa" ("A Prayer"), became the anthem of the Polish resistance movement. In April 1944, Tuwim published a manifesto entitled *My, Żydzi polscy* ("We Polish Jews"), the sheer fury, power, and irony of which it would be hard to match in any nation's literature. After his return to Poland in 1946, he mainly devoted himself to literature, journalism, and the training of young poets. A literary craftsman and acknowledged master of the Polish language, Tuwim was one of the great revolutionary innovators in the history of Polish verse. He was also a prolific translator, particularly from Russian (e.g., Pushkin), and he published many delightful children's books (e.g., *Lokomotywa*, 1938), as well as satires, philological research papers, and various anthologies. A selection of his works was published in English (1942).

During the last years of his life, Tuwim supported the State of Israel and the Hebrew University of Jerusalem. His family relationships and his Jewish loyalties find reflection in the correspondence with his cousin, Immanuel Tuwim, a Haifa engineer, and with the Zionist leader and poet Leib *Jaffe, a close friend of his, which was published in the Israeli press by Moshe Altbauer. His sister, the poet and translator IRENA TUWIM (1900–1987), described her brother and family in *Lódzkie pory roku* ("Lodz Years," 1958[2]).

[Shlomo Dykman]

TWERSKI, JACOB ISRAEL (1899–1973), U.S. ḥasidic rabbi. Twerski, a descendant of a long line of famous ḥasidic rabbis, was born in Hornistopoli, near Kiev, Russia. In accordance with time-honored ḥasidic tradition, he was pledged in marriage at the age of 11 to his future wife, who was then aged 10, the actual marriage taking place in 1922. He immigrated to the United States in 1927, and after serving congregations in various parts of New York, settled in Milwaukee, where in 1939 he founded Congregation Beth Yehudah, whose spiritual leader he remained until his death. For Jews in Milwaukee and throughout Wisconsin, Twerski was a counselor and friend to whom people turned for guidance and arbitration. Following the family tradition, all his five sons were ordained as rabbis, but only one of them, Michael, officiated as such, succeeding his father on his death. Of the other sons, Shlomo became a research scholar in Talmud at Denver; Abraham was clinical director at St. Francis Psychiatric Hospital, Pittsburgh; Aaron served as a law professor at Hofstra University in Hempsted, N.Y.; while Motel (Mordecai) became a certified public accountant in Brooklyn, N.Y.

[Manfred Eric Swarsensky (2nd ed.)]

TWERSKY, ḥasidic dynasty in the Ukraine. The founder of the dynasty, MENAHEM NAHUM BEN ẒEVI of Chernobyl (1730–1787), was educated in Lithuanian yeshivot. After his marriage he eked out a living as a teacher. Influenced by the kabbalistic teachings of Isaac *Luria, he practiced self-mortification, and with the spread of *Ḥasidism he journeyed to Medzhibozh to visit *Israel b. Eliezer Ba'al Shem Tov. After the latter's death Menahem became one of the prominent disciples of *Dov Baer of Mezhirech, and was one of the first to propagate Ḥasidism; he was then accepted as *maggid* (preacher) at Chernobyl, where he lived in penury. The *Mitnaggedim* were extremely hostile toward him and sometimes insulted him while he was preaching. It is doubtful whether Menahem became a ḥasidic *ẓaddik*; as an itinerant preacher he wandered among the towns of the Ukraine, engaging also in pious deeds and the "redemption of captives" (in this case, Jewish tax farmers who had been imprisoned for failing to pay rents to the landowners). He wrote *Me'or Einayim* (Slavuta, 1798), on the Torah and *aggadah*, and *Yismaḥ Lev (ibid.*, 1798), both of which were frequently reprinted. Menahem added no innovations to his teachers' expositions of Ḥasidism, but among the principles he stressed in particular was the purification of man's moral attributes: "so long as his moral attributes are not purified [a man] will not be worthy of the Torah" (*Me'or Einayim, Lekh Lekha*); "every day of the week should be devoted to the purification of one particular attribute; the first day to love; the second to fear of God; etc." (*ibid., Be-Shallaḥ*).

Menahem's son, MORDECAI OF CHERNOBYL (1770–1837), replaced him as *maggid* in Chernobyl, where he was born. He was the real founder of the Chernobyl dynasty of *ẓaddikim*. Unlike his father, who had spread the teachings of Ḥasidism while wandering and living in poverty, Mordecai lived in a splendid house and exercised his functions as leader in opulence and power. While maintaining a high standard of living he introduced the payment of *ma'amadot*, a financial contribution which every ḥasid paid for the benefit of the *ẓaddik's* "court," collected by emissaries sent from Chernobyl. He was revered by Ḥasidim who traveled to visit him in their thousands. Mordecai wrote *Likkutei Torah* (1860) on the Bible, and sermons. He added nothing new to the teachings of Ḥasidism. His outstanding pupil was Israel Dov Baer, the *maggid* of Weledniki, whose *She'erit Yisrael* was an important ḥasidic treatise of his time.

After Mordecai's death his place was taken by his eight sons, who settled in different cities in the Ukraine. His eldest son (1) AARON (1787–1872) lived in Chernobyl itself. He was educated by his grandfather, Menahem Nahum, and already during his father's lifetime was considered to have a saintly inclination. He based his sermons on his grandfather's teachings and the commentary *Or ha-Ḥayyim* by Ḥayyim b. Moses *Attar. Thousands of admiring Ḥasidim flocked to him. Aaron was confident of his spiritual abilities and holiness; he once wrote in a letter: "Even if they [his Ḥasidim] live as long as Methusaleh they will never realize even a thousandth part of the good I – with God's help – have bestowed on them." He was convinced that the Messiah would come in his lifetime. He headed the Volhynia *kolel* in support of settlement in Ereẓ Israel. A dispute concerning the presidency of the *kolel* between himself and one of his brothers ended in Aaron's favor. Two of his sons, ZUSIA and BARUCH, continued the dynasty of Chernobyl. (2) MOSES (1789–1866) lived at Korostyshev. (3) JACOB ISRAEL (1794–1876), author of *Shoshannat ha-Amakim* (1884), lived at Cherkassy; he had begun to lead a congregation while his father was still alive, and after the latter's death did not recognize his eldest brother's authority, but after a fierce controversy was forced to yield. His grandson MORDECAI DOV of Hornistopol (1840–1904), son-in-law of Ḥayyim *Halberstamm of Sandz, was a noted scholar and wrote several works, including *Emek She'elah* (1906), responsa, and *Emek ha-Ḥokhmah* (1928). (4) NAHUM (1805–1852) lived at Makarov. (5) ABRAHAM (1806–1889) was also known as the *maggid* of Trisk (Turiysk), where he lived. He exercised his

leadership with a high hand although he tried to act in keeping with the simplicity of the Polish ḥasidic leaders. His Ḥasidim were mainly learned men, wealthy and distinguished persons, and rabbis, including several famous *ẓaddikim*. He treated his Ḥasidim, who flocked to him in their thousands, as his personal guests and maintained them at his expense. His sermons are a mixture of ḥasidic teachings and Kabbalah, spiced with numerology and *gematria* in the manner of Samson b. Pesaḥ *Ostropoler. Two years before his death he published *Magen Avraham* (1887) on the Pentateuch and the festivals. In his *Shalosh Hadrakhot Yesharot li-Zemannim Shonim* he strives to teach "a method of divine service and ways to repentance." He wielded great influence. During the reign of Nicholas I he was imprisoned on the slanderous charge that his sayings questioned obedience to the government. He was quickly released once the charges were proven false. His three sons, NAHUM, MORDECAI, and JACOB LEIB, continued the dynasty of Trisk. (6) DAVID (1808–1882), the most celebrated of the brothers, first lived at Vasilkov and later at Talnoye, where he held his luxurious court in great splendor. It is said that he sat on a silver throne with the words "David King of Israel lives for ever" inscribed in gold. For this the Russian authorities kept him under arrest for a long time. David loved singing and music, being visited sometimes by popular Jewish musicians. His teaching was spiced with secular references and parables, which increased his popularity. He wrote *Magen David* (1852), *Birkat David* (1862), and *Kehillat David* (1882). (7) ISAAC (1812–1895) lived at Skvira. (8) JOHANAN (1802–1885) lived at Rotmistrovka. The courts of these *ẓaddikim* dominated Ukrainian-Russian Jewry throughout the 19th century. The influence of the Twersky family increased particularly after Israel of Ruzhin left Volhynia to settle in Galicia. After the Russian Revolution of 1917 descendants of the Twersky *ẓaddikim* left for Poland, the United States, and Ereẓ Israel.

[Zvi Meir Rabinowitz / Avraham Rubinstein]

TWERSKY, ISADORE (1930–1997), scholar and teacher. Born in Boston, Massachusetts, the son of R. Meshullam Zalman Twersky (Tolnaer Rebbe), a member of the well-known ḥasidic dynasty, Twersky was ordained as a rabbi by the Isaac Elchanan Yeshiva (University). At Harvard University he earned a bachelor's degree in 1952, a master's in 1953, and a doctorate in 1956. He became a faculty member at Harvard in 1956 as professor of Hebrew literature and philosophy, and chairman of the Department of Near Eastern Languages from 1965. He served as director of Harvard's Center for Jewish Studies from 1978 to 1993.

Twersky's formidable expertise in Jewish literature encompassed such areas as the rabbinic texts, Bible commentaries, and legal writing of the Middle Ages. He was a fellow of the American Academy for Jewish Research and the American Academy of Arts and Sciences. In 1989 he won a Guggenheim Fellowship.

His published works include *Rabad of Posquières, a 12th-Century Talmudist* (1962); *Judaism and World History* (1969); and *A Maimonides Reader* (1969). He edited *Studies in Medieval Jewish History and Literature* (vol. 1, 1979; vol. 2, 1985; vol. 3, 2000); *Danzig: Between East and West* (1985); *Jewish Thought in the 17th Century* (1987); and *Studies in Maimonides* (1991).

Twersky was the son-in-law of the eminent rabbinic thinker and scholar Rabbi Joseph *Soloveitchik.

[Ruth Beloff (2nd ed.)]

TWERSKY, YOḤANAN (1900–1967), Hebrew novelist. Born in Shpikov (Ukraine), of the famous ḥasidic family, Twersky immigrated to the United States in 1926 and taught for 20 years (1927–47) at the Hebrew College in Boston. He settled in Israel in 1947, and served on the editorial staff of the Dvir Publishing House in Tel Aviv. From 1924 he steadily produced historical novels which centered around Jewish and non-Jewish heroes, both in the remote past and in the present. These novels include *Uriel Acosta* (3 vols., 1935–38); *Aḥad Ha-Am* (1941); *Alfred Dreyfus* (1946); *Rashi* (1946); and *Rom u-Tehom* (1951), a novel with the Second Commonwealth as background. He also authored *Lappidim ba-Laylah* (1954), a series of historical stories on Saadiah, Descartes, Leibnitz, Spinoza, Moses Ḥayyim Luzzatto, Leone Modena, Mordecai Emanuel Noah, and Herzl. Both his stories and novels have a lively, staccato style.

Of special interest is Twersky's work on Ḥasidism. From his knowledge and his observation, he was able to reconstruct the exciting innovations of the founders of the movement and its latter-day epigones in a number of narrative works: *He-"Ḥaẓer" ha-Penimit* (1954), a partly fictionalized autobiography; *Ha-Lev ve-ha-Ḥerev* (1955), a novel on R. Naḥman of Bratslav; and *Ha-Betulah mi-Ludmir* (1950), a fictional biography of the Ḥasidic Maid of *Ludomir.

Twersky also edited a memorial volume *Sefer Maximon* (1935) and, together with E. Silberschlag, a Festschrift, *Sefer Touroff* (1938). In addition, he published many essays on education and educational psychology. Before his death, he was engaged in a multi-volume work on the story of human thought from its inception to the present time, of which only one volume appeared, *Toledot ha-Filosofyah ve-ha-Filosofim* (1967). His four-volume encyclopedia of world literature, *Sifrut ha-Olam* (1953–54), is a useful reference work.

[Eisig Silberschlag]

TWILIGHT, the transition period between day and night, called in the Bible *bein ha-arbayim* (Heb. בֵּין הָעַרְבַּיִם, Ex. 12:6),

and in rabbinic literature *bein ha-shemashot* (Heb. בֵּין הַשְּׁמָשׁוֹת, Ber. 2b; Avot 5:9). Whether twilight forms part of day or the night is a moot question in the Talmud (Shab. 34b). Its exact duration was also a matter of dispute. According to R. *Yose, the transition from day to night is instantaneous, whereas R. *Nehemiah said twilight lasted for nine minutes after sunset (i.e., the length of a walk of half a mile = 1000 ells, approx. 560 meters). The *amora* Samuel said it lasts for 13½ minutes and according to another opinion 12 minutes (Shab. 34b). The codifiers established the duration of twilight at 18 minutes, i.e., when the sun is about 3½ degrees below the horizon (Tur, OḤ 293). Actual night begins only with the appearance of three stars in the sky (called *ẓet ha-kokhavim*, Ber. 2b; see also Neh. 4:15). This traditional calculation of the duration of twilight deviates only slightly from the exact astronomical twilight.

Twilight on Friday is reckoned as Sabbath eve and consequently no work may be performed then. The Sabbath candles must be lit before twilight (Shab. 2:7). The twilight at the end of the Sabbath is calculated as still belonging to the Sabbath day which concludes with the appearance of three stars in the sky. This rule applies also to the beginning and conclusion of the holidays. Before the beginning of the Day of Atonement, twilight is reckoned from approximately one hour before the stars would become visible. All religious ceremonies which ought to be performed only at night, e.g., the recital of the evening service, the kindling of *Ḥanukkah lights, the reading of the *Megillah*, should be observed only after twilight; but if they are performed during twilight they are valid and do not have to be repeated.

TWORKOV, JACK (1900–1982), U.S. educator, printmaker, painter. Tworkov was born in Biala, Poland and immigrated to the U.S. in 1913. He studied at Columbia University, the National Academy of Design, and the Art Students League. Tworkov worked as an artist for the Works Project Administration's Federal Art Project in 1935, where he met Willem de Kooning. Both men emerged as forces in the Abstract Expressionist movement. Tworkov was also one of the founders of The Club, a loose New York association of Abstract Expressionists which met to discuss matters relating to art making. Like many other Abstract Expressionists, Tworkov's early work consisted of figures and still-lifes. He also rendered images in a cubist style before adopting the visual aspects of Abstract Expressionism. As to be expected, his early work shared many stylistic characteristics with that of de Kooning. As Tworkov gained eminence along with his colleagues in the New York School representational subject matter became subsumed in abundantly textured long, dashing, diagonal brush strokes, as in his painting *Blue Note* from 1959. Among other influences, Tworkov also turned to the art of the marginalized Expressionist painter Chaim Soutine as a source of inspiration; in fact, Tworkov wrote an article on Soutine during the latter's 1950 show at MOMA. Tworkov achieved the illusion of vibrating and multiple fields or screens of color from a cool, restricted palette and subtle nuances of tone. Likely influenced by the Minimalists, Tworkov integrated grids and other ordering systems into his images from the 1960s onward, such as *Shield* (1961) and *Variables II* (1964–65). One of his major series of paintings, *House of the Sun,* refers to Ulysses, whose epic adventures suggested a variety of themes to the artist. Tworkov taught at numerous institutions: the American University, Black Mountain College (other luminaries of this period such as John Cage, Franz Kline, and Lyonel Feininger also taught here during the 1940s), Queens College, the Pratt Institute, and Yale University, where he functioned as chairman of the art department. He was a recipient of a Corcoran Gold Medal in 1963. Tworkov's art has been exhibited at numerous major museums, including the Art Institute of Chicago, the Guggenheim Museum, the Museum of Modern Art, New York, the Pennsylvania Academy, and the Whitney Museum, among other venues. His work is in the collections of the Hirschhorn Museum and Sculpture Garden, the National Gallery of Art, Washington, D.C., and the Smithsonian Museum of American Art.

°**TYCHSEN, OLAUS GERHARD** (**Oluf Gerard**; 1734–1815), Danish Orientalist. Born in Tönder, Schleswig, Tychsen is said to have learned Hebrew in Altona as a pupil of Jonathan *Eybeschuetz, and later to have studied rabbinics and Oriental languages at the University of Halle. After conducting unsuccessful missionary activities among Jews in Denmark and northern Germany (1759–60), he taught at the University of Buetzow in Mecklenburg (which subsequently became Rostock University), serving as professor of Oriental languages from 1763 until 1789.

Tychsen wrote on a variety of subjects, including the Bible, Hebrew coinage, and cuneiform inscriptions. He was a violent controversialist, and his views foreshadowed the German school of biblical criticism. His six-volume *Buetzowische Nebenstunden* (1766–69) reflects his Hebrew and rabbinic scholarship. He reputedly mastered Yiddish and also became an expert on Arabic and Syriac philology. His publications include *Dialecti rabbinicae elementa* (1763); *De delectu veterum Ebraeorum* (1763); *De Pentateucho Ebraeo-Samaritano* (1765); *Abbreviaturarum Hebraicarum supplementum secundum* (1769); an introduction to the *Sefer Tikkunei Shetarot*, on Jewish deeds of contract (1773); and *De numis Hebraicis* (1791).

TYKOCIN (in Jewish sources, **Tiktin**; Rus. **Tykotsin**), village in Bialystok province, N.E. Poland. Tykocin was formerly a town on the border between the kingdom of Poland and the principality of Lithuania. In 1522 the noble family of Gashtold, who owned Tykocin, invited ten Jewish families from *Grodno to settle there. They were given sites for homes and were later allowed to establish shops, a synagogue, a cemetery, and an autonomous community. A charter (1536) provided that the rabbi and the head of the town council should jointly judge cases between a Jew and a gentile. By 1576 there were 54 houses owned by Jews, who engaged in wholesale trading of salt, spices, and cloth. Their rights were confirmed by special royal privileges in 1576 and 1639. In 1642 a baroque synagogue was erected, which until 1740 was the finest building in the town (it still stood in 1970, preserved as a historical site, although the Nazis ruined the interior and the women's section).

With the growth of the community Tykocin achieved independence from the *kahal* of Grodno. Between 1621 and 1654 Tykocin conducted a successful struggle with Grodno involving the hegemony over the communities of Choroszcz, *Zabludow, *Gorodok, and Wasilkow. In 1623 Tykocin severed its ties with the Council of Lithuania and instead declared allegiance to the *Council of Four Lands. It became one of the most important communities in the region in the 17th and 18th centuries. The communities of Podlasie (*Siemiatycze, Wysokie Mazowieckie, *Miedzyrzec Podlaski, Bransk) and eastern Masovia (*Ciechanow) were under the jurisdiction of the Tykocin *kahal*, which was the chief community in the *galil* (province) of Tykocin. In 1660 the Jews of Tykocin suffered at the hands of the Swedish army and the troops of the Polish general, S. Czarniecki. In the 18th century the Tykocin community weakened and its influence in the area diminished.

Tykocin's rabbis until the end of the 18th century included some important halakhic authorities: Mordecai (1568); Menahem David b. Isaac, a student of Moses *Isserles; Samuel Eliezer *Edels (in the 1620s); Joshua b. Joseph, author of the talmudic commentary *Penei Yehoshu'a* (early 1630s); Isaac Aizik b. Eliezer Lipman Heilperin (1667–81); Elijah *Shapira, head of the rabbinical court of Prague, who became nonresident rabbi of Tykocin in 1703; and Shalom ben Eliezer Rokeaḥ (1756–66). In 1765 there were 2,694 Jews in Tykocin and nearby villages who paid the poll tax, and in 1808 there were 1,652 (56% of the total population). In 1815 the town was annexed to Congress Poland and the Russian administration allowed free Jewish settlement of the area. There were 2,701 Jews (64%) in 1827; 3,456 (70%) in 1857; and 2,484 (59%) in 1897. The Jews earned their livelihoods in small trade and crafts. Between 1919 and 1920 the community suffered at the hands of Russian and Polish armies which passed through the town. Between the two world wars the Jews manufactured brushes and prayer shawls (*Talitot Tiktin*). In 1921 there were 1,401 Jews (49%) in Tykocin. Various Zionist parties, mainly *He-Ḥalutz, were active and there was a *Tarbut school.

[Shimshon Leib Kirshenboim]

Holocaust Period and After

At the end of June 1941 after the outbreak of the German-Soviet war, Tykocin was captured by the Germans. During the first days of the occupation, a pogrom was conducted by the Poles (with the encouragement of the Germans), and Jewish property was looted. The Jews were drafted for forced labor and freedom of movement was limited. On Aug. 25, 1941, the Jews of the town were called to assemble in the market square. After a *Selektion* about 1,400 people were transported to large pits that had been prepared near the city and were murdered. Some of the Jews succeeded in hiding, but the next day they were caught and executed by the Polish police. About 150 people found temporary shelter in the *Bialystok ghetto and in the surrounding townlets, later perishing together with the members of those communities. After the war a few of the survivors returned to Tykocin, but they were subject to attacks by gangs of Polish nationalists that were active in the area; as a result they left the city. A memorial book, *Sefer Tykocin*, was published in Tel Aviv in 1949.

TYKOCINSKI, ḤAYYIM (1862–1942?), Jewish historian. Tykocinski, born in Poland, was one of the editors and main contributors of the important work in German-Jewish history *Germania Judaica* (1917–34), continuing with this work until he was killed by the Nazis and the material was lost. He also wrote *Die gaonaeischen Verordnungen* (1929).

His scholarly articles appeared in the *Monatsschrift fuer Geschichte und Wissenschaft des Judentums*, *Devir*, and *Tarbiz*, as well as in the *Festschriften* for M. Philippson (1916) and S. *Dubnow (1930). They dealt with such subjects as Moses b. Ḥisdai and Moses Taku (MGWJ, 54 (1910), 70ff.); Isaac *Or Zaru'a* and his pupils (MGWJ, 55 (1911), 478ff.; 63 (1919), 333ff.); and the history of the Jews in Halle (MGWJ, 47 (1913), 32ff.).

[Siegbert Neufeld]

TYKOCINSKI, JEHIEL MICHEL (1872–1955), rabbi and author. Tykocinski was born in Lyakhovichi, Belorussia. Orphaned of his father while still young, he was taken to Ereẓ Israel in 1882. He studied under Samuel *Salant, whose grand-

daughter he married in 1890. In 1900 he began to take part in the administration of Eẓ Ḥayyim in Jerusalem, at first as head of the junior department and then as chief administrator. He contributed greatly to the development of the institution – both when it was in the Old City of Jerusalem, and later when it moved outside. He was also active in the foundation of new suburbs in Jerusalem, and favored the unification of all sections of the Jewish population, new and old. Tykocinski specialized in the laws and customs pertaining to Ereẓ Israel, and from 1904 onward published an annual *Lu'aḥ* ("calendar") detailing liturgical and other customs for the whole year. This calendar was accepted as the authoritative guide for the liturgical and synagogal customs of the Ashkenazim in Israel; it continued to appear under the editorship of his son even after his death.

Tykocinski devoted himself especially to halakhic problems connected with astronomy, in which field he published *Tekufat ha-Ḥamah u-Virkatah* (1924); *Bein ha-Shemashot* (1929); and *Sefer ha-Yomam* (1943), on the international date line (see *Calendar). His other works are *Tohorat Yisrael* (c. 1910); *Ha-Ishah al pi Ḥukkat Yisrael* (1920); *Hilkhot Shevi'it* (1910) and *Sefer ha-Shemittah* on the laws of the Sabbatical Year; *Gesher ha-Ḥayyim* (1947, 1960^2) on the laws of mourning; and *Sefer Ereẓ Yisrael* (1955) on the laws and customs appertaining to Ereẓ Israel. He also published many articles in various journals and left behind in manuscript novellae on the Talmud and responsa.

°**TYNDALE, WILLIAM** (c. 1490–1536), English Bible translator and religious reformer. An Erasmian humanist, Tyndale began work on a new, vernacular Bible in 1520, but met so much opposition from his fellow-churchmen that he had to seek refuge on the Continent, where his New Testament, based directly on the Greek, appeared in various editions (Cologne/Worms, 1525; Antwerp, 1526^3, etc.). Having visited Martin *Luther at Wittenberg and declared himself a Protestant, Tyndale proceeded to smuggle his publications into England, where they were condemned as heretical: Cardinal Wolsey ordered his arrest, but failed to capture him. Of all the English scholars of his time, Tyndale was the only competent Hebraist. His translation of the Old Testament, which referred to the original Hebrew text, appeared only in part (Pentateuch, 1530; Jonah, 1531), although the section from Joshua to Chronicles – which remained in manuscript at the author's death – is thought to have inspired Miles Coverdale's Bible (1535) and to have been included in Matthews' Bible (by J. Rogers, 1537). Tyndale's Old Testament was Protestant more in its prefaces and marginal glosses than in its actual English text, which maintained a great measure of independence. Anglo-Saxon outweighs Latin in the translator's vigorous English style, since he believed, that "… the properties of the hebrue tonge agreth a thousande tymes moare with the english then with the latyne…" (*The Obedience of a Christian Man*, 1528). In fact, the English language's saturation in Hebrew idiom may largely be credited to the popular appeal of Tyndale's Bible which, after Henry VIII's quarrel with Rome, was allowed to circulate in England. Tyndale was finally arrested, condemned, and burnt at the stake for heresy.

[Godfrey Edmund Silverman]

TYNYANOV, YURI NIKOLAYEVICH (1894–1943), Soviet Russian novelist and literary theoretician. Born in Rezhitsa (Rezekne), Latvia, a small Jewish town in the old Pale of Settlement, Tynyanov moved at an early age to St. Petersburg, where he spent the rest of his life. His assimilation into the milieu of the Russian literary intelligentsia was almost complete. None of his works display any interest in Jewish subjects, and even in his posthumously published memoirs there is no hint of any Jewish identification. A brilliant literary scholar, Tynyanov was one of the foremost exponents of Formalism, a school of literary criticism fashionable in the early 1920s. This, like New Criticism in the U.S., emphasized the study of structure and artistic devices rather than of literature's social and ideological content. He was equally well known as a creative writer, particularly as the author of polished, whimsical works of historical fiction.

His best-known books included *Kyukhlya* (1925), a novel about Wilhelm Kuechelbecker, a Russian poet, eccentric, and friend of Pushkin; *Smert Vazir-Mukhtara* (1927–28; *Death and Diplomacy in Persia*, 1938), on the 19th-century Russian poet and diplomat Alexander Griboyedov; and *Pushkin* (3 vols., 1936–43). The suite *Lieutenant Kijé* by Sergei Prokofiev is based on Tynyanov's satirical novella *Podporuchik Kizhe* (1928) set in the reign of the oppressive Czar Paul I.

[Maurice Friedberg]

TYPOGRAPHERS. Within the past century and a half the concept of typography as a special art distinct from the ordinary mechanics of printing has gained ground. Originally typography was another term for printing, but the meaning has changed. Typography now covers choice of paper, ink, design of layout, type forms, and illustrations.

Impetus was given to this modern attitude, after nearly four centuries of fairly static practice, by the technical improvements of the 19th century: the inventions of lithography and the halftone screen process of making blocks for pictures; rotary and power-driven presses in place of flatbed; and machine in place of hand typesetting, ensuring fresh type for every job instead of worn pieces. Probably most significant of all in this last respect was the solid-line setting machine, the Linotype – line o' type – invented by a man of German-Jewish origin, Ottmar Mergenthaler (1854–1899), and first used in New York in 1886.

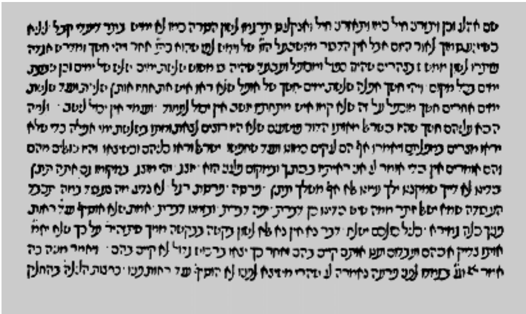
The Private Presses

Typesetting by hand has, however, never lost its votaries. This can be seen in the rise during the last hundred years, especially in the U.S. and England, of the private presses, whose aim was not commercial profit so much as beautiful books. An authoritative survey, *The Private Presses*, written by Collin Ellis Franklin, a Jewish publisher in London, appeared in 1969. At the same time, after centuries of dependence on relatively few styles of type, there has been a widespread renaissance in type and book designing, not to mention the opportunities afforded by the tremendous growth of advertising. Jews have been prominent in these modern movements. As early as the 1870s, for example, a National Typographical Society was founded in Milan, Italy, among whose activities was the holding of exhibitions of printed matter. One of its chief supporters, elected president in 1881, was Emilio *Treves, son of the rabbi of Trieste, who was director and editor of 15 journals. Eminent among the founders of the finest private presses was Lucien Pissarro (1863–1944), the artist son of the French impressionist, Camille *Pissarro. His Eragny Press (1894–1914) is among the two or three credited with bringing wood engraving back into the hands of artists. He also designed a new type known as the Brook type. One of the services to printing performed by the private presses, and the commercial presses in their wake, has been the encouragement of illustrators and type designers, and in both these fields – sometimes combined – there have been a great many Jews. The revolutionary halftone screen process, which enables any sort of picture or photograph to be faithfully reproduced for printing in black and white or color, was perfected in the late 19th century by Georg Meisenbach (1841–1912) and Max Levy.

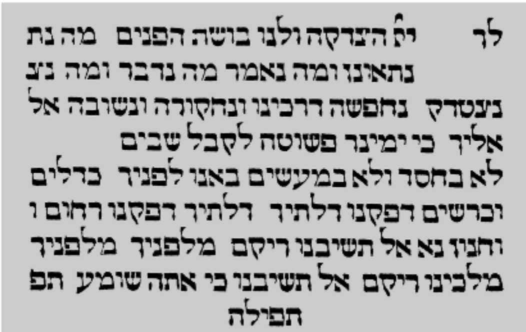
In Britain

One of the presses to introduce distinctive typography was the Hogarth Press, established in 1917 by Leonard *Woolf and his wife Virginia, and now part of a large commercial group. One of Francis Meynell's two partners in the fine Nonesuch Press which he founded in 1923 was Vera Mendel. In 1917 a firm originally founded in 1863 to print music, the Curwen Press, began to achieve fame by turning to general printing. Associated with it was a Jewish artist who played a great part in its art work and patterned papers, Albert Rutherston, brother of the artist Sir William *Rothenstein. In 1920 their nephew Oliver Simon joined Curwen, later to become its head. He was one of the greatest experts on typography, on which he wrote some standard works. His brother Herbert and other members of the family were also associated with the firm. Oliver Simon greatly influenced the revival of good printing by founding, and editing from 1923 to 1927, *The Fleuron*, a fine typographical annual, and the journal *Signature* (1935–54), as well as by founding, in 1924, an international association of distinguished typophiles called the Double Crown Club. Other Jews who have figured prominently in typography in England are Dennis David Myer Cohen (1891–1969), who founded the Cresset Press in 1927; John Gustave Dreyfus (1918–2002) of the Cambridge University Press; Barnett *Freedman, artist, letterer, and lithographer of genius; René Ben-Sussan, Salonika-born French artist; and two men of German birth: Hans P. Schmoller (1916–1985) of Penguin Books, and Berthold Wolpe (1905–1989), designer of books, symbols, and numerous typefaces. One of the last typefaces, Albertus, which he created for the U.S. Monotype Corporation in 1932, was described nearly 40 years later as "perhaps the most successful modern display face that has yet been designed."

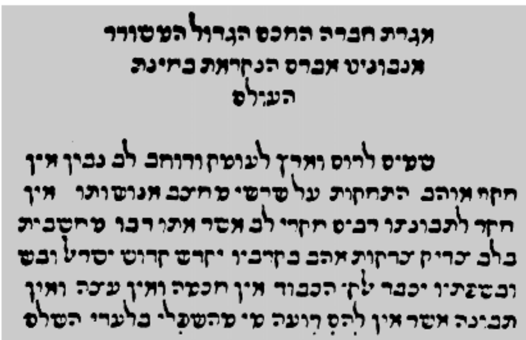
In Other European Countries



Jewish typographers include Imre Reiner (1900–1987), who was born in Hungary but became known for his work in Switzerland, where he designed Corvinus and other types; and two Dutchmen: Sem L. Hartz, engraver and art director for the famous printers Enschedé, and S.H. de Roos (b. 1877), who as chief designer to the Amsterdam Type Foundry had several typefaces to his credit. Russia was very late in producing its own type; until the latter half of the 19th century, type was generally imported. The first native type foundry and printing machine factory was established, probably some time in the 1870s, by a St. Petersburg Jew, Isidore Goldberg. In 1886 he founded the first typolithographic establishment in Askabad, Transcaspian Territory, and the following year, remarkably in that antisemitic period, was decorated with the Order of St. Stanislas for his services to printing.

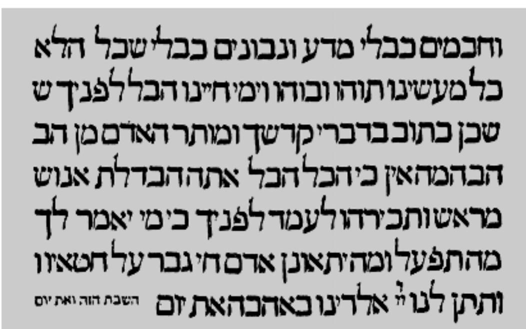


In the U.S.



Simon's counterpart in the U.S. was Elmer *Adler, who established Pynson Printers in 1922 to do fine printing. Modern typographers of eminence in the U.S., where Jewish names in the craft form a high proportion, are J.B. Abrahams (b. 1884), calligrapher; Peter Beilenson and his wife Edna (Peter Pauper Press); Lucian Bernhard (1883–1972), designer of Fraktur and nearly 40 other types; Joseph *Blumenthal (1897–1990) of the Spiral Press, designer of Monotype Emerson; Henry Dreyfuss (1904–1972), designer of complete magazines, especially for the McCall Company; William Henry Friedman, printing educationist; Reuben Leaf, specialist in Hebrew lettering; Robert *Leslie, Alvin Lustig, Sol Marks, and Sidney Solomon of Macmillan, New York. An American Jewish expert, N.I. Korman, dealt with the development of electronic typesetting and gave an authoritative precast of its future in an article entitled "The Editorial Revolution" in the 1968 edition of the printers' handbook, the *Penrose Annual*.

[John M. Shaftesley]



TYPOGRAPHY. Hebrew *printing began about 1475, the date of publication of two books, one at *Reggio di Calabria and the other at *Piove di Sacco, near Venice. It is sometimes claimed that a group of undated and unlocated early Hebrew books by different printers were issued earlier, and by conjecture, are believed to have originated in Rome. The year 1476 appears in the imprint of a book printed at *Guadalajara, Spain, the first of about 15 books to be printed there during the following six years. In the short span of the following few

years new Hebrew presses were established in *Mantua, *Bologna, *Ferrara (Italy), and *Hijar (Spain). Thus, within a short time Hebrew printing spread to relatively distant places. Since printers at that time had to provide their own letter founts, a remarkable variety of alphabets and styles appeared at the inception of Hebrew typography.

The books printed in Spain and in Reggio di Calabria display the reed-born alphabets (square and cursive, a sort of italics) customary in the manuscripts of the Jews centered in Spain (Sephardi). These alphabets are distinguished by a great elegance in their curves and in the modeling of their strokes; the artist who cut the ones used in Guadalajara was mentioned by name, Piedro de Guadalajara, and was ostensibly a gentile. It is remarkable that the cursive Sephardi letter is already used as text letter in the first book printed in Reggio di Calabria, Rashi's commentary on the Pentateuch (hence its later name "Rashi-letter"), 26 years before a (non-Hebrew) cursive letter was used for the first time by the Venetian printer Aldus Manutius in 1501. In Piove di Sacco, where the printer was of German origin – as were most of the early Hebrew printers in Italy – the alphabets used were developments of the quill-shaped Ashkenazi (German) manuscript letter, angular and based on heavy contrast between bold and fine strokes. The edition of *seliḥot*, undated and probably the first book by that printer, displays a distinguished page set in quite large letters and long lines with wide margins in quarto size.

The founder of the press in Mantua, Abraham *Conat, who was a physician and scribe by profession, had an alphabet cut for himself, for which his own Italian-German cursive hand served as a model. His square letter was of the Ashkenazi type and similar to that used in Piove di Sacco. In 1477 Psalms, with the commentary of David Kimḥi, appeared in Bologna, the letters being of a similar type to those used in Mantua. In the same year Abraham b. *Ḥayyim, "The Dyer," of Pesaro started a short-lived press in Ferrara, buying the equipment from Abraham Conat. In 1482 he printed in Bologna an edition of the Pentateuch with Rashi's commentary; the text is set in a pleasantly large and elegantly light Sephardi new square letter and the commentary in a much smaller cursive letter of the Italian type. This edition fixed the layout for biblical texts with commentaries for all following editions.

The decisive turn in Hebrew typography after these initial trials was instituted with the activity of the *Soncino family. This family, hailing from Germany, printed Hebrew books through five generations, starting in 1484 in Soncino and later publishing works in Casalmaggiore, Pesaro, Brescia, Naples, Rimini, Salonika, Istanbul, and Cairo until 1557. The Soncinos, the most prolific and most creative Jewish Hebrew printer-publishers of all time, stabilized the style of letters used in Hebrew printing, employing an alphabet based on the Sephardi type and well adapted to the mechanical exigencies of printing, and which served as a base for later printers. They put out works of basic Hebrew literature in editions which became classic, as well as non-Hebrew books. The non-Hebrew books printed by Gershom Soncino typographically take a place of honor among the book productions of this time. He employed as a letter cutter the most accomplished letter artist of his time, and possibly of all time, Francesco Griffo, a friar of Bologna who had also worked for the famous Venetian printer Aldus Manutius, the first to print books in cursive letters (*cancellaresca*), which were cut by Griffo, in pocket size.

In the meantime *Venice became a new center of Hebrew printing. A rich gentile humanist from Antwerp, Daniel *Bomberg, assembled an impressive team of scholars – Jewish and baptized – as editors and proofreaders, as well as competent craftsmen, had excellent letters cut, and erected a Hebrew press in Venice which was to excel in quantity and quality all those that had preceded him in this field. All of the products of Bomberg's press were distinguished by faultless composition and layout, improved typefaces, and high-quality paper. His products constituted the high mark of achievement of the first decades of Hebrew typography. Based on the shapes pioneered by the Soncinos, Bomberg's typefaces became dominant and greatly influenced the further development of Hebrew typography.

While the Spanish-Italian branch of Hebrew printing developed – after some initial wavering – a square and cursive typeface based on the Sephardi tradition of lettering, another Hebrew printing center came into being in the second decade of the 16th century in *Prague (and somewhat later in *Basle) whose lettering was based decidedly on the Ashkenazi letter shapes. From the start the Prague printers achieved high typographical excellence and their influence spread to various parts of Germany and to Poland. Hebrew printing in Prague started in 1512; in 1514 the printers' company was joined by new partners, among them Gershom *Kohen, and from then on he was the central figure in the enterprise. His family continued his work well into the 17th century. In 1526 the Kohen press published a typographically outstanding work, a Passover *Haggadah* in large quarto with many woodcuts, the text being set in a superb large-size Ashkenazi typeface, which was probably cut in wood and displays to the best advantage all the beauty in this late Gothic style of Hebrew lettering. The many initial words are of exceptional beauty and are set in a still larger size, or, more probably, cut as whole words in wood. Four of the woodcut illustrations have the letter *Shin* (ש) unobtrusively incorporated, probably the signature of one of the partners, Ḥayyim *Shaḥor (he had already left the partnership when the *Haggadah* was published but seems to have been responsible for the woodcuts, or some of them). The *Haggadah* was reprinted in the same year with slight alterations by the original printers and was closely copied in 1560 in Mantua, with altered woodcuts and initial words; parts of the text were printed in smaller type.

Shaḥor set up a press in Oels (*Olesnica), near Breslau, moving from there to Augsburg, Ichenhausen, Heddernheim (all in Germany), and finally to Lublin, Poland. He took typefaces from Prague and continued to use the skill he gained there. The *Halicz brothers set up a press in Cracow about 1530, using mostly Prague type and style. The Hebrew Bible

(c. 1551–52), with Rashi's commentary, printed by Samuel Halicz in Istanbul – of which only the Pentateuch with the Five Scrolls and *Haftarot* is known (in a unique copy) – is in good typographical tradition; the letters which were used show a strange mixture of Ashkenazi and Sephardi style.

In the 16th century the interest of Christian humanists in Hebrew printing became of the utmost importance. Apart from Daniel Bomberg in Venice, there was Johannes Froben of Basle, who used the Ashkenazi type of letters to great advantage, including the Ashkenazi cursive (chiefly for texts in Judeo-German). Froben printed quite a number of Hebrew and Judeo-German books in cooperation with the Christian Hebraists Sebastian *Muenster and the two Buxtorfs, among them the biblical cantillation rendered in musical notes for the first time (in a Hebrew grammar written in Latin by Sebastian Muenster, 1534). Paulus *Fagius in Isny and Paulus Aemilius in Augsburg carefully produced books in Ashkenazi Hebrew type. At the same time in France Robertus Stephanus (Etienne), who was responsible for editions of many Latin and almost all Greek texts, printed the Hebrew Bible twice, once in a small format and once in octavo in beautiful letters of the Sephardi type, cut specially for these editions. Guillaume Le *Bé, the man who influenced the further development of the Hebrew printed alphabet possibly more than any other single figure, emerged from Stephanus' printing house. A native of Troyes, France, he was a letter designer and punch cutter who in 1545 was employed on Stephanus' recommendation by the Venetian humanist M.A. *Giustiniani, the founder in that year of a Hebrew press in Venice. Le Bé, 21 years old when he came to Venice, mainly specialized from then onward in designing and cutting Hebrew letters (until 1550 in Venice and later again in Paris). He carefully studied the Hebrew letter shapes, collected what he considered the best samples from everywhere, and continued cutting Hebrew founts to the end of his long life. Almost 20 Hebrew founts are credited to him. Not only did Giustiniani and the Italian-Jewish printer Meir *Parenzo depend on his typefaces but they were also later copied in Italy until the 19th century. The press of *Belforte in Leghorn (closed in 1939) used a derivative of his letters, and the Nebiolo type foundry in Turin still produced them in 1970 in a later rendering.

More important still, Le Bé provided Christopher *Plantin, the great printer of Antwerp, with Hebrew letters which the latter used in his Polyglot Bible (Antwerp, 1569–72), a superb piece of printing. Le Bé's letter style (and probably even some of the original letters) was passed on from Plantin to Christian printers in Germany, on one hand, and on the other to Holland, which took the lead in Hebrew printing in the 17th and 18th centuries, and by which Hebrew printing in Germany, England, Eastern Europe, and even the Near East was decisively influenced. The first Hebrew printer in Holland was *Manasseh Ben Israel, who had his letters cut from models prepared by the chief Hebrew scribe of Amsterdam, Michael Judah. His first publication, a prayer book of the Sephardi rite, appeared in 1627. Further Hebrew presses were set up soon after in *Amsterdam. The Jewish printers there, who were learned and cultured men, ordered their letters from the most accomplished punch cutters of their time, among them Christopher van Dyck and Johann Michael Fleischmann of Nuremberg. Since Hebrew books became an important export item in the economy of Amsterdam, all the important type foundries there produced Hebrew fonts. These were used everywhere, and printers mentioned the use of "Amsterdam type" on their title pages rather than the places and names of the printers. Typographically outstanding among the Amsterdam Hebrew presses was that of the *Athias family, which produced, among others, the famous Hebrew Bible (1661) and the beautiful edition of Maimonides' *Mishneh Torah* (1702–03). Another Hebrew press in Amsterdam of high standing was that of the *Proops family, which published a very large quantity of Hebrew books and continued its work into the late 19th century.

In the 17th and 18th centuries Hebrew printing spread widely to Germany, Poland, and some Oriental countries, and continued at some presses in Italy. The centers all derived from Amsterdam, Prague, and Venice and continued their respective typographical traditions, mostly with loss of quality. Some Hebrew type is also used in the first book printed on the North American continent, the *Bay Psalm Book* (Cambridge, Massachusetts, 1640). The 19th century brought further innovations. In *Roedelheim (near Frankfurt) W. *Heidenheim and B. Baschwitz published a new *maḥzor* in 1800 in nine volumes, using newly cut letters – square and cursive Sephardi for the commentary, and cursive Ashkenazi for the German translations – with a great deal of skill. This press continued printing in the same style and with the same letters throughout the 19th century, and its products were reprinted from stereotypes until the Holocaust, being reproduced in Basle even after World War II. In Eastern Europe the most important typographical production was the superb edition of the Babylonian Talmud by the house of *Romm in Vilna (1880–86). In England Z.H. *Filipowski printed Hebrew text editions in a pleasant small type.

The 19th century, with its deep changes in Jewish life, made new claims on Hebrew typography. A secular literature arose, with newspapers and periodicals not only in Hebrew but also in Yiddish and Ladino. By the end of the century changes in typographical techniques had taken place. The large European type foundries produced new Hebrew letters on traditional lines which were used in the printing of Bibles by the British and Foreign Bible Society and the Wuerttemberg Bible Institute, as well as in other scholarly editions. The most successful Hebrew type innovation was created through the cooperation of the Leipzig cantor and scribe Raphael Frank and the graphic artist Ruehl who worked for the Berthold type foundry. The Frank-Ruehl letter spread quickly, and after it was incorporated in the program of all the chief typesetting machines (Linotype, Monotype – under the name of Peninim – and Intertype) it held a near monopoly for quite a long period, in spite of its being an expression of the Art Nouveau style.

The rapid expansion of the press and of art and literature publications in Hebrew and Yiddish after World War I and the growing influence, first of the German expressionism and then of the New Typography promoted by the Bauhaus, were a new challenge to Hebrew typography. The existing letters were of little use in shaping the new typographical images. New Hebrew letters of the sans serif type were therefore created, at least for display, the first a letter called "Haim" by Jacob Levit (in Warsaw) and the second by the Tel Aviv graphic artist Aharoni which was published under his name in Germany. Both these typefaces were widely used for display and gave Hebrew printing an entirely new look. At the same time the cursive (Rashi) alphabet was totally abandoned in secular literature – a fact which resulted in a deplorable impoverishment of typographical possibilities.

The renascence of Hebrew literature, its concentration in Israel, and the tremendous growth of the production of books and periodicals, as well as of commercial printing, necessitated swift developments in Hebrew typography. They took shape chiefly from the end of World War II onward, and from the foundation of the State of Israel with accelerated energy. Between the two world wars new Hebrew types were still intended chiefly for what could be called ceremonial printing: this is true of the Ashkenazi square letter called "Stam," which was cut by the Berthold foundry and was dependent on a design by Franziska Baruch, and of the type designed by Marcus Behmer and ordered by the *Soncino Society for its monumental Bible, of which only the Pentateuch was printed before the Nazis put an end to the project. From this time a different sort of typeface was needed. Serious attempts began in the period between the two world wars, such as those of Eric Gill and L.A. Meyer, together with Franziska Baruch, but were not successful in providing new letters for general use; others, such as those of the German letter designer E.R. Weiss (whose drawings were lost), the American F.W. Goudy, and the Englishman H.G. Carter, were abortive. A radical step forward was made in the Ha-Ẓevi family of typefaces (Jerusalem Type Foundry), which were designed by Ẓevi Hausmann in collaboration with M. Spitzer. Based on a quasi-sans serif style, it went back to old letter shapes and reduced the overdecoration which had crept into Hebrew letter design in the course of centuries. In this way it achieved a modern appearance, but (being in its light rendering a book face) available for hand composition only, it could not be used for book work. The David Hebrew, a letter built on somewhat similar principles but more cursive, was designed by Ismar David with some help from M. Spitzer, and is available on Intertype; it is used in book work and allows for a very light look of the page in contrast to the heavy look traditional in Hebrew printing. Other new types are a modern renewal of the Ashkenazi letter by Henry Friedlaender, Hadassah (Amsterdam Type Foundry), also available on Intertype; Franziska Baruch's Schocken-Hebrew (Monotype); Z. Korngold's Koren (Deberny et Peignot, Paris), a traditional letter useful for traditional literature; and Ẓvi Narkis' Narkis Hebrew on Linotype. As a result of the progress of photo setting new faces were created. The general appearance of Hebrew typographical work – which in the present day covers the whole range of printing from belles-lettres through scholarly and technical literature to art books, periodicals of all sorts, and a very wide range of commercial printing – will go on changing. Some substantial advances in bibliophile book production have also taken place.

[Maurice Moshe Spitzer]

TYRE (Heb. צוֹר), port in Lebanon, S.S.W. of Beirut. An ancient competitor of *Sidon, Tyre by 1200 B.C.E. became the leading port of Phoenicia and is mentioned in the *El-Amarna Letters. By the 10th century Tyre had founded the colonies of Uttica, Godes, and perhaps Carthage. Tyre was famous for its temple and craftsmen, and *Hiram of Tyre supplied Solomon with wood for the Temple (I Kings 5). A later Hiram built a huge breakwater in front of the port, then situated on an impregnable island, making Tyre one of the most important ports in the Mediterranean.

In 332 B.C.E. Alexander marched on Tyre for refusing to submit to him as the other Phoenician towns had done. After a siege of seven months Alexander took Tyre by building a mole, which joined the island to the mainland for the rest of its history. Tyre was destroyed and its inhabitants killed or enslaved (Arrian, Anabasis 2:5–21). The town rapidly recovered and was ruled by a native dynasty under Ptolemid suzerainity until 274 B.C.E. (Era of Tyre), when power was passed to the suffetes. Conquered by the Seleucids in 200 B.C.E. (Justinian 18:3:18), Tyre gained independence in 126 B.C.E. It expanded its silk, glass, and purple dye industry for which it was famous in the ancient world. During the Maccabean wars Tyre joined Sidon and Ptolemais (Acre) in attacking the Jews of Galilee, only to be repulsed by Simeon (Jos. Ant. 12:331; I Macc. 5:16).

In 63 B.C.E. Tyre came under Roman rule and Mark Antony demanded the restoration of Jewish property taken by the Tyrians during the wars of Hyrcanus and forbade damage to it (*ibid.* 14:313–22). Cleopatra begged him to grant her Tyre as a gift with the other territories south of R. Eleutherus that she received. Antony refused as Tyre was a free city (*ibid.* 15:95). There was a Jewish community at Tyre but the Tyrians were bitter enemies of the Jews (Jos., Apion 1:70). Like Sidon, Tyre under Augustus lost her rights because of some disturbances, but she administered territories up to the Jordan until Byzantine times. Tyre established centers for commerce at Puteoli and Rome, but when Ostia was rebuilt by Trajan they

began to fail (CIG, 5853; CIL 10: 1601). By this time Tyre was the richest town of the eastern provinces. In the second century *Simeon b. Yoḥai lived there.

Excavations by P. Bikai in 1973–1974, on behalf of the Lebanese Department of Antiquities, produced a sequence of architecture and pottery from the site dating from between 2700 and 1600 B.C.E. The visible archaeological remains from the city are essentially from the Roman and Byzantine periods, notably a colonnaded street, a monumental archway, a large Roman bath, and a hippodrome that could seat some 60,000 spectators. A fourth-century basilica and a large Crusader cathedral represent some of the later remains in the city.

In the Middle Ages

In the Middle Ages Tyre was a rich and well-fortified city with a large Jewish community, whose high economic and cultural standard made it one of the most important communities in the Near East. The *Genizah* and other sources contain a wealth of material on the community in the 11th and 12th centuries. It transpires from these records that the Jews of Tyre derived their income mainly from the manufacture of glass and the export of glass products. They also traded in spices and flax with Jews from Egypt and the Maghreb, who came there on business. According to the testimony of an Italian Jew who settled in Ereẓ Israel in the 11th century, many Jews came to settle in Tyre during that period. During the great Bedouin revolt against *Fatimid rulers in the 1030s the Jewish community in Tyre was spared the sufferings that afflicted most of the other communities in Ereẓ Israel and southern Syria. It was the center of religious scholars who engaged in literary works and maintained close contacts with the Ereẓ Israel academy; in 1071, when Jerusalem was conquered by the *Seljuqs, the academy moved to Tyre. In 1081 the *rosh yeshivah* *Elijah ha-Kohen traveled to Haifa to ordain his son Abiathar as his successor, honoring the principle that ordination is not to be carried out beyond the confines of Ereẓ Israel. Ten years later a violent controversy broke out between the *ḥakhamim* of the academy and *David b. Daniel, when the latter demanded recognition as *nasi* by the Jews of Ereẓ Israel and Syria. As a result, Abiathar, the *gaon* of the academy, was forced to leave Tyre, and was followed by the *av* of the academy, *Solomon ha-Kohen. The controversy was finally settled in 1094, when the *nagid* *Mevorakh succeeded in gaining the upper hand over David b. Daniel; the academy was reestablished and Abiathar returned to resume his office. After the Crusader conquest of Tyre in 1124, Italian merchants, led by Venetians, established trade colonies in the city. The Jews lived in the Venetian quarter, which was under the direct control of the Venetian republic, and attempts by the last of the Frankish kings of Jerusalem to wrest jurisdiction over the Jews from their Venetian overlords were of no avail. *Benjamin of Tudela, who visited Tyre in the second half of the 12th century, reports on having found about 400 Jews in the city; they were engaged mainly in glass manufacture, but also included shipowners, i.e., international traders. The rabbis of Tyre in this period addressed numerous inquiries to *Maimonides. In the 13th century the community seems to have declined since there is an absence of reports dating from that period. After the *Mamluk conquest in 1291, the Tyre Jewish community ceased to exist.

[Eliyahu Ashtor]

TYRE, LADDER OF (Heb. סֻלָּם צוֹר; Sullam Ẓur), a steep road cut in steps which connected the territory of Acre with that of Tyre and formed part of the coastal road passing the twin capes of Rosh ha-Nikrah (Ras en-Naqura) and Rosh ha-Lavan (Ras el-Abyad) partly in Israel and partly in Lebanon. It is first mentioned in I Maccabees 11:59 as the northern boundary of the coastal province of Paralia, entrusted by the Seleucid king to Simeon the Hasmonean. Josephus describes it as the northern boundary of Ptolemais (Acre), 100 stadia (c. 11½ mi.; 18½ km.) from that city. In talmudic sources, the Ladder of Tyre (Aramaic: *Sulma de Sor*) is frequently mentioned as the northern limit of the Holy Land, beyond which certain ordinances referring to that region no longer applied (Tosef., Pes. 1:28; et al.). The area from which the snails yielding purple dye were collected extended from Haifa to the Ladder of Tyre (Sab. 26a). The name has been revived as the appellation of a regional council in northwestern Galilee.

[Michael Avi-Yonah]

TYRE OF THE TOBIADS, fortress in Transjordan, built by Hyrcanus, the last of the Tobiad rulers of Peraea (Jos., Ant., 12:228–34). It is identified with the ruins of ʿIrāq al-Amir, approximately 10½ mi. (17 km.) W. of Amman (see full description of the site under entry *Tobiads). Another suggested identification is with Birtha of the Ammanitis, the Tobiad capital in the third century, which is mentioned in the *Zeno Papyri* (ed. by Edgar, no. 59003).

TYRNAU, ISAAC (end of 14th century), Austrian rabbi and compiler of a book of **minhagim*. Tyrnau's teachers were Abraham *Klausner, Sar Shalom of Neustadt, and *Aaron Neustadt. Until recently it was assumed that his name derived from Trnava (Tyrnau) in Hungary (now Slovakia), but modern scholars incline more to the view that he came from

Austria. He was born in Vienna and apparently subsequently moved to Tyrnau in Austria, from where it is possible that he went to minister as rabbi of Pressburg although some scholars deny that he was ever in Pressburg. Little is known about his life except that in 1420 he contacted Jacob *Moellin regarding a divorce.

Tyrnau's fame rests upon his book of *minhagim*. Basing himself largely on his teacher, Klausner, he set down customs and codes of conduct for the whole year, and they were subsequently adopted in most communities in Austria, Hungary, and Styria. As Tyrnau wrote in the preface, his aim was to create a common *minhag*. As a result of the *Black Death (1348–50), which had uprooted most of the communities of Germany, "scholars became so few.… I saw localities where there were no more than two or three persons with a real knowledge of local custom." His description is concise and his style easy. The book enjoyed great popularity among German and Polish Jewry. Glosses by a Hungarian scholar, whose identity is not certain, apparently were added to the book and published together with it. The first edition was printed in Venice (1566) and has been frequently republished often as an appendix to the prayer book. Similarly a German translation by Simon Guenzburg (Mantua, 1590) has often been reprinted. A legend has been preserved to the effect that the Hungarian crown prince fell in love with the beautiful daughter of Tyrnau, and out of love for her renounced the throne, became converted to Judaism, and went to study Torah from Sephardi rabbis. On his return to Hungary he entered into a clandestine marriage with her and continued to study under his father-in-law. His identity was accidentally discovered by Catholic priests who demanded that he revert to his original faith. When he refused, he was burned at the stake and the Jews expelled from Tyrnau (*Eẓba Elohim, o Ma'aseh Ray she-Eira le-ha-Rav Yiẓḥak Tyrnau*; "The Finger of God, or What Happened to R. Isaac Tyrnau," the author of *Sefer ha-Minhagim*, 1857).

TYROL, autonomous province in W. Austria. Jews are first recorded in the Tyrol in the late 13th century: Isaac of Lienz was a large-scale moneylender and leased the income from the customs. A "Mayr the *Monetarius*" (*mintmaster) is mentioned in 1310 in *Merano. The few Jews living in *Innsbruck were massacred during the *Black Death persecutions in 1348–49, and in the following decades few are recorded in the province. In Bozen (*Bolzano) and Trient (*Trent), scene of the notorious blood libel in 1475, Jews are first mentioned in 1403. In 1442 a blood libel also occurred in Lienz. The alleged murder of Andreas of Rinn on the local "*Judenstein*" was an early 17th-century fabrication on the lines of the Trent blood libel. Although Andreas was never beatified, his cult was tolerated by the Church in 1755; an attempt to revive the "Anderl" play in 1954 was not permitted.

Expulsion orders of Jews from the Tyrol issued in 1520 and 1569 were not enforced, and a few Jews were found living there soon afterward, mainly in Innsbruck. After the expulsion from nearby *Hohenems in 1676, a few families settled in Innsbruck and elsewhere. Though Tyrol produced few scholars of distinction, two of the 17th century should be mentioned: Solomon b. Isaac and Shemaiah b. Meir Halevi Horowitz. During the anti-French uprising of Andreas *Hofer the Jewish settlement in Innsbruck was pillaged. Legal and economic restrictions on the Jews were not abolished under Bavarian rule and were ratified by the estates in 1817. In 1850 about 90 Jews were living in the province, mainly in Innsbruck. In Merano, where the first Jew settled in 1832, a Jewish settlement developed following the growth of the resort town. The Koenigswarter burial foundation was established in 1872, a hospital was opened in 1893, and a synagogue in 1901. In 1914 there were 130 Jews living in the province; that year Joseph Link, formerly of Hohenems, became provincial rabbi of the Tyrol and *Vorarlberg at Innsbruck, officiating until 1932. He was succeeded by E.S. Rimalt, under whom Zionism gained ground. After World War I *sheḥitah* was prohibited in Tyrol. The early 1930s saw a rise in the support of Nazism by the local population. Isolated Jews living in the province were not molested during **Kristallnacht* in November 1938, but the Jews of Innsbruck suffered extensively from Nazi attacks. Soon afterward all the Jews of Tyrol moved to Vienna. After World War II about 11 families established a new community in Innsbruck.

TYSMENITSA (Pol. **Tyśmienica**), town in Ivano-Frankovsk oblast, Ukraine; within Poland until 1772 when it passed to Austria, reverting to Poland between the two world wars. An organized Jewish community existed in Tysmenitsa from the early 18th century, under the jurisdiction of the council of the "province of Russia" (see *Councils of the Lands). In the mid-18th century Jews from Tysmenitsa attended the *Breslau fairs. In the 1760s, during the rabbinate of Meshullam b. Samson *Igra, a new stone synagogue was erected to replace the old wooden one which had burned down in 1754. In 1765 there were 856 Jews paying the poll tax in the town. The Ḥasidim in Tysmenitsa were persecuted in the early 19th century. The Jewish population numbered 2,529 (36% of the total) in 1880, 2,049 (26%) in 1900, and 2,305 (23%) in 1910. They mainly engaged in trade of agricultural products and timber, shopkeeping, furriery, and carpentry. In the 1850s Menahem Mendel of Tysmenitsa, author of *Elef Alfin* (1876), was rabbi of the community. He was followed by Saul b. Meshullam Issachar ha-Levi Horovitz, author of responsa (*Besamim Rosh he-Ḥadash*). Before World War I there was a Jewish school financed by the *Baron de Hirsch Fund. Between 1914 and 1920 many Jews moved to *Stanislav, *Lvov, and *Stry. Between 1919 and 1939 when Tysmenitsa was within Poland, the Zionist movement was active. The community had

a library. The Jewish population numbered 1,090 (16%) in 1921. The community was destroyed in the Holocaust. There were 56 survivors, some 30 of whom immigrated to Israel.

[Shimshon Leib Kirshenboim]

TYSZOWCE (in Jewish sources **Tishvits**), a village in Lublin province, near the city of *Tomaszow Lubelski, E. Poland. Tyszowce was granted municipal rights in 1453. Jewish merchants settled there in the early 16th century, and by the 1630s they actively participated in the fairs at Lublin and *Lvov. In 1565 King Sigismund II Augustus granted the Jews equal rights and forbade market days to be held on the Sabbath. The *Council of the Lands sometimes met in Tyszowce and discussed such important matters as autonomous governance of communities, independent choice of rabbis, guardianship of orphans, marriage arrangements (Takkanot Tishvits, 1583), intercession with the government (1624), and financial support for Jews in Ereẓ Israel (1742). In 1649 and 1655/57, the Jews suffered from the armies of S. *Czarniecki and *Chmielnicki. In the 18th century they engaged in shoemaking and pottery, in addition to commerce. In 1765, 925 Jews living there paid the poll tax. In 1815 the town was included in Congress Poland, and from 1823 to 1862 the Russian authorities limited Jewish settlement in the area because of its proximity to the Austrian border. The 732 Jews living there in 1827 comprised 34% of the population. In 1857 there were 956 Jews (36%); in 1897/98, 851 Jews (85%); in 1921, 2,454 Jews (55%). Between the world wars all the Jewish parties were represented in the town and there was an active community life.

Holocaust Period

On the outbreak of World War II, there were about 3,800 Jews in Tyszowce. In September 1939 the Red Army entered the town but withdrew after a short time, according to a new Soviet-German agreement on the partition line. About 1,000 Jews left the town for the East with the withdrawing Red Army. The German army occupied the town at the beginning of October 1939. In May 1942 about 1,000 Jews were deported to the *Belzec death camp. The Jewish community was liquidated in November 1942, when the remaining Jews were sent to the same camp. After the war the Jewish community of Tyszowce was not reconstituted.

TZARA, TRISTAN (originally **Sami Rosenstein**; 1896–1963), Romanian and French poet. Born in Moinesti, Romania, Tzara was one of several Jews who enjoyed literary repute both in their native country and in their adopted land, France. His earliest poems in Romanian appeared in 1912 (under the pen name S. Samiro) in *Simbolul*, a short-lived review which he founded together with the poet Ion Vinea (1895–1964). Tzara's symbolist verse was thereafter published in other leading Romanian periodicals and its unusual imagery already heralded "the great Faun of poetry" – a title which the French writer Louis Aragon was later to bestow on him. In 1916 Tzara left Romania, settling first in Zurich and, three years later, in Paris. He continued to write Romanian poetry, however, publishing his work in avant-garde reviews, mainly in *Unu*. His collected Romanian verse, edited by *Unu's* chief editor, Sasa *Pana, appeared as *Primele poeme* ("First Poems," 1934). In Romania Tzara exerted a powerful influence on the younger generation of poets.

In Zurich, Tzara was co-founder of the *Dada* movement and editor of its official organ. Until the rise of surrealism in 1924, *Dada* was a literary and artistic sensation, making a "clean slate" of traditional forms, dislocating the rules of language and logic, and transforming poetry into an ideological weapon. Some of Tzara's collections of this period are *Vingt-cinq poèmes* (1918) and *Cinéma, calendrier du coeur abstrait* (1920). In the course of time, his poetic tone became more sober and restrained, revealing genuine poetic gifts. In 1931 Tzara turned to surrealism with *L'Homme approximatif* and published an important theoretical essay, *Sur la situation de la poésie*. He became a Communist in 1935 and was active in the French underground during World War II. There is little trace of Jewish sentiment or expression in his verse, but Tzara became increasingly preoccupied with an imminent universal catastrophe. His later works include *O – boivent les loups* (1932); *L'Antitête* (1933), essays; *Le coeur à gaz* (1946); *La Fuite* (1947), a drama; *La Face intérieure* (1953); and *Parler seul* (1950). In 1970 La Monnaie de Paris stamped a medal with the effigy of Tristan Tzara "the father of dadaism" engraved by Andre-Henri Torcheux.

TZELNIKER, MEIR (1896–1980), Yiddish actor. Tzelniker began his career at 12 in Bessarabia, Russia, and attended the Odessa School of Drama. He played for three years on the Russian stage and joined a Yiddish company in 1922. Immigrating to London in 1927, he played in Yiddish at the Pavilion Theater, Whitechapel, and then headed the Yiddish National Theater Company. In 1939 he took over the Yiddish Theater in the Grand Palais, Whitechapel, which played throughout World War II in modern repertoire and in Shakespeare. He made a hit in *The King of Lampedusa* based on an amusing war episode. He subsequently appeared in films and television. His daughter, ANNA TZELNIKER (1922–), who was born in Romania, was also a well-known Yiddish actress in London.

Uc-Uz

UCEDA, SAMUEL BEN ISAAC (1540–?), talmudist, preacher, and kabbalist. Uceda, who was born in Safed, studied Kabbalah under Isaac *Luria. After the latter's death, he studied under Luria's disciple Ḥayyim *Vital and Elisha *Gallico. At the age of 40, he established a great yeshivah in Safed where Talmud and Kabbalah were taught. The yeshivah was supported by the *Nasi family of Constantinople. Uceda also spent some time as a merchant in Aleppo. In 1597, when the financial resources of the yeshivah were depleted, he went to Constantinople in an attempt to raise funds. There he was helped by the philanthropist and scholar Abraham Algazi.

Uceda was apparently the owner of a large library which contained many manuscripts. In his *Midrash Shemu'el* (Venice, 1579), a commentary on the tractate *Avot*, he quotes some of the early Spanish scholars and his contemporaries from books which were in his possession. He also wrote a commentary on the Five Scrolls. The commentary on Ruth was published as *Iggeret Shemu'el* (Kuru-Chesme, near Constantinople, 1597). It includes sayings of early Spanish scholars and of Uceda's contemporaries. His commentary on Lamentations was published as *Leḥem Dimah* (Venice, 1606). His books had wide circulation and his commentary on *Avot* was printed three times during his life. His sermons are to be found in manuscript (Moscow, Guenzburg Ms. 1054).

UCKO, SIEGFRIED (**Sinai**; 1905–1976), rabbi and educator. Born in Gleiwitz (Gliwice), Upper Silesia, Ucko studied at the Juedisch-Theologisches Seminar, Breslau, and at the Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums, Berlin. After serving as rabbi in Mannheim and Offenburg, he settled in Palestine in 1935, teaching at Kiryat Bialik and at a teachers' training college in Tel Aviv (from 1946). In 1951 he was appointed head of the teacher's seminary at Givat ha-Sheloshah and was instructor in education at the Hebrew University, Jerusalem. In 1955 Ucko became head (later professor) of the education department of Tel Aviv University, also serving as inspector of teachers' training at the Israel Ministry

of Education. His published works include *Der Gottesbegriff in der Philosophie Herrmann Cohens* (1927) and *Al ha-Osher re-ha-Tov* ("On Happiness and Goodness," 1951).

UDIM (Heb. אוּדִים), moshav in central Israel, 5 mi. (8 km.) S. of Netanyah, affiliated with Ha-Mo'aẓah ha-Ḥakla'it. Founded in 1948, Udim had 369 inhabitants in 1970 and 661 in 2002. The first settlers, from Poland and Hungary, were later joined by Israelis and immigrants mainly from Yemen and Iraq. Farming was based on irrigated citrus groves, vegetable gardens, and livestock. Other source of livelihood were from various retail outlets. The "Roman Breach" in a nearby sandstone ridge was once assumed to have been opened in the Roman period to provide an outlet for the waters in the Poleg swamp, but later archaeological investigation identified the breach as belonging to the fortification installations of a settlement dating from the Israelite period. The name, "Embers [i.e., Drawn from the Fire]," refers to the founders, who were survivors of the Holocaust.

UDIN, SOPHIE A. (1896–1960), founder of the Women's Organization for the Pioneer Women of Palestine (*Pioneer Women, subsequently Na'amat U.S.A.). Udin was born in Zhinkov, Ukraine, and emigrated as a child to Pittsburgh, Penn., with her socialist parents. Trained at Columbia University School of Library Science (M.L.S., 1929), she married Pinchas Ginguld, head of the network of secular Yiddish Folk Schools and Teachers Seminary and Po'alei Zion officer in New York (1922). Udin, who served on the staff of New York Public Library (1914–29), specializing in foreign collections, helped organize the American Mogen David Adom (March 13, 1918) and served as its first national secretary (1918–19). In 1921 and 1925–27, she went to Palestine to help organize and build the Jewish National and Hebrew University Library, introducing the Dewey decimal system and Anglo-American cataloguing and American-style library education for the staff. Living in Jerusalem, she became involved in clandestine Haganah work. In 1924 she raised American funds to produce the first Kiryat Sefer, the bibliography of Jewish and Hebrew publications of the National Library. According to the "legend of the well," Udin, with the assistance of six wives of Po'alei Zion members, responded to the plea of Raḥel Yanait *Ben-Zvi to raise money for a well to water trees at a tree nursery near Jerusalem. In 1925 they founded the Women's Organization for the Pioneer Women of Palestine to achieve this immediate goal as well as to support working women in Palestine and to campaign for auto-emancipation for all women. Udin established and directed the Zionist Archives and Library in New York, collecting documentation of the Zionist movement and editing *The Palestine Year Book* annual (1945–49) and three-volume *Palestine and Zionism* (1947–48); she published "A List of References Leading to the Establishment of the Jewish State of Israel" in *The Journal of Educational Sociology*. Leaving her husband to continue his work in New York, Udin made *aliyah* with her children in 1949 when David Ben-Gurion appointed her to set up and direct the Israel State Archives (now the National Archives) in the government complex in Tel Aviv. When the government moved to Jerusalem, she also moved the archives. She helped organize the Association of Americans and Canadians (AACI) in Israel in 1951 to ease the absorption of American immigrants to Israel; she died in Jerusalem.

[Judith Friedman Rosen (2nd ed.)]

UDLICE (Czech **Údlice**; Ger. **Eidlitz**), village in N.W. Bohemia, Czech Republic. It is assumed that the Jewish community of Udlice was founded by refugees who fled from the nearby community of *Chomutov (Komotau) when the *Hussites attacked it in 1421. Eleven families were recorded in 1570 and the oldest gravestone (still extant until the Holocaust) dated from 1572. The *ḥevra kaddisha* was founded in 1680. The synagogue was rebuilt in 1694 and again in 1782. Judah Loew b. Isaac Lipschitz, the author of *Hanhagot Adam* (Fuerth, 1691) was rabbi in the 17th century. In 1724 the community numbered 76 families; 15 houses owned by the local lord were given to 24 heads of families in 1727; in 1815 they were destroyed by fire. The community numbered 597 in 1809, and in 1824, 111 families (481 persons) lived in 40 houses. In 1840 the synagogue was rebuilt in Reform style. (It was demolished in the 1920s and services were held in the school.) After 1848 the community diminished rapidly, most of its members moving to Chomutov and until 1869 returning to Udlice only for services. Only 150 Jews (9.2% of the total population) were left in Udlice in 1880 and these had declined to 21 (1.02%) in 1910; by 1926 only two families remained. Under Nazi occupation, both cemeteries and the school were destroyed. The memory of the community is perpetuated in the family name "Eidlitz."

[Jan Herman]

UEBERLINGEN, town in Baden, Germany. Although the oldest gravestones discovered in Ueberlingen date from 1275–76, a Jewish community with a synagogue and cemetery was in existence in 1226. In 1240 the bishop of Constance forbade the setting up of a private mint in Ueberlingen either by a Jew or a Christian. A Jewish witness to an agreement appears in a source dated 1253. Most Jews made their living through *moneylending: in 1289 a Jewess, Guta of Ueberlingen, lent a considerable sum of money to Bishop Frederick of Montfort to permit him to participate in a Church Council in Wuerzburg. The Jew Samuel lent money in 1290 to a minister of high position and to the bishop of Constance; even King Louis IV, the Bavarian, was a debtor of Ueberlingen Jews. A tax list of 1241 indicates that the Jewish population was one of the smallest in Germany at the time, but by the beginning of the 14th

century the Jewish population had grown considerably. A *Judenstrasse* is also noted during this period. A Rabbi Menlin of Ueberlingen is mentioned by Jacob b. Moses *Moellin (MaHaRil, 1365–1427). In 1332 an accusation was made that Jews had murdered a Christian child. A threatening mob surrounded the Jews who had gathered in the synagogue and set the structure afire, about 300 Jews perished as a result. The remaining Jews continued to live in the city, and two years later when King Louis IV, the Bavarian, visited the city he imposed a fine on those who had perpetrated the massacre. More Jewish lives were claimed by the *Black Death persecutions of 1349, after which the city confiscated the synagogue, cemetery, and houses of the victims. Jewish gravestones were used to build a cathedral. Jewish settlement was renewed, however, in 1378. In 1429 a *blood libel in Ravensburg brought about the arrest of all the Jews in Ueberlingen: 12 Jews were burned in 1430, and 11 saved themselves by accepting baptism. Jewish settlement came to an end in 1431 and was not renewed until 1862. The modern community remained extremely small; in 1895 there were only five Jewish families in the town and the community combined with that of Constance. All five families recorded as living in Ueberlingen in 1938 emigrated to England and the U.S.

[Alexander Shapiro]

UFA, capital of Bashkortostan, Russia. Under the czars, Ufa was beyond the *Pale of Settlement. Its Jewish community was established by veteran Jewish soldiers. In 1855 a synagogue was built. In 1897 the Jews in Ufa numbered 376 (0.8% of the total population). In World War I about 1,000 Jewish refugees came to Ufa from areas near the front. The Jewish community suffered from the battles between the Red Army and the White Army in 1918. In 1923 there were 1,588 Jews (1.8% of the total population). In the entire Bashkir Republic there were 7,167 Jews in 1959. In 1971 some thousands of Jews were thought to be still living in Ufa, but there was no information available about Jewish communal or religious life in the town. When the community re-emerged in the post-Communist period, a full range of communal services developed, a chief rabbi was installed, and the Jewish population was estimated at as much as 10,000.

UGANDA SCHEME. In the spring of 1903 Joseph Chamberlain, the British colonial secretary, offered Herzl the Guas Ngishu plateau near Nairobi in East Africa – not Uganda, as Chamberlain and others later erroneously called it – for a Jewish settlement under the British flag. Herzl thought it politically imprudent to reject it, since the very fact that a Great Power was negotiating with him amounted to a de facto recognition of his movement. He considered the offer primarily in political terms. Rather than being an impediment, it might bring the realization of his ultimate goal nearer. For him it was merely a ploy to obtain British recognition of the Zionist movement, recognition of Jews as a people, and to bring Britain gradually to the conclusion that only in Palestine would the Jewish Problem be solved. In these tactics he was eminently successful. At no time did Herzl abandon Palestine.

The storm that erupted during the Sixth Zionist Congress in August 1903 was unforeseen. The acrimonious controversy was largely due to a misunderstanding. It was not the choice between "Zion or Uganda" that had been put on the agenda. What had been proposed was the dispatch of a Commission of Inquiry to East Africa, and Herzl anticipated that the report would be negative, as it was crystal clear to him that the Jews would not go to Africa in any case.

Moreover, all the controversy was irrelevant, because the subject matter became unreal. In view of the protests raised by the white settlers in Kenya against the very idea of a Jewish settlement, the Foreign Office changed its mind. Herzl did not shed any tears. In a circular letter to the members of the Zionist Executive, he declared that the East Africa project was dead. In mid-April 1904, during a meeting of the Executive, the leading opponents, the Neinsagers, admitted that they were mistaken and expressed their unswerving confidence in Herzl.

For a fuller treatment see *Herzl, Theodor.

[Isaiah Friedman (2nd ed.)]

UGARIT, ancient city located about 7 mi. (11 km.) north of Latakia. Though it is not mentioned in the Bible, its discovery has had a profound effect on biblical studies, especially in the fields of religion, literature, and language.

Excavation

The ancient mound of this city, known as Ras Shamra ("Hill of Fennel"), first came to the attention of modern scholars after a Syrian farmer accidentally uncovered a stone from the roof of a well-built tomb chamber containing Cypriot and Mycenean pottery. C. Virolleaud, then director of archaeological works for the (French mandatory) government of Syria, first excavated the tomb in 1928. In the following year the Mission de Ras Shamra under the direction of Claude F.A. *Schaeffer began systematic excavations that continued into the 1970s except for several years during World War II.

Nine seasons from 1929 to 1937 were devoted to the seaport at Mînet el-Beiḍa (classical Leucos limen, "White Harbor") and to the acropolis on the western half of the tell, where two temples, one to Dagon and the other to Baal, were found; between them was the high priest's house, containing a rich collection of literary texts. The site of the town rises c. 65 ft. (20 m.) above the surrounding plain and stands about 3,980 ft. (1,200 m.) from the bay. Its total surface area is 22 hectares. From 1937 to 1939 and from 1948 to 1955 work was concentrated on the northwestern corner of the mound, where stables, various important residences, and above all the royal palace, were uncovered. The palace archives have furnished invaluable historical and social data. From 1953 to 1958 a large residential quarter came to light, and during the years 1959–66 the craftsmen's quarter on the south side of the tell was investigated. Some private archives have provided both legal and literary texts. An abundance of artifacts including statuettes, bowls, and other objects of bronze and gold have been found in various points on the mound.

Early Stratigraphy

The basic chronology for prehistoric Ras Shamra has been established by a series of deep soundings and can be briefly summarized thus: Level V, Neolithic, five meters of deposit beginning from the pre-pottery to the later ceramic Neolithic Age (seventh–fifth millennia B.C.E.); Level IV, early phase represented by wares of Hassuna and Tell Halaf (early fifth millennium B.C.E.), later phase with influence from el-Ubaid (c. 4500–4000); Level III C and B, Chalcolithic (4000–3000 B.C.E.); Level III A1 and A2, Early Bronze Age (3000–2350), probably destroyed during one of the campaigns of the rulers of the Akkad Dynasty – throughout this long period the settlement developed into a formidable city with ample storage space for surplus grains, etc.; Level III A3 reflects the nomadic invasion by foreign elements that settled on the ruins of the previous civilization – they were the "torque wearers," whose only traces at this site are their tombs (c. 2250 to 2050 B.C.E.).

History – Middle Bronze (2050–1500 B.C.E.)

After the disappearance of the "torque wearers" a new ethnic element, the Amorites, became the dominant people of the Levant. The new urban center which they built at Ras Shamra must have arisen shortly before approximately 2000 B.C.E. (Level II). The pharaohs of the 12th dynasty (1990–1780) strove to maintain strong diplomatic and commercial ties with Ugarit, as evidenced by the presence of numerous statuettes and other objects. The earliest known thus far is a bead inscribed with the cartouche of Senusret I (1971–1928); this is followed by the statuette of a queen of Senusret II (1897–1877) and two sphinxes of Amenhemet III (1842–1797). Other statues include that of an Egyptian vizier and his family and those of other priests and important women. Since Ugarit is not mentioned in the Egyptian Execration Texts, there is no reason to suppose that the city was under the direct suzerainty of Egypt.

In the later Middle Bronze Age, Ugarit is mentioned a few times in texts on the Euphrates. Hammurapi, king of Yamhad (Aleppo), wrote to Zimri-Lim (c. 1779–1761), king of *Mari, informing him that the ruler of Ugarit wanted to see the famous palace at Mari. Another letter, by an official who was evidently writing to Zimri-Lim, suggests that the latter planned a trip to Ugarit. Five other references to Ugarit appear in unpublished economic texts. The city was obviously one of the flourishing "Amorite" city-states of the Old Babylonian Age. The "Amorite" origin of the dynasty at Ugarit is also reflected in the rulers' names, which are also attested as Amorite in a later age. The "dynastic seal" used by kings of Ugarit in the Late Bronze Age was of Old Babylonian style and bears the name of Yaqarum son of Niqmaddu; one of these two, either the father or the son, was probably the founder of the dynasty. These two names also appear at the end of an unpublished list of deified rulers. A man from Ugarit is recorded on an administrative list from neighboring *Alalakh (Level VII) just slightly later than the Mari texts. During the 1969 excavations, Schaeffer began to uncover the palace from this period.

History – Late Bronze (1500–1100)

There are two allusions to Ugarit in the later Alalakh tablets (Level IV) from the 15th century B.C.E. One is an epistle or agreement having to do with thieves and the other is a fragment. A letter found at Ugarit from Niqmepa (of Alalakh?) to a certain Ibira, probably ruler of Ugarit, can be dated to about the same period; the subject was a fugitive groom. The dynastic roster alluded to above included three kings named Ibrn (for Ibiranu); one of them may have been this 15th-century Ibira(nu).

Though Thutmose III (1490–1436) does not claim the conquest of Ugarit in his northern campaigns, he did overrun the neighboring states of Alalakh, Nughasse, and Niyi. A vase found at Ugarit is inscribed with the name of Thutmose III. In addition, Amenhotep II (1436–1416) apparently made a thoroughgoing foray into Ugarit's territory on his first campaign as sole ruler. The name of Ugarit is preserved only imperfectly in his annals; the initial error must have occurred in the first "historical" digest prepared as a preliminary to making the inscriptions. It would appear that the local ruler was loyal to the pharaoh and had an Egyptian garrison in his city. Another faction was plotting against the pro-Egyptian king. Amenhotep II quelled the rebellion in the countryside and pacified the city.

The next information about Ugarit pertains to Ammistamru I, a contemporary of Amenhotep III (1405–1367). He appealed to the pharaoh for help, evidently when the Hittite Suppiluliumas (1375–1335) was making his first foray into northern Syria. He seems to have had a dispute with a certain Niqmepa of Amurru. Other Tell *el-Amarna letters lacking the name of the sender must have come from Ugarit about this time or during the reign of Ammistamru's successor, Niqmaddu II. They indicate that the ruler of Ugarit was a loyal "servant" of the pharaoh. A scarab and some vase fragments

found at Ugarit bear the name of Amenhotep III. The commercial relations between Ugarit and Egypt under this pharaoh are further illustrated by an epistle, apparently from the overseer of Ugarit's main port, *Ma'h-adu* (Mînet el-Beiḍa), addressed to Nimmuria (praenomen of Amenhotep III). It is no surprise, therefore, that Ugarit is mentioned in a topographical list of Amenhotep III.

The next ruler of Ugarit, Niqmaddu II, seems to have continued his allegiance to Egypt. His portrait appears on the side of an alabaster vase; before him stands a lovely Egyptian maiden. She is evidently of noble birth and represents a marriage tie between Ugarit and Egypt. Niqmaddu sent a letter to Egypt asking for two Cushite page boys and a physician. His loyalty to the next pharaoh, Amenhotep IV (1367–1350), is proven by the name of the latter and of his wife, Nefertiti, on other alabaster vases discovered at Ugarit.

During the First Syrian War of Suppiluliumas in which he defeated the Mitannians and subdued the pro-Mitannian states of northern Syria, the Hittite ruler recognized that Ugarit was more closely allied to Egypt than to Mitanni and thus made the very clever offer to Niqmaddu of an alliance against the neighboring states of Mugish and Nughasse. These latter had also sought Niqmaddu's support against Suppiluliumas and had attacked Ugarit when he refused. Hittite troops were sent to rescue Ugarit. The ensuing conflict resulted in a conclusive Hittite victory throughout the area. Niqmaddu was rewarded with large portions of territory taken from Mugish on the north and Nughasse on the east. A report from Tyre to the pharaoh to the effect that Ugarit's palace had been burned may pertain to this affair.

Niqmaddu thus became a loyal vassal of the Hittites. Just as his father had clashed with the expansionist rulers of Amurru, so he and his own vassal, Abdi-khebat of Siyannu, ran foul of Baʿluya, brother of the infamous Aziru (probably while the latter was called to Egypt to give an accounting).

After Aziru's return, he continued the feud until he too was compelled to submit to Hittite rule. Since both states were now vassals of the same overlord, a treaty was arranged between them. Henceforth, the entire coastline from Ugarit to Byblos was subject to the Hittites.

Later, in the seventh year of Mursilis (c. 1334–1306), Niqmaddu was asked to furnish troops against his neighbors who were staging an Egyptian-inspired revolt. He evidently did so, and the revolt was suppressed; but just at this time he was followed on the throne by his son Arkhalbu, the only ruler of Ugarit to bear a Hurrian name. It would appear that pro-Egyptian elements at Ugarit had staged a coup at the instigation of Pharaoh Horemheb (c. 1335–1309; whose inscribed vases were also found in the Ugaritic palace); this would explain Ugarit's inclusion in a topographical list by that pharaoh. A second revolt by Nughasse, to which Ugarit may have been partner, was smashed by Mursilis who then removed Arkhalbu and placed his brother, Niqmepa, on the throne of Ugarit. The size of the kingdom was much reduced and even Siyannu was taken out of Ugarit's jurisdiction.

Niqmepa was the ruler of Ugarit who joined the Hittite allied forces in their confrontation with Pharaoh Ramses II (1290–1224) at the battle of Kadesh (1285). He continued to reign for a considerable time after Mutawallis' death (1282). Under Hattusilis (1275–1250), his kingdom enjoyed a renewed era of wealth and prosperity, doubtless facilitated by the peace treaty between Hatti and Egypt. Ugarit's position as a key center in the Hittite imperial economy is illustrated by the fact that the Hittite king agreed to restrain the activity of even his own merchants from Ura (in Cilicia) vis-à-vis Niqmepa. Another decree by Hattusilis prevented Ugaritic citizens from deserting their own sovereign and fleeing to the *ʿapiru* territory, i.e., they could not escape the jurisdiction of Niqmepa by joining the freebooters.

At the demise of Niqmepa, there seems to have been some dispute over the succession. Two sons of Niqmepa's widow Ahatmilku (formerly a princess from Amurru), Hishmi-sharruma and Abdi-sharruma, committed an act of treason (lit. a "sin") against the new incumbent, Ammistamru II. The queen mother was held responsible for seeing that the rebels took their shares of personal property and went into exile to Alashi (on Cyprus).

Ammistamru's domestic troubles were just beginning. He decided to divorce his own Amorite wife and apparently discovered, after she had gone back to her home country, that she had not only been a troublemaker but had also committed a "great sin" against him – probably adultery. Various attempts were made to adjudicate the affair, first before the Hittite viceroy in Carchemish and later before the emperor in Hattusas, now Tudkhaliyas. After certain acts of hostility between Ugarit and Amurru, the emperor imposed a settlement. The erring lady was returned to Ammistamru and promptly executed; in return an indemnity payment was made to her brother, the king of Amurru. Certain difficulties arise from the documents pertaining to this case; in fact, two separate women may be involved though it seems most unlikely that Ammistamru would have taken a second wife from Amurru after divorcing the first.

When the Assyrians (probably under Shalmaneser I; 1274–1245) began to put pressure on the eastern Hittite frontier, Ammistamru was not required to furnish support troops, but a payment of 50 minas of gold was imposed upon him as financial backing for the war. Neighboring Amurru did have to send troops.

The next ruler of Ugarit was Ibiranu, another son of Ammistamru (rather than the son of the deposed Amorite wife). A certain indifference toward the Hittites can be discerned in his failure to present himself at the capital and in his not sending the customary gifts upon his accession to the throne. His recalcitrant attitude may have been the result of the new Assyrian threat under Tukulti-Ninurta I (1244–1208). This time the Hittites were not content to accept money in lieu of soldiers. Ibiranu tried to stall, but they sent an officer to muster the troops of Ugarit.

Ibiranu was followed by his son Niqmaddu III, whose reign must have been short. The last known king at Ugarit

bore the name Hammurapi. Under the leadership of the last Hittite monarch, Suppiluliumas II, he was more cooperative than his predecessors. The reason is clear; a new threat was looming, this time on the western horizon. The Ugaritic fleet was the backbone of Hittite resistance by sea. Tablets still baking in the kiln when the palace was finally destroyed tell the sad tale of failure and retreat in the face of an advancing foe. Some Ugaritic ships were lost near Cyprus; there was apparently an advance raid on the coast of Ugarit while the rest of the fleet was away. Land forces from Ugarit, led by the king, had joined the Hittites in an attempt to stem the tide of enemy troops advancing from the west and north.

Ugarit was sacked and burned in a mighty conflagration. Its civilization remained buried until the excavator's spade revived it in modern times. The small colony of Hellenic tradespeople that lived for a time at Ras Shamra during the Iron Age had no idea of the rich cultural treasures buried beneath their feet.

Social Structure

The Late Bronze Age archives from Ugarit provide a unique source for the study of social structure and institutions in the Levant on the eve of the Israelite conquest. Geographically and politically Ugarit was never a part of *Canaan; in fact, a Canaanite at Ugarit was listed like any other foreigner. The most prominent element in the Ugaritic population was West Semitic; but there were also many Hurrians there who seem to have been considered an integral element in the society. Unlike neighboring Alalakh, Ugarit has furnished administrative records in both the standard lingua franca, Akkadian, and the West Semitic dialect of the indigenous population, *Ugaritic. Thus many West Semitic equivalents for Akkadian social and political terms are available.

Ugarit was a monarchical despotism ruled by a dynasty that apparently had its roots in the previous "Amorite" culture of the Levant (cf. above). The kings, though themselves vassals of the Hittite emperor (and of the pharaoh before that), were recognized by international law as the absolute lords of all persons and real estate in their realm. At least for a time, the neighboring state(s) of Siyannu-Ushnatu stood in a vassal relationship to Ugarit.

By virtue of his ownership of all the lands in the kingdom, the king of Ugarit was able to provide estates for all his loyal supporters, especially the aristocracy of officials, soldiers, and other noble classes (including the priesthoods). In return, the landholders were obligated to serve the crown. A person who committed treason against the state or who fell hopelessly into debt to a foreign creditor would lose his patrimony. If an estate were left temporarily without an adult male to fulfill the incumbent duties to the crown, the king would protect the widow as well as his own interests.

The upper class included the principal palace officials such as the high commissioners (*rābiṣū*) and the overseers (*sākinu*), whose offices were either identical or parallel (the former term is Akkadian, the latter West Semitic). Scribes (*tupšarrū/‡sāpirūma*) had the great responsibilities of keeping official records and composing correspondence; many of them rose to higher government positions. There was also an elite band of "royal acquaintances," who shared special privileges in the palace.

Yeoman classes included various craftsmen, such as carpenters, shipwrights, metalsmiths, cooks, fowlers, etc. Many of these lived in a special quarter of the city (cf. above). Farmers and herdsmen were doubtlessly located in the many village precincts throughout the realm. Little is known about the administration of the local town or village. Sometimes a whole town would be given to a high-ranking officer as his patrimony. Overseers and village headmen governed most of the others. Each township was responsible for furnishing a certain number of man-days, evidently for corvée labor, each year. The peasantry was doubtless employed in the cultivation of the nobles' estates.

Ugarit's role as a major metropolitan focus of international trade is underlined by the presence of numerous foreign elements in the personnel rosters. Assyrians, Hittites, Egyptians, and Canaanites all made their way to Ugarit on diplomatic and commercial missions. The Ugaritic merchant fleet sailed the entire eastern Mediterranean from Egypt to Caphtor. The evidence from written records has been abundantly confirmed by the material finds produced in excavation. Vessels of gold and ivory reflect artistic styles of Semitic and other cultural traditions. Alabaster vessels testify to frequent and close contacts with Egypt (whenever political factors permitted).

[Anson Rainey]

UGARITIC, a Northwest Semitic language spoken and written in northern Syria during the second millennium B.C.E. Documents written in this tongue have been discovered at Ras Shamra, site of the ancient *Ugarit, and at nearby Ras ibn Hani.

The texts were written on clay tablets in a unique cuneiform alphabetic script. This represented a revolutionary adaptation of the Mesopotamian writing method, which was in its original form syllabic and logographic and required hundreds

of symbols; thus there were separate symbols for *ba* and *ab*, *ik* and *ki*, etc. The Ugaritic repertoire consisted, in contrast, of 27 basic consonants. An additional sign for *samekh* and two supplementary *alefs* served to distinguish the three fundamental Semitic vowels in combination with that consonant, i.e., *a*ʾ, *i*ʾ, *u*ʾ. Rare instances have been noted in which these consonant-plus-vowel signs were utilized as pure vowel indicators and in two texts the *yod* seems to stand for a final vowel; otherwise the Ugaritic method of writing was entirely consonantal. Five small inscriptions show certain unusual features such as minor divergences in the shapes of letters and especially a preference for only 22 consonants as in the traditional Canaanite *alphabet. Three of these texts with the shorter alphabet were found not at Ugarit but in Ereẓ Israel.

The corpus of Ugaritic inscriptions so far published represents a wide range of literary and nonliterary types. The former have attracted the widest attention because of their parallels to biblical poetry and epic prose. Of special interest are the tablets pertaining to the adventures of Baal and his consort Anath which outnumber the other literary works discovered. In many instances, the language and poetic style are – as shown especially by U. Cassuto and H.L. Ginsberg – very close to passages in the Hebrew poetry, e.g., the god of death, Mot, warns Baal not to boast "because you have smitten Lotan [Leviathan] the evil serpent, you have destroyed the crooked serpent, the mighty one of seven heads." The analogy with Isaiah 27:1 is indeed striking.

Other mythical works include an ode on the marriage of the Moon god (masculine) with the goddess Nikkal (a deity of Mesopotamian origin), and a drama about the birth of the good and lovely gods which even contains stage directions for the cast and parenthetical remarks by the narrator. Two legendary stories are worthy of special notice, viz. that of a certain renowned king named Keret (Kirta) and a judge known as Dan'il. The latter is probably to be equated with the Daniel of Ezekiel 14:14, 20; 28:3; he was famous for his fairness as a judge, revealed especially in his care for the widow and the orphan. A major theme of both the Keret and the Dan'il epics is the desire for an heir to maintain the family line.

As the archaeological researches at Ras Shamra continue, the variety of religious and literary texts increases. Ritual inscriptions include dedicatory formulae on stelae and votive objects, lists of sacrifices to the various deities of the Ugaritic pantheon, and descriptions of ceremonial acts of worship. Extispicy, the "science" of omens, is also represented. One unpublished tablet deals with ominous predictions founded on unusual births; another is a clay model of a sheep's liver with textual allusions to certain marks and other features which the examining priest had to learn to recognize and interpret. All of these have their counterparts or prototypes in Mesopotamian and Hittite sources; it is quite clear now that all these facets of cuneiform science and culture had made their mark on the life of Ugarit. For the first time scholars can compare the linguistic expressions in these ancient literary genres in both the East Semitic Akkadian and the West Semitic Ugaritic (with many Hittite and Hurrian parallels as well).

The classification of Ugaritic within the Northwest Semitic family is a disputed issue. Many scholars hold that it is Canaanite or north Canaanite. It certainly is not identical with the dialect(s) spoken further south in the original land of Canaan as reflected in Egyptian transcriptions and glosses in the *El-Amarna letters.

The Ugaritic language bears many resemblances to other members of the Northwest Semitic family, and to Hebrew and *Phoenician in particular. There are, however, also a number of significant differences: Ugaritic used a *shin*-causative stem instead of *h*(*ifil*), *a*(*fel*) or *y*(*ifil*); its long [*a*] vowels had not shifted to long [*o*]; the old Semitic case system was still in full force and short final vowels had generally not been elided from various verb forms. Barth's law of thematic and preformative vowels in imperfect verb tenses is shared by both Ugaritic and Hebrew but, unlike the latter, these forms still distinguished four modes, indicative, volitive, jussive, and energic, in correspondence with classical Arabic (except that the jussive had already begun to assume the function of a past or completed-action tense).

To date the Ugaritic lexicon consists of over 2,000 words. Many personal names are similar in form and construction to those in the Bible. The Ugaritic script was even utilized to write texts in the Hurrian language and Hurrian names appear alongside those of local Semites. Although the royal scribes of Ugarit carried on their international correspondence and drew up most of their local documents in Akkadian, they also used Ugaritic for various administrative purposes.

The decipherment of Ugaritic was achieved almost simultaneously by H. Bauer, E. Dhorme, and C. Virolleaud, each working independently. Various scholars have contributed to the analysis and elucidation of the inflection, syntax and lexicography of the language. A major pioneer was H.L. *Ginsberg, whose fundamental researches put the grammar on a solid, scientific basis. C.H. *Gordon made a systematic presentation of the various aspects of the grammar, to which a comprehensive glossary was added, along with transcriptions of all texts published to date. Interest in the linguistic, literary, religious, and cultural information in this newly discovered body of inscribed material has been international. Relationships with the Bible and biblical Hebrew have received most of the attention. As more examples of major compositions from the Mesopotamian sphere have come to light at Ugarit, the influence of Babylonian literature on that of Ugarit has attracted further research. Attention has also been paid to Ugarit against the larger world of ancient Syria including Emar and *Mari. Since the 1970s Ugaritology has emerged as a discipline in its own right rather than a handmaiden of biblical studies. *Ugarit Forschungen* ("Ugaritic Researches"), 1969ff., which has been publishing articles in several languages, is in the main devoted to Ugaritic studies. A scholarly series is published by Ugarit Verlag in Muenster, Germany.

UGODA (Pol. "Compromise"), a type of arrangement between the Polish administration and the Jewish Parliamentary Club of the *Sejm known as the Koło Zydowskie. According to this agreement, certain indispensable requirements were granted to the Jews in return for a declaration of loyalty to several demands by the Polish government. The compromise came as the conclusion to prolonged talks involving a limited circle of notables including Foreign Minister Skrzynski and Minister of Religion and Education Stanislaw *Grabski on the Polish side, and the leaders of the Koło, Leon *Reich and Osias *Thon. The negotiations resulted in an official meeting on July 4, 1925, in the chambers of Premier Wladyslaw *Grabski. Among the matters discussed, which were later announced publicly, were economic questions, political rights of citizens, organization of Jewish communities, and problems of culture, religion, and education.

The agreement aroused hopes that many painful matters would be rectified, such as compulsory stoppage of work on Sundays, the *numerus clausus at the universities, and discriminatory practices in taxation and credit, and that aid would be rendered to foster a national Jewish culture and autonomous institutions. Nonetheless, of the 42 original paragraphs, only 12 were officially publicized in July 1925 with the stamp of approval of the Polish government; they were limited to reforms concerning the organization of Jewish communities, educational aid to schools, the right to use a Jewish national language, and religious considerations for soldiers and students in government schools. The more serious problems that the Ugoda was expected to alleviate were solved on paper only, a fact which led Yiẓḥak *Gruenbaum, as spokesman of the Jewish populace, to criticize the leadership of the Koło. On the other hand, the antisemitic camp criticized the government for its leniency in granting concessions to the Jews. While the Ugoda negotiations were in progress, Poland had been undergoing a financial crisis due to a tariff war with Germany. The situation caused political repercussions which resulted in the ousting of the Grabski administration in November 1925. The Ugoda was thenceforth regarded with disappointment by the Jews.

UHDE, MILAN (1936–), Czech playwright, publicist, essayist, and prose writer. Born in Brno, Moravia, into a Czech-Jewish assimilated family, Uhde completed his studies of Czech and Russian at the Faculty of Philosophy in Brno in 1958. He worked at the literary monthly *Host do domu* ("Guest in the House"). After the Soviet occupation of Czechoslovakia, the journal was banned in 1970. Uhde lost his job and was forced to publish either in *samizdat* or under assumed names. In 1977 he signed Charter 77. In 1989–90 he became editor-in-chief of the Atlantis Publishing House. Entering political life, he served as minister of culture (1990) and chairman of the House of Deputies of the Czech Parliament (1992–96). Uhde started his literary career with three collections of stories and a satirical anti-regime play *Král-Vávra* ("King Vávra," 1964), followed by a work in verse, *Děvka z města Théby* ("The Bitch of Thebes," 1967). In the 1970s he adapted three novels – by V. Páral, I. *Olbracht, and V. Mrštík – for the stage (under a pen name). The play *Zvěstování aneb Bedřichu, jsi anděl* ("The Annunciation, or Bedřich, You Are an Angel," 1990), written in 1986, is a parody of Karl Marx's biography. Jewish themes are reflected in some characters, names, and stories in Uhde's radio and TV plays, such as *Velice tiché ave* (1981, 1987; German, "A Very Quiet Ave") in which a Jewish woman who wants to save herself from being sent to a concentration camp uses fake evidence to show that she had non-Jewish parents; *Pán plamínků* ("The Master of Small Flames," 1977, 1990); *Hodina obrany* ("An Hour of Defense," 1978, 1991); and *Zázrak v černém domě* ("Miracle in the Black House," 2004). After 1989 Uhde wrote essays against racism in *Česká republiko, dobrý den* ("Czech Republic, Good Day!" 1995); on tolerance and freedom in a collection of articles entitled *Čeští spisovatelé o toleranci* ("Czech Writers on Tolerance," 1994); and on Czech-German relations. In 2000 he was awarded the State Medal of Merit in the Cultural Sphere by President V. Havel. Uhde lived in Brno.

[Milos Pojar (2nd ed.)]

UHERSKE HRADISTE (Czech **Uherské Hradiště**; Ger. **Ungarisch-Hradisch**), town in S.E. Moravia, Czech Republic; in the Middle Ages one of the six royal cities in Moravia. The first documentary evidence about Jews residing in the town dates from 1342. In 1453, when Jews were expelled from all the other Moravian royal cities, Uherske Hradiste refused to follow suit; but in 1514, under King Ladislaus II, they were expelled from there too. They settled in small rural communities and smaller towns and were not permitted to return to Uherske Hradiste until 1848. In 1857 there were 67 Jews in the town, rising to 342 in 1869 and 488 in 1880. A new synagogue was constructed in 1875; it was redesigned in the Art Noveau style in 1904. In the early 21st century it was used as the municipal library. A prosperous community developed, the majority of Jews joining Zionist organizations. By 1930 the number of Jews had fallen to 353. The few who returned after World War II were incorporated into the community of *Uhersky Brod and later into that of *Brno.

On the site of the former cemetery, devastated by the Nazis, a memorial to the Holocaust victims was erected.

[Chaim Yahil / Yeshayahu Jelinek (2nd ed.)]

UHERSKY BROD (Czech **Uherský Brod**; Ger. **Ungarisch Brod**; in rabbinical literature, **Broda**), town in S.E. Moravia, Czech Republic. It was an important Jewish community, probably from the 13th century, first mentioned in a municipal document in 1470. Four Jewish families lived there in 1558; 18 in 1615; 59 in 1753; 160 in 1745; and 110 families by the late 18th century. In 1843 there were 827 Jews; 1,068 in 1857; and 825 in 1900.

Uhersky Brod Jews suffered severely during the Thirty Years' War (1618–48). After the expulsion of the Jews from Vienna in 1670, many settled in Uhersky Brod. In 1683 a plague killed 438 Jews, and another 100 were massacred by Kuruc soldiers defending Vienna. The massacre forced many inhabitants to take refuge in upper Hungary. There they established new Jewish communities, such as Nove Mesto, *Vahom *Trencin, Cachtiace, Beckov, and Vrbove, which after the rehabilitation of Uhersky Brod remained under its religious jurisdiction for more than 50 years. Among those killed by the Kuruc was Nathan Nata *Hannover, author of *Yeven MeẒulah* and *Sha'arei Ẓiyyon*, who had escaped the *Chmielnicki massacres and settled in Uhersky Brod. An elegy in memory of the Kuruc catastrophe (composed in Judeo-German) was customarily recited in the Uhersky Brod community on the 20th of Tammuz. The community was reconstituted a short time after the disaster and developed rapidly. Since the first half of the 17th century, some 20 noted rabbis served there, including *David ben Samuel ha-Levi (the "Taz") and, in the 19th century, Moses Nascher (1844–54), Moses David Hoffmann (1864–89), and Moritz Jung (1890–1912), who established the first high school that combined Jewish studies with general education. The rabbis, who came from such cities as Vienna, Frankfurt a. M., and Cracow, wrote significant theological and historical works.

The community was one of the largest in Moravia. In the 18th and 19th centuries, many left the overcrowded ghetto and moved to Slovakia.

During the 1848 Revolution, Jewish members of the National Guard prevented the outbreak of anti-Jewish riots in Uhersky Brod; they were subsequently forced out of the militia. Uhersky Brod was one of the most Orthodox communities in Moravia. In 1872 the ultra-Orthodox group in the community seceded, in protest against the moving of the *bimah* and the introduction of a choir; bitter strife divided the community for more than a generation. Both factions adhered to the Orthodox tradition.

In the nearby village of Drskovice, the well-known Jelinek family originated and from there spread throughout the Jewish world. The rabbi of Vienna, Abraham Adolf *Jellinek, was a member of this family.

[Isaac Ze'ev Kahane / Yeshayahu Jelinek (2nd ed.)]

Holocaust Period

In March 1939 the community of Uhersky Brod numbered 489. Religious services were held in two synagogues. In 1941 the head of the community, Felix Brunn, and seven members of the communal council were arrested by the Gestapo and executed for alleged "underground anti-German activity." At the end of that year, local Fascists set fire to the great synagogue. In early 1942, 350 Jews from Uherske Hradiste were taken to Uhersky Brod, to be quartered with and supported by the local Jewish families. Subsequently Uhersky Brod became a center of concentration for Jews from the whole of southeast Moravia before deportation. In January 1943, three transports totaling 2,837 Jews were sent first to the Theresienstadt ghetto, and later to the Auschwitz death camp; only 81 survived.

In 1945, 30 Jews returned; the community was supported by the American Jewish Joint Distribution Committee. It became a center of religious and social life for the smaller neighboring communities. In 1948 the Uhersky Brod community donated 500,000 crowns to purchase arms for Israel and financed the training of two of its members for the Israeli Air Force. After the rise of Communism in 1948, antisemitic riots occurred and many Jews were deprived of their livelihood. In 1948, 20 Jews immigrated to Israel, and the independent community ceased to exist; the few remaining Jews were served by the Kyjov community. In 1948 a monument was erected in the local cemetery, bearing the names of the Holocaust victims.

UHLMAN, FRED (**Manfred**; 1901–1985), English painter and writer. Born in Stuttgart, Germany, and trained as a lawyer, Uhlman began to paint when he fled to Paris after the Nazis came to power. In Germany, he was at risk both as a Jew and as a prominent lawyer for the outlawed Social Democratic Party. His first works, studies of French life, resembled the productions of "Sunday" painters. His first exhibitions were held in Paris by the mid-1930s. In 1936 Uhlman moved to England and married Diana Page Croft, the daughter of an extreme right-wing Member of Parliament, Sir Henry Page Croft. Uhlman was briefly interned as an "enemy alien" in 1940. When Uhlman moved to England, his work developed more sophistication. He became an interpreter of the English provincial scene in a linear style, as in his paintings of cathedral cities. After the war he held many exhibitions. He was the author of an interesting autobiography, *The Making of an Englishman* (1960), and also became a novelist of some note, whose *Reunion* (1971) was translated into many languages.

UJ KELET (Hung. "New East"), Zionist newspaper in the Hungarian language which first appeared in Kolozsvár (Cluj), Transylvania, and was later revived in Tel Aviv. On the initiative of Chajjim Weiszburg, a leader of the Zionist Movement, *Uj Kelet* was launched as a weekly on Dec. 19, 1918. It became a daily in 1920. The first editor was Béla Székely, who was succeeded in 1919 by E. *Marton. From 1927 until the end of its Transylvanian period, the responsible editor was Ferenc Jámbor. After the Hungarian annexation of Cluj in 1940, the Fascist regime banned the paper because of its strong Zionist line. Marton emigrated to Ereẓ Israel after World War II, and in 1948 the paper reappeared under his editorship in Tel Aviv. David Dezső Schőn, who had been a contributor, participated in its reestablishment and was appointed responsible editor. In Transylvania the paper had always reacted strongly to events affecting world Jewry and fought for the rights of the Jewish communities. Reestablished in Tel Aviv, *Uj Kelet* encouraged the integration of Hungarian immigrants into Israel's cultural life. Its contributors were mostly survivors of the Holocaust who had been contributors in Transylvania. E. Marton, who died in 1960, was succeeded by his widow, Gisela Marton, while the running of the paper was entrusted to his son Michael Marton.

UJVÁRI, PÉTER (1869–1931), Hungarian author and journalist. Ujvári, the son of Wolf Groszmann, rabbi of Érsekújvár (Nové-Zámky), Slovakia, was born in Tolcsva. He was educated at various yeshivot until the age of 20, when he became a journalist in Szeged. By the time he moved to Budapest, in 1907, he was already well known. In Budapest he joined the editorial boards of a number of liberal newspapers, as well as the Jewish newspaper *Egyenlőség*. It was in this paper that his first and most important novel, *Az új keresztény* ("The New Christian," 1907), was serialized. This is the tragicomic story of the conversion to Christianity of the head of a small Jewish community, so that his son may be elected to parliament. The book gives a realistic picture of Jewish life in the late 19th century, of the people who strove to preserve it, and of those who helped to destroy it. He never gained a wide readership and lived most of his life at starvation level. After World War I, he wandered from one Central European country to another and, when he returned to Budapest, every one of his attempts to establish a Jewish newspaper met with disaster. His only successful enterprise was the Hungarian-Jewish encyclopedia, *Magyar Zsidó Lexikon* (1929), a carefully written and responsible work which, after the extermination of Hungarian Jewry, became an important source of information.

Ujvári's other works include *Legendák és krónikák* ("Legends and Stories," 1905), *A túlsó parton* ("Across the River," 1920), and *A mécs mellett* ("By Candlelight," 1908), memories of his yeshivah days. Ujvári's play, *Leviathán* (1929), on life during the Ukrainian pogroms, was banned in Hungary.

UKBA (**Ukva**), **MAR,** Babylonian *amora* of the early third century C.E. Ukba's name is usually prefixed by the title *mar*, which was customarily adopted by members of the exilarch's family. According to the letter of Sherira Gaon (ed. Lewin, 77), Ukba succeeded Huna as exilarch; Bacher (JE, 5 (1903), 289) dates his accession to a period shortly before the rise of the Sassanids. His principal teacher was *Samuel (Er. 81a; Shab. 108b), who praised his qualities as a judge. A dispute between Samuel and Karna was referred to Ukba's court at Kafri (Kid. 44b). To his court were applied the words of Jeremiah (21:12): "O house of David [the exilarch was traditionally descended from David] execute judgment in the morning, and deliver him that is spoiled out of the hand of the oppressor" (Shab. 55a). Moreover, although Samuel's knowledge exceeded that of Ukba, the latter passed judgment in his teacher's presence (MK 16b). He nevertheless continued to show his respect for Samuel by accompanying him home every day. When he once

neglected to do so, he acknowledged his fault (*ibid.*). Ukba and his court had close ties with Palestinian scholars, who consulted him and by whom he was highly respected (Sanh. 31b). He corresponded with the *nesi'im* on matters relating to the calendar, such as the incidence of leap years (TJ, Meg. 1:7, 71a), and the timing of festivals (RH 19b). Among his Babylonian colleagues was Matna (MK 26b). His closest pupil was *Ḥisda, who also lived in Kafri, and who transmitted many of his sayings (Ber. 10b, etc.)

Ukba was renowned for his charity, of which the Talmud gives three particular examples (Ket. 67b). On one occasion, he and his wife, in order to avoid being seen and thanked by a poor man to whom they were accustomed to give four zuz every day, took refuge in a furnace from which the fire had barely been swept. On another, his son reported that a man to whom Ukba had sent him to give 400 zuz on the eve of the Day of Atonement was not, in fact, a pauper. Ukba nevertheless immediately doubled the amount. Finally, even when he discovered, on his deathbed, that he had already donated 7,000 golden denarii to charity, he gave half of his remaining wealth to charity (Ket. 67b). Ukba had two sons: Meri (Ḥul. 43b) and Nathan (Ber. 13b).

UKBA (Ukva), MAR, *exilarch in the late ninth-early tenth centuries. Ukba was appointed exilarch in succession to his uncle Zakkai b. Aḥunai (d. c. 890), as Zakkai's son *David, who later became known for his dispute with R. *Saadiah Gaon, was then very young. A violent controversy broke out between Ukba and the *rosh yeshivah* of *Pumbedita, R. Judah b. Samuel, who acted as *Gaon* from 905 to 917, over the question of the income of the academy from the region of *Khorasan. As a result of the interventions of the wealthy communal leaders *Netira and his father-in-law *Joseph b. Phinehas, Mar Ukba was banished from 909 to 916. According to *Nathan ha-Bavli, he was banished to *Kermanshah, in the east of the Abbasid Empire. After a time Ukba returned to *Baghdad, but the interventions of Netira and his father-in-law caused him to be banished for a second time. According to *Abraham b. Nathan ha-Yarḥi (*Sefer ha-Manhig*, ch. 58), it is known that he settled in *Kairouan, where he received all the honors due an exilarch. The position of exilarch was left vacant until the appointment of David b. Zakkai.

[Abraham David]

ʿUKBARĀ (Okbarā), Babylonian town. The three towns of ʿUkbarā, Avana (Awana), and Busra, which were all situated near each other on the left bank of the Tigris, were regarded as the northern extremity of Babylonia during the talmudic period. The largest of these was ʿUkbarā; the geographer al-Muqaddasī said at the close of the tenth century that it was a big town with a large population. It fell into decline and was destroyed as a result of a change in the course of the Tigris, whose chief river bed moved eastward during the 12th century; this explains the fact that the town's ruins are now located to the west of the river. During the town's period of prosperity there was also a large Jewish settlement (see allusions to it in A.E. Harkavy, *Zikkaron la-Rishonim ve-gam la-Aḥaronim*, 4 (1887), no. 285). During the ninth century *Meshvi of ʿUkbarā achieved fame; he founded a sect which deviated from both traditional Judaism and *Karaism. According to the testimony of *Benjamin of Tudela, the 12th-century traveler, there were about 10,000 Jews in ʿUkbarā during the second half of the 12th century. After the decline and destruction of the town, the Jewish settlement also disappeared. However, when the Jewish researcher Jacob *Obermeyer visited the site in 1877, he found many potsherds bearing Hebrew inscriptions in square script.

UKHMANI, AZRIEL (1907–1978), Israel writer and literary critic. Born in Sanok, Poland, Ukhmani studied in Sanok at the *yeshivah* of Rabbi Meir Shapiro and was ordained by the Taḥkemoni Rabbinical Seminary in Warsaw, later graduating in agronomy from the University of Toulouse, France. In 1932 he joined kibbutz Ein Shemer and was secretary of the labor council of Karkur. He served as editor of the literary supplement of Ha-Shomer ha-Ẓa'ir.

Ukhmani was one of the founders and editor of the daily newspaper *Al ha-Mishmar*. Together with Lea *Goldberg, R. Eliaz and Ezra *Sussman, he was a member of the editorial board of the literary weekly *Ittim*, which was edited by *Shlonsky. He was a founder of the progressive culture (*Tarbut Mitkademet*) and Ẓavta movements. He was editor of the *belles lettres* section (now the poetry section) of the Sifriat ha-Poalim publishing company and a member, for 20 years, of the Central Committee of the Hebrew Writers' Association in Israel, and for a number of years edited its publication *Moznayim*. He was a member of the PEN committee in Israel and was co-editor with Israel *Cohen of the annual for literature, criticism, and thought – *Me'assef*. Ukhmani published works on literary criticism: *Le-Ever ha-Adam* (1935); *Tekhanim ve–Ẓurot* (1957, enlarged and expanded edition, 2 vols. 1977); and *Kolot Adam* (1967). His poetical works, written under the pseudonym of Ron Adi, are *Aval Laylah Laylah Ani* (1968), *Mi-Sha'ah le-Sha'ah*, *mi-Nes le-Nes* (1970), *Emor Pelaim* (1973) and *Atar Kadum* (1976, awarded the Talpir Prize). Yehudit Kafri edited a volume in his memory, entitled *Bi-Ẓeva'im mi-Makor Rishon* (1983).

[Getzel Kressel]

UKMERGE (Pol. **Wilkomierz**; Rus. **Vilkomir**), city in Lithuania. The Jewish community of Ukmerge is first mentioned in a document of 1685. In the census of 1766, 716 Jews were counted there, and by 1847 their number had risen to 3,758, the majority of whom were engaged in commerce and crafts, including tanning. The community of Ukmerge was renowned for its conservatism. M.L. *Lilienblum lived there during the 1860s and it was there that he began his public career and literary activity. The community continued to develop and by the 1880s the number of Jews reached 10,000. A period of decline followed, however, when the town was bypassed by the railroads which were built at that time. In 1897 there were 7,287 Jews (54% of the total population) and 6,390 (49%) in 1910. At the beginning of May 1915 the Jews were expelled from Ukmerge, together with those of the province of Kovno. Some returned after the war and in 1923 there were 3,885 Jews (37% of the population). During the period of independent Lithuania (1918–40), Jewish life in Ukmerge prospered. A *yeshivah ketannah* (preparatory yeshivah) which prepared pupils for the larger Lithuanian yeshivot was established and there were also two secondary schools, Hebrew and Yiddish. The last rabbi of Ukmerge, R. Joseph Zussmanowitz (of Palestinian birth), ranked among the most prominent Lithuanian rabbis. With the annexation of Lithuania to the Soviet Union in June 1940, religious and nationalist Jewish life was systematically destroyed. A year later, Ukmerge fell into the hands of the Germans. On Sept. 18, 1941, the Jews remaining in Ukmerge, together with those of the neighboring towns, were assembled in the nearby forest and massacred.

[Yehuda Slutsky]

UKRAINE (Rus. **Ukraina**), East European republic, formerly the Ukrainian S.S.R. At the close of the 16th century there were about 45,000 Jews (out of the 100,000 Jews who were then presumably in the whole of Poland) living in the eastern regions of Poland which were inhabited by Ukrainians. Before the *Chmielnicki massacres of 1648–49 their numbers had increased to at least 150,000; in the census of 1764, 258,000 Jews were enumerated, though in fact their number was over 300,000. In 1847, according to official sources, there were almost 600,000 Jews in the Ukrainian regions belonging to Russia (the provinces of southwestern Russia – *Volhynia, *Podolia, and *Kiev; of "Little Russia" – *Chernigov and *Poltava; and of "New Russia" – Yekaterinoslav (*Dnepropetrovsk), *Kherson, and Taurida), though they actually numbered up to 900,000. According to the population census of 1897 (the first general census in Russia), there were 1,927,268 Jews in these regions, 9.2% of the total population of the Ukraine. The census of 1926 enumerated 1,574,391 Jews in the Ukraine, subsequent to the detachment of half of the province of Volhynia (the second half was then within the borders of Poland), half of the province of Taurida, and a small section of the province of Chernigov, while several districts of the Don region had been incorporated into it. The Jews then constituted 5.43% of the total population of the Ukraine. The census of 1939 enumerated 1,532,827 Jews in the Ukraine (4.9% of the total). According to the census of 1959, which also included the Jews of the regions which had passed to Russia after World War II (eastern *Galicia, northern *Bukovina, *Subcarpathian Ruthenia), there were 840,319 Jews in the Ukraine (2% of the total). According to this census, which was generally regarded as underestimating their numbers, Jews were concentrated in the towns of Kiev (153,500), *Odessa (106,700), *Kharkov (84,000), Dnepropetrovsk (52,800), *Chernovtsy (Czernowitz; 36,500), *Lvov (24,700), and *Donetsk (21,000). About 80% of the Jews of the Ukraine declared their mother tongue as Russian, about 17% (142,240) as Yiddish, and only about 3% as Ukrainian.

Development and Distribution of the Jewish Settlement

The Jewish settlement in the Ukraine preceded the unification of the area and the formation of the Ukrainian nation. Jewish settlements already existed on the banks of the River Dnieper and in the east and south of the Ukraine and the *Crimea in the periods of the *Khazar kingdom, while ancient Jewish communities were only established in the west, in Volhynia and "Red Russia" (eastern Galicia), in the 12th century. Of these the most ancient was apparently *Vladimir-Volynski. It seems that the "Russia" mentioned in 13th-century rabbinical literature refers to "Red Russia." These communities absorbed the Jewish migration from Germany and Bohemia caused by the persecutions and massacres of the 14th (the *Black Death) and 15th centuries; later, Jews were drawn to the Ukraine by the colonizing activities of the Polish nobility that intensified in the 16th to 17th centuries with the consolidation of the rule of *Poland-Lithuania over the region. The important role taken by the Jews in the economic sphere in this colonization made the Ukraine one of the Jewish centers in Poland-Lithuania. The number of the communities there increased from 25 during the 14th century to 80 in 1764. Even the Chmielnicki massacres in 1648–49 did not halt Jewish migration to the Ukraine and they played a prominent role in its economic recovery during the second half of the 17th and the 18th centuries. After the Ukraine was annexed by Russia, according to the census of 1764, about 15% of the Jewish population lived in provinces having communities over 1,000 Jews, while in other provinces – Volhynia, Podolia, Kiev, and *Bratslav – their proportion was only 11%. The census of 1897, however, shows that 72% of the Jewish population there were living in 262 communities of more than 1,000 persons, which, taken together with the communities having more than 500 Jews, meant that 37% of the Jewish population there lived in towns and townlets in which the Jews formed an absolute majority and 22% in lo-

calities where they formed 40–50% of the total population. In contrast, in the part of the Ukraine which lay beyond the Dnieper, in the provinces of Poltava and Chernigov (where about 225,000 Jews lived and constituted a majority in about two places only and 40% of the total population in three others), 65% of the Jewish population lived in 39 communities of more than 1,000. The same situation obtained in "New Russia" (the provinces of Kherson, Yekaterinoslav, and Taurida) where over 500,000 Jews lived: 76% of the Jewish population was concentrated in 58 communities of over 1,000, and Jews formed a majority only in their agricultural settlements. In 1897 Jews constituted 30% of the urban population of the Ukraine, 26% of them living in 20 towns, in each of which there were over 10,000 Jews.

After the abolition of the *Pale of Settlement, with the October 1917 Revolution, the civil war, and the disorders which accompanied it, more than 300,000 Jews left the Ukraine for other parts of the Soviet Union. Hence they formed only 5.4% of the total population and 22% of the urban population of the Ukraine in 1926, and 4.1% and 11.7% respectively in 1939. In 1926, 44% of them lived in 20 towns, each having over 10,000 Jews; while in 1939, 39% lived in the four cities of Odessa, Kiev, Kharkov, and Dnepropetrovsk. This intensified urbanization did not, however, give them predominance in the cities, since there also was a stream of Ukrainian peasants from the villages into the towns, which assumed a pronounced Ukrainian character.

For the history of Ukrainian Jewry after World War I and in the Holocaust see *Russia.

Economic Situation

The migration of Jews from the western provinces of Poland to the Ukraine in the 16th century was mainly due to their economic role in the **arenda* business on a large or small scale. Hence, the Ukraine became a region where Jews managed a considerable proportion of the agricultural economy, administering complexes consisting of a number of estates, single estates, or a sector of their economy. Jews also engaged in *arenda* there in the collection of customs duties and taxes, and played an important role in the export and import trade in the region. The Cossack authorities of the part of the Ukraine annexed by Russia beyond the Dnieper opposed the frequent expulsions of the Jews from there (1717, 1731, 1740, 1742, 1744), and argued in favor of their free admission to the Ukraine (1728, 1734, 1764) stating that the Jews promoted the region's trade. When the Ukraine (with the exception of eastern Galicia) became part of the Pale of Settlement after the partition of Poland-Lithuania, the Jews continued to play a considerable and dynamic role in the economy of the region. In 1817, 30% of the factories in Ukraine were owned by Jews. They were particularly active in the production of alcoholic beverages. In 1872, before the anti-Jewish restriction in this sphere, 90% of those occupied in distilling were Jews; 56.6% in sawmills, 48.8% in the *tobacco industry, and 32.5% in the *sugar industry. Only a limited number of Jews were occupied in heavy industry, where they were generally employed as white-collar workers. In 1897 the occupational structure of the Jewish population of Ukraine was 43.3% in commerce; 32.2% in crafts and industry; 2.9% in agriculture; 3.7% in communications; 7.3% in private services (including porterage and the like); 5.8% in public services (including the liberal professions); and 4.8% of no permanent occupation. Under the Soviet regime, by 1926, it had become 20.6% in arts and crafts; 20.6% in public services (administrative work); 15.3% workers (including 6.6% industrial workers); 13.3% in commerce; 9.2% in agriculture; 1.6% in liberal professions; 8.9% unemployed; 7.3% without profession; and 3.2% miscellaneous (pensioners, invalids, etc.). The proportion of Jews in various administrative branches was 40.6% in the economic administration and 31.9% in the medical sanitary administration. After large numbers of Jews had been absorbed under the Five-Year Plan in heavy industry (especially the metal and automobile industries), in the artisan cooperatives (in which there were over 70,000 Jewish members – 12.9% of the membership), and in agriculture (16,500 families in the cooperative farms), the proportion of Jews living in villages rose to 14% of the Jewish population.

Hatred of the Jews

When the Jews settled in the Ukraine during the period of Polish rule, they found themselves between hammer and anvil: under the *arenda* system the Jewish lessee administered the estate in the name of the Polish landowner, and, if living in the town, he found his customers among the nobility, officials, the Catholic clergy, and the local army garrison. To the enslaved peasants and rebellious Cossacks, Ukrainians, and Greek-Orthodox the Jewish lessee appeared both as an infidel and an alien – an emissary of the Polish Catholic noblemen who sought to dominate them. The Ukrainian townsman was jealous of his urban rival, the unbelieving Jew, whose success was due to the assistance of the foreign and hated Polish regime. In times of rebellion and war, this hatred and jealousy was vented in severe persecutions and horrifying massacres, such as the Chmielnicki massacres of 1648–49, when over 100,000 Jews were brutally killed and almost all the communities of the Ukraine were destroyed, and the persecutions of the *Haidamaks in the 18th century, which were more limited in scope but even more terrible in their cruelty. These massacres, whose perpetrators were admired as national heroes, gave rise to a popular tradition of hatred toward the Jews in the Ukraine; it was nurtured by the increase of the Jewish population in the country, by its economic position, and later by the propagation of the Russian language and culture by Jews – an act which the nationalist Ukrainian intellectuals (the "Ukrainophiles") regarded as collaboration with the "Muscovite" Russian government in its campaign against their awakening as a separate nation. This tradition of hatred toward the Jews found its expression in both folk songs and literature (T. Shevchenko; N. Gogol), in historiography (N. Kostomarov), and in political thought (M. Dragomanov). The Nationalist and Socialist Party of the Ukraine was also imbued with anti-Jewish feel-

ings. The *pogroms of 1881–82 broke out and spread through the provinces of the Ukraine; after 1917, in the Civil War and under the regime of S. *Petlyura (the "Socialist" government), about 100,000 Jews were murdered in the Ukraine (1919–20), as in the days of Chmielnicki and with the same cruelty. Two decades of Soviet regime did little to eradicate the hostility against the Jews: during World War II great parts of the Ukrainian population wholeheartedly collaborated with the Nazis in exterminating the Jews in the occupied Ukraine.

The Period of the Independent Ukraine and Jewish National Autonomy

The period from March 1917 to August 1920 constitutes a special chapter in the history of the Jews of the Ukraine. The Ukrainians established a National Council (the Rada), which in January 1918 proclaimed the separation of the Ukraine from Russia; this episode came to an end in August 1920, when the Red Army completed the conquest of the Ukraine. During this time the leaders of the Ukrainian nationalist movement attempted to reach an agreement with the Jews. They established relations with the leaders of Zionism in eastern Galicia, and jointly waged a struggle against Polish aims in the Ukraine. During this period the Jews were represented in the Rada (with 50 delegates), a secretariat for Jewish affairs was established (July 1917), and a law passed on "personal national autonomy" for the national minorities, among which, the Jews were included. The Jewish ministry (M. *Silberfarb was the first minister; he was succeeded by J.W. *Latzki-Bertholdi) passed a law providing for democratic elections to the administrative bodies of the communities (December 1918), a Jewish National Council was formed, and the Provisional National Council of the Jews of the Ukraine was convened (November 1918). These institutions were short-lived. In July 1918 the autonomy was abolished, the Jewish ministry was dissolved and the pogroms which then took place – without the Ukrainian government taking any effective measures to assure the security of the Jewish population – proved that the whole of this project had been directed more at securing the assistance of the Jewish parties in order to achieve complete separation from Russia than at really developing a new positive attitude toward the Jews.

Religious and Social Movements in Ukrainian Jewry

Ukrainian Jewry became a focus of religious and social ferment within Judaism from the late 17th century. The massacres and sufferings endured by the Jews in the Ukraine also introduced spiritual and social trends. The messianic agitation which followed the massacres of 1648–49 paved the way for the penetration of *Shabbateanism, while at the time of the Haidamak persecutions and the revival of *blood libels, the *Frankist movement made its appearance, and *Ḥasidim as inaugurated by *Israel b. Eliezer Ba'al Shem Tov developed and spread rapidly through the country. After the pogroms of the 1880s, the Ukraine was not only the birthplace of the *Ḥibbat Zion, the *Bilu, and the *Am Olam movements but also of the Dukhovno-bibleyskoye bratstvo ("Spiritual Biblical Brotherhood," founded by Jacob *Gordin and his circle) which sought to "bring back" the Jews to the religious purity of the Bible and thus draw them closer to Christianity. Activist and revolutionary trends were also prominent in the Hebrew and Yiddish literature which emerged in the Ukraine during the 19th and 20th centuries.

During the 1920s and the early 1930s three Jewish districts were created in the areas of Jewish settlement in southeastern Ukraine (*Kalininskoye, Stalinskoye, and *Zlatopol; see also *Yevsektsiya).

[Benzion Dinur (Dinaburg)]

After World War II

During the last stages of World War II and in the period after it, when Nikita Khrushchev was the ruling party man of the Ukraine, Ukrainian Jews who, during the occupation, fled or were evacuated to Soviet Asia, began to stream back and claim their previous housing, possessions, and positions. They were met with outspoken hostility by most of the Ukrainians who had taken their place. The administration refused to interfere in favor of the Jews and generally showed "understanding" for the anti-Jewish reaction, even hushing up violent clashes (as, e.g., in Kiev). When Khrushchev became the ruling figure in the U.S.S.R. after Stalin's death, and particularly in the 1960s, the traditional hatred of Jews in the Ukraine was again allowed to find free expression in pseudo-scientific literature (e.g., the book by the professional antisemite Trofim Kichko, *Judaism without Embellishment*, which appeared in 1963 under the auspices of the Ukrainian Academy of Sciences) and in various popular brochures and periodicals. This official anti-Jewish atmosphere prevailed in the Ukraine during the whole postwar period. The only synagogue in Kharkov was closed down in 1948 and its aged rabbi sent to a labor camp. In Kiev the only remaining synagogue was put under severe surveillance of the secret police, more than in other Soviet cities. Yiddish folklore concerts and shows were almost completely banned from the Ukrainian capital, Kiev, though they were allowed to take place occasionally in Ukrainian provincial towns.

An interesting reaction to this trend "from above" became noticeable in the late 1960s among Ukrainian intellectuals who openly strove to achieve more freedom in civil and national rights. Though engaged in defending the Ukrainian character of their republic against "russification," some of them went out of their way to emphasize their solidarity with Jewish demands for the revival of Jewish culture and education. They also identified with the Jewish attempt to keep alive the remembrance of the Holocaust against the official policy of obliterating it. Young Ukrainian writers, most of them Communist Party members, expressed this new trend in Ukrainian national thought in various ways, and even in labor camps after their arrest for "bourgeois nationalism." A particular impression was made in 1966 by the speech of the writer Ivan Dzyuba in *Babi Yar on the anniversary of the massacre (October 29). It was published only in the West, but it became widely known among Jews and educated non-Jews in the Ukraine.

From 1969 some Jewish families in Kharkov, Kiev, and Odessa were allowed to leave the U.S.S.R. for Israel. In the following two decades Jewish life continued to be repressed as in the U.S.S.R. as a whole. Religious life was centered in the synagogues. In the mid-1970s there were an estimated dozen functioning in the Ukraine. Many Jews were able to leave during the large wave of emigration in the 1970s, arriving largely in the United States and Israel. During the 1970s and 1980s Kiev became a major center of underground Jewish culture and pro-*aliyah* agitation. (For general developments, see *Russia.)

In Independent Ukraine

According to the Soviet census there were 487,300 Jews living in Ukraine in 1989. This figure included 100,600 in Kiev, 69,100 in Odessa province (city and surrounding oblast), 50,100 in Dnepropetrosk province, and 48,900 in Kharkov province. By late 1991 the number of Jews in the Ukraine was estimated at 325,000. The number of Ukrainian Jews emigrating from the late 1980s was the following: 1988 – 8,770; 1989 (to Israel) – 32,547; 1990 – 60,074, and 1991 (to Israel) – 41,264. The geographical breakdown of emigration for 1989–1991 (from 1990 only to Israel) was: from Kiev – 33,818; Odessa province – 19,741; Kharkov province – 11,945; Dnepropetrosk province – 7,501; and Zhitomir province – 5,005. Large-scale emigration continued through the 1990s. At the end of the process over 80% had left, leaving an estimated 84,000 in 2005.

Ukraine declared its independence on August 24, 1991, with the majority of the republic's Jews also voting for independence. On a number of occasions the leaders of the Ukrainian national movement "Rukh" expressed a positive attitude toward the Jews of the Ukraine and the desire to cooperate with them. To further that goal, an international conference was held in Kiev in June 1991 on Ukrainian-Jewish relations, with the participation of leading Ukrainian public figures. Ukrainian president Kravchuk spoke at the public meeting commemorating the 50th anniversary of the mass murder of Kiev's Jews at Babi Yar. In his speech the president acknowledged the Ukrainian people's share of guilt for the destruction of the Jews and asked for the Jewish people's forgiveness. He also called for the UN to support the initiative of U.S. president George Bush and rescind the UN resolution equating Zionism with racism. In 1990, before the splitting up of the U.S.S.R., four Jewish deputies were elected to the Supreme Soviet of the Ukrainian republic.

Under Soviet rule, Bogdan *Chmielnicki, the leader responsible for the unprecedented Cossack slaughter of Jews in the mid-17th century, had been considered a Ukrainian national hero. With the growth, however, of Ukrainian separatist feeling, Chmielnicki became less of a hero due to the fact that he had concluded a pact with Moscow which transformed Ukraine into a Russian colony. Today Simon *Petlyura (1879–1926) is considered the pre-eminent national hero since he headed the country during the brief years of its independence after World War I. Petlyura's responsibility for pogroms during the Civil War is denied by Ukrainian nationalists. In Ukraine the Jewish hero Shalom *Schwarzbard, who assassinated Petlyura in Paris for supporting the perpetrators of pogroms, is today viewed as having been a Soviet secret police agent.

Grass roots antisemitism has not disappeared in Ukraine. According to the results of a sociological survey conducted in November 1990, 7 percent of the population firmly believe in the existence of an international "Zionist" conspiracy, while 68 percent believe that such a conspiracy may exist; 10 percent believe that the Jews bear considerable responsibility for the suffering of other peoples (e.g., the Ukrainians) in the Soviet Union in the 20th century; and 20 percent believe that Jews have an unpleasant appearance.

A law on ethnic minorities grants Ukrainian Jews the right of national-cultural autonomy. In 1992 several Jewish publications appeared, including three (*Vozrozhdenie-91, Evreiskie vesti*, and *Khadashot*) in Kiev. Study (often by amateurs) of local Jewish history is being developed in the republics. The Jewish Culture Association of Ukraine was headed by Ilya Levitas; the rival Association of Jewish Public Organizations of Ukraine was headed by the co-chairman of VAAD of the CIS, Iosif Zisels.

In late 1991, 120 Jewish organizations were operating in Ukraine. The Ukrainian Jewish Congress was established in Oct. 1991. The American rabbi Yankel Blau was named chief rabbi of Ukraine. Several synagogues confiscated in the 1920s and 1930s were returned by Ukrainian authorities, among them those of the Jewish communities of Kharkov, Donets, Vinnitsa, Odessa, Lvov, Shepetovka, Kirovograd, and Drahobych.

[Michael Beizer]

In 1993 Leonid Kuchma was elected president of the Ukraine, which put an end to the moderate nationalist government in the country; Kuchma was regarded as a more pro-Russian leader, who favored closer ties with Moscow. The Black Sea fleet and the Crimean question continued to be, however, burning issues in the relations with Russia.

In April 1994, the Academies of Sciences in the Ukraine and in Israel signed an agreement on cooperation. In September 1995 Prime Minister Yitzḥak Rabin paid an official visit to the Ukraine.

JEWISH LIFE. The main umbrella organization of Ukrainian Jewry in the 1990s was the Association of Jewish Communities and Organizations of Ukraine (VAAD). The Jewish Council of the Ukraine (JCU) was registered in the Ministry of Justice of the Ukraine in January 1993 as the second umbrella organization of Ukrainian Jewry. In the words of the Jewish activist Arkadii Monastyrsky, the JCU united all the Jews of the Ukraine, whereas the VAAD was merely a council of chairpersons of Jewish organizations. Despite the obvious rivalry between both federations, there was no lack of cooperation between them. In 1993 both rival umbrella organizations agreed on cooperation in such matters as Holocaust commemoration

and the program "Righteous Gentiles" (in June), and also on common endeavors for the establishment of the Methodological Center for Jewish Education under the aegis of the Ukrainian Ministry of Education (in September 1993).

The Solomon's University in Kiev, one of the four Jewish universities operating in the former Soviet Union, was formerly established in 1993. The International Memorial Foundation Ianovsky Camp was established in Lvov in the beginning of 1993. The newly established foundation issued a declaration in which it explained its goals: to liquidate a penitentiary colony at the site of the former Nazi camp in the outskirts of Lvov; to set up a memorial complex, which would include a Holocaust museum and the international center of documentation on the Jews of Galicia.

In March 1994, the training center for teachers in Jewish day and Sunday schools in the Ukraine, Belarus and Moldova opened in Kiev. It was supported by the JCU, VAAD, the Ukrainian Ministry of Education, and the Foundation for Culture and Education in the Diaspora.

There were 19 Jewish periodical publications in the Ukraine in 1993, among them 10 were issued only in Kiev, 2 in Kharkov, 2 in Dnepropetrovsk, 2 in Chernovtsy, others in Donetsk, Simferopol and Bershad. The papers were issued in Russian, Ukrainian, and, to a lesser extent – in Yiddish. The oldest and the most important Jewish newspapers were the monthly *Vozrozhdenie-91* ("Revival-91"), the continuation of *Vozrozhenie* (see JDB, 1993, p. 364), *Khadashot-Novosti* ("The News"), and *Evreiskie vesti* ("Jewish Reports"), all published in Kiev.

A number of academic conferences on Jewish issues were held in the Ukraine. In October 1993 alone there were three such events: two international scientific conferences, "The Holocaust of Galician Jewry – Problems of History, Politics and Morality," held in Lvov, and "The Beilis Trial: Current Perspectives," held in Kiev; and the conference "Overcoming Chauvinism and Extremism – the Prerequisite for Inter-Ethnic Harmony and Civil Peace in the Ukraine," held in Kiev. At the end of 1994, the conference "Jewish Culture, History and Tradition" was held in Odessa.

Jewish communal life continued to flourish in the following years. By 2005 over 250 Jewish organizations were active and education had expanded into a network that included 14 Jewish day schools, 10 yeshivot, and 70 Hebrew and Sunday schools. Large and active Jewish communities thrived in Kiev, Kharkov, Odessa, and Dnepropetrovsk. In late 2004, a new Jewish community complex opened in Zaparozhye with a theater, gym, kosher kitchen, library, Jewish school, kindergarten, orphanage, and welfare center.

The All-Ukrainian Jewish Congress (AUJC), founded in 1997, united the country's disjointed Jewish organizations in order to promote the Jewish national renascence. It is a volunteer, independent action organization whose membership includes over 120 different public associations, cultural associations, and funds. Also in 1997 the Jewish Foundation of Ukraine was founded as a Jewish charitable organization collecting funds for needs of Jewish organizations and communities in Ukraine.

In 1998, a new umbrella organization, the Jewish Confederation of Ukraine (JCU), was founded, uniting the Association of Jewish Communities and Organizations of Ukraine (VAAD), the Jewish Council of Ukraine, the Union of Jewish Religious Organizations of Ukraine, and the Kiev Municipal Jewish Community.

Another group, the Congress of Jewish Religious Organizations, under Chabad Lubavitch, has also been active in recent years. The World Union for Progressive Judaism has a rabbi based in Kiev and additional Reform congregations operate in Lvov and Kerch; the World Union also runs leadership seminars as well as holiday and summer programs. The Masorti (Conservative) movement runs a Sunday school and youth group in Kiev, and operates day schools, youth activities, and summer camps in several smaller cities.

Antisemitism

There were a number of right-wing nationalist and antisemitic groups in the Ukraine in 1993–94. Among the most conspicuous were the Organization of the Ukrainian Idealists, based in Lvov, the State Independence of the Ukraine party, and the Ukrainian National Assembly with its strong para-military wing "Ukrainian National Self-Defense" (IMA-UNSO). The OUI managed to organize several mass rallies in Lvov, which attracted more than 2,000 participants each; at the rallies antisemitic placards were displayed, and anti-Jewish speeches delivered.

Riots broke out in September 1993 in Vinnitsa, where UNA-UNSO members picketed the offices of the city's Jewish mayor Dmitrii Dvorkis, whom they accused of being a mafia boss. Following the arrest of the leaders of the organization, approximately 10,000 people reportedly blockaded roads and demanded their release. In 1993–94 Dvorkis, as well as other Jewish mayors – Odessa's Eduard Hurvich and Donetsk's Efim Zviahilsky – became victims of antisemitic campaigns.

There were a number of antisemitic periodicals in the Ukraine in recent years: *Nova Ukraina, Za vilnu Ukrainu* ("For Free Ukraine"), *Nezalezhna natsiia* ("Independent Nation"), *Holos natsii* ("The Voice of the Nation"), *Neskorena natsiia* ("Unconquered Nation"), which in 1994 serialized the "Protocols of the Learned Elders of Zion." The main accusation of the Ukrainian nationalist press against the Jews has been their alleged organizing of the mass famine in the Ukraine in 1932–33. A columnist wrote in *Neskorena natsiia* in November 1994: "It is difficult to find a people who have done Ukraine more harm than the kikes. Compared to their crimes, all the misdemeanors of Moscow, Warsaw, and Berlin combined pale into insignificance." Antisemitism in the Ukraine, based on a long tradition, continued to raise its head into the early years of the 21st century.

UKẒIN (Heb. עֻקְצִין; "Stalks"), 12th and last tractate in the order *Tohorot* in the Mishnah and the Tosefta. There is no *Gemara*, either in the Babylonian or the Jerusalem Talmud. *Ukẓin* deals, in three chapters, with the problems of ritual impurity affecting roots, stalks, husks, shells, kernels, etc., and the imparting of the uncleanness to the fruits to which they are attached. This tractate was considered one of the most difficult even in talmudic times (Ber. 20a; Hor. 13b).

Chapter 1 distinguishes first between *yad* ("handle") and *shomer* ("protection"), the former referring to that part of the fruit which one holds when eating the fruit, and the latter to such parts as protect the fruit; both are relevant to the question of ritual purity. It then goes on to consider the roots and stalks of a great variety of vegetables and fruits, determining whether or not (or to what extent) they fall under the terms of *yad* and *shomer*. Chapter 2 continues this subject, in particular whether kernels, shells, husks, and encasing leaves are to be regarded as part of the fruit. Toward the end of the chapter, the problem of *hekhsher is touched upon, i.e., the susceptibility of food to ritual impurity, a subject dealt with in detail in tractate *Makhshirin*. Chapter 3 continues with the subject of *hekhsher*, introducing also the associated notion of *maḤashavah*, i.e., the intent to use the respective foods (vegetable or meat) for human consumption. Then there is a detailed discussion of various cases where one of the elements, *hekhsher* or *maḥashavah*, or neither of them, or both, are required in order to make the food susceptible to impurity.

Most of the laws in this tractate are found scattered among the other tractates, e.g., *Tohorot* 1:1–4; 8:9; *Tevul Yom* 3:1–3; and *Makhshirin*. R. Samson of Sens (in his commentary at the beginning of *Tohorot*) suggests that *Ukẓin* logically precedes *Tohorot*, which continues with the subject matter of *Ukẓin*'s final chapter. The laws of *Ukẓin* were known to be very difficult to understand, and when Rav Judah studied it he would say, "we see here questions of Rav and Samuel." In *Horayot* 13b it is related that several rabbis strove to embarrass the *nasi* Simeon b. Gamaliel by challenging him to teach them *Ukẓin*. If the reference is to the tractate and not to the individual laws, it proves that at least parts of the Mishnah were edited before Judah ha-Nasi. According to Epstein, Mishnah 3:2 represents the revised opinion of Akiva (cf. Tosefta 3:2) and Mishnah 3:10 represents the view of Meir.

The Tosefta also consists of three chapters, but many paragraphs in it, such as 2:1–10 and 3:6–14, are not directly related to any Mishnah; and even when there is a correlation, the order of the Tosefta does not correspond to that of the Mishnah. It may be noted that the view of Resh (Simeon b.) Lakish, placing *Tohorot* as the sixth and last order of the Mishnah, having been accepted (Shab. 31a), *Ukẓin* appears as the last tractate of the whole Mishnah (as well as of the Talmud and Tosefta). It is an unusual subject with which to round off the Oral Law. According to Maimonides, its position does not express any particular appreciation for this tractate; on the contrary "it has been left to the end", he says, "because it is based on rabbinical speculation, without any foundation in the Bible" (Introduction to *Zera'im*). To give the Mishnah a fitting close, later editors of the Mishnah added an aggadic passage to the original text of *Ukẓin*, speaking of great reward for the pious and the divine blessing of peace, and quoting in conclusion Psalm 29:11: "The Lord will give strength unto His people, the Lord will bless His people with peace." It was translated into English by H. Danby in *The Mishnah* (1934). For bibliography see main articles *Mishnah; *Talmud; *Tosefta.

[Arnost Zvi Ehrman]

ULAM, STANISLAW MARCIN (1909–1984), mathematician. Ulam was born in Lvov, Poland (then Austro-Hungary), and educated at the Lvov Polytechnic Institute, receiving his doctorate in mathematics in 1933. In 1935 he was invited to work at the Institute for Advanced Study in Princeton. After a brief period in Poland, he returned to the U.S. in 1938, first to Harvard and then in 1940 to the University of Wisconsin as assistant professor. He became a U.S. citizen in 1943, the same year that he joined the Manhattan Project group at Los Alamos working on the development of nuclear weapons. With Von Neumann, he developed the "Monte Carlo" approach to computational problems, paving the way for the "simulation" methods of physics research. His major contribution to the development of thermonuclear weapons was to suggest that compression was essential to inducing a sustained fusion reaction. With Edward *Teller, he devised the system by which this was achieved with radiation implosion from a fission explosion rather than mechanical shock. In 1965 he left Los Alamos for the chair in mathematics at the University of Colorado in Boulder, a post he retained until his death in Santa Fe. With

K.C. Everett, he proposed a scheme for nuclear propulsion of space vehicles. He was essentially a theorist and his intellectual creativity survived the effects of encephalitis contracted in 1946. He was elected a member of the U.S. National Academy of Sciences, the President's Science Advisory Committee, and the Board of Governors of the Weizmann Institute (1975). His publications mainly feature books on mathematical theory.

[Joseph Gillis / Michael Denman (2nd ed.)]

ULIANOVER, MIRIAM (1890–1944), Yiddish poet. Born in Lodz, Poland, Ulianover published poems in journals such as the *Lodzher Folksblat* and *Lodzher Togblat*, until deported to *Auschwitz where she perished. A single volume, *Der Bobes Oytser* ("Grandmother's Treasure," 1922), with an introduction by David *Frischmann, led to her being acclaimed as one of the outstanding women poets in Yiddish. Only extracts of a second volume, *Shabes* ("Sabbath"), appeared in E. Korman's anthology *Yidishe Dikhterins*. Her poems combined the simplicity of folk songs with tender romantic mysticism and nostalgia for the lost traditional world of her grandmother and great-grandmother in Polish villages.

[Sol Liptzin / Sarah Ponichtera (2nd ed.)]

ULLA I (**Ulla b. Ishmael** in the Jerusalem Talmud; second half of third century), Palestinian *amora*. Ulla studied in Ereẓ Israel under *Johanan b. Nappaḥa (Ḥag. 19a), Resh Lakish (Git. 50b), and *Eleazar b. Pedat (Er. 21b), and transmitted halakhic decisions in their names. He also recorded some of the teachings of Oshaiah and Joshua b. Levi. He was known to be extremely strict in his interpretation of religious laws (Shab. 147a; 157b). Among his halakhic decisions were those concerning the benedictions to be made on different occasions (Ber. 38b; Pes. 53b; 104b). He censured decisions he disliked and on one occasion commented, "As vinegar to the teeth and as smoke to the eyes are the words of *Huna" (Kid. 45b). Some of his other colleagues were *Abba (BM 11 b), *Judah (Ḥul. 76a), and particularly, *Rabbah b. Bar Ḥana (Ḥul. 34a).

Ulla was greatly respected both in Ereẓ Israel and in Babylon, which he visited frequently, and he was one of the first **neḥutei* (TJ, Kil. 9:3). In Babylon he reported on current Palestinian customs and decisions and was often invited by the exilarch to deliver halakhic discourses (Ket. 65b; Kid. 31a; Shab. 157b). It is related that once, when returning to Ereẓ Israel from Babylon, Ulla was in danger of being murdered by one of his fellow travelers. In order to save himself he had to condone the murder of another, and Johanan excused his conduct as having been done in self-defense (Ned. 22a). Ulla's maxims reveal how intensely he felt the tragedy of the destruction of the Temple; for instance: "Since the destruction of the Temple, God has nothing in this world save the four cubits of *halakhah*" (Ber. 8a); and "Jerusalem will be redeemed through the performance of charity" (Sanh. 98a). He died in Babylon on one of his visits (before c. 279 C.E.). On hearing the news, Eleazar, adapting Amos 7: 17, exclaimed, "That you, Ulla, should have died in an unclean land" (Ket. 111a), and had his remains taken to Ereẓ Israel for burial. He was survived by his only son, Rabba (Shab. 83b). Among those who transmitted his sayings were Aḥa b. Adda, Ḥisda, and Joshua b. Abba.

BIBLIOGRAPHY: Hyman, Toledot, 970–4; Bacher, Pal Amor; Frankel, Mevo, 119b–120b; Ḥ. Albeck, *Mavo la-Talmudim* (1969), 302–4.

ULLENDORF, EDWARD (1920–), British linguist. Ullendorf, who received his schooling in Germany and his university education in Jerusalem, served with the British in Eritrea and Ethiopia during and after World War II (1942–46) and was an assistant secretary in the Palestine government in 1947–48. He then took up a research post at Oxford; in 1950 he became reader in Semitic languages at St. Andrews University, Scotland. In 1959 he was appointed professor of Semitic languages and literatures at Manchester University and in 1964 professor of Ethiopian studies at the School of Oriental and African Studies of the University of London, retiring in 1982. Ullendorf's service in Eritrea and Ethiopia led him to concentrate his research on studies of the Semitic languages of those areas.

Among his published works are *The Definite Article in the Semitic Languages* (1941), *Exploration and Study in Abyssinia* (1945), *The Semitic Languages of Ethiopia* (1955), *The Ethiopians* (1959), and *The Challenge of Amharic* (1965). He was chairman of the Anglo-Ethiopian Society.

ULLMAN, MICHA (1939–), sculptor and painter. Ullman was born in Tel Aviv, the son of Yitzhak Ullman and Lily Hirsh, who emigrated from Germany in 1933. Ullman spent his childhood in Tel Aviv where he lived with his extended family. After his army service, he studied art in the Bezalel Academy of Art and Design (1960–64). In 1965 he studied in London at the Central School of Arts and Crafts. From 1970 until 1978 Ullman taught at Bezalel, but after an ideological rebellion by the teachers and the students there, Ullman was fired. He began to teach at Haifa University and from 1991 was also a lecturer at the Academy of Art in Stuttgart, Germany.

Ullman participated in the Venice Biennale (1980) and in the Sao Paulo Biennale (1989). He was awarded many art prizes in Israel as well as in Germany and became a well-known artist in both countries.

Ullman used graphic techniques and sculpture in his art. In most cases the drawings of the sculptures were printed and exhibited beside them or in a separate exhibition. For a better understanding of Ullman's abstracts it is recommended to observe all those components.

From 1982 Ullman began to create public sculptures. He created site specific works, some of which were so minimal in size that they became almost unseen. Some of his public sculptures were placed at ground level or even beneath it, so most of the time the audiences stood on them without being

aware of it. This subversive style is a characteristic of Ullman's art. One of his first digging works was created in 1972. Ullman excavated two potholes one in kibbutz Mezer and the other one was situated in the nearest Arabic village Meser. In a symbolic act Ullman took the earth of each hole and filled the other one with it. This conceptual action was connected to the art style of the 1970s as well as to the political meaning of Ullman's art.

One of his noted works is the monument *Library* (1995, Bebelplatz, Berlin), which commemorates the book burning of May 10, 1933. The sculpture was a closed hall, below the ground, covered with a glass square. All the walls were covered with shelves and in general was reminiscent of a library which could contain around 20,000 books, similar to the amount of books burned that night. The white hall is lit with constant artificial light so the surroundings, the sky and the viewer, are reflected in the glass. This modest monument was very heartrending and it attracted a great public.

The shape of Ullman's works was abstract, but their content was very symbolic. Ullman used linguistic double meanings in his works, referring to literary, philosophical, religious as well as historical meanings. Being an Israeli who was working outside of his country was expressed in the meaning of the works, for example, by creating a linkage between the works and Jerusalem (*Molad – New Moon*, 1994, Schloss Solitude, Stuttgart).

[Ronit Steinberg (2nd ed.)]

ULLMAN, TRACEY (1959–), British comedienne, actress, and singer. Ullman was born in Berkshire, England, to Dorin and attorney Antony Ullman, a Polish immigrant who died when Tracey was six. Her mother enrolled her in the Italia Conti Academy of Theatre Arts at 12. Ullman dropped out at 16 and spent six months performing in a Berlin production of *Gigi* before returning to England, where she was cast in West End productions of *Grease* and *The Rocky Horror Show.* At 21, Ullman won the London Theatre Critics Award for her part in the improvisational play *Four in a Million* (1981). This led to roles on British television, including the BBC sketch comedy shows *Three of a Kind* (1981–83) and *A Kick Up the Eighties* (1981–84), as well as the ITV Jennifer Saunders-Dawn French sitcom *Girls on Top* (1985). Ullman recorded a comically romantic album under punk label Stiff Records, *You Broke My Heart in Seventeen Places* (1983), which featured the hit single "They Don't Know About Us." The song's video featured a cameo from Paul McCartney, who at the time was shooting *Give My Regards to Broad Street* (1984) with Ullman. After Ullman finished the Meryl Streep film *Plenty* (1985), she moved to Los Angeles with her husband and took time off to have her first child. Soon after, producer James L. Brooks helped her create the highly popular Sunday night variety show *The Tracey Ullman Show* (1987–90). The series received five Emmy nominations; earned Ullman a Golden Globe Award for best actress in 1988; and spun off one of America's longest-running animated series, *The Simpsons*. Ullman starred in *I Love You to Death* (1990) and appeared opposite Morgan Freeman in *The Taming of the Shrew* (1990) in Central Park. She made her Broadway debut in the one-woman show *The Big Love* (1991), which earned her a Drama Desk nomination. Ullman gave birth to a son in 1991. In 1993, she won an Emmy for her guest spot on the CBS sitcom *Love & War,* while 1994 saw her take another Emmy for her HBO special *Tracey Ullman Takes On New York* (1993). Ullman continued to star in films, including Mel Brooks' *Robin Hood: Men in Tights* (1993), *Bullets over Broadway* (1994), and James L. Brooks' *I'll Do Anything* (1994). HBO turned Ullman's award-winning special into a series, *Tracey Takes On…* (1996–99), which earned her a sixth Emmy in 1997. Her turn as Dr. Tracy Clark on *Ally McBeal* earned a second guest actress Emmy for Ullman in 1999. After starring in Woody Allen's *Small Time Crooks* (2000), Ullman received two more Emmy nods for her HBO specials *Tracey Ullman in The Trailer Tales* (2003) and *Tracey Ullman: Live & Exposed* (2005). Ullman became a naturalized American citizen in 2003.

[Adam Wills (2nd ed.)]

ULLMAN, VIKTOR (d. 1944), theater conductor and composer. Ullman studied under *Schoenberg in Vienna. Among his compositions were two operas, a piano concerto and much chamber music.

Ullman was arrested by the Nazis, imprisoned in Theresienstadt and murdered at Auschwitz in about 1944. While in Theresienstadt, he wrote an opera entitled *The Emperor of Atlantis,* but it was never performed since the Nazis realized its anti-Hitler implications and banned its performance. It was thought that the work had perished with the author, but a mutilated copy turned up in London. It had been written on scraps of paper, including the backs of Theresinstadt entrance forms. A young British composer, Kerry Woodward, succeeded in piecing it together, except for six bars which had disappeared; he therefore composed new ones. The text was written by a Czechoslovakian Jew, Peter Kien, who perished in Theresienstadt. The opera, written in German, had its world premiere in Amsterdam in 1975. The American premiere was performed in San Francisco by the Spring Opera on Apr. 21, 1977, in an English version translated by Aaron Kramer.

ULLMANN, ADOLPH (1857–1925), Hungarian baron, economist, and member of the Hungarian Upper House. He entered the service of the General Hungarian Credit Bank. In 1885 he was appointed director of the petroleum refinery, a subsidiary of the bank, and in 1909 (after the death of N. Kornfeld) he became the bank's chief executive. Ullmann played a decisive role in the financial activities of the Hungarian government and in establishing factories and industrial enterprises. He was also the president of the national industrial union. His articles on

economic problems were published (in German) in the daily Hungarian government newspaper, *Pester Lloyd*.

[Jeno Zsoldos]

ULLMANN, ERNEST (1900–1975), South African artist. Born in Munich, he worked as illustrator for *Auslandspost* and later in Berlin for *Mitropa-Zeitung*. In 1935 he settled in Johannesburg and the following year won the Empire Exhibition poster competition.

He was art editor of the weekly, *The Forum*, 1938–46, worked independently in various media, and took up sculpture. In 1950 he toured Israel and painted ten murals for the "Israel Cavalcade" exhibition in Johannesburg. His designs for wood panels and glass engravings for "Yad Vashem," the Etz Chaim Memorial Hall, Johannesburg, were unveiled in 1969. Ullmann's other works include book illustrations, designs for tapestries, and monumental sculptures in various South African cities, notably a large bronze group, *Playmakers*, for the Civic Theatre, Johannesburg, 1964. A park and recreation center in Johannesburg is named in his honor. He wrote an autobiography, *Designs on Life* (Cape Town, 1970).

[Lewis Sowden]

ULLMANN, SALOMON (1806–1865), French rabbi. Ullmann, who was born in Zabern (Saverne; Lower Alsace), first studied in Strasbourg, and then at the Ecole Centrale Rabbinique in Metz, where he was the first to receive the diploma of *grand rabbin* (1832). He officiated as rabbi in Lauterbourg (Lower Alsace) from 1834, and in Nancy (Lorraine) from 1844. In 1853 he succeeded Marchand Ennery as *grand rabbin* of France. One of his major achievements was the organization of the Central Conference of the *Grands Rabbins* of France, the first of its kind, over which he presided in Paris in May 1856. The conference resolved on a number of practical measures, including the introduction of the organ in synagogues.

ULLSTEIN, family of German publishers whose newspaper and magazine empire was at one time one of the largest in the world. The Ullstein company was founded in 1877 by LEOPOLD ULLSTEIN (1826–1899), the son of a wholesale paper merchant of Fuerth, Bavaria. Ullstein left his father's paper business in 1848 and went to Berlin, where he founded his own wholesale paper firm and became a progressive member of the Berlin City Council (1871–1877). In 1877 he bought up the failing *Neues Berliner Tageblatt* and brought it out as an evening paper with the name *Deutsche Union*. A year later Ullstein bought the *Berliner Zeitung*. In 1904 this paper, which reflected Ullstein's liberal political views, was merged by his sons with the *Berliner Zeitung am Mittag*. The new paper's circulation reached the unprecedented figure of 40,000 and made the Ullstein company one of the biggest publishers in Germany. All five of Ullstein's sons entered the family firm. HANS (1859–1935) was legal advisor for many years; LOUIS (1863–1933) was business head after his father's death, and FRANZ (1868–1945), who was editorial director, was the guiding force behind the company for many years. The younger sons, RUDOLF (1873–1964) and HERMANN (1875–1943) joined the firm after their father's death, Rudolf becoming technical director and Hermann managing the magazine and book departments. In 1887 Louis Ullstein founded the *Berliner Abendpost;* in 1898 the three eldest sons founded the *Berliner Morgenpost* and raised its circulation to 600,000, the largest of any German daily. They made the *Berliner Zeitung am Mittag* the first German newspaper to be sold by street vendors instead of by subscription. They also produced a series of other newspapers, including the *Berliner Allgemeine Zeitung*, the *Montagspost*, the *Vossische Zeitung*, and *Tempo*. In addition, the Ullsteins had their own picture and news services, radio equipment, music division, dress pattern division, movie studios, and even a zoo to serve one of their children's papers. The other major ventures of the Ullstein company were its book publishing house (Ullstein, renamed Propylaeen in 1919) and magazine empire. They published the *Berliner Illustrierte Zeitung*, a new type of paper with many illustrations, photographs and drawings, from 1894 with a circulation of two million. In 1919 the Ullsteins began publishing on a large scale, producing many other magazines on the sciences, the arts and literature, broadcasting, automobiles, and aviation. The advent of Hitler, however, spelled the end of the Ullstein enterprise. In 1934 the family was forced to sell the colossal empire to a Nazi-backed consortium for one-fifth of its value and the company became known as the *Deutscher Verlag*. In 1938 Franz and Hermann immigrated to the U.S.; Rudolf went to England in 1939 and to the U.S. in 1943. After World War II, the American authorities in West Berlin rebuilt the Ullstein plant and appointed Rudolf Ullstein as chairman. By 1957 the *Berliner Zeitung* and *Morgenpost*, owned by the Ullstein group, had the largest circulation in West Berlin. In 1960, however, the controlling interest in the group was sold to Axel Springer and the Ullstein family interest in the concern came to an end.

[Stewart Kampel / Archiv Bibliographia Judaica (2nd ed.)]

ULM, city in Wuerttemberg, Germany. The first documentary evidence of a community in Ulm dates from 1241, when a sum of six silver marks in taxes was paid by Jews. The first settlers undoubtedly arrived much earlier. An unbroken series of gravestones (dated from 1243 to 1491) from the cemetery, first mentioned in 1281, indicates the continued existence of

the community. As it grew during the 13th and early 14th centuries, its members were engaged primarily in moneylending. Jews were allowed to own houses, and although a *Judengasse* is mentioned in 1331, Jews were not restricted to one quarter. In 1348 the emperor *Charles IV allowed the imperial taxes paid by the Jewish community to be kept by the city for the purpose of its fortification. Despite measures taken by the municipal council to protect the Jews, on Jan. 30, 1349, during the *Black Death persecutions, the Jewish quarter was stormed by a mob and the community was all but destroyed. Nevertheless, it rapidly revived. The synagogue, cemetery and dance hall that had been appropriated by the city were relinquished to the Jewish community in 1354 and 1357. In 1366 a number of Jews were granted partial citizenship. Jud Jacklin, a local Jewish moneylender, monopolized the southern German money market, lent the city funds, and aided it in its struggle against the emperor. The municipality gradually replaced the emperor as protector of the Jews and recipient of their taxes.

In the 15th century, Ulm grew in economic and political importance, while the Jewish community, oppressed by heavy taxation and regulations restricting their financial activities, declined. In 1457 Jewish noncitizens were expelled; in 1499 all Jews were given five months to leave the city. These acts were carried out under a policy known as *Judenfreiheit* ("freedom from Jewish settlement"), which was vigorously observed for two centuries. Only in 1712 were Jews even allowed to trade at the cattle market. In 1786 a single Jew possessing the right of residence was known to have resided in Ulm. During the wars of the 18th century, *Court Jews lived in the city.

From 13 in 1824 the community grew to a peak of 667 in 1886, and thereafter gradually declined. A synagogue was consecrated in 1873 and a cemetery in 1885. The community consisted mostly of prosperous merchants and manufacturers. Albert Mayer, a lawyer, was the first Jew elected to the Wuerttemberg parliament, serving from 1906 to 1909. Julius Baum, the museum director, and the artist L. Moos were two well-known residents of the community. The most famous Jew born in Ulm was Albert *Einstein. During the Nazi era, the population of the community declined from 530 in 1933 to 162 in August 1939, in part due to the boycott of Jewish business establishments and antisemitic harassment; the old cemetery was desecrated in 1936; the same year, Jewish children were no longer able to attend the public schools and a Jewish school was established in its place. On Nov. 10, 1938, the synagogue was burned down and many Jews were viciously beaten. Of 116 Jews deported from Ulm during World War II (45 were sent to *Theresienstadt on Aug. 22, 1942), only four returned. Approximately 25 Jews were living in Ulm in 1968. In 1958 a plaque was mounted to commemorate the former synagogue. In 1988 an additional memorial was erected. In 2002 a Jewish community was founded as a branch of the Jewish community of Wuerttemberg in Stuttgart. A new community center was consecrated in the same year. The community had 450 members in 2004, mostly immigrants from the former Soviet Union who went to Germany after 1990.

[Henry Wasserman / Larissa Daemmig (2nd ed.)]

ULMAN, ABRAHAM (1791–1849), Hungarian rabbi. Ulman served as rabbi in Szabadka (Subotica) and from 1824 to his death in Lackenbach. Moses *Sofer had a high opinion of him and said that "his teaching is sacred" (ḤM no. 197).

Ulman published *Divrei Rash* (1826), the work of his father, Shalom Ulman. His own son, David, published Ulman's writings posthumously under the title *Beit Avraham* (1909), pilpulistic and halakhic responsa and talmudic novellae. David succeeded his father as rabbi in Lackenbach, serving until his death in 1906.

[Naphtali Ben-Menahem]

ULMAN, JOSEPH N. (1878–1943), U.S. lawyer and jurist. Ulman, who was born in Baltimore, Maryland, taught at the University of Maryland Law School during 1908–28 and served as judge of the Supreme Bench of Baltimore from 1924. As a judge, he advocated modernization of the state's divorce laws (1932), and a year later he wrote *A Judge Takes the Stand*, in which he discussed justice in Maryland, based on specific cases he had tried. About the same time, he told a convention of lawyers that the country's penal system "would be ludicrous if it were not so tragic." President Franklin D. Roosevelt appointed him head of a committee to study prison labor, then appointed him chairman of the newly-created Prison Industries Reorganization Board (1934–36), where he acted as a mediator in disputes concerning privately- and prison-made goods. Ulman was also active in civic affairs, serving as president of the Hebrew Benevolent Society (1925–28), president of the Baltimore Urban League (1931–34), and vice president of the Baltimore branch of the American Jewish Congress (1937–41).

ULPAN (Heb. אֻלְפָּן), center for intensive study by adults, especially of Hebrew by newcomers to Israel. The term comes from an Aramaic word meaning custom, training, instruction, law. It is also used to mean a broadcasting studio or artist's atelier. The term was coined in 1949 when the first center for intensive adult Hebrew study by immigrants was opened at the Eẓion immigrants' camp in Jerusalem and was called an ulpan in distinction to *bet sefer*, the usual term for a school.

The term has since spread to the Diaspora, where it is applied to all kinds of educational activity.

Mass immigration in the early years of the state brought a babel of tongues, and it became imperative to provide centers where the new arrivals could acquire Hebrew and a knowledge of Jewish culture. The Ministry of Education and Culture and the Absorption Department of the *Jewish Agency set up the Eẓion ulpan as a pilot project. Others were soon set up, primarily for professional men who could not find suitable work because of their ignorance of the Hebrew language and Israeli culture. The ulpan network became one of Israel's most significant features, essential in aiding immigrant settlement.

The major ulpanim are residential and intensive, offering four to five months' study with 30 hours of classwork per week. At a kibbutz ulpan younger people work half a day and pay no fees. Other ulpanim are nonresidential, and there are also morning and evening courses; the term *ulpanit* is also used for the less intensive courses. In 1969 there were 89 ulpanim in Israel (including those run by local authorities but supervised by the Ministry of Education). Between 1949 and the end of 1969, over 120,000 adults studied in them, some 11,000 in 1969 alone. The major residential ulpanim are in Jerusalem, Tel Aviv, Haifa, Netanyah, Beersheba, and Nazareth. In the 1990s, with the renewal of mass immigration, the ulpanim hosted Russian and Ethiopian newcomers. At the turn of the century there were 220 ulpanim nationwide teaching 27,000 students at 350 sites in cities, kibbutzim, factories, hospitals, army bases, universities, community centers, and government offices.

Ulpan teaching is intensive, eclectic, and functional. The curriculum combines study of the past (Bible, *aggadah*, Jewish history and traditions, folklore, and literature) with the needs of everyday communication. It includes civics, information on professional life, and the different aspects of modern Israel in its various aspects – geography, economy, security, and so forth.

ULPIAN (**Ulpianus Domitius of Tyre**; d. 228 C.E.), Roman jurist. Some scholars in the early part of the 16th century, believing that the Latin of Ulpian had been corrupted by an Oriental influence, sought for traces of "Hebraisms" in the fragments of his works, many passages of which are included in the *Digest* of Justinian. One, Otto, even went so far as to affirm, in his *Thesaurus of Roman Law*, that Ulpian, together with two other great Roman jurists, Papinian and Modestinus was half-Jewish. In the 18th century, this hypothesis was completely refuted by Heineccius, who not only pointed out the lack of reliable evidence for the supposed Eastern origins of Ulpian, since many Roman families lived in Tyre, but also showed that the alleged "Hebraisms" in Ulpian's Latin were also used by Livy, Cicero, and Quintillian, authors whose Roman origin is beyond question. Although in the 19th century, Orientalists such as Revillout and Lapauge revived this theory in an attempt to prove the Eastern origin of Roman law, it has been again discredited and abandoned by serious modern scholarship.

[Alfredo Mordechai Rabello]

°**ULRICH, JOHANN CASPAR** (1705–1768), Swiss Protestant theologian and historian. After his ordination in 1727, he studied Hebrew and the Talmud in Bremen under the Jewish apostate Gottlieb Fromann, and in Lengnau with Jacob Guggenheim. His missionary activities in Surbtal brought him into contact with the Jews of *Endingen and Lengnau. In his *Sammlung juedischer Geschichten*… (Basle, 1768; repr. 1922), the first comprehensive history of the Jews of Switzerland, he exonerates the Jews from complicity in causing the *Black Death and from similar allegations. For his work, Ulrich used Jewish sources as well as cantonal records, and it remains a valuable work of reference, especially the section on the Jews of Zurich.

UMAN (Pol. **Human**), city in Kiev district, Ukraine; in Poland-Lithuania until the 1793 partition. In 1749 the *Haidamacks massacred many Jews of Uman and burned part of the town. Count Potocki, the landlord of the city, rebuilt it in 1761, held fairs there, and otherwise stimulated its development. In 1768 Haidamacks annihilated the Jews of Uman, together with the Jews from other places who had sought refuge there. On June 19, 1788, the peasant revolutionary, Maxim Zheleznyak, marched on Uman after he had butchered the Jews of Tetiyev. When the Cossack garrison and its commander, Ivan Gonta, went over to Zheleznyak (despite the sums of money he received from the Uman community and the promises he had made in return), the city fell to Zheleznyak, in spite of a courageous defense in which the Jews played an active role. The Jews then gathered in the synagogues, where they were led by Leib Shargorodski and Moses Menaker in an attempt to defend themselves, but they were destroyed by cannon fire. The remaining Jews in the city were subsequently killed. The massacre lasted three days and did not spare old men, women, or children. Gonta threatened death to all Christians who dared

to shelter Jews. The number of Poles and Jews who were killed in the "massacre of Uman" is estimated to be 20,000. The anniversary of the commencement of the massacre, Tammuz 5, hereforth known as the "Evil Decree of Uman," was observed as a fast and by a special prayer. Naḥman of Bratslav settled in Uman and before his death there he said, "the souls of the martyrs (slaughtered by Gonta) await me." After his death in 1811, the Ḥasidim of Bratslav used to come to Uman in large numbers to prostrate themselves on his grave.

Uman had the reputation of being a city of *klezmerim* ("Jewish musicians"). The grandfather of the violinist Mischa *Elman was a popular *klezmer* in the city, and the tunes of Uman were widely known. It was also known as one of the first centers of the *Haskalah movement in the Ukraine. The leader of the movement was Chaim (Ḥaikl) *Hurwitz. In 1822 "a school based on Mendelssohnian principles" was established in Uman several years before the schools in *Odessa and *Kishinev. The founder was Ẓevi Dov (Hirsch Beer), the son of Chaim Hurwitz and a friend of the poet Jacob *Eichenbaum; the school closed after a few years.

In 1842 there were 4,933 Jews in Uman; in 1897, 17,945 (59% of the total population), and in 1910, 28,267. During the Bolshevik Revolution, the Jews of Uman endured great suffering. In the spring and summer of 1919, a number of troops passed through the city and perpetrated pogroms; there were 170 victims in the first pogrom and more than 90 in the subsequent one. This time the Christian inhabitants helped to hide the Jews. The Council for Public Peace, most of whose members were prominent Christians, with a minority of prominent Jews, saved the city from danger several times; in 1920, for example, it stopped the pogrom initiated by the troops of General A. Denikin. In 1926 there were 22,179 Jews (49.5% of the total population).

During World War II, the Nazis exterminated the Jews of Uman. In 1959 there were 2,200 Jews (5% of the total population). In the late 1960s the Jewish population was estimated at about 1,000. The last synagogue was closed by the authorities in the late 1950s, and the Jewish cemetery was badly neglected. A monument to the memory of 17,000 Jewish martyrs of the Nazis bears a Yiddish inscription. Jews still visit the tomb of Naḥman of Bratslav.

After the breakup of the Soviet Union, pilgrimages to Rebbe Naḥman's grave were renewed, with thousands arriving from all around the world on Rosh ha-Shanah.

[Baruch Shohetman]

UMAYYADS, dynasty (660–750) under which the Arabs established their empire, extending from Central Asia and the Indian border to the Atlantic Ocean. The religious ties which had unified Muslims under the first four Orthodox caliphs ("al-Rāshidūn") were weakened under ʿUthmān. Muʿāwiya, the first Umayyad caliph (661–680), transformed the community of the faithful into a secular Arab state in which religion took second place. For the first time, leadership was in the hands of a person who had not been one of the Prophet's eminent associates. Muʿāwiya was proclaimed caliph in *Jerusalem in 660, but was not finally recognized as such until 661 – after ʿAlī had been assassinated and his son Ḥasan had abdicated. Muʿāwiya organized the empire on the Persian and Byzantine model, introduced the *barīd* (postal horse) service, the official service of Post and Intelligence, and was the first to create an Arab fleet.

The capital of the Umayyad caliphate was *Damascus, and *Syria and Ereẓ Israel were the center of the Muslim world. Muʿāwiya built a wooden mosque on the Temple Mount (mentioned in an apocalyptic Midrash; Wertheimer, *Battei Midrashot* (1894), 30 and by the Christian pilgrim Arculfus: J. Wilkinson, *Jerusalem Pilgrims before the Crusades* (1977), 9–10). He and his successors confiscated land from the Jews of Ereẓ Israel and distributed it among the new Arab settlers, causing great disappointment to the Jews among whom the Arab conquest of Ereẓ Israel had caused messianic stirrings (see: PdRE, ch. 30 and *Nistarot de-Rabbi Shimon bar Yoḥai*), and it seems that they settled some of those Jews in *Tripoli, Lebanon. Muʿāwiya established the principle of heredity for the caliphate and four years before his death appointed his son Yazīd as his successor. The majority of the tribal chiefs supported the appointment. After his death, opposition to Umayyad rule resulted in civil war, the main centers of the unrest being in *Persia, *Iraq, and the *Ḥejāz. Abdullah ibn Zubayr proclaimed himself caliph in Mecca, having gained the support of the Muslim aristocracy; the Umayyad caliphs Yazīd I (680–3), his son Muʿāwiya II (683–4), and ʿAbd al-Malik ibn Marwān (685–705) warred against him. Ḥusayn, the grandson of Muhammad, revolted and was killed in Karbalā', Irak (680). ʿAbd al-Malik built the Dome of the Rock (691–2), the costs being covered by the tax revenue which he received from *Egypt for a period of seven years. *Goldziher assumes that the purpose of the grandiose structure was to divert the pilgrims from Mecca to Jerusalem, but *Goitein is of the opinion that the aim was to compete with the Holy Sepulcher. A. Elʿad, according to older traditions than those used by both researchers, thinks that Goldziher was right ("Al-Ḥaram al-sharīf: ʿAbd al-Malik's Jerusalem," in: *Oxford Studies in Islamic Arts*, 9:33–58) and that ʿAbd al-Malik or his son al-Walīd (705–715) built the Al-Aqṣā Mosque.

Al-Wasiṭī (Jerusalem, 1019), the author of the oldest remaining book of *Faḍā'il al-Bayt al-Muqaddas* ("The Praises of Jerusalem"; I. Hasson ed. 1979, 43–44) reports that a group of Jewish attendants were in charge of cleanliness in the mosque and on the Temple Mount and responsible for the maintenance of the lighting, for which service they were reimbursed by exemption from the poll tax. This monopoly was inherited by their descendants until it was abolished by Omar II. The

Umayyad caliphs employed both Jews and Christians, some of whom attained high posts in the government hierarchy. Under ʿAbd al-Malik a Jew was in charge of the mint. In spite of the existing prohibition on the building of new churches, some were in fact built. In general Umayyad caliphs exercised tolerance in religious matters, the exception being Omar ibn ʿAbd al-ʿAzīz (the Second; 717–20), a religious fanatic who was the first to apply the restrictions of the Covenant of *Omar to the religious minorities. It was presumably Omar II who excluded the Jews from the Temple Mount and restricted them to prayers at only one gate (*Salmon b. Jeroham in his commentary on Psalms 30:10; see Dinur in bibl.).

During the rule of the Umayyads, Ereẓ Israel was the scene of construction and development projects. Sulaiman ibn ʿAbd al-Malik (715–7) built *Ramleh, which became a district capital in Jund Falastin. Walīd II (743), the son of Yazīd II, embarked on a project of diverting the Jordan for irrigation purposes, but the project came to an abrupt end when a landslide caused the death of some of the workers; Walīd was then assassinated by his opponents. This event is described in *Midrash Nistarot de-Rabbi Shimon bar Yoḥai*: "Another king will arise and will seek to separate the waters of the Jordan, and he will bring laborers from distant lands to dig a canal to raise the water level and irrigate the land; and the land they dig up will collapse upon them and kill them, and when their princes learn of this event they will rise against the king and assassinate him" (J. Even Shemuel, *Midreshei Ge'ullah* (1954^{2}), 193). This report was confirmed by the Arab chronicler al-Ṭabarī.

Toward its end, the Umayyad regime was plagued by natural catastrophes and internal strife. Between 746 and 749 a number of earthquakes occurred in Ereẓ Israel. The most severe took place in 748 and caused a heavy loss of life and the collapse of a part of the Dome of the Rock. Against a background of inter-Muslim sectarian strife, Shiʿite opposition to the ruling house, and wars against the Byzantine Empire, which raised messianic hopes among the Jews of a Muslim victory over the Christians, Jewish sects came into being in the East in the beginning of the eighth century. Some of these sects advocated revolt against the established order, hoping to bring about redemption by force. One of these sects was headed by Serenus (or *Severus) of Syria, who was active at the time of Yazīd (720–4); reports of his appearance even reached Spain. The climax of anti-Umayyad stirrings in Persia came in the 740s, when an insurrection headed by Abdullah ibn Muʿāwiya was successful in establishing a short-lived independent kingdom. This was the background for the rise of the Jewish pseudo-messiah Abū ʿIssa (or Obadiah) from *Isfahan, who lived during the rule of Marwān II (744–50), the last Umayyad caliph. The internal strife in various parts of the empire was among the major causes for the collapse of the Umayyad dynasty and paved the way for the rise of the *Abbasids.

Umayyad Caliphs in Syria

Muʿāwiyah ibn Abī Sufyān, 661–680
Yazīd ibn Muʿāwiyah, 680–683
Muʿāwiya II ibn Yazīd, 683–684
Marwān ibn al-Ḥakam, 684–685
ʿAbd al-Malik ibn Marwān, 685–705
al-Walīd ibn ʿAbd al-Malik, 705–715
Sulaymān ibn ʿAbd al-Malik, 715–717
ʿUmar ibn ʿAbd al-ʿAzīz, 717–720
Yazīd II ibn ʿAbd al-Malik, 720–724
Hishām ibn ʿAbd al-Malik, 724–743
al-Walīd II ibn Yazīd II, 743–744
Yazīd III ibn al-Walīd, 744
Ibrāhīm ibn al-Walīd, 744
Marwān II ibn Muḥammad, 744–750

In Spain

The Umayyad dynasty began its rule in Spain in 756. ʿAbd al-Raḥmān I (reigned 756–88), a survivor of the slaughter of the Umayyad dynasty in Damascus by the newly proclaimed Abbasid caliphate, and grandson of the 10th Umayyad caliph Hishām, made *Cordoba the capital of his emirate. The Jews under his jurisdiction enjoyed the same rights and status as they had previously under the former Muslim rulers. Both they and the Christians had to pay the special poll tax (**jizyah*) of 12, 24, or 48 *dirhems* each year, according to income. The activity of the Umayyad dynasty at first was the consolidation of the conquest of Spain and the conciliation of a hostile Christian population, a task which continued well into the mid-9th century. The Jewish minority, which had welcomed the Muslim takeover, did not suffer from the Muslim attacks on rebellious Christians, particularly prevalent in Cordoba. The first cultural flowering came under ʿAbd al-Raḥmān II (822–852) through the patronage of literature and science and the refinement of customs and traditions: Al-Andalus became the center of western Islam. There is little information on the Jews under early Umayyad rulers in the 8th and 9th centuries, except that the population increased rapidly as Umayyad tolerance encouraged Jewish immigration to Spain. Under Umayyad rule, the Jews attained wealth, developed their culture, and even acquired influential positions at the center of power. *Ḥisdai ibn Shaprut was physician and adviser to ʿAbd al-Raḥmān III (912–61), who proclaimed himself caliph in 929. The latter's reign marks the height of Umayyad military, economic, and cultural supremacy, and the caliph was considered the most tolerant toward minorities of all the Umayyads. Ḥisdai, head of the Jewish community, was in charge of trade and commerce and foreign affairs, traveling to the generally hostile northern Christian provinces of Spain on diplomatic missions. Cordoba was then the center of Muslim civilization in the West and an important seat of Jewish culture. Other prominent Jewish communities included *Tarragona, *Granada, and *Lucena. Under ʿAbd al-Raḥmān's successors, al-Ḥakam II (961–76), Hishām II (976–1013), and al-*Manṣūr (Hishām's chamberlain who in effect managed affairs of state from 996 to 1002), the Jewish community in the caliphate rose to great wealth and cultural prominence. Just as the western caliphate had declared its independence of Abbasid Baghdad,

Spanish Jewry began to assert its independence of the Babylonian academies and the *geonim. The 12th-century historian Abraham *Ibn Daud describes the relations between the Jewish community of Cordoba and the caliph (Ibn Daud, Tradition, 63–71). Apparently the Umayyad ruler intervened in the appointment of the head of the Jewish community (*nasi) and the head of the academy, as exemplified in the case of the conflict between R. *Ḥanokh b. Moses and R. Joseph *Ibn Abitur in the late tenth century. At first, al-Ḥakam acknowledged the leadership of R. Ḥanokh. During Hishām's reign, al-Manṣūr appointed a supporter of Ibn Abitur, Jacob *Ibn Jau, a wealthy silk merchant who supplied the royal house with his costly wares, *nasi* of all Jewish communities in his domain. Ibn Jau, however, did not collect enough tribute from his people to suit al-Manṣūr, and was imprisoned. He was released by Hishām. The wealth of the Cordoba community and especially of Ibn Jau is attested to by Ibn Daud. The intellectual exchange and high cultural level of the Umayyad house may be ascertained from the statement that Ibn Abitur "interpreted the whole of the Talmud in Arabic for the Muslim king al-Ḥakam." The *Berber invasion and sack of Cordoba (1010–13) resulted in the decline of the Umayyad dynasty in Spain. Cordoba never regained its supremacy as a Muslim and Jewish cultural center; many Jews fled to Granada, Malaga, Lucena, and other cities. The constant internecine strife between the Muslim principalities contributed to a longing for the stability and peace of the Umayyad reign which had endured for nearly 250 years. The dynasty ended with the demise of the weak Hishām III in 1031.

Umayyad Emirs of Spain

ʿAbd ar-Raḥmān ibn Muʿāwiya, 756–788
Hishām ibn ʿAbd ar-Raḥmān, 788–796
al-Ḥakam ibn Hishām, 796–822
ʿAbd ar-Raḥmān II ibn al-Ḥakam, 822–852
Muḥammad ibn ʿAbd al-Raḥmān, 852–886
al-Mundhir ibn Muḥammad, 886–888
ʿAbdallāh ibn Muḥammad, 888–912
ʿAbd ar-Raḥmān III ibn Muḥammad ibn ʿAbdallāh, 912–929

Umayyad Caliphs of Spain

UMAYYA IBN ABĪ AL-SALT, one of the "true seekers of God" (*Ḥanīf,* pl. *Ḥunafāʾ*) who are mentioned several times in the *Koran. Umayya was an older contemporary of *Muhammad. According to Muslim tradition, he desired to be the apostle, the prophet to the Arabs. Muhammad, however, regarded him as a deviationist who led others astray and did not accomplish his mission. There is an allusion to him in Sura 7:174–5, which, according to most commentators, refers to *Balaam. Many long and short extant fragments of ancient Arabic poetry deal with the same biblical subjects that are found in the Koran. Scholars differ as to the originality of these poems and their independence from the narratives of the Koran. Undoubtedly, many came from the Jewish and Christian legends used by Muhammad and therefore there is neither plagiarism nor borrowing from the Koran.

[Haïm Z'ew Hirschberg]

U-NETANNEH TOKEF (Heb. וּנְתַנֶּה תֹּקֶף; lit. "Let us declare the mighty importance [of the holiness of the day]"), a *piyyut* (*silluk*) recited before the *Kedushah* of the *Musaf* of Rosh HaShanah and the Day of Atonement. The prayer epitomizes the significance of the High Holy Days as "the day of judgment" on which all creatures pass, one by one, before God, like a flock before the Shepherd Who decrees their fate. It emphasizes man's precarious and painful lot and his futile strivings. Following an enumeration of the manifold fates which may be decreed for a man during the year to come, the prayer, however, goes on to stress the belief that "repentance, prayer and charity avert the severe decree": God is full of forgiveness toward man who "came from dust and who shall return to dust" and whose days are "as a fleeting shadow, as a passing

cloud … and as a dream that vanishes." Because this prayer, in simple yet very expressive words, voices the basic idea of the Day of Judgment, it came to be one of the most solemn parts of the High Holy Day liturgy and is recited with awe and in a soul-stirring mood.

Written by Kalonymus b. Meshullam *Kalonymus, the *paytan* of Mayence (11th century), a well-known legend ascribed its composition to a R. Amnon of Mainz (for details see *Amnon of Mainz). The prayer became part of the traditional Ashkenazi, Polish, and Italian liturgies.

UNGAR, BENJAMIN (1907–1983), **ḥazzan*. Born in Jaslo, Galicia, Poland, Ungar studied with several notable cantors and composers before taking his first position as *ḥazzan* in Magdeburg, Germany. From there he moved to Stendal and in 1938 went to Israel. He officiated in several Tel Aviv synagogues and in 1959 became chief *ḥazzan* of the Tel Aviv Great Synagogue. The possessor of a powerful and rich tenor voice, Ungar gained a reputation through his many concert, radio, and television appearances, and became known internationally through his records and concert tours. In 1966 he became chairman of the Association of Cantors of Israel. In May 1983 Ungar was made a Distinguished Citizen of Tel Aviv.

[Akiva Zimmerman (2nd ed.)]

UNGAR, JOEL OF RECHNITZ (1800–1885), Hungarian rabbi. Ungar was born in Rechnitz, where his father Eliezer was a merchant. At about the age of 15, he went to the yeshivah of Mordecai *Banet in *Mikulov (Nikolsburg) and finally to the yeshivah of Moses *Sofer in Pressburg. In addition to his talmudic studies, he studied German, French, and mathematics. In 1824 he married the daughter of the wealthy Joseph Yust of Csejte, who wished him to devote himself to commerce. Once, however, when traveling to the Vienna fair on behalf of his father-in-law, he called upon his teacher and became so engrossed in halakhic discussion that he arrived too late for the fair, bringing about the impoverishment of his father-in-law. As a result, Ungar was compelled to accept the rabbinate of Csejte and became known as an outstanding Torah scholar. He was later appointed rabbi of *Paks, where he remained until his death. He maintained and administered a large yeshivah and several of the great Hungarian talmudists were his pupils. His protest against the resolutions of the Brunswick conference in 1844 was printed in the *Torat ha-Kena'ot* (1845). He was nevertheless opposed to the schism of Hungarian Jewry, and when it took place, he withdrew from national Jewish affairs, devoting himself wholly to his own community and to teaching.

He was very strict in his personal life. On the morrow of the Day of Atonement, he would eat only such minute quantities of food as did not constitute eating according to the *halakhah* because of his doubt as to whether one was obliged to fast for two days, so that he would technically be fasting. After his death, his son-in-law Susman Sofer published several of his responsa on the four parts of the Shulḥan Arukh under the title *Teshuvat Riba* (Riba = Heb. acronym **R**abbi **J**oel **B**en **E**liezer).

BIBLIOGRAPHY: *Magyar Żsidó Szemle* (1886), 134–9; Sofer, in: J. Ungar, *Teshuvot Riba* (EH, ḤM; 1924); S.B.D. Sofer, *Mazkeret Paks* (1962), 116–26.

[Samuel Weingarten-Hakohen]

UNGER, IRWIN (1927–), U.S. historian. Born in New York, Unger received both his M.A. (1949) and Ph.D. (1958) in American history from Columbia University. He taught at the universities of Columbia and California and was appointed professor of history at New York University, where he taught U.S. economic and 19th-century history. His main areas of interest were radicalism and reform; the 1960s; the Gilded Age; and economic history.

Unger's book *The Greenback Era: A Political and Social History of American Finance, 1865–1879* (1964) won the Pulitzer Prize in history. Meticulously researched, it recognized the variety of economic interests on either side of the paper money issue and emphasized the impact of intellectual, religious, and political leaders on that controversy. In a different vein, Unger perceptively analyzed "New Left" historians in "The 'New Left' and American History…" in *The American Historical Review* (72, no. 4 (July 1967), 1237–63).

Other books by Unger include *The Movement* (1974); *These United States* (1978; 2002²); *Turning Point, 1968* (with his wife, Debi, 1988); *20th-Century America* (with D. Unger, 1990); *Postwar America* (with D. Unger, 1991); *America in the 1960s* (with D. Unger, 1993); *Instant American History* (1994); *The Best of Intentions* (1996); *LBJ: A Life* (with D. Unger, 2000); *Recent America*: *The United States since 1945* (2001); and *The Guggenheims: A Family History* (with D. Unger, 2005). The Ungers also compiled *The Times Were a Changin'* (1998), an anthology of the 1960s.

[Ari Hoogenboom / Ruth Beloff (2nd ed.)]

UNGER, JOSEF (1828–1913), Austrian statesman and jurist. Unger converted to Christianity at a young age. He was appointed professor of jurisprudence at the University of Vienna in 1857. He entered parliament in 1867, was minister without portfolio 1871–79, and president of the Supreme Court in 1881. His principal work, *System des Oesterreichischen Allgemeinen Privatrechts* (6 vols., 1856–64) gained him a European reputation.

UNGER, MAX (1883–1959), musicologist. Born in Germany, Unger worked as a conductor and critic, and in 1919–20 edited the *Neue Zeitschrift fuer Musik*. In 1933 he went to Switzerland and Italy and returned to Germany after World War II. An authority on Beethoven, he published *Auf Spuren von Beethovens unsterblicher Geliebten* (1911), *Beethovens Handschrift* (1926), *Ein Faustopernplan Beethovens und Goethes* (1952), and the

catalogs of two important Beethoven collections. Unger gathered material for a revised edition of Beethoven's letters and established many of their datings for the first time.

UNGERFELD, MOSHE (1898–1983), Hebrew literary critic. Born in Galicia, Ungerfeld was active in the Zionist and Hebrew movement in Vienna, where he was also a teacher and journalist. He emigrated to Palestine in 1938 and from the following year served as director of the Bialik House in Tel Aviv.

He contributed articles and book reviews to many Hebrew and Yiddish periodicals. Ungerfeld wrote literary essays for the Hebrew press, concentrating on material from the Bialik archives. He published *Vinah* (1946), *Ḥ.N. Bialik vi-Yeẓirotav* (1960), a bibliography of Bialik's works, and *Ketavim Genuzim shel Bialik* (1971), as well as a collection of essays *Orot u-Ẓelalim* (1977) and *Hogim and Meshorerim* (1974).

[Getzel Kressel]

UNGERMAN, IRVING (1922–) sports promoter, manager, and member of Canadian Boxing Hall of Fame and the International Sports Hall of Fame. Ungerman was born in Toronto and grew up in the downtown heavily Jewish Kensington Market area. During World War II, he enlisted in the Royal Canadian Air Force and served as a bombardier.

Ungerman was one of Canada's most prolific promoters of amateur and professional sports. He managed and represented many Canadian boxers during his career, notably the champions George Chuvalo and Clyde Gray. Ungerman's contribution includes television broadcasting. He initiated the broadcast of boxing on Canadian closed-circuit television in the early 1950s and he was also responsible for establishing Canada's Friday Night at the Fights on commercial TV. Ungerman was also involved in sports other than boxing. He served on the organizing committee that developed the inaugural hockey series between Team Canada and the Soviet National Team in 1972. He was a prominent figure on the organizing committee that brought the Blue Jays and major league baseball to Toronto.

Outside the realm of sports, Ungerman was a longtime supporter of many Toronto-based charitable organizations, including the Salvation Army, Variety Village, the Reena Foundation serving special needs children within a framework of Jewish culture and values, the Hospital for Sick Children, and Mount Sinai Hospital. In 2000 Ungerman was honored by the Government of Ontario with the Order of Ontario.

[Avi Hyman and Brenda Cappe (2nd ed.)]

UNION, OESTERREICHISCH-ISRAELITISCHE (Union of Austrian Jews, later **Union oesterreichischer Juden**), association representing the interests of the Jews of the Austrian Empire and standing for implementation of their equal rights. It was founded in 1882 in part as an outgrowth of J.S. Bloch's battle against a rising tide of antisemitism. The union operated a legal office which kept a watchful eye on every violation of equality in all the provinces, supporting legal action up to the highest courts, exposing and prosecuting calumnies against Jews, and intervening against any administrative discrimination. It believed that the only legally relevant criterion of a Jew was his religion, following the same line as the Central-Verein Deutscher Staatsbuerger Juedischen *Glaubens in Germany. This tenet brought it into conflict with Jewish aspirations for national autonomy. The union rejected the creation of any special category for the Jews, pointing to the fact that this was the aspiration of the antisemitic parties in order to deprive the Jews of equality in the professions and the economy. After the partition of old Austria, the union limited its activity to the Austrian Republic. It welcomed the Balfour *Declaration and supported colonization in Palestine but remained unalterably opposed to nationalist domestic policy. It lost its majority in the Vienna religious community in 1932, but in general elections the Jewish electorate did not support the Jewish national candidates. The union published an annual, *Kalender fuer Israeliten* (1892ff.), a weekly, *Die Wahrheit* (1899ff.), and a monthly, *Mitteilungen* (1888f.). After the 1938 *Anschluss*, the union and its publications ceased to exist.

[Hugo Knoepfmacher]

UNION COUNTY, county in N.E. New Jersey. Of Union County's 532,000 residents (2004 census), about 35,000 were Jews. Major Jewish communities are in Elizabeth-Hillside, Westfield, Scotch Plains, Springfield, Union, Cranford, and Linden.

Although German Jews came to Elizabeth in the middle of the 19th century, by 1880 only 25 families had settled there. At the turn of the century, immigrants came from Eastern Europe; there were 550 Jewish families in 1905 and the large influx continued until a limit was placed on immigration in 1920. In the mid-1930s, 10,000 Jews lived in Elizabeth, a number of them American-born. A parallel settlement occurred in Plainfield where four congregations and two charitable associations were already active in 1904. The Plainfield community grew to 6,000 Jews in 1960.

YM-YWHA's were founded in Elizabeth in 1883 and in Plainfield in 1929, and a Jewish community council for eastern Union County based in Elizabeth in 1940, and one in Plainfield in 1937. In 2006 one synagogue struggled to continue its existence in Plainfield, where most of the Jewish population had moved to Somerset County, while Elizabeth continued to attract young families.

The major difference was the strength of the Jewish Educational Center (JEC), founded by Rav Mordechai Pinchas Teitz. The JEC grew from a *mikveh* and an elementary school, founded in 1940, to high schools, five synagogues (with a Sephardi as well as an Ashkenazi minyan in one synagogue), a second *mikveh*, an institute for Talmud study for college-age

students, and an adult education system. Rabbi Teitz initiated the move from the downtown Elizabethport neighborhood to the more affluent Elmora and Westminster areas. Elmora Avenue has several kosher restaurants, a kosher bakery and a kosher supermarket.

Three distinctive features of Elizabeth are that it is a united *kehillah*; it is a center for Holocaust survivors who were integrated into the community and joined in all facets of Jewish life; *aliyah* is encouraged, with more than 100 families, especially those of scientists who worked in research in nearby pharmaceutical, communications, and other companies, settling in Israel.

The YM-YWHA is now on Green Lane in Union, near Kean University, at the edge of Elizabeth's Elmora section. The Wilf Jewish Community Campus of Central New Jersey, located in Scotch Plains, is a major Jewish Community Center. The Jewish Family Service (www.jfscentralnj.com) is in Elizabeth with branches in Fanwood and Warren (Somerset County).

Temple Emanu-El in Westfield had over 1,100 members (2005) (www.tewnj.org); Beth Israel in Scotch Plains had 463 members (2005); the JEC in Elizabeth had over 1,000 members (2005) (www.thejec.org). B'nai Israel, a Conservative synagogue in Elizabeth, merged with a congregation of the same name in Millburn in 1992, a few years after its centennial, while Beth El, a Reform synagogue founded in 1950, also closed.

UNION GÉNÉRALE DES ISRAÉLITES DE FRANCE (UGIF), official body created by the Vichy government under German pressure, to represent French Jewry during the German occupation. Soon after the occupation of France (June 1940) the Germans unsuccessfully tried to organize a representative body in Paris, to be directed by consistorial leaders who remained in the city. In connection with relief work, a Comité de Coordination des Oeuvres de Bienfaisance du Grand Paris was organized on Jan. 30, 1941, and officially declared in April 1941 as a French association. French officials had long resisted the German pressure, mainly led by Theodor Dannecker, Eichmann's representative in Paris, to organize a centralized Jewish organization that could serve as a German tool to implement antisemitic measures. The French government finally accepted the setting up of such a body, under the threat of a purely German organization. By a law of Nov. 29, 1941, the Vichy government created the UGIF, which became an official French body representing both French and foreign-born Jews, with two divisions, one in the occupied and one in the Southern zone. The UGIF was officially to be controlled by the Commissariat Général aux Questions Juives, then headed by Xavier Vallat. Like the Germans in Paris, the Vichy authorities also tried to choose veteran Jewish leaders to direct the affairs of the new body. Vallat frequently discussed the UGIF with Jewish leaders, since its creation separated French Jewry into two sharply divided groups: those willing to participate in the UGIF in order to retain some form of independence for Jewish relief activities and to be able to pursue them, as they became ever-more necessary, and to prevent the takeover of the new body by less responsible Jews; and those willing to stick to the traditional Jewish organizational scheme, set up by the Republic, mainly the Consistory. The fight against the UGIF was conducted in the free zone mainly by the Consistoire Central (Central Consistory) which protested against the creation of such a quasi-political organization with its own juridical and fiscal structure. The Consistoire Central stated that such a body would be called upon to give indirect or even direct approval to anti-Jewish measures; traditional voluntary Jewish relief would have to give way to forced relief controlled by the government and financed by funds from confiscated Jewish properties. Jacques Helbronner, president of the Consistoire Central, stated in a protest to Vichy that the creation of the UGIF was based on legislation of a racial character and of foreign inspiration, and the basic idea of which stood in contradiction to the spirit of French legislation. Albert Lévy, a member of the Consistoire Central, became the UGIF's first president, with André Baur, vice president for the occupied zone, and Marcel Stora as administrators, respectively, of the free and occupied zones. Among the members of the board, the majority were former members of the Comité de Coordination. They were all French Jews, coming from a professional or upper-class background, who had been active in relief organizations. The first task of the UGIF, almost immediately after it was set up, was to collect the levy of 1 billion francs imposed by the German Military Command in Paris (Majestic) on the Jews of France as "reprisals" for the first attacks by the French Resistance. This levy was imposed on December 12, 1941. As the money available was not sufficient, and as the threats of deportation and the shooting of hostages became stronger, the UGIF had to organize a loan from the main French banks, of 250 millions francs, to pay the first installment. Then, it could use money raised by the selling of Jewish-owned stocks on the Paris stock exchanges to pay the rest of the levy. All pre-war Jewish organizations, according to the law, would be disbanded and merged into the UGIF, the only authorized Jewish body in France. The UGIF took over the properties of these defunct organizations, and also all their relief tasks. In the spring of 1942, the UGIF was helping half of the Jews in France, mostly through payments, as the aryanization policy had struck severely and impoverished the Jewish population. In the occupied zone the UGIF had no fewer than 24 offices (for services in the free zone there were seven directorates, each of which was a former association that had been absorbed by UGIF). In the French Jewish circles which were opposed to involvement in the UGIF, the old enmity to foreign-born Jews played an important role. Many French Jews did not favor a plan which forced all Jews, foreign as well as French, to belong to the UGIF. Participation in the UGIF

indicated not only acknowledgment of the anti-Jewish legislation, but also a recognition of separate Jewish identity, which repudiated the established tenet that Jews were to be regarded solely as a religious group. The UGIF never became strictly an organization of collaboration with the Germans, although the UGIF leaders were forced to negotiate constantly with the Gestapo, the Sipo-SD. Leaders of the UGIF had to acquiesce to some of the logic of the perpetrators, for example in giving more attention to French Jews in comparison to foreign Jews. Raymond-Raoul Lambert proved, however, more sympathetic to foreign Jews, people he had tried to help in the late 1930s who had entered prior to the beginning of the German Occupation, in contrast to the French Consistory. When negotiating with the Germans, the UGIF tried to use its margin of maneuverability, always very small, to have French Jews released or not deported. The Union hired many Jews as employees, to serve the needs of a growing despairing population. Officially, employees of the UGIF were exempt from deportation though the protection proved unstable. For example, a roundup in the office of Lyons, organized by Klaus Barbie, led to the arrest of the employees, later deported to Auschwitz. On July 21, 1943, André Baur, then the president of the Union in the northern zone, was arrested. He was deported, together with his family, to Auschwitz. In the days before his arrest he had protested, once again, directly to Marshall Pétain, on the poor conditions of Jews in the Drancy camp. In September 1943, Raymond-Raoul Lambert was also arrested, then deported with his wife and children. The question, raised as early as February 1943, became then whether or not to maintain the activities of the UGIF or to dismantle it. Such a decision was never made, and the UGIF continued officially to work till the very end of Occupation. The support it provided for Jews, whether in freedom or imprisoned in camps in France, proved to be necessary. Underground activities developed then rapidly, not organized by the leaders of the UGIF but under the cover and with the financial help of the Union. The most notable was the underground fight of the Eclaireurs Israélites, officially absorbed into the 6th department of the UGIF, which led to the purchase of weapons and the organization in the Southeast of France of a maquis, a group of youth that fought for the liberation of the city of Tarbes. The policy of the UGIF was always to negotiate in order to keep as many Jews as possible on French territory, whatever the German conditions might be. This led to the creation of agricultural colonies in the northern part of France, and to three camps in the heart of Paris, annexes of Drancy for "privileged Jews," mostly spouses of Aryans. These persons were entirely fed and taken care of with the finances of the Union. The leaders were not able to make the necessary steps to go underground nor to disperse children's homes that sheltered youngsters whose parents had already been deported. Numerous such houses were raided by the Gestapo, such the one in La Verdière or Izieu. On July 21, 1944, the houses in the suburbs of Paris were raided; 242 children and 33 UGIF employees were arrested and immediately deported to Auschwitz. Soon after the Allied invasion (June 1944) in Normandy, members of the Comité Général de Défense, an underground Jewish body consisting of representatives of all Jewish groups, discussed the possibility of closing the UGIF offices. At a secret meeting held on July 13, 1944, in Paris, the UGIF leaders of the former occupied zone adopted a resolution against the voluntary dissolution of the UGIF because it would induce immediate reprisals against the Jews in both zones. Raymond Geissmann, who was then director general of the UGIF in the former free zone, strongly defended the record of the UGIF. As early as July 1944, the newly (clandestinely) created body representing all Jews in France, the CRIF, considered the fate of the UGIF and possible trial for its leaders. In October 1944, a commission set up by the CRIF started to investigate the activities of the Union. This led only to a reprimand that was even not made public. The debate continued within the CRIF until 1947 but its president, Léon Meiss, avoided any further determinations. The debate about the UGIF started anew in 1980, with the publication of a book by Maurice Rajsfus, *Des Juifs dans la collaboration*. It lasted more than 10 years, with the judgment on the UGIF remaining equivocal: the Union was seen as either a body whose leaders, French bourgeois Jews, were ready to deliver foreign Jews to the Germans to save the French Jews, or as a Resistance body. Further research, and comparison with other countries, could clarify both versions of history and give a more accurate, balanced description of this tragic episode.

UNION OF COUNCILS FOR JEWS IN THE FORMER SOVIET UNION (UCSJ; formerly Union of Councils for Soviet Jews).

Voice of the Refuseniks (1970–1999)

In the mid-1960s, with the sense that American Jews had not done enough to rescue Europe's Jews during the Holocaust still fresh in their minds, a small number of American Jewish activists concluded "Never Again": that the needs for rescue from persecution and quarantine of the Soviet Union's 4-plus million Jews was receiving inadequate attention.

Following the inspiration of Student Struggle for Soviet Jewry, activists in half a dozen cities organized local "action" committees and, in 1970, they established the umbrella organization, Union of Councils for Soviet Jews (UCSJ). In the 1970s, UCSJ established itself as the principal grassroots and activist component of the Soviet Jewry Movement. Prior to the internet, it pioneered a number of innovations to assure an integrated campaign. It purchased fax machines for each local council to receive their information and to compile and distribute to them a weekly packet of information about new developments in the former Soviet Union and provide up-to-date UCSJ policies and projects.

Virtually every Refusenik and Prisoner of Conscience was "adopted" by at least one council which, in turn, developed and shared official biographies and coordinated their respective cases. The councils provided regular information to local media and officials and to their Congressional delegations. UCSJ organized a Congressional Vigil, headed by Congressmen John Porter (R-Ill) and Tom Lantos (D-Cal); assisted by UCSJ, congressmen placed profiles of Refuseniks and Prisoners into the Congressional Record every Friday for nearly two decades.

UCSJ's greatest political triumph came in the early 1970s with its successful advocacy in the Congress of the interventionist Jackson-Vanik Amendment, sponsored by Senator Henry Jackson and Congressman Charles Vanik, to U.S. Trade legislation, which made "most favored nation" trade concessions contingent on the free emigration of the Jews – this over the vehement opposition of the Nixon-Kissinger administration and the Israeli and American Jewish leadership.

By the late 1980s, the organization had swelled to nearly 40 local councils with a combined membership of 50,000, matching the approximately 50,000 unaffiliated members and supporters of the national organization. In its campaigning, throughout the 1970s and 1980s, UCSJ briefed thousands of visitors not only about who to visit among the Refuseniks but on how to collect vital, strategic information from their leaders. They supplemented these reports with weekly telephone calls to activists across the Soviet Union. Refuseniks especially valued the leadership of UCSJ's 10-year president, Pamela B. Cohen of Chicago Action for Soviet Jewry. When she made an unannounced two-week visit in 1987, word of her arrival spread across the 11 time zones and hundreds of Refusenik leaders traveled to Moscow and Leningrad to brief her on conditions in their communities.

Although it was largely unknown to the million-plus American Jews who responded to the rallying cry, "Let My People Go," there existed a serious, principled political and operational divide between the Israel-dominated "Establishment" wing of the Soviet Jewry movement and the grassroots activists. The difference often produced a measure of vitriol during the Refusenik era but, since the fall of the Iron Curtain, it is seen by UCSJ as affecting far more dangerous stakes. Among the questions that divided the "establishment" from the activists were "Who spoke for Soviet Jews? How to position the struggle? Was the ultimate goal of the movement "*aliyah*" or "freedom," including the freedom not to choose to live in Israel, and to what extent was the movement devoted to human rights as well as *aliyah*.

The Jewish Establishment conceded to the State of Israel the international voice of Soviet Jewry. They argued that only Israel was prepared to accept all Soviet Jews, and the demographics of a proportionately rising Arab population in greater Israel was a time bomb that massive immigration from the U.S.S.R. could help defuse. What's more, the Soviets were prepared at least to consider granting Jewish emigration if it were seen as repatriation to homeland rather than a human rights category – freedom of movement. Hence, it was seen as the duty of every departing Soviet Jew to make *aliyah*.

Further, as the movement began, in the post-1967 era, Moscow had severed its diplomatic relations with Israel, and Israel's vital interests were at stake in promoting a modus vivendi with the then powerful Soviet Union. Israel had a long agenda with the Soviet Union; Soviet Jews were only one part of that agenda, which also included trade, military security, and Soviet diplomatic support of its hostile neighbors. Accordingly, Israel was convinced that the only effective approach to the Soviets was what they termed "quiet diplomacy." It therefore rejected grassroots activism aimed at "making noise" and opposing antisemitism and the broad violations of human rights – concerns that the 35-nation Helsinki Process, and UCSJ, routinely addressed.

But to the activists in the U.S.S.R. and UCSJ alike, "quiet diplomacy" and the *aliyah*-only campaign smacked of paternalism and violated the Russian Jews' internationally guaranteed "freedom of choice and movement." It also unacceptably isolated the targeted Jews from their equally oppressed majority, their non-Jewish neighbors, and especially from the politically courageous dissident Helsinki monitors led by such international luminaries as Andrei Sakharov, Yuri Orlov, and Anatoly (Nathan) Sharansky. In contrast, UCSJ and the activist Refuseniks, including Sharansky and Leonid Stonov, viewed the activists as full, non-paternalistic partners – with UCSJ as the Western "voice of the Refuseniks."

Antisemitism and Human Rights Monitor

In the late 1990s, with grassroots antisemitism rising dangerously in Russia (Ukraine and Belarus as well), UCSJ established a nationwide antisemitism and xenophobia monitoring network – the only one of its kind. And it forged a full working coalition with the prestigious Moscow Helsinki Group, a human rights coalition still opposed by the Jewish Establishment. Although Russian President Vladimir Putin has made many excellent speeches inveighing against antisemitism and xenophobia in Russia, as well as terrorism, antisemitism remains the principal language of extremist violence and propaganda, from the 50,000 neo-Nazi skinheads, to the exclusionary Russian Orthodox Church, to the nationalistic and fascist political factions. By 2005 these factions constituted one-third of the deputies in the Duma (parliament); strongly antisemitic

attitudes garnered upward of 50% approval in public opinion sampling. Putin has tolerated a fully corrupt and dysfunctional rule of law infrastructure incapable of providing protection to citizens let alone economic stability, has systematically outlawed political opposition parties, and has imposed virtual control of the major media.

In sum, with the collapse of the Iron Curtain, half a million Soviet Jews "dropped out" in Vienna and came to America; and more than a million made *aliyah*. In the early 21st century, with the Russian Jewish leadership dependent upon President Putin's good intentions, Russia still remained an authoritarian country that hand picked its presidents. With the pool of future contenders so contaminated, Jews and democracy itself are in jeopardy. With Jews also challenged and targeted in Ukraine and Belarus, advocacy and the monitoring of antisemitism and xenophobia in the FSU remained UCSJ's unique mandate as 2005 drew to a close.

[Micah H. Naftalin (2nd ed.)]

UNION OF ORTHODOX JEWISH CONGREGATIONS OF AMERICA (UOJCA), commonly referred to as the OU, largest organization of Orthodox synagogues in the U.S. Founded in 1898, the UOJCA was originally oriented toward the few English-speaking, rather than Yiddish-speaking, congregations. The call for establishing the organization was sent from the address of the Jewish Theological Seminary, and a few early UOJCA leaders, such as Henry Pereira *Mendes, were also identified with that institution. The UOJCA remained a small group until about 1950, and its status rested more on the reputation of its presidents, men such as Rabbi Herbert S. *Goldstein, than on the activities or the number of its affiliates. Since then it has experienced tremendous growth and in 2005 claimed nearly 1,000 affiliated synagogues.

The UOJCA is best known for its *kashrut* supervision; founded in 1923, today it is a multinational operation that certifies 400,000 industrial and consumer products manufactured in 73 countries. The *kashrut* division employs 300 full-time supervisors and produces its own rabbinic journal about *kashrut* called *Mesorah,* as well as a quarterly called *Behind the Union Symbol*. Under the leadership of Rabbi Menachem Genack, the *kashrut* division also seeks to educate the Jewish community about various aspects of *kashrut*.

Aside from programming geared towards its constituent synagogues, the UOJCA seeks to promote its perspective and values through its Institute for Public affairs in Washington, headed by the UOJCA director for public policy, Nathan J. Diament. The National Council of Synagogue Youth (NCSY), a division of the UOJCA, has a cadre of 850 volunteers and reaches unaffiliated youth who do not attend Jewish day schools. Yachad, the National Council for Jewish Disabilities, also a division of the UOJCA provides mainstream programming for children and adults with developmental disabilities.

In addition to their offices in New York and Los Angeles, which employ over 200 people, the UOJCA also maintains an office in Jerusalem, which aims to bring secular Israelis closer to Orthodox Jewish observance through adult education programs and summer camps across 25 Israeli cities and towns. The UOJCA also services Orthodox college students through their Jewish Learning Initiative on Campus, which deploys rabbinic couples to serve as Torah leaders and mentors on college campuses. Additionally, the UOJCA sponsors the Sha'alavim High School in Kharakov, Ukraine, and produces a quarterly magazine called *Jewish Action*. In 2005 the executive vice president of the UOJCA was Rabbi Dr. Tzvi Hersh Weinreb and its president was Stephen J. Savitsky.

UNION OF ORTHODOX RABBIS OF THE UNITED STATES AND CANADA (**Agudath Harabbonim**), the oldest organization of Orthodox rabbis in the U.S. in 2005 it had 450 members. The Agudath Harabonnim was founded on July 29, 1902, in New York City with a goal of strengthening "the weakened hands of the rabbinate and to remove stumbling blocks from the path of our nation." In 1914 the organization set up the Central Relief Committee, which was later absorbed into the American Jewish Joint Distribution Committee, and in 1915 a charity called Ezras Torah, which still operates today. During World War II, Agudath Harabbonim founded the *Vaad ha-Hatzalah, which rescued leading Orthodox Torah scholars. Occasionally the Agudath Harabbonim clashed with the Rabbinical Council of America over a variety of issues, this was exacerbated by the fact that the former represented the older European-trained generation of rabbis and the latter American-trained rabbis, most of whom were ordained by the Rabbi Isaac Elchanan Theological Seminary at Yeshiva University. Originally, membership in the Agudath Harabbonim was limited, almost exclusively, to rabbis ordained in Europe, and it still insists on the more comprehensive *yadin yadin* ordination. The monthly Torah journal *Ha-Pardes* had close ties with the Aggudath Harabbonim and carried a lot of information relevant to it, until it stopped appearing in 2004. The Agudath Harabonnim maintains its own *bet din* (ecclesiastical court) that was headed in 2005 by Rabbi Hersh Ginsberg. Rabbi Yehuda Levin of Brooklyn, New York, although not a member of the Agudath Harabonnim, lobbied on its behalf since 1979.

For many years Rabbi Eliezer *Silver was the president and central figure in the Agudath Harabbonim. The organization has not had a president since the passing of Rabbi Moses Feinstein in 1986. In the early 21st century, it was led by a Va'ad ha-Meẓumẓam that included Rabbi David Feinstein, son of the late Rabbi Moses Feinstein.

[Asher Oser (2nd ed.)]

UNION OF REFORM JUDAISM (formerly the **Union of American Hebrew Congregations** (UAHC)), association of the more than 900 Reform and Liberal congregations of the U.S. and Canada, representing some 1.5 million Jews, with headquarters in New York. Founded in 1873 as the first nationwide cooperative organization of Jewish congregations – after 32 years of unsuccessful efforts to establish a semblance of unity among U.S. Jewish communities – the UAHC's first goal was to coordinate support for the establishment of a seminary for the training of rabbis. Two years after the first meeting of the UAHC, its leaders announced the founding of the *Hebrew Union College, with Isaac Mayer *Wise, the prime mover in the creation of the UAHC, as its president. Wise had hoped that the UAHC would be an "umbrella" organization which would include traditional as well as progressive congregations. This hope was doomed to defeat, however, and a number of Conservative rabbis, who at first cooperated in the program of the Hebrew Union College, withdrew and established the *Jewish Theological Seminary in New York City. In 1876 the UAHC succeeded in reconciling the disparate aims of the eastern and Midwestern Reform leaders, and absorbed the *Board of Delegates of American Israelites, which had been founded in 1859 under the impact of the *Mortara case in Italy. The UAHC gradually developed an extensive program of administrative activity, including such fields as religious education (1886), congregational organization (1903), sisterhoods (1913), brotherhoods (1923), youth work (1939), synagogue administration (1941), and social action (1949). For many years its greatest contribution was a broad range of religious school textbooks which were utilized in Orthodox and Conservative as well as Reform congregations. For much of the period prior to World War II the UAHC was the weakest partner in the trio of agencies of the Reform movement; its lay leaders regarded it simply as a service organization, rather than one which would stimulate and lead its congregations and their members. The Reform Movement was the first to establish the tri-partite system of organization – a seminary, a rabbinic body, and a union of congregations.

The direction of the UAHC's activity was changed beginning in 1941, however, with the appointment first of Rabbi Edward *Israel and then of Rabbi Maurice N. *Eisendrath as executive secretary. In 1951 the UAHC moved its offices from its former Midwestern stronghold in Cincinnati to New York City, thereby dramatizing the adoption of an active, dynamic program of leadership within the Reform Movement and in U.S. Jewish life generally and moving out of the shadow of Hebrew Union College. The change of location to the center of U.S. Jewish affairs and the assumption of prerogatives of national leadership were both preceded and followed by conflicts between those who favored emphasis on the local autonomy of the individual congregation and those who supported the concept of national action. Generally, the proponents of national assertiveness won out, and the UAHC took strong stands on such issues as civil rights for blacks and the Vietnam War. And the leader of the Union became not only the titular head of Reform Judaism but its actual leader. In Conservative Judaism by contrast, the chancellor of the Seminary was the titular head of the movement. The leadership of the UAHC attempted in such matters to present a Jewish view that would match that of newly vocal forces within the Catholic and Protestant churches. From an ideological and theological point of view, however, this trend was part of the search by the entire U.S. Jewish community, during the post-World War II period, for a definition of Jewish distinctiveness and identity.

The governance of the Union is different than its counterparts. The Union's policy-making body is the General Assembly, which meets every other year at the Biennial, in accordance with the Union of Reform Judaism's Constitution and Bylaws. The General Assembly is composed of delegates who are members of and selected by Union congregations in proportion to the size of their synagogue.

The Union's Board of Trustees meets twice each year and is responsible to the General Assembly. Its more than 242 board members come from all parts of the United States and Canada. Fifty percent of the board is elected directly by the Union's regions, while the remaining membership is made up of at-large members elected by the General Assembly and ex officio members.

The 90-member Union for Reform Judaism's Executive Committee also meets twice each year.

The UAHC has had two strong and dynamic leaders since 1973, Rabbi Alexander M. Schindler, who became president of the UAHC in 1973, and his successor Rabbi Eric Yoffie, who assumed office in 1976. Schindler gained renown for his assertive support of the social action agenda of the Reform Movement of the 1970s and 1980s, including civil rights, world peace, nuclear disarmament, a "Marshall Plan" for the poor, feminism, and gay rights, as well as his opposition to the death penalty. He was the head of the Conference of Presidents of Major American Jewish Organization and as such the titular leader of American Jewry when Menachem Begin became prime minister of Israel, and although they disagreed, strongly and directly with each other, they got along famously and Schindler paved the way for Begin's acceptance by American Jewry shocked by the transition from Labor leadership. He strengthened the ties of the Reform Movement to Israel and also got along quite well with the leaders of Orthodox Jewry, including Moshe Sherer of the Agudah, who also were his intense ideological opponents. Within the Reform Movement, Schindler is associated with a period of growth, which overtook Conservative Judaism as the largest denomination of American Jews. During his presidency, the UAHC grew from 400 congregations in 1973 to about 875 in 1995. He was an advocate of outreach to intermarried couples and of patrilineal descent. His efforts at outreach broke the taboo against dealing with the subject of intermarriage except to condemn it. He called upon the Reform Movement to reach out to the non-Jewish spouses in interfaith marriages and also to unchurched Americans. His second initiative was even more controversial. During his tenure the Reform Movement adopted the patrilineal descent resolu-

tion, which stated that the child of one Jewish partner is "under the presumption of Jewish descent." Traditionally, only the child of a Jewish mother was considered Jewish. As Schindler advocated, the UAHC approved a resolution that said that the child of a Jewish father (and a non-Jewish mother) would be regarded as Jewish, *provided that the child was raised as a Jew*. The Conservative and Orthodox movements and the statutes of the State of Israel did not agree with this position, so that there are now two operative standards for being considered Jewish. During Schindler's presidency, the Reform Movement allowed women to assume a more central role in the synagogue, a direct consequence of the feminist movement that influenced every aspect of American life. He also was associated with the move to welcome gays and lesbians – and their congregations into the movement as well as into the rabbinate. And rare in Jewish life, he was the mentor to his successor and retired gracefully to make way for Eric Yoffie.

Under Yoffie's leadership the name of the organization was changed to better reflect its task. Since 2003 it has been called the Union for Reform Judaism (URJ). He moved the organization from its Fifth Avenue headquarters and used the bully pulpit to change the direction of the Union, including congregational worship, adult and religious school education, and Jewish camping. The Religious Action Center of Reform Judaism in Washington, D.C. – headed by David Saperstein – which has long been a feature of the movement, sought to translate its prophetic mandate into practical political action; lobbying and working with other coalition groups generally on liberal issues and for the state of Israel.

Yoffie himself, and by extension the URJ, has been a strong critic of President George W. Bush on the domestic agenda and an equally strong critic of the war in Iraq. He has been critical of the Israeli government, but supportive of the disengagement from Gaza and the peace process and within the President's Conference, a strong advocate of the peace camp much to the chagrin of right-wing and some Orthodox religious forces. Like the Union – and like Schindler before him – he is a force to be reckoned with.

Yoffie has expanded the Union's work to strengthen Progressive Judaism in Israel, and has been a strong advocate of Jewish religious pluralism in the Jewish state. Reflecting on the work of the URJ, Yoffie has stated: "We are a union of Jews committed to a particular vision of Jewish life: to spirituality, Torah, and social justice – the highest ideals of Reform Judaism."

Yoffie is leading the restructuring and revitalization of the Reform Movement with new approaches to study, worship, and ritual practice. He proposed a plan to reform Reform. "I propose, therefore, that at this biennial assembly we proclaim a new Reform revolution. Like the original Reform revolution, it will be rooted in the conviction that Judaism is a tradition of rebellion, revival, and redefinition; and like the original too, this new initiative will make synagogue worship our Movement's foremost concern." Yoffie urged that this "worship revolution" be built on a partnership among rabbis, cantors, and lay people. He stressed music as a central element of worship, a reintensification of the commitment to study Torah, a return to *mitzvot*. He has moved to strengthen Reform youth programs and to expand its camps and its trips to Israel. During the height of the Intifada, he was roundly criticized for canceling a series of trips to Israel, but with the diminution of tension and the increase in safety, Reform Judaism has redoubled its efforts to get its youth involved.

In the past years, Reform Judaism has at once been more traditional and less so; more willing to return to the practices that classical Reform left behind such as the *kippah*, the *tallit*, forms of *kashrut*; more engaged in Torah study, but also more confident in its own unique synthesis of a Judaism at home in tradition and at home in the liberal wing of American life.

[Bertram Wallace Korn]

UNION OF THE RUSSIAN PEOPLE ("**Soyuz russkogo naroda**"), a right wing political movement, fanatically antisemitic, in czarist Russia; founded in November 1905. It demanded the exclusion of Jews from military service and their payment of a special tax instead; annulment of all the privileges enjoyed by the more prosperous Jewish merchants, artisans, and academic intelligentsia; negation of the Jews' right to vote, either actively or passively, for the Duma (the Russian parliament); a prohibition against Jews trading in books, maintaining printing presses, or editing newspapers. In December 1905, Czar Nicholas II consented to take the Union under his auspices. Among its leaders were A. Dubrovin and V.M. Purishkevich, who was a member of all the national Dumas except the First. The official paper was *Russkoye znamya* ("The Russian Flag"). The union was active among the city and rural roughs and the lower middle class, whence it recruited the "Black Hundreds" (*chernosotentsy*), armed gangs who initiated *pogroms against Jews and members of the radical intelligentsia. In 1907 Purishkevich and a group of his followers broke away from the union to create the "Chamber of the Archangel Michael." There was little difference between the two groups in their attitude toward the Jews.

A few members of the union were elected to the Second Duma, and many more entered the Third. The union conducted a virulent propaganda campaign, and published a large number of pamphlets and papers. In many towns, the union's "tea houses" were the headquarters of anti-Jewish propaganda and assaults on Jews. The union organized the murder of two progressive members of the Duma, Professor M.Y. *Herzenstein (of Jewish origin) and G.B. Yollos (a Jew). The union was especially successful in its election propaganda within the *Pale of Settlement, and its members were influential behind the scenes in the highest government circles. They also had an important role in the *Beilis trial. After the Revolution of February 1917, the Provisional Government established a committee to investigate the activities of the union. In many aspects the Union of the Russian People was the precursor of

*Nazism. It bequeathed to Nazism the use of the Protocols of the *Elders of Zion, and probably directly influenced the Nazis via the Baltic Germans, among whom were Scheubner-Richter and Alfred *Rosenberg.

UNION OF SEPHARDIC CONGREGATIONS, THE. The Union of Sephardic Congregations was established in 1929 by leaders of Sephardi communities in America to promote the religious interests of Sephardi Jews. Its primary aim was to give cohesion and the strength of union to the scattered and comparatively weak congregational units of the Sephardim. It also assisted Sephardi communities outside of the United States.

The main activity of the union was the preparation and publication of Sephardi prayer books with English translations by the union's first president, Dr. David de Sola Pool. These books were distributed to Sephardi communities throughout the world, including South America, Europe, Africa, India, Canada, Rhodesia, and Iraq. The union also assisted American Sephardi communities in finding and bringing to the United States trained Sephardi rabbis, cantors, and scholars, and it provided scholarships for religious training for promising Sephardim in yeshivot in the United States. During the 1930s and 1940s it assisted in the rescue of Sephardi scholars and religious leaders from Europe, was involved with the Sephardi refugees interred at Fort Ontario in Oswego, New York, and collected financial support for the Marranos in Portugal. Additionally, the union supported the adoption of Sephardi Hebrew for use in Israel.

UNITED JEWISH COMMUNITIES, organization incorporated in 1999 as a result of merger discussions held between representatives of the *Council of Jewish Federations, (CJF), United Israel Appeal (UIA), and United Jewish Appeal (UJA).

Prior merger discussions began in 1948, both privately and publicly, by various representatives of sometimes two and three organizations. The new organization subsumed the functions formerly performed separately by CJF, UIA, and UJA. The structure established five pillars (the word used to describe various departments or divisions of UJC), one of which was closed a year or so after the United Jewish Communities began. The pillars still functioning are:

1. Financial Resource Development
2. Human Resources and Social Policy
3. Israel and Overseas Needs, now called ONAD
4. The Trust for Jewish Philanthropy Development

Financial Resource Development monitors trends in Jewish and general fundraising, provides consultation, various publications, and fund raising tools to local Jewish Federations in improving their fund raising.

Human Resource and Social Policy is devoted to addressing human and social needs of the Jewish community. Staff training and consultation is provided for local federations regarding planning and allocation of resources, staff development and staff placement. Through this pillar, UJC plays a significant role in Washington regarding government allocations for health and human services under local Jewish auspices.

ONAD assesses the needs of Jewish communities worldwide and aids in the educational process on the local level in enhancing the awareness of Jewish needs. The allocation of local federation funds, dedicated to overseas use is done through this pillar. Representatives work closely with the *Jewish Agency for Israel (JAFI) and the *American Jewish Joint Distribution Committee (JDC), who are the major recipients of these funds.

The now closed Philanthropic pillar was originally intended to evaluate the field of Jewish philanthropy by conducting Jewish outreach, provide consulting services to Jewish philanthropists and non-profits, and catalyze new ventures in American Jewish life.

Before being closed it developed two initiatives; one devoted to Jewish women and their career advancement in the Jewish community and the other to developing a coalition for service in the larger Jewish community.

UJC continues to evolve in response to suggestions and evolving needs and interests within the American Jewish community and is a work in progress.

UIA continues with its name as a department within UJC and continues as an agent for friends to JAFI (UJC, 2003).

Historical Context

What follows is a brief historical summary of the major national and international institutions which served the Jewish community from 1914 to 1999 until the formation of UJC. Included are two organizations that were not partners in the merger but are integral elements of the Jewish philanthropic and communal system – American Jewish Joint Distribution Committee and the Jewish Agency for Israel.

AMERICAN JEWISH JOINT DISTRIBUTION COMMITTEE (JDC). In 1914, as the shadow of World War I began to spread over Europe, JDC was established. Its mission is "to serve the needs of Jews throughout the world, particularly where their lives are threatened or made more difficult." JDC's focus is on rescue, relief, and renewal of Jewish communities around the world to rebuild Jewish culture and religion while advancing Jewish continuity. In addition, JDC is committed to assisting Israel in providing social services to her vulnerable communities. JDC estimates that it has assisted millions of Jews in 85 countries through its efforts, starting with the distribution of $50,000 raised in 1914 to help Jews in Palestine and Europe from starving to death through to the respose to

the current economic crisis faced by the Jewish community in Argentina.

At its inception, JDC focused on maintaining the vibrancy of worldwide Jewish communities and assisting them with rescue and relocation to Palestine when they were at risk of destruction. That stance changed with the formation of the State of Israel. The majority of JDC's annual budget came from UJA. Additional resources included grants from the United States Government for specific programs such as the resettlement of Jewish emigrants from the Soviet Union, individual private donations, donations from foundations, international organizations, and Jewish communities around the world.

COUNCIL FOR JEWISH FEDERATIONS (CJF). Nearly two decades before the founding of JDC, the first federation was established in Boston. This model was believed to be a more efficient way to raise funds and address the needs in local Jewish communities. Almost 40 years later, a national organization was created to service the more than 200 local federations in the United States. It was originally named "National Council of Jewish Federations and Welfare Funds." In 1932, it became known as CJF. Organizers aimed to develop standards, principles, and programming in social and communal welfare work for federations, welfare funds, and other Jewish communal service organizations in North America. The Council was primarily concerned with organizing resources to best serve the Jewish communities on local and national levels, without concentrating on issues abroad.

UNITED ISRAEL APPEAL (UIA). Created in 1925, to unify fundraising efforts of organizations including Jewish National Fund, Hadassah and Hebrew University, "United Palestine Appeal" was dissolved in 1930. But in 1936, it was revived. In 1939, it became one of the founders of United Jewish Appeal, and was its principal beneficiary. UIA was the main source of tax-deductible contributions from American Jewry to the people of Israel and was the primary source of funding for the Jewish Agency for Israel. By 1952 it became known as United Israel Appeal (UIA). In 1971, the Jewish Agency was reconstituted, and UIA's role in the Agency as representative of the U.S. fundraising community was enhanced to encompass the monitoring as well as the transfer of funds. From its inception, UIA served as the sole fundraising agency for the *Jewish Agency for Palestine (Israel), and provided a link between the American Jewish community and Palestine (Israel). Though UIA had the smallest operating budget of the three organizations involved in the merger, its power and land holdings in Israel surpassed both CJF and UJA's influence on Israel.

The formation of UIA created the need for an agency abroad to allocate funds collected in North America, and the Jewish Agency for Israel (JAFI) was established. UIA distributed these funds raised by UJA/federation campaigns to JAFI for allocation. These funds accounted for three-fourths of JAFI's annual operating budget. Due to the funding UIA provided, its board had influence on JAFI's policies, including representation on JAFI's Board of Governors and Assembly. The composition of UIA's board changed over the years as various American Jewish organizations vied for seats in order to influence JAFI. From 1973, UIA annually secured and monitored grant money from the United States Government for the resettlement of Jewish refugees to Israel.

JEWISH AGENCY FOR ISRAEL (JAFI). In 1929, World Zionist Organization (WZO) created the Jewish Agency for Palestine, which today is known as JAFI. Before the birth of Israel, JAFI was recognized by the League of Nations as the official representative of World Jewry in forming a Jewish National Home in Palestine. It was the de facto government for the territory before the State of Israel was created. After the State of Israel was recognized, JAFI remained in place to finance and organize mass immigrations and to welcome and initiate settlement of those moving to Israel. Its Board of Governors is equally composed of members of WZO and Diaspora Jews. JAFI's mission is dedicated to rescuing Jewish communities at risk, resettling new immigrants' to Israel, encouraging and assisting those who make *aliyah*, building new settlements, bolstering Israel's economic development, providing local and worldwide Jewish Zionist education, promoting Israeli culture, enhancing Jewish unity and identity, supporting health services in Israel, and strengthening Israel as a home for all Jews. JAFI is as concerned about the well being of American Jews as it is about Israelis since so much of its own and Israel's funding comes from the United States. JAFI remains influential in both effecting Israeli politics and maintaining American-Israeli relationships. Before 1999, JAFI was the major recipient of CJF, UIA, and UJA funds raised or transmitted for Israel. Any exceptions were locally selected programs and organizations in Israel to which a number of local federations had begun to provide direct funding.

UNITED JEWISH APPEAL (UJA). UJA was formed in 1939 in order to unite fundraising efforts with the American Jewish Joint Distribution Committee and the United Palestine Appeal as principal partners and with the National Refugee Service as a beneficiary for efficient fundraising to help European Jews in response to *Kristallnacht*. It was preceded by United Jewish Appeal campaigns in 1934 and 1935 for the American Jewish Joint Distribution Committee and for the Keren Hayesod, and by a similar joint effort in 1930 by the Allied Jewish Campaign. Over the following decades, UJA grew to become the "largest voluntary philanthropy in Jewish history." Part of the impetus for the merger came from CJF, pressuring the organizations to unify their fundraising efforts to reduce the strain on the American Jewish community in deciding which overseas efforts to support.

From the beginning, UJA decided it would implement its campaigns through the local federations. It had a profound impact on how federations raised money. Under the leadership of Rabbi Henry *Montor, American Jews were challenged as never before to give and to increase their contributions in support of the Jewish State. This drive forever changed how federations raised funds. Their combined efforts in overseas and

domestic campaigns helped to bring Zionism to the American Jewish community, while at the same time strengthen Jewish communities in America. After World War II, UJA's fundraising assisted in the resettlement of Holocaust survivors – some 370,000 Jews to the United States, Canada, and France – and aided Israel and Jewish communities, worldwide. It grew to provide leadership development, educational programs, twinning of American and Israeli communities, and various missions to Israel (Davis, 1994).

From 1939 through 1966, the United Jewish Appeal distributed $924 million to the United Israel Appeal and to its predecessor United Palestine Appeal, $582 million to the American Jewish Joint Distribution Committee, $55 million to the United Service for New Americans and its predecessor the National Refugee Service, $29 million to the New York Association for New Americans, and $4 million to United HIAS Service. Over 200 Jewish Federations and Welfare Funds, including the New York United Jewish Appeal, provided about 95% of United Jewish Appeal income. The remainder was secured directly by United Jewish Appeal in hundreds of small communities where federated appeals did not exist The chairmen of the United Jewish Appeal included Rabbi Abba Hillel Silver, Rabbi Jonah B. Wise, William Rosenwald, Rabbi James G. Heller, Charles J. Rosenbloom, Henry Morgenthau, Jr., Edward M. Warburg, Morris Berinstein, Philip M. Klutznick, Joseph Meyerhoff, Max Fisher, and Edward Ginsberg. The executive vice chairmen of the United Jewish Appeal included Isidor Coons, Henry Montor, Joseph J. Schwartz, and Rabbi Herbert A. Friedman.

The UJA receives its fund through 229 federation and welfare funds and 665 independent and combined campaigns. It supports the UIA; the JDC; United HIAS Service, which helps Jews settling in countries other than Israel; and the New York Association for New Americans (NYANA), which aids Jewish immigrants settling in the Greater New York area.

UNITED JEWISH SOCIALIST WORKERS' PARTY (SS and JS; abbr.: Fareynigte, i.e., "United"), short-lived group in revolutionary Russia and interwar Poland. It was formed in June 1917 through the union of the *Zionist Socialist Workers' Party (SS, who were *territorialists), and the *Jewish Socialist Workers' Party (JS, who were *autonomists), which revived after the February revolution. The program of the Fareynigte was based on the "unity of the Jewish working class as an organic part of the 'ex-territorial' Jewish nation and the international proletariat." The former divergences of opinion on the realization of territorialism were declared to be lacking in actual significance, and the central element of the party program became "national personal autonomy."

Several leaders of the two parties did not join the Fareynigte: J.W. *Latzky-Bertholdy, N. *Shtif, I. *Yefroykin, and J. Tschernikhov. They became *Folkists. For a brief period, the party became influential, particularly in the Ukraine, where it played an important role in the experiment of national autonomy. Its spokesmen included M. Rashkes, Moses *Katz, the brothers Joseph and Jacob *Lestschinsky, Y. Churgin, M. Gutman, M. *Litvakov, M. *Schatz-Anin, and *Ben-Adir. In September 1917, the party called on the Provisional Government of Russia to declare the equality of languages and to set up a council for national affairs which would represent all nationalities and cover the financial requirements of Jewish schools and social institutions. At the third All-Russian Conference of the Trade Unions (June), the Fareynigte proposed the establishment of "national sections," but only the eventual formation of national "committees" was decided upon. In the *Ukraine, the party joined the Central *Rada* (national council) and the party leader, M. *Silberfarb, held the position of vice secretary (minister) for Jewish affairs in the government (called General Secretariat) from July 1917 to January 1918. After the manifesto ("third *universal*") of the *Rada*, which proclaimed a free Ukraine federally allied to Russia, Silberfarb drafted the law on "national personal autonomy" for the minorities in the Ukraine – the Jews, the Poles, and the Russians – and simultaneously pursued his activities in organizing a system of Jewish institutions. The Fareynigte abstained from voting on the "fourth *universal*" (January 1918), which proclaimed the complete separation of the Ukraine from Russia, but, in practice, the party complied with it. Silberfarb resigned from the government for general reasons as well as because of the anti-Jewish pogroms in the Ukraine. In the elections to the Jewish community councils in the Ukraine, the Fareynigte obtained 8.2% of the votes, as compared with the *Bund (14.4%) and Po'alei Zion (6.3%). In the elections to the Jewish National Assembly of the Ukraine, they obtained 19,689 out of the 209,128 votes. In 1918 the Fareynigte also supported Belorussian statehood federally allied with Russia. The party, on the whole, opposed the seizure of power by the Bolsheviks, and its delegates left the second All-Russian Congress of the Soviets. One of the leaders of the Fareynigte, D. *Lvovich, was elected to the Constituent Assembly on the list of the Socialist Revolutionaries with which the Fareynigte had allied themselves in their political activity.

In independent Ukraine, the Fareynigte at first enthusiastically supported the government (called Directory, in 1918–19) but its tolerant attitude toward the pogroms changed their stand. At the second conference of the party in the Ukraine, a pro-Soviet program was adopted, although it opposed joining

the Communists. The pogroms and the stimulus of the revolution in Germany prompted the majority of the party, headed by the leaders (Novakovsky, Levkovsky, and M. Levitan) to establish the United Jewish Communist Party in March 1919. In May 1919, together with the Ukrainian Kombund, it established the Yidisher Komunistisher Farband. In August the Komfarband was included within the Ukrainian Communist Party which began to form branches of the *Yevsektsiya. At the third conference of the branches of the Yevsektsiya (July 1920), the former Fareynigte led the faction which sought a greater measure of autonomy for these "Jewish sections." The first national conference of the Fareynigte decided to adopt a stance of loyalty to the Soviet regime (July 1919). The second national conference of the Fareynigte (Gomel, April–May 1920) adopted a Communist program and, together with the Communist faction of the Bund, they formed the Kombund (June 1920), which in turn decided to join the Communist Party of Russia (March 1921).

In Poland there was no JS movement, but the SS, at their conference in November 1918, changed their name to "United Jewish Socialist Workers' Party (Fareynigte)." The party was short-lived. Some of its members joined the Bund and others the Communists. In summer 1922, the party, led by J. Kruk (d. 1972), joined the Independent Socialist Party (from 1924, "Independent Socialist Labor Party") as a Jewish section. Its program called for "national personal autonomy" for the Jews. Among its proposed activities, the "section" also included "regulation of the emigration of the Jewish working masses." Kruk represented the party on the executive council of the Socialist International. In 1937 it was dissolved by the government. To a limited extent the Fareynigte subsisted within the territorialist movement Freyland (Freeland League). The organs of the Fareynigte included the weekly, *Der Yidisher Proletaryer* (Kiev, 1917); a daily, *Naye Tsayt* (Kiev, 1917–19); the collections *Der Yidisher Proletaryer*, 1–2 (Warsaw, 1918); and *Unzer Vort* (Warsaw, 1920).

[Moshe Mishkinsky]

UNITED NATIONS (UN), a worldwide organization of states established in 1945, in the wake of World War II, with a view, primarily, to maintain international peace and security and also bring about cooperation among nations in the economic, social, cultural, and humanitarian spheres.

Most, though not all, countries are members of the UN, which has become the most important international forum for states to exchange views, conduct diplomatic negotiations, and adopt resolutions calling for concerted action by the world community. As a medium of discussion and resolution, the UN has been instrumental in the process leading to the creation of the State of Israel, as well as in the course of Israel's ongoing struggle for survival. It has also been utilized as a forum for debates on a number of issues pertaining to the plight of distressed Jewish communities in the Diaspora, particularly Arab countries and the Soviet Union.

The Partition Resolution (1947)

At the inception of the UN, Palestine was still a *Mandate territory under the administration of the United Kingdom. In Chapter XII of the UN Charter, adopted on June 26, 1945, an international trusteeship system was established applying, inter alia, to territories subject to mandate. The founding conference of the UN, convened in San Francisco in April 1945, had before it a memorandum submitted by the *Jewish Agency for Palestine requesting that the special rights of the Jewish people under the Mandate be secured. It proposed that the Charter include a general stipulation safeguarding rights acquired under existing mandates. Despite Arab objections, a "conservatory clause" was indeed incorporated in Article 80 of the Charter, but it was circumscribed in terms of temporal applicability to the period pending the conclusion of trusteeship agreements. Article 79 made the transformation of a mandate into a trusteeship dependent on the agreement of the mandatory power. With regard to Palestine, the United Kingdom did not choose to follow the procedure envisaged in the Charter. Initially, it insisted on awaiting the report of the Joint Anglo-American Committee of Inquiry appointed to examine the question of Palestine and of European Jewry after the war. On April 2, 1947, when the United Kingdom finally transmitted the Palestine issue to the UN, it went beyond the purview of Chapter XII. Asserting that the Mandate had proved unworkable, the United Kingdom requested that the UN recommend a solution for the settlement of the problem.

A special session of the UN General Assembly, the first of its kind, was summoned in April 1947 and decided, in Resolution 106 (S-l) of May 15, to establish the UN Special Committee on Palestine (UNSCOP), consisting of representatives of 11 states. UNSCOP members visited Palestine, neighboring countries, and camps of *displaced persons in Europe. They heard oral testimonies, received written communications from individuals and organizations, and finally submitted a report to the General Assembly. The UNSCOP report (A/364) unanimously recommended that the Mandate over Palestine be terminated and that Palestine be granted independence as soon as possible, after a brief transition period. The majority of the UNSCOP members proposed the political partition (subject to an economic union) of Palestine into a Jewish state, an Arab state, and a separate City of Jerusalem. A minority of the members urged the formation of a Federal State of Palestine. (See *Palestine, Inquiry Commission). The report was discussed by the General Assembly, at its second regu-

lar session, in the Ad Hoc Committee on the Palestine Question, which, after a prolonged debate, endorsed, with modifications, the UNSCOP majority plan. Strong Arab opposition was countered by a unique alliance between the United States and the Soviet Union, supported by many smaller countries. On Nov. 29, 1947, a plenary meeting of the General Assembly adopted the Ad Hoc Committee's report (A/516) containing the scheme of the partition of Palestine, by a vote of 33 in favor, 13 against, and 10 abstentions. This is the famous Partition Resolution N. 181 (II).

The Israel War of Independence

The State of Israel, however, was not "created" by the UN partition resolution. The resolution was only an important link in a chain of events that brought the state into being. Under international law, Israel emerged as an independent state from the throes of its War of Independence, when it proved its viability as a legal unit by meeting the four cumulative conditions: nation, territory, government, and independence. The partition resolution was hardly a matter of record when the Arab leadership in Palestine resolved to oppose it by force. Confronted with a challenge to its moral authority, the UN convened a second special session of the General Assembly early in 1948. Some delegates felt that the partition plan could no longer be implemented and that a new approach to the Palestine problem should be sought. The United States put forward a proposal (A/C. 1/277) for the establishment of a "temporary" trusteeship for Palestine, thereby discarding, in effect, the partition scheme. Initially, the new idea gained ground – against Jewish protests – and a special subcommittee (No. 9) was designated to formulate the necessary details. Still, when the establishment of the State of Israel was proclaimed in Tel Aviv on May 14, 1948, the United States granted it immediate de facto recognition, and the trusteeship project was abandoned.

The partition resolution constituted a Palestine Commission to supervise its implementation under the guidance of the Security Council. The commission indeed submitted several reports to the Security Council, but on May 14, 1948, it was relieved of its responsibilities by the General Assembly in Resolution 186 (S-2). Instead, the General Assembly created the post of a UN mediator on Palestine, to which Count Folke *Bernadotte of Sweden was appointed on May 20.

The Partition Resolution requested the Security Council to take required action for its implementation, including enforcement measures within the scope of Chapter VII of the Charter. It was the consideration of the Palestine Commission's reports, however, that generated the constantly increasing involvement of the Security Council with the Palestine question. At the outset, the council proceeded cautiously and on March 5, 1948, merely made a general appeal to all concerned to prevent or reduce disorders in Palestine (S/691). By April 17, however, it had already adopted a detailed truce resolution (S/723), and on April 23 it established a Truce Commission for Palestine (S/727). Following the armed attack by a number of Arab states against Israel on May 15, the Security Council resumed debate. A call for a cease-fire, within 36 hours, was issued only on May 22 (S/773). After the 36 hours had passed and the Arab governments still refused to stop fighting, the council continued the discussion for several more days. It was not until May 29 that it finally adopted a strong resolution (S/801) calling for a four-week cease-fire by June 1, instructing the mediator on Palestine and the Truce Commission to supervise its observance, and, for the first time, referring to Chapter VII of the Charter, implicitly threatening sanctions.

The June 1 deadline was also ignored by the Arab states, which insisted that Jewish immigration to Israel halt during the course of the cease-fire. After lengthy negotiations through the mediator, however, cessation of hostilities, commonly known as the "first truce," was accepted as of June 11. When the four-week duration of the truce drew to a close, on July 7, the Security Council addressed an appeal to the parties to accept its prolongation (S/867). As in previous cases, Israel agreed but the Arabs did not, and hostilities were renewed. On July 15 the council passed its most vigorous resolution on the war (S/902), wherein it took into account Arab rejection of appeals for the continuation of the truce; determined that the situation constituted a threat to the peace within the meaning of Chapter VII; declared that failure to comply with the resolution would demonstrate the existence of a breach of the peace entailing action under that chapter and ordered a cease-fire "until a peaceful adjustment of the future situation of Palestine is reached." The renewed cease-fire, commonly known as the "second truce," took effect on July 18.

The second truce was frequently violated, and the poignant phrasing of the resolution of July 16 had only an initial impact on the antagonists. On August 19, the Security Council passed another resolution (S/983), which is of particular interest as a precursor of things to come. It was stated that each party "is responsible for the actions of both regular and irregular forces operating under its authority or in territory under its control" and that violations of the truce on the ground of "reprisals or retaliation" were impermissible. The observance of the cease-fire was supervised by the mediator, who simultaneously attempted to propose a solution of his own to the Palestine question. On September 16 Bernadotte presented a progress report (A/648), in which he recommended a number of crucial changes in the partition plan, e.g., that the Israel Negev "should be defined as Arab territory." The following day Bernadotte was assassinated by unknown terrorists in the Israel sector of Jerusalem. (Israel paid reparations to the UN, according to a ruling of the International Court of Justice in 1949 that the UN had the "capacity to maintain its rights by bringing international claims.") Ralph Bunche, a member of the UN Secretariat, was appointed acting mediator.

In October, when heavy fighting again broke out between Israel and Egypt, the Security Council adopted a resolution (S/1044; October 19) calling for restoration of the cease-fire

and suggesting withdrawal of forces, as well as negotiations between the parties either directly or through the UN. The unheeded call was reiterated by the council on November 4 (S/1070), November 16 (S/1080), and December 29 (S/1169). Negotiations between Israel and Egypt, under the chairmanship of the acting mediator, opened at Rhodes in January 1949. An *Armistice Agreement was signed on February 24, followed by a series of similar agreements between Israel and Lebanon (signed March 22), Jordan (signed April 3), and Syria (signed July 20). All the Armistice Agreements were concluded without prejudice to territorial rights, and it was specifically stated that the armistice demarcation lines were not to be construed as political boundaries. The agreements established certain demilitarized zones and set up Mixed Armistice Commissions (MACs) to supervise the implementation of the truce. The chairman of each MAC was the chief of staff of the UN Truce Supervision Organization (UNTSO).

In its role in the course of the Israel War of Independence the UN, for the first time, faced a clear-cut case of a concerted armed attack, in flagrant contravention of the Charter, but ultimately failed to discharge its peace-keeping responsibility. The collective security system structured in San Francisco remained practically a dead letter, and it was left to the State of Israel to defend itself as best it could. In the Security Council, protracted discussions replaced action, and as the number of resolutions increased, the specific weight of each decreased. When agreement was finally reached between Israel and the Arab states, it was almost entirely due to Arab defeat on the battlefield and to negotiations between the parties.

Israel Membership

Israel applied for admission to membership in the UN in November 1948 (S/1093). Under Article 4 of the Charter, such admission is effected by a decision of the General Assembly upon the recommendation of the Security Council, but the latter did not initially endorse Israel's application. In February 1949, however, when Israel requested renewed consideration of the matter (S/1267), recommendation was granted by the council (A/818). The General Assembly considered the issue at great length and finally accepted Israel to the fold, in Resolution 273 (III), on May 11, 1949.

Israel soon perceived that as a result of the bloc system permeating every facet of life in the UN, it could scarcely take a major part in the institution's affairs. Being beyond the pale of all blocs, in its decades of membership Israel failed to get elected even once to any of the UN councils: the Security Council, the Trusteeship Council, or the Economic and Social Council. The most important elective office that Israel ever held in the UN framework was the vice presidency of the General Assembly during the eighth session in 1953 (the position was held by Abba *Eban). Resolutions sponsored by Israel were practically doomed to failure, and even cosponsorship was not sought by other states, since Arab opposition would ensue almost automatically. Israel did extend aid to developing countries through the UN and did receive technical assistance from the organization, although regional cooperation with the Arabs proved impossible.

In the beginning, Israel enjoyed at least a relative degree of support on the part of both the United States and the U.S.S.R. In a short while, however, the U.S.S.R., trying to gain a foothold in the Middle East, began to support the Arab cause, putting its veto power in the Security Council and its significant bargaining position in every UN organ at the Arabs' disposal. According to Soviet policy, as of the mid-1950s, the Arabs could do no wrong against Israel and Israel could almost never do right. Not one single pro-Israel resolution was passed by the Security Council subsequent to 1951. Although Israel made impressive efforts to win friends and influence new states and was consequently able to thwart many pro-Arab resolutions aimed at undermining its political independence and stifling its economic development, the atmosphere in the UN became increasingly hostile to her, and, particularly after the *Six-Day War (1967), Israel found itself frequently isolated and even ostracized.

Israel's political insulation in the UN had its psychological impact on many of the organization's officials (especially within UNTSO), some of whom flaunted their partiality to the Arab cause in a variety of ways. As a result, Jewish public opinion, which in 1947 deeply believed the UN to be an objective moral arbiter in international affairs, became disenchanted in the 1950s and defiant by the late 1960s.

Jerusalem

The partition resolution prescribed a special international regime for the city of Jerusalem as a *corpus separatum*, to be administered by the UN through the Trusteeship Council. Thus in December 1947, the Trusteeship Council appointed a working committee on Jerusalem to elaborate a statute for the city. The committee formulated a draft, which the council discussed and modified, but had not completed by the end of April 1948. During the War of Independence, many UN debates revolved around the fate of Jerusalem and the need to protect the holy places. At the second special session of the General Assembly (April and May 1948), a special subcommittee (No. 10) was established to consider the question of Jerusalem. A resolution dealing with the temporary administration of the city was adopted by the subcommittee, but failed to be carried by the General Assembly. Specific clauses relating to the protection of Jerusalem were incorporated in the Security Council's cease-fire resolutions of May 29 (S/801) and July 15 (S/902) 1948. General Assembly Resolution 194 (III) of Dec. 11, 1948, declared that "in view of its association with three world religions," Jerusalem should be placed under an international regime. Israel and Jordan, however, were equally opposed to the *corpus separatum* concept. Since the city was in effect divided between them by the War of Independence, the Armistice Agreement stabilized the situation along the lines of the status quo.

In 1949 the fourth session of the General Assembly adopted Resolution 303 (IV), which restated the case for an in-

ternational regime in Jerusalem, and in 1950 the Trusteeship Council resumed its work on the statute for the city and approved a new text (A/1286). Nonetheless, Jordan and Israel's united opposition to the internationalization scheme was so strenuous, and the actual state of affairs so removed from the atmosphere prevailing in the UN, that the efforts toward internationalization began to flag. A proposal to initiate further study on the subject by the Trusteeship Council was introduced at the fifth session of the General Assembly, and approved by the Ad Hoc Political Committee (A/1724), but did not obtain the required two-thirds majority in plenary. A Philippine amendment endorsing "the principle of the internationalization of Jerusalem" (A/L. 134) was submitted in plenary at the seventh session of the General Assembly in 1952, but once more fell short of the necessary majority. During the next 15 years, the issue of Jerusalem remained dormant in the General Assembly.

In the Security Council questions pertaining to violations of the Armistice Agreement in Jerusalem engendered several debates over the years. As early as 1950 Israel complained about Jordan's noncompliance with Article VIII of the agreement, which had accorded to Israel rights of access to holy places, normal functioning of the institutions on Mount Scopus (the Hebrew University and the Hadassah Hospital), and free movement of traffic on vital roads. The Security Council, however, adopted only a noncommittal resolution (S/1899), and the article was never implemented by Jordan. Israel renewed the complaint in 1957 (S/3883), but to no avail. The UN did help in supervising the observance of a special agreement for the demilitarization of Mount Scopus, concluded between Israel and Jordan on July 7, 1948. The agreement provided for supplies to be brought to Mount Scopus by special convoys, and occasionally Jordan suspended the line of communication. Late in 1957 Secretary-General Dag Hammerskjöld paid a special visit to the Middle East and in 1958 appointed a number of personal representatives to conduct negotiations between the parties with a view to the full implementation of the 1948 agreement.

In 1957 Jordan brought the issue of Israeli activities in the zone between the demarcation lines in Jerusalem before the Security Council, which called for their suspension (S/3942). In 1961 Jordan complained that Israel planned to hold a military parade in Jerusalem on Independence Day despite the prohibition against heavy armaments in the city under the Armistice Agreement. Israel pointed out that the equipment was brought into Jerusalem for ceremonial purposes only and that military parades had been conducted in the city earlier by both sides. The Security Council refused to accept Israel's explanation and urged it to comply with a MAC decision upholding Jordan's position (S/4788). The question of an Independence Day military parade was again raised in the Security Council in April 1968 (after the reunification of the city). In Resolution 250 (1968) the council called upon Israel to refrain from proceeding with the parade. When Israel ignored the call, and held the event, the Security Council adopted another resolution (No. 251; 1968) deeply deploring that action.

The reunification of Jerusalem after the Six-Day War revived UN interest in establishing an international regime in the city. The idea was espoused in a Latin American draft resolution submitted in June 1967 to the fifth emergency special session of the General Assembly (A/L. 523), but it was not adopted, having failed to gain the necessary two-thirds majority. On July 4, the General Assembly nevertheless, approved a Muslim-sponsored resolution, No. 2253 (ES-V), calling upon Israel to rescind and desist from any measures to alter the status of Jerusalem and considering such steps invalid. Israel did not participate in the vote and ignored the call. On July 14, the General Assembly voted in favor of a second resolution, No. 2254 (ES-V), deploring Israel's noncompliance and reiterating the demand. In May 1968 the Security Council adopted a resolution of its own (No. 252; 1968) in the same vein and in July 1969 it approved resolution 267 (1969), which censured "in the strongest terms" the measures taken by Israel. In September of that year, after the arson committed at the Al Aqṣā Mosque, the Security Council adopted resolution 271 (1969), condemning Israel for its failure to carry out any of the previous pronouncements. In the midst of the spate of resolutions, the secretary-general sent Ernesto A. Thalman of Switzerland to Jerusalem in August 1967 as his personal representative. Thalman's report (S/8146) tried to reflect impartially the conflicting viewpoints about a complicated matter, but it was swept aside by the descent of one-sided attacks against Israel. Israel's stand was that Christianity and Islam, like Judaism, have legitimate claims to their holy places in Jerusalem, and the concern of the UN, representing the world community, with the fate of the city is understandable. Yet the UN kept silent for 15 years, when Jordan totally disregarded the rights guaranteed Israel by the Armistice Agreements, and the general desecration of Jewish holy places by Jordan's army and population occurred. It can, therefore, hardly expect Israel automatically to submit to its sudden concern for law and order in Jerusalem when the city became reunited under Israel jurisdiction, particularly in view of the fact that since the reunification, Muslim and Christian religious rights have been scrupulously observed, and Israel has often voiced its readiness to guarantee these rights by special legal arrangements.

The Arab Refugees

The problem of the Arab refugees (see State of *Israel, Arab Refugees) was spawned by the War of Independence and augmented by a myopic and self-deluding approach to the subject by Arab governments. The General Assembly, in the pace-setting paragraph 11 of Resolution 194 (III), dated December 11, 1948, proclaimed that "the refugees wishing to return to their homes and live at peace with their neighbors should be permitted to do so at the earliest practicable date, and that compensation should be paid for the property of those choosing not to return." The Palestine Conciliation Commission (PCC), established by the same resolution, was

instructed to facilitate repatriation, resettlement, rehabilitation, and compensation.

Israel, having admitted back tens of thousands of Arab refugees on the basis of a reunion of families project and having agreed in principle to the admission of others (sometimes the figure of 100,000 was used), always emphasized that, on the whole, the solution to the problem lay in resettlement rather than repatriation. Israel pointed out that the Arab refugees, far from willing "to live at peace with their [Jewish] neighbors," have been subjected to a continuous propaganda campaign, beginning in primary schools, based on hatred for Israel, and have always been regarded by the Arab states as a means to bring about the disintegration of Israel from within. In addition, it raised the issue of Jewish refugees, from Palestine as well as from Arab countries, which also emanated from the War of Independence. Israel always expressed its readiness to contribute to the payment of compensation for Arab property abandoned in Israel, though it has also drawn attention to the seizure of Jewish property in Iraq and elsewhere in the Arab world and indicated that a balancing off is in order. As a gesture of good will, it agreed to release frozen accounts of Arab refugees. At times Israel insisted on dealing with the problem of the Arab refugees only as part and parcel of a comprehensive settlement with the Arab states, but on other occasions it agreed that solution was not contingent on an overall reconciliation. The Arab states, on the other hand, consistently repeated that repatriation of the refugees, as distinct from resettlement, is their only goal, and, as of 1948, they turned this essentially humanitarian issue into their main political weapon against Israel. Since then not a single year passed without an acrimonious debate on the subject in the UN.

In the beginning, hectic negotiations relating to the Arab refugees were held between Israel and the Arab states under the auspices of the PCC. In 1949 the latter set in motion an Economic Survey Mission for the Middle East, headed by Gordon R. Clapp of the United States, which suggested that the immediate constructive step was to give the refugees an opportunity to work in their new locations (A/AC. 25/6). The Arabs rejected the idea, and for a long time the PCC was inactive. Then, at its 15th session in 1961, the General Assembly requested the PCC (in resolution 1604 (XV)) to renew efforts to secure the implementation of paragraph 11 of resolution 194 (III). Accordingly, the PCC appointed Joseph E. Johnson of the U.S. its special representative and sent him to the Middle East. The mission, however, did not bear fruit, and Johnson resigned in 1963. For many years the PCC, through its Technical Office, conducted a program of identification and assessment of individual parcels of immovable refugee property left in Israel. It was hoped that, once concluded, the project could serve as a basis for the initiation of a compensation scheme; however, inasmuch as the Arabs were interested in repatriation only, the endeavor faded out.

In resolution 212 (III) of 1948 the third session of the General Assembly decided to appoint a director of UN relief for Palestine refugees. In 1949 the assembly's fourth session established the UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) in Resolution 302 (IV). The term "Palestine refugees," used in the definition of UNRWA's mandate, covered not only Arabs but also Jews displaced as a result of the War of Independence, and originally UNRWA dealt also with thousands of cases of Palestine Jewish refugees. These, however, were quickly absorbed in the economic life of Israel and needed no further assistance from the UN. The problem of the Palestine Arab refugees, on the other hand, kept inflating, with children and grandchildren of 1948 refugees, born and reared outside Israel, automatically joining the lists.

The Arab refugee problem did not expand as a result of the Sinai Campaign of 1956, but the Six-Day War of 1967 caused many Arabs – some of them already refugees, others displaced for the first time – to leave the territories coming under Israel control. Israel permitted many thousands of them to return, and some of them, but not all, availed themselves of the opportunity. At its 23rd session (in 1968), the General Assembly adopted resolution 2452 A (XXIII), which called upon Israel to take effective steps for the immediate return of those inhabitants who had fled the occupied areas since the outbreak of hostilities. This call was renewed at the 25th session in 1970 in resolution 2672 (XXV).

Perhaps the greatest impact of the Six-Day War on the Arab refugee problem is reflected in the fact that most of the refugees (in the Gaza Strip and the West Bank) found themselves under Israeli administration for an indefinite period of time. Instead of returning to their old homes in Israel, Israeli control reached their new ones. At long last Israel was given a chance to prove in practice that resettlement, rehabilitation, and compensation were a valid alternative to repatriation. Due to the more urgent requisites of the "war after the war," however, Israel has not of yet found its way to exploit the unique opportunity.

In the 1960s the Arabs endeavored to have the General Assembly pass a resolution safeguarding the property rights of the Arab refugees, as well as appointing a custodian to administer and protect them. Draft resolutions along these lines were submitted to the Special Political Committee but were not pressed to a vote (A/SPC/L.90 at the 17th session in 1962; A/SPC/L.99 at the 18th session in 1963) or were rejected by the committee (A/SPC/L.116 at the 20th session in 1965; A/SPC/L.128 at the 21st session in 1966; A/SPC/L.168 at the 23rd session in 1968). On other occasions the drafts were approved by the committee but not put to a vote in plenary (A/SPC/L.157 at the 22nd session in 1967) or failed to receive the necessary two-thirds majority in the final vote (A/SPC/L.61 at the 15th session in 1961; A/SPC/L.81 at the 16th session in the same year).

All these drafts, designed implicitly to undermine the sovereignty of Israel, proved abortive. At the 24th session of the General Assembly in 1969, however, an explicit resolution (No. 2535 (XXIV)) reaffirming "the inalienable rights of the people of Palestine" and requesting the Security Council to take effective measures against Israel, was accepted. At the

25th session, in 1970, two resolutions (2672 (XXV) and 2628 (XXV)) were adopted, declaring that respect for the rights of the people of Palestine was indispensable for the establishment of a just and lasting peace in the Middle East. Still another resolution carried in the same session (2649 (XXV)) condemned unnamed governments for denying the rights of self-determination of peoples, including, *expressis verbis*, the people of Palestine. Resolution 2535 (XXIV) thus created a new trend, which probably reflects Israel's greatest defeat at the UN in more than two decades. The problem of the Arab refugees was transformed into the problem of the so-called people of (the no longer existent) Palestine. Resolution 2535 (XXIV) and its sequels are the antithesis of Resolution 181 (II).

Direct Negotiations

Israel always insisted on direct negotiations with the Arab governments as the only way of arriving at a peaceful settlement of the conflict. The Armistice Agreements were in effect an outcome of such negotiations, albeit under UN auspices. In 1950 Israel submitted to the Ad Hoc Political Committee of the General Assembly, at its fifth session, a draft resolution (A/AC.38/L.60) urging direct negotiations upon the parties concerned. The draft was withdrawn prior to a vote, but the resolution finally adopted (No. 394 (V)) did call upon the parties to seek agreement by negotiations conducted either through the PCC "or directly." At the seventh session of the General Assembly, in 1952, the Ad Hoc Political Committee endorsed a resolution (A/AC.61/L.23/Rev.4) urging the parties "to enter at an early date, without prejudice to their respective rights and claims, into direct negotiations," but the required two-thirds majority was not obtained in plenary. At the 16th session of the General Assembly, in 1961, Israel canvassed sponsors for a draft resolution appealing for direct negotiations and managed to get 16 states, most of them from Africa and Latin America, to submit the resolution to the Special Political Committee (A/SPC/L.80). Although the resolution failed in the vote, the initiative was renewed with 21 sponsors at the 17th session, in 1962 (A/SPC/L.89), 19 sponsors at the 18th session, in 1963 (A/SPC/L.100), and the sole sponsorship of Israel at the 20th session, in 1965 (A/SPC/L.115), but another confrontation on the floor of the committee was avoided. Following the Six-Day War, Israel revived the demand for direct negotiations, but in 1967, when the secretary-general appointed (in keeping with the instructions of Security Council Resolution 242 (1967)) Gunnar V. Jarring of Sweden as his special representative to the Middle East, Israel was willing to cooperate. Jarring traveled extensively on several missions to the capitals of Israel and her neighbors, and submitted a number of reports, but at first he could not bring the Arabs to accept anything remotely like negotiations on a peace settlement with Israel, while Israel, in spite of its adherence to the principle of direct negotiations was ready to agree to an initial stage of indirect talks under Jarring's auspices. However, in March 1971, after Nasser's death and the secession of the right-wing Gaḥal from the Israeli government, a certain change seemed to occur in the attitude of both Cairo and Jerusalem. To a questionnaire of Jarring Cairo in principle agreed to sign a peace settlement with Israel, but demanded complete withdrawal of Israel forces from all territories occupied in the Six-Day War, according to the Arab-Soviet interpretation of the Security Council resolution of Nov. 22, 1967. Israel for its part responded to Jarring's questionnaire by reiterating its readiness to negotiate with Egypt on all outstanding issues "without any preliminary conditions," but refused to answer in the affirmative Jarring's question, whether, in exchange for a signed peace settlement and agreed security arrangements in Sharm el-Sheikh, Israel would evacuate all Egyptian territory and withdraw its forces to the previous international boundary between Egypt and Palestine (which excludes the Gaza strip from Egyptian territory). Israel stressed that the withdrawal should be effected to "secure and recognized" frontiers, not identical with any previous line of demarcation, to be agreed upon between the parties in unconditional negotiations. Egypt regarded this response as a "total rejection" of its "peace offer."

Armistice: The First Phase

The PCC entered upon its task of looking for ways and means of reconciling Israel and the Arab states with a great deal of zeal. Its essay culminated in a conference convoked at Lausanne on May 12, 1949, when a rather ambiguous protocol (A/927) was signed separately by the parties. In 1951, at another conference convened in Paris, the PCC suggested that a declaration of pacific intentions be accepted. Israel agreed in principle, but the Arabs refused, and when further attempts to bring the adversaries together failed, the PCC reached the conclusion that it was unable to discharge its duties (A/1985). Nevertheless, the sixth session of the General Assembly 1952 decided (in Resolution 512 (VI)) to keep the PCC alive. Similar resolutions were passed in later years, but to all intents and purposes the PCC ceased to be a factor in the political picture of the Middle East.

Once the armistice agreements were signed, in 1949, the Security Council relieved the acting mediator of his assignment, and the supervision of the truce was entrusted to UNTSO (1/1376). UNTSO and the MACs, however, could not maintain the armistice, mainly because their senior officers often tried to appear scrupulously "neutral" by "balancing" the number of infringements from the both sides against each other or, in some cases, showed pro-Arab bias and declared Israel's retaliatory self-defense measures as aggressive acts, while ignoring infiltrations of saboteurs and terrorists which provoked them. Thus, many meetings of the Security Council were monopolized by the Middle East question. In 1950 Israel complained to the council about Egypt's interference with passage of goods destined for Israel through the Suez Canal. On Sept. 1, 1951, the Security Council resolved that such practice was illegal and called upon Egypt to terminate the restrictions imposed on Israel-bound shipping (S/2322). This is perhaps the only unequivocally pro-Israel resolution to have emerged from that body. When Egypt refused to conform and even extended its

interference beyond the canal to the Gulf of Akaba, Israel renewed its complaint to the Security Council in January 1954. A New Zealand draft resolution (S/3188), noting "with grave concern" Egypt's noncompliance and calling for the implementation of the 1951 resolution, foundered on a Soviet veto in March. In September 1954, when the Israel vessel *Bat Gallim* was seized by Egypt at the entrance to the Suez Canal, Israel again complained to the Security Council, which was still unable to surmount the obstacle of the veto. On Oct. 13, 1956, after Egypt nationalized the Suez Canal Company, the Security Council adopted a resolution (S/3675) stating that any settlement of the Suez question should meet six "requirements," including "free and open transit through the Canal without discrimination, overt or covert." These requirements were accepted by Egypt, but access to the Suez Canal nonetheless continued to be denied to Israel and Israel-bound shipping until the canal's closure during and after the Six-Day War.

In the early 1950s a pattern began to be formed in the Security Council. Backed by the U.S.S.R., the Arabs seized the initiative and started to submit a spate of complaints about violations and alleged violations of the armistice by Israel. Israel also turned to the council occasionally, but was generally rebuffed. Many of the disputes before the Security Council related to the demilitarized zones, which thus became a source of friction, instead of fulfilling their intended role as a buffer. In 1951 fighting erupted between Syria and Israel concomitant to the drainage of the Ḥuleh marshes. The matter was brought before the Security Council, which first issued a directive of cease-fire (S/2130) and then, in effect, called upon Israel to desist from all operations in the demilitarized zone (S/2157). In 1953, when Israel began to construct a Jordan River canal as part of a hydroelectric project, the Security Council quickly called for the temporary suspension of operations in the demilitarized zone (S/3128). The suspension became indefinite as a Western draft resolution (S/3151/Rev.2), containing a compromise formula, encountered a Soviet veto in 1954.

In 1953, after an Israel retaliatory raid on the Arab village of Qibya, as a reprisal for terrorist attacks on Israel territory emanating from there, the Security Council expressed "the strongest censure" of Israel's action (S/3139/Rev. 2). This was the first among many resolutions in which the council tried to curb Israel reprisals without dealing explicitly with the terrorist Arab attacks that had motivated them. Israel reprisals were again condemned by the council in 1955, subsequent to the Gaza raid (S/3378), and in January 1956, following reprisal on terrorist bases east of Lake Kinneret (S/3538). By 1956 it became clear that the armistice structure was crumbling. In March of that year, at the request of the United States, the Security Council took up the general issue of compliance with the Armistice Agreements and its own resolutions. In April it requested the secretary-general to arrange with the parties for the adoption of certain measures designed to reduce the tension (S/3562). Dag Hammarskjöld visited the Middle East and submitted a progress report (S/3594). In June the council called for reestablishment of full compliance with the Armistice Agreements, and requested the secretary-general to continue his good offices (S/3605). Hammarskjöld returned to the region in July and transmitted to the council two more reports (S/3632 and S/3659). Conditions continued to deteriorate, however, and murderous fedayeen raids into Israeli territory increased, mainly from the Gaza Strip and Sinai, which in turn provoked Israeli retaliation. On Oct. 29, 1956, the *Sinai Campaign began, and Israel announced that the Armistice Agreement with Egypt was no longer valid.

The early 1950s thus represented a constant deterioration of the conditions on the Israel-Arab armistice lines and proved the inadequacy of the UN as a peace and law-enforcing agency. Not once did a Security Council resolution refer specifically to the operations of the fedayeen. Hardly any distinction was made between aggressor and victim. In fact, judging by the peculiar attitude of the UN members, who treated measures which Israel regarded as self-defense as more criminal than the aggression which provoked them, it would appear that it was Israel who continuously motivated trouble in the Middle East and endangered world peace.

The Sinai Campaign

The UN, which was slow to react in 1948 to the War of Independence, showed remarkable alacrity when the Sinai Campaign and the Anglo-French Suez War began. This time the two superpowers, the United States and the U.S.S.R., acted initially in full harmony. By Oct. 30, 1956, the Security Council was already in session. The same evening a vote was taken on a U.S.-sponsored draft resolution (S/3710) calling for immediate withdrawal of Israeli troops and urging other states not to assist Israel. The resolution was vetoed by France and the United Kingdom, but an emergency special session of the General Assembly was convened forthwith. On November 1 the General Assembly met and the following day in Resolution 997 (ES-I) it appealed for an immediate cease-fire and prompt withdrawal of forces. Another resolution (No. 998 (ES-I)), restating the case more strongly, was approved on November 4. Still another resolution (1002 ES-I), again urging immediate withdrawal of Israel troops, was taken on November 7.

New ground was broken at the emergency special session with the adoption of Resolution 998 (ES-I), originally introduced by Canada, on November 4. It requested the secretary-general to present a plan for the creation of a UN emergency force, and he quickly responded to the idea. The UN Emergency Force (UNEF) was established on November 5 by Resolution 1000 (ES-I). Its purpose was "to secure and supervise the cessation of hostilities." Resolution 1001 (ES-I), dated November 7, approved guidelines proposed by the secretary-general for the functioning of UNEF. The formation of UNEF was carried out against strong protests from the U.S.S.R., which adhered to the view that only the Security Council, as distinct from the General Assembly, was empowered to take such action. The U.S.S.R., as well as several other countries, refused to participate in covering UNEF's expenses, and in time this refusal precipitated a financial and political crisis

for the UN. (The question was eventually brought before the International Court of Justice, which, in 1962, in the matter of *Certain Expenses of the United Nations* (Article 17, paragraph 2 of the Charter), gave an advisory opinion to the effect that these were "expenses of the organization" within the meaning of Article 17 of the Charter.)

The 11th regular session of the General Assembly continued the deliberations begun in the first emergency special session. On November 24, in Resolution 1120 (XI), it noted "with regret" that no withdrawal of Israeli, French, or British troops had been effected and reiterated its call to comply with former resolution on the subject. In Resolution 1121 (XI), adopted the same day, it noted the "basis for the presence and functioning" of UNEF in Egypt, in line with points made by the secretary-general in an *aide-mémoire* (A/3375). The *aide-mémoire*, based on the secretary-general's conversations in Cairo, contained a clear Egyptian undertaking to be guided by Resolution 1000 (ES-I) and enable UNEF to operate until its task had been completed. The first UNEF contingents arrived in the Middle East within a matter of days.

Throughout this period Israel was subjected to intense pressure by the United States and the secretary-general (in person) to commence withdrawal. Dag Hammarskjöld was a strong and active secretary-general who interpreted his authority in a way that permitted him to play a direct and major role in the affairs of the Middle East. Gradual withdrawal of Israeli troops started late in November, but Israel and the secretary-general were in constant disagreement over the schedule of the evacuation of Sinai and the Gaza Strip. On Jan. 19, 1957, pursuant to a report by the secretary-general, the General Assembly in Resolution 1123 (XI), noted "with regret and concern" that withdrawal had not yet been completed, and lent its support to the secretary-general's uncompromising stand. Israel then put forward an *aide-mémoire* (A/3511) indicating that withdrawal from *Sharm el-Sheikh must be accompanied by related measures ensuring free navigation in the Straits of Tiran and the Gulf of Akaba. Furthermore, Israel propounded that certain steps be taken to ascertain that the Gaza Strip would not again be used as a springboard for attack and raised practical questions pertaining to the conditions for the termination of UNEF's functions.

The secretary-general continued to insist on total and immediate withdrawal (A/3512). Debate in the General Assembly resumed, and on February 2, in Resolution 1124 (XI), the assembly deplored Israel's noncompliance with former resolutions and urged the completion of withdrawal without delay. In a complementary resolution (No. 1125 (XI)), adopted on the same day, the General Assembly also called for the scrupulous observance of the Armistice Agreement. Israel then had a new round of exchanges with the secretary-general (A/3527 and A/3563), and on March 1 Israel announced that it was prepared to proceed with full withdrawal on the basis of certain "assumptions," founded in part on statements made by the U.S. government. Withdrawal followed suit. During the Sinai Campaign and immediately thereafter, the UN suddenly reawakened as a peace-keeping organization. Its energetic pursuit of the goal of cease-fire and withdrawal had no precedent in the Middle East conflict. The same UN members, who remained aloof during weeks of bloodshed in 1948 and who totally ignored the activities of the fedayeen in subsequent years became agitated when the pace of Israel's withdrawal from Sinai was not rapid enough, and, under pressure from the UN and the United States, Israel complied.

Armistice: The Second Phase

The presence of UNEF contributed to the relative stability that characterized the southern border of Israel in the decade following the Sinai Campaign, but the attention of the Security Council was frequently drawn in the same period to clashes between Israel and Syria (which, for a while, formed part of the United Arab Republic). Most of the disputes again involved the demilitarized zones.

In 1958 and 1959 the Security Council convened to discuss complaints by Israel against Syrian violations of the armistice (S/4123 and S/4151), but no resolution could be reached because of Soviet intransigence. Conversely, in 1962, when Israel again retaliated against Syria in the Lake Kinneret area, the council adopted a resolution (S/5111) reaffirming the January 1956 condemnation of Israel (S/3538) and determining that the recent reprisal constituted a "flagrant violation" of that decision. In 1963, after terrorist bloodshed at Almagor, a Western draft resolution condemning the "wanton murder" of Israeli citizens (S/5407) was once again vetoed by the U.S.S.R. In 1964, when fighting erupted around Tel Dan, the Security Council rejected an Arab-sponsored draft resolution condemning Israel (S/6085), whereupon the Soviets cast their veto on a Western text which deplored the renewal of military action on both sides (S/6113). In July 1966, following a flare-up of fighting as a result of Syrian support of terrorist activities and attempts to divert the source of the Jordan River, another Arab-sponsored draft resolution condemning Israel (S/7437) was rejected by the Security Council. In October of that year Israel complained about the Syrian-backed terrorist attacks. A Western resolution calling upon Syria to prevent the use of its territory by the terrorists (S/7568) was not even put to a vote. A weaker and broader draft (S/7575) was vetoed by the U.S.S.R. In November 1966, subsequent to the Israeli reprisal action in the village al-Samʿu, in Jordan territory, the Security Council approved resolution No. 228 (1966), which, for the first time, "censured" Israel for its action and emphasized that such retaliation "cannot be tolerated" and may entail "further and more effective steps."

The decade of relative quiet between Israel and Egypt came to an abrupt end in May 1967. On May 16 Egypt demanded the withdrawal of UNEF from observation posts along the border. By May 18 Egypt insisted on the total evacuation of UNEF from Sinai and the Gaza Strip. Secretary-General U Thant immediately conceded that UNEF could remain in Egypt only as long as that country consented to its presence. On the same day he issued instructions to UNEF to withdraw

and merely reported his decision to the General Assembly (A/6669), without requesting permission from the General Assembly or the Security Council; without consideration for Israel's views; and without serious study of the legal rights of Egypt unilaterally to terminate the presence of UNEF (in the light of the agreement reached in 1956 in Cairo with Secretary-General Hammarskjöld (A/3375) and endorsed by General Assembly Resolution 1121 (XI)). UNEF was ousted at the moment when its presence was most needed. On May 19, after issuing the withdrawal instructions, the secretary-general submitted a further report to the Security Council (S/7896) and left for consultations in Cairo. On May 23, while U Thant was in Egypt, Canada and Denmark requested an urgent meeting of the Security Council to examine the deteriorating situation. In the ensuing debates, held on May 24, the council proved its complete ineffectiveness as a peace-keeping organ, particularly when the U.S.S.R. and other pro-Arab states regarded the situation as favorable to Arab aggression against Israel. The representatives of the U.S.S.R. and Bulgaria claimed that events in the Middle East were over-dramatized and that there was no reason for an urgent meeting of the council in the first place. Other representatives, from Asia and Africa, also contended that the discussion was untimely. A draft resolution, submitted by Canada and Denmark (S/7905), merely requesting all member states to refrain from steps which might worsen the situation, was not even put to a vote. On May 26 the secretary-general returned from Cairo and issued a new report (S/7906). On May 29 the Security Council reconvened, and ineffective discussions continued, until the canons began thundering in the Middle East.

The Six-Day War and After

The Security Council met in emergency session on June 5, nearly as soon as the news of the outbreak of fighting reached New York. The United States was immediately willing to adopt a resolution calling for the cessation of hostilities, but, inasmuch as it was not yet clear which side had the upper hand in battle, the U.S.S.R. preferred to await developments. Only on June 6, when the Egyptian military debacle became obvious, was the Security Council in a position to adopt resolution 233 (1967), calling for an immediate cease-fire. On June 7 a second resolution, No. 234 (1967), urging the cessation of all military activities (particularly between Israel and Jordan) was approved. On June 9 resolution 235 (1967) demanded that hostilities between Israel and Syria come to an end immediately. On June 11 the Security Council (in resolution 236 (1967)) condemned all violations of the cease-fire. On June 14 (in resolution 237 (1967)) it called upon Israel to ensure the security of the inhabitants of the areas where military operations had taken place and urged the governments concerned to respect the humanitarian principles governing the treatment of prisoners of war and protection of civilians. However, a Soviet-sponsored draft resolution (S/795 Rev.2) condemning Israel as the aggressor and demanding immediate withdrawal was rejected by the Security Council the same day.

Having failed to achieve the denunciation of Israel in the Security Council, the U.S.S.R. took the initiative to convene the fifth emergency special session of the General Assembly. The session opened on June 17, and two days later the chairman of the council of ministers of the U.S.S.R., Aleksei Kosygin, personally presented a draft resolution to the effect that the General Assembly vigorously condemn Israel; demand immediate withdrawal of Israel troops as well as compensation for damages inflicted on Arab countries; and appeal to the Security Council to take effective measures to eliminate all the consequences of Israel's aggression (A/L.519). This proposal was rejected by the General Assembly on July 4. A similar draft submitted by Albania, which also condemned the United States and United Kingdom for their complicity in the aggression (A/L.521), was voted down on the same day. Yugoslavia introduced another text, ultimately sponsored by 17 (mostly African and Asian) states, which generally restricted itself to a call for immediate withdrawal (A/L.522/Rev.3). An alternative Latin American draft resolution, sponsored by 20 states, also made a request for withdrawal, but coupled it with a call for an end to the belligerency, a request that the Security Council look into the question of navigation and Arab refugees, and reference to the issue of Jerusalem (A/L.523/Rev.1). The Yugoslav and the Latin American proposals met the same fate on July 4, having failed to obtain the required two-thirds majority. The only resolution adopted by the General Assembly on that day (No. 2252 (ES-V)), like Security Council Resolution 237 (1967), related to the need for respecting humanitarian principles.

By July 1967 it was already necessary for the Security Council to convene to examine complaints about breaches of the cease-fire along the Suez Canal, but no formal resolution was voted upon. The discussion resumed in October, after the sinking by the Egyptians of the Israel destroyer *Eilat*. On October 25 the council approved Resolution 240 (1967), generally condemning all violations of the cease-fire. On November 22 the reconvened Security Council adopted the famous Resolution 242 (1967), initially proposed by the United Kingdom, which affirmed that the establishment of "a just and lasting peace in the Middle East" was based on both withdrawal of Israeli forces and termination of belligerency, as well as respect for the right of every state in the area "to live in peace within secure and recognized boundaries." The resolution further affirmed the necessity for (1) guaranteeing freedom of navigation; (2) achieving a just settlement of the refugee problem; and (3) guaranteeing the territorial inviolability and political independence of every state in the region. Finally, the resolution requested the secretary-general to designate a special representative to proceed to the Middle East in order to promote a settlement between the parties. This resolution became a milestone in the period following the Six-Day War. Its precise meaning, however, was controversial, and its validity in later years, in view of the disintegration of the cease-fire on which it was based, was often subject to doubt. It also reflected the low-water mark of Arab postwar efforts to bring about the

adoption of unequivocally one-sided, anti-Israel resolutions at the UN. From that point on, the tide of resolutions, which practically challenged Israel's right to self-defense and self-preservation, became an almost routine performance, losing much of its political and moral impact. In March 1968, after the Karameh battle (in which Israel attacked the main Arab terrorist base in Jordan), the Security Council adopted Resolution 248 (1968), condemning the military action launched by Israel "in flagrant violation" of the Charter and the cease-fire and declaring that it would have to consider more effective steps to prevent the repetition of such acts. The Security Council was reconvened almost immediately for further debate on new violations of the cease-fire along the Israel-Jordan line, but no formal resolution was taken. The discussion resumed in August, when the council approved Resolution 256 (1968), again condemning Israel and reaffirming the warning that more effective measures might be taken. Once more, the deliberations continued in March and April 1969, and the council accepted Resolution 265 (1969), adding still another condemnation of Israel to the record, while repeating the same warning.

In September 1968 the situation along the Suez Canal was brought up before the Security Council, which insisted, in Resolution 258 (1968), that the cease-fire "must be rigorously respected." In November 1968 the discussion recommenced, but no vote was taken.

In December 1968, after the attacks of Arab terrorists based in Beirut on El Al planes in Europe, the pendulum swung to Lebanon, and the Security Council met to examine Israel's reprisal action against the international airport in Beirut. The Security Council (in Resolution 262 (1968)) condemned Israel, adding "a solemn warning" about further steps that might be taken. The question of Lebanon was also raised in August 1969, when Israel attacked terrorists operating from Lebanese territory and the council (in Resolution 270 (1969)) condemned Israel again. In May 1970 the same problem produced a similar resolution (S/9807), including condemnation of Israel and reiteration of the "solemn warning." It is notable that the (actual) cease-fire within a (technical) cease-fire, agreed upon for a period of three months in August 1970 – and extended for an equal length of time in November of that year – was brought about as a result of a U.S. rather than UN initiative. In November 1970 the General Assembly adopted Resolution 2628 (XXV), recommending the extension of the cease-fire. This resolution, however, was totally unbalanced against Israel in its thrust and formulation. The advent of the second series of talks with the parties, conducted by the secretary-general's special representative, Gunnar Jarring, early in 1971, was again due to U.S. diplomatic efforts.

Antisemitism

At its first session in 1946 the UN General Assembly confirmed the principles of international law introduced by the legislation of the International Arbitrary Tribunal in Nuremberg and later embodied in the *Genocide Convention (resolutions 95 (I), 96 (I)), thus outlawing the worst antisemitic crimes ever committed in the history of mankind. After that the UN for years ignored the issue of antisemitism. In 1959–60 a "swastika epidemic" swept through large parts of the world. Consequently, several members submitted to the UN subcommission on Prevention of Discrimination and Protection of Minorities at its 12th session (in January 1960) a draft resolution condemning manifestations of antisemitism and other religious and racial prejudices (E/CN.4/Sub.2/L.159). There was a consensus in the subcommission that it was necessary to take action against antisemitism, but some members had qualms about the explicit use of that term in the resolution. Finally a decision was taken to condemn antisemitism without resorting to euphemisms, and the subcommission recommended that its parent body, the UN Commission on Human Rights do the same (Resolution 3 (XIII)). The Commission on Human Rights, followed the recommendation, in a somewhat altered form, in Resolution 6 (XVI), adopted at its 16th session (in March 1960). The matter was discussed later in the year in the Third Committee of the General Assembly. The General Assembly in Resolution 1510 (XV) condemned all manifestations of racial, religious, and national hatred, but deleted a specific reference to antisemitism. The item of "manifestations of antisemitism and other forms of racial prejudice and religious intolerance of a similar nature" was placed on the agenda of the subcommission at its 13th session (in 1961). The subcommission studied material on the subject obtained from governments (E/CN.4/Sub.2/208) and nongovernmental organizations (E/CN.4/Sub.2/L.216), and discussed the nature of the manifestations of antisemitism, as well as the causes of the swastika epidemic. It also examined public reaction to the incidents and measures taken by governments. Objections were again raised to the specific reference to antisemitism in the emerging resolution. Finally the term was relegated to the preamble of Resolution 5 (XIII); the operative paragraphs were of general character and dealt with the need to combat racial, religious, and national hatred. At the 17th session of the Commission on Human Rights (in 1961) manifestations of antisemitism were further studied, but Resolution 5 (XVII) almost entirely ignored antisemitism as such. The Economic and Social Council of the UN (ECOSOC) continued the trend in Resolution 826B (XXXII) of that year, calling for the eradication of racial prejudice and religious intolerance wherever they exist. The General Assembly debated the subject at its 17th session, in 1962, when another resolution, No. 1779 (XVII), was adopted along the same lines.

As an outcome of the deliberations on the subject in the Third Committee, in 1962 the General Assembly also resolved to initiate the drafting of a series of declarations and conventions on the elimination of all forms of racial discrimination (Resolution 1780 (XVII)) and religious intolerance (Resolution 1781 (XVIII)). The Declaration on the Elimination of All Forms of Racial Discrimination (Resolution 1904 (XVIII)) was adopted by the General Assembly at its 18th session, in 1963. In the course of drafting the accompanying convention, at the

20th session of the Commission on Human Rights, a representative of a Jewish nongovernmental organization (see below), the Agudat Israel World Organization, suggested that a specific condemnation of antisemitism be incorporated in the document. The United States embraced the idea and officially proposed that Article 3 of the draft prepared by the subcommission, condemning "racial segregation and apartheid," be amended to include a condemnation of antisemitism as well. Objection to the proposal was voiced on the ground that Article 3 dealt exclusively with segregation and apartheid, and that antisemitism was out of place in this context. The United States therefore withdrew the amendment and offered the addition of a new article instead: "States parties condemn antisemitism and shall take action as appropriate for its speedy eradication in the territories subject to their jurisdiction" (E/CN.4L.701, later revised). The U.S.S.R., for its part, proposed to expand the new article to cover Nazism also (including Neo-Nazism) and genocide (E/CN.4/L.710).

Most members of the Commission on Human Rights endorsed, in principle, the concept of the condemnation of antisemitism, but since the United States and the U.S.S.R. could not reach a mutually accepted formula, it was decided to transmit both versions to the General Assembly. The Third Committee debated the issue only at the 20th session, in 1965. By that time, opposition to the express mention of antisemitism had grown and congealed, particularly among Arab and Soviet bloc delegations. The U.S.S.R. was no longer satisfied merely with the joint listing of antisemitism and Nazism and now insisted on adding Zionism to the same category (A/C.3/L.1231). Many other delegations wanted to avoid a confrontation on the subject, inasmuch as they had reservations even about the direct reference to antisemitism. Therefore, at the suggestion of Greece and Hungary (A/C.3/L.1244), the Third Committee decided, by an overwhelming majority, not to insert in the convention "any reference to specific forms of racial discrimination," i.e., to delete from the text all the "isms" (the condemnation of apartheid in Article 3 was left intact). Thus, the International Convention on the Elimination of All Forms of Racial Discrimination, adopted by the General Assembly in Resolution 2106 (XX), does not condemn antisemitism in so many words. However, the interpretation that antisemitism is covered by the general injunctions of the convention, is based on good authority (see Schwelb, "The International Convention on the Elimination of All Forms of Racial Discrimination," in: *International and Comparative Law Quarterly*, 15 (1966), 996, 1011–5).

Whereas progress in the UN codification on racial discrimination was very quick, many obstacles have impeded the drafting of the instruments regarding religious intolerance. The declaration was in effect abandoned in the Commission on Human Rights in favor of a convention, and the prospects that the latter will be quickly adopted by the General Assembly do not appear to be good. In the process of drafting, however, at the 22nd session of the Commission on Human Rights in 1966, Israel proposed to add in Article 5 (later enumerated as No. 6) of the text prepared by the subcommission a specific reference to antisemitism (E/EN.4/L. 791). This amendment was subsequently withdrawn in favor of a similar draft submitted by Chile (E/CN.4/L.797). The Chilean formulation was accepted by the Commission on Human Rights, which, once more, was not sufficiently sensitive to the atmosphere prevailing in the General Assembly. In the 22nd session of the General Assembly (in 1967) Libya proposed (in the Third Committee) adding the words "Nazism, Fascism and Zionism" after antisemitism (A/C.3/L.1461). Before discussion of Article 6 as a whole was about to begin, however, the General Assembly adopted Resolution 2295 (XXII), which decided not to mention "any specific examples of religious intolerance" in the convention. Thus specific mention of antisemitism, past or present, has become a taboo in UN resolutions. The closest that the UN ever came to denouncing the Nazi Holocaust was in a 1960 Security Council resolution in the case of Adolf Eichmann (S/4349). In response to an Argentinean complaint against Israel's abduction of Eichmann, the council noted, with Soviet support, "the universal condemnation of the persecution of the Jews under the Nazis" and concern that Eichmann should be brought to appropriate justice for his crimes. However, it nonetheless requested Israel "to make appropriate reparation."

Jewish Communities in Arab Countries and the U.S.S.R.
Israel, as the only Jewish member state of the UN, has always felt itself duty-bound to raise the issue of oppressed, sometimes silent, Jewish minorities in Diaspora countries. The same sense of responsibility has been shared by some Jewish nongovernmental organizations in consultative status with the Economic and Social Council. The greatest efforts to appeal to the conscience of the world were made on behalf of Jews in Arab lands and in the U.S.S.R. The plight of Jews in Arab lands, directly affected by the Middle East conflict, was first brought to the attention of the UN early in 1948 by the World Jewish Congress, which initiated the adoption of two rather bland formal resolutions on the subject by the Economic and Social Council (Resolutions 133 (VI) H of March 1948 and 214 (VIII) B of February 1949). The Jewish nongovernmental organizations and the State of Israel later found it impossible to have formal resolutions placed before the United Nations. The campaign was therefore confined to the debating ground.

Israel used the opportunity of the annual General Assembly discussion on the subject of the Arab refugees to air in public the grievances against the Arab governments' maltreatment of Jews. Occasionally more dramatic action was taken, and at the sixth session of the General Assembly (in January 1952), Israel publicly withdrew from meetings of the Ad Hoc Political Committee (47th meeting) and the Third Committee (398th meeting) as a protest against the hangings of Jews in Iraq following useless appeals for UN intercession on their behalf. When other incidents of hanging Jews in Iraq occurred early in 1969, Israel proposed to the Commission on Human Rights (at its 25th session) that it dispatch a special communi-

cation to the Baghdad government in an effort to prevent further summary executions. The commission was unresponsive, even though the year before, when Arab houses connected with terrorist actions were blown up in Israel-administered territories, a telegram appealing to Israel "to desist forthwith from indulging in such practices" had been promptly adopted at its 24th session.

The Sinai Campaign compounded the plight of the Jewish community in Egypt, and Israel brought the matter up in detail before the 11th session of the General Assembly. The Six-Day War ignited an anti-Jewish campaign of unprecedented dimensions throughout the Arab world, and Israel strove to mobilize world public opinion on behalf of the persecuted Jews. A special representative of the secretary-general, Nils G. Gussing, was nominated in July 1967, pursuant to Security Council Resolution 237 (1967), relating to respect for humanitarian principles by "the Government concerned," and sought to obtain information with regard, inter alia, to the treatment of Jewish minorities in Egypt and Syria (A/6797). Israel requested that the condition of Jewish communities in the whole area of the conflict, including Iraq and Lebanon, be investigated by a projected second mission, but the Security Council (in Resolution 259 of September 1968) called upon Israel alone to receive a special representative of the secretary-general to examine the situation in the territories under its control. Israel insisted that the assignment of the special representative include the issue of Jews in Arab countries, and when this demand was denied, it refused to cooperate with any new mission. For the same reason, Israel also expressed its unwillingness to cooperate with a Special Committee to Investigate Israel Practices Affecting the Human Rights of the Population of the Occupied Territories, established by General Assembly Resolution 2443 (XXIII) in 1968 (renewed in Resolution 2546 (XXIV) in 1969 and in Resolution 2727 (XXV) in 1970), as well as a special Working Group of Experts set up by Commission on Human Rights Resolution 6 (XXV) in 1969 (and renewed in Resolution 10 (XXVI) in 1970).

The plight of about 3,000,000 Jews in the U.S.S.R. was generally not raised in the UN during the Stalin period. An exception was made in 1953, just before Stalin's death, when Israel castigated in the First Committee of the General Assembly, at its seventh session, "the libel of an alleged world Jewish conspiracy" underlying the notorious *"Doctors' Plot." With the advent of the 1960s, however, the UN gradually became an important arena for exposing the suffering of Soviet Jewry. First Jewish nongovernmental organizations, then Israel, and eventually many other states from all continents raised their voices denouncing the denial of human rights and fundamental freedoms to the Jews of the U.S.S.R. Initially, the accusations leveled at the U.S.S.R. were muted and circumspect, scarcely mentioning that country by name; but in time, a systematic and sustained offensive developed. It covered, under a variety of agenda items, almost every possible session of the subcommission, the Commission on Human Rights, the Economic and Social Council, and the General Assembly. Since 1967 even debates in the Security Council served as a forum for the topic.

The campaign for Soviet Jewry in the UN served to enlist world opinion in exerting moral pressure upon a government defaulting the human rights of an oppressed minority group to persuade it to mend its ways. Most of the critical statements at the UN have hinged on the U.S.S.R.'s violations of fundamental freedoms proclaimed by the Universal Declaration of Human Rights and related instruments: communal Jewish activities that were not permitted; synagogues that were closed down; Jewish schools, religious facilities, publishing houses and cultural institutions that were practically nonexistent; reunion of families torn asunder by World War II that was not made possible. After the Six-Day War (1967) the focus shifted from charges of discriminatory practices to protests against the virulent antisemitic propaganda, thinly disguised as attacks against Israel and "world Zionism," which spread over the U.S.S.R. and practically revived the paranoiac concept of The Protocols of the *Elders of Zion. On a number of occasions, special emphasis was placed on the poisonous writings of the Ukrainian antisemite Trofim Kichko. His first book, *Judaism Without Embellishment*, was strongly reprehended by Israel and other delegates at the 20th session of the Commission on Human Rights in 1964. His later book, *Judaism and Zionism*, and, for that matter, the whole phenomenon of "Kichkoism" was rebuked by Israel at the 25th session of the commission in Israel in 1969. As of November 1969 Israel has publicly raised the demand that Soviet Jews be permitted to go and settle in Israel, and circulated in the UN official communications on the subject – the first one containing a letter addressed to the Israel government and various UN bodies by a group of 18 families in Soviet Georgia who expressed the wish to settle in the Jewish homeland (A/7762).

Soviet response to the statements made at the UN on behalf of Jews in the U.S.S.R. was uneven. Soviet representatives tried to muzzle such statements, contending that they were irrelevant to the agenda under discussion. They took strong exception to Israel's circulation of official documents on Soviet Jewry and claimed that the procedure constituted "a gross violation" of the Charter, inasmuch as it intervened in the domestic jurisdiction of the U.S.S.R. (A/7787). The U.S.S.R. accused those who spoke out on behalf of Soviet Jews of slander and distortions, of creating a smokescreen to conceal their own violations of human rights, and even of an attempt to undermine the Soviet system. At times the U.S.S.R. also responded with elaborate statements, replete with statistics and quotes, designed to disprove any discriminatory practices against Soviet Jews. However, the fact that the Soviets, who consistently denied the existence of antisemitism in their country, became the standard-bearers of the fight against the condemnation of antisemitism at the UN, voided their statements of any moral content. Often, the debate on antisemitism at the UN became synonymous with a debate on Soviet policies.

UN Bodies and Specialized Agencies

Israel's participation and activities in the framework of the various UN bodies and specialized agencies has been relatively fruitful and in some cases even outstanding, mainly in view of her role as a source of aid to other developing countries.

ECONOMIC AND SOCIAL COUNCIL. At the sessions of the Economic and Social Council, which consists of 27 members elected by the General Assembly, Israelis participated as observers and frequently raised the issue of discrimination against the Jews in the U.S.S.R.

Regional Commissions. Due to Arab refusal to cooperate with Israel in regional bodies, no Regional Commission for the Middle East, similar to those for Europe (ECE), Asia and the Far East (ECAFE), Latin America (ECLA), and Africa (ECA), was established. Israel, however, sent observers to the ECA, ECAFE, and ECLA, some of whose sessions had to be transferred from cities closed to Israel (e.g., Karachi, Algiers, or Kabul) to those open to her (Bangkok or Addis Ababa). In the framework of these commissions, Israel experts took part in development schemes, as, e.g., in the Mekong Delta Development Project in the Far East, regional development in Upper Volta, and various projects in Latin America.

Functional Commissions. Israel was an active member in the functional commissions elected by the Economic and Social Council. As a member of the Commission for Human Rights (from 1957 until 1959 and from 1965 until 1970), Israel, together with other delegations, incessantly raised the issue of Soviet Jewry and was active in drafting the Convention on the Right of Asylum. The problem of Soviet Jewry was also raised by Israeli members, as well as by members from other countries, in the Subcommission on the Prevention of Discrimination and the Protection of Minorities, where Israel's membership lasted from 1966 until 1968. Israel was also a member of the Social Commission; the UN Refugee Fund Executive Committee (UNREF), the Technical Assistance Committee; the Population Commission; the commissions for Social Development, on the Status of Women, on Housing, Building and Planning; the Advisory Committee on the Application of Science and Technology to Development; and the International Law Commission. Israel was a member on the Executive Committee of the UN High Commissioners' Program (1970).

Other Bodies. Israel played an outstanding part in the International Children's Emergency Fund (UNICEF), not only as a member of the Executive Board from 1957 but also as its vice chairman (in 1957–58) and member, and several times as chairman, of its Program Committee. Israel's representative, Zena *Harman, received on UNICEF's behalf the Nobel Prize for Peace in 1965. Israel was active in extending aid through UNICEF by participating in the establishment of the plant for sterilized milk, of centers for mothers, and care for prematurely born children. Israel became a member of the High Commissioners' Advisory Committee on Refugees in 1951, the rapporteur in 1952, and chairman of the session in 1954.

AD HOC COMMITTEES. Israel was also a member of a number of ad hoc committees, appointed by the General Assembly, such as the Ad Hoc Committee on Refugees and Stateless Persons; the Special Committee on the Methods and Procedures of the General Assembly for Dealing with Legal and Drafting Questions; the Committee on International Criminal Jurisdiction; the Special Committee on Review of Administrative Tribunal Judgments; the Peace Observation Committee; the Panel for Inquiry and Conciliation; several committees of the UN Trade and Development Board, e.g., the Committee on Manufactures, the Group on Preferences, etc.

SPECIALIZED AGENCIES. *International Labor Organization (ILO).* ILO's director general from 1948 to 1970 was an American Jew, David *Morse. Israel joined the ILO in 1949 and signed 36 of the 130 conventions drafted by it, including the convention against forced labor. Arab and Soviet representatives failed in their attempt to establish that the *Naḥal (in the Israel army) is a form of forced labor. The Israeli government is represented in the ILO by its Ministry of Labor; Israeli workers by the *Histadrut; and employers by the Manufacturers' Association. The Histadrut delegate was elected in 1954 as workers' deputy member, and the Israeli government delegate was elected in 1960–61 as government group deputy member. ILO assisted Israel, from her early days, in establishing a vocational school network and workers' training courses for developing countries in cooperation with the Histadrut. Israeli experts were sent by the ILO to developing countries (e.g., Cyprus) to assist in trade union organization.

Food and Agricultural Organization (FAO). Israel joined the FAO in 1949 and until 1953 belonged to its Near Eastern Region. In view of the Arabs' refusal to attend regional conferences of FAO with Israel, the latter moved to its European Region in 1954. In 1967–68 Israel was a member of the FAO's Council. FAO assisted Israel in matters of irrigation and the drainage of underground water, e.g., in Naḥal Shikmah. Israel cooperated with the FAO in establishing courses in poultry raising, irrigation, multi-seasonal crops, food production, etc. for developing countries. Israel contributes to the World Food Program of the FAO.

World Health Organization (WHO). Israel joined WHO in 1949 and at first belonged to its Eastern Mediterranean Region, together with Cyprus, the Arab states, Pakistan, Iran, and Ethiopia. Arab refusal to participate together with Israel in regional activities prevented the convocation of its meetings until 1953. In 1954 WHO decided to split the regional organization into two subcommittees, and Israel belonged to subcommittee B, together with Iran, Cyprus and Ethiopia; these, however, gradually seceded from it, and the subcommittee ceased to exist. Despite Arab opposition, Israel continues its participation in the region and in 1961–64 was represented by the director general of its Ministry of Health on WHO's Executive Board. On WHO's initiative, Israel and Arab states cooperated in combating rabies and venereal diseases. WHO assisted Israel

in establishing medical courses and nursing courses as well as postgraduate medical courses in various fields for students from developing countries. WHO also assisted Israel in sending experts and equipment to other countries for combating malaria and producing vaccine against tuberculosis.

International Civil Aviation Organization (ICAO). Israel joined ICAO in 1949, and on her initiative the organization adopted a resolution in 1970 against plane hijacking.

Universal Postal Union (UPU). Israel joined UPU in 1949, but Arab states refused to maintain mutual postal services with Israel.

International Telecommunication Union (ITO). Israel joined ITO in 1949, but Arab states refused to maintain telegraphic contacts with Israel.

World Meteorological Organization (WMO). Israel joined WMO in 1949, and Israeli experts were sent by WMO to African states. WMO experts and equipment assisted Israel in establishing a meteorological station at Beit Dagon.

Israel also participates in the following specialized agencies of the UN: the Inter-Governmental Maritime Consultative Organization (IMCO), from 1958; the International Bank for Reconstruction and Development (IBRD), from 1954; the International Monetary Fund (IMF), from 1954; the International Financial Corporation (IFC), from 1965; the General Agreement on Tariffs and Trade (GATT), from 1962. The International Atomic Energy Agency (IAEA) was joined by Israel in 1957, and Israel's Atomic Energy Commission maintained close contact with it.

UNESCO. A particularly fruitful cooperation developed between the UN Educational, Scientific and Cultural Organization (UNESCO) and Israel. Léon *Blum played a prominent role in UNESCO's foundation in 1946, and the opening sentence of its constitution ("since wars begin in the minds of men, it is in the minds of men that the defense of peace must be constructed") is attributed to him. Israel joined UNESCO in 1949 and was a member of its Executive Board, represented by Moshe Avidor, from 1962 until 1970. Until 1967 Israel belonged, in most fields of UNESCO activity, to the organization's Asian region. Later UNESCO's regional organization became more specified, and Israel's participation in the Asian region greatly diminished; Israel is now the only developing country that does not belong to any regional sector of UNESCO. UNESCO experts, equipment, and scholarships assisted Israel in many fields of education, science, and cultural activities. UNESCO international conferences on adult education, the social sciences, and science instruction in elementary schools took place in Israel. Israeli professionals and scientists are often invited by UNESCO to participate in expert meetings, panels, and study groups on specific issues, such as hydrology, racialism, sociology, communal integration, adult education, etc. Israel raised the issue of discrimination against Jewish education in the U.S.S.R. at UNESCO's general conferences from 1964. In 1964 the UNESCO conference adopted an Israel-proposed resolution demanding education toward tolerance and against racialism in kindergartens and elementary schools. In 1960 Israel was active in drafting the Convention against Discrimination in Education.

In November 1967, after the Six-Day War, Israel raised the issue of using textbooks containing material of anti-Jewish and anti-Israel hate and incitement in UNWRA-UNESCO schools. In 1968, in accordance with a decision by its Executive Board, the director general of UNESCO appointed a committee of outside experts to examine the textbooks in Jordan, Lebanon, and Egypt, and it confirmed Israel's complaint. After prolonged negotiations, these states undertook to expunge the objectionable passages from the textbooks. Syria refused to abide by UNESCO's Executive Committee's decisions, declaring that "the hatred we instill in our children from birth is a sacred emotion." In 1969–70, under UNESCO auspices, matriculation examinations, according to the Egyptian curriculum, were held in the Israel-administered Gaza Strip. In 1967, in accordance with the Convention on Protection of Cultural Property in the Event of Armed Conflict, applied for the first time, UNESCO sent general commissioners to Israel and her neighbors. The Arabs accused Israel of destroying historical sites, but the reports of UNESCO's general commissioners denied this charge. The Arabs also failed in their attempt to have UNESCO denounce Israel for the fire in the Al-Aqṣā mosque in Jerusalem. On the other hand, the Arabs succeeded in having UNESCO adopt a resolution which called on Israel to refrain from archaeological excavations and town planning in East Jerusalem in order to preserve its specific character. Israel did not vote and declared that the status of Jerusalem is not within UNESCO's sphere of responsibility.

UNESCO published books and pamphlets on Jewish topics in several languages, as well as anti-racialist literature, such as *Israel Ancient Mosaics* (prefaced by Meyer Shapiro with an introduction by M. Avi-Yonah, 1960); *Social Life and Social Values of the Jewish People*, in: *Journal of World History*, 11 (1968/69); Leon Roth, *Jewish Thought as a Factor in Civilization* (1961); Claude Levi-Strauss, *Race and History* (1961–4); Cyril Bibby, *Race, Prejudice and Education* (ed. by Z. Adar, Jerusalem, 1962); Arnold M. Rose, *L'Origine des Préjugés* (Jerusalem, 1963); Harry L. Shapiro, *The Jewish People: A Biological History* (1963²). UNESCO's monthly *Courier* began to appear in Israel in 1968 in a Hebrew edition called *Eshnav la-Olam* ("Window to the World").

NONGOVERNMENTAL ORGANIZATIONS (NGO). By 1970 there were some 620 nongovernmental organizations a consultative status on the Economic and Social Council and other UN bodies, as well as on regional bodies outside the UN framework.

NGOs delegate observers to the meeting of the bodies with which they have a consultative status and distribute written material on the topics under discussion. The Jewish NGOs were active in various fields, such as denouncing racialism,

discrimination of all kinds, antisemitism, oppression of minorities, as well as demanding freedom of religion, and particularly persisting in defending the rights of the Jewish communities in the Soviet Union and the Arab countries.

In 1968 the Arab and Soviet delegations opened an intensive campaign to oust the Jewish NGOs that have consultative status on the Economic and Social Council, arguing that their "Zionist" character deprives them de facto of their nongovernmental character, since they are closely linked with the State of Israel. Their main target was the Coordinating Board of Jewish Organizations. At its spring session in 1970, the ECOSOC decided not to change the status of the Jewish NGOs.

[Anne Marie Lambert]

For Israel, the collapse of the Soviet Union and the end of the Cold War, as well as significant weakening in the Arab position following the Gulf War and the opening of peace talks after the Madrid Conference, led to a significant change in its standing in the United Nations. This manifested itself in the unprecedented repeal on December 15, 1991, of General Assembly Resolution 3379 passed in 1975 that had equated Zionism with racism. The resolution, which had been passed by a vote of 72 in favor, 35 against and 32 abstentions, was repealed in 1991 by a vote of 111 in favor, 25 against (including almost all the Arab and Muslim states), and 13 abstentions.

Even following the resolution's repeal, critics pointed to an anti-Israel bias at the UN, in the General Assembly and other UN forums, such as UNESCO. Israel's position within the UN was nevertheless considered to have improved since 1991, as it was elected to several UN bodies that were previously closed to it. At the end of 1992 Israel was approached for the first time by the secretary general of the UN, Dr. Butrus-Ghali, about sending professional personnel to participate in UN peacekeeping forces, and agreed.

Resolution 3379 (November 10, 1975), which declared that "Zionism is a form of racism and racial discrimination," had marked the climax of what critics denounced as an ongoing anti-Israel and antisemitic campaign in the United Nations, especially since the 1970s. The U.S. ambassador to the UN, Daniel Patrick Moynihan called it a "terrible lie… an infamous act." Israel's then ambassador to the UN, Chaim Herzog, told the General Assembly: "For us, the Jewish people, this resolution based on hatred, falsehood, and arrogance is devoid of any moral or legal value," and then he tore the text of the resolution in two.

For most Israelis, the UN resolution equating Zionism with racism was an Orwellian inversion of language, deemed common practice at the Soviet-Arab-Third World-dominated General Assembly of the mid-1970s. But unlike other regular generalized attacks on capitalism, democracy, or freedom of the press, here the Israeli delegation felt the target was clear and specific: to delegitimize a member state – Israel – and to legitimize antisemitism. The adverse ramifications for Jews and Israelis went far beyond the narrow confines of the United Nations, as would become explicit in an alarming increase of antisemitic incidents in Western Europe.

Subsequently, critics point out, the attacks on Israel and Zionism, replete with antisemitic nuances, spread to all the UN institutions and special agencies, bearing the nature of a campaign to delegitimize the right of the Jewish people to its own independent state. More than 30 anti-Israel resolutions were adopted on various aspects of the Arab-Israel conflict. Israel was singled out in General Assembly resolutions for policies of "hegemony" and "racism" and was accused of being a "non-peace-loving country" (a characterization, which, according to the UN Charter, could be grounds for expulsion from the organization), "an affront to humanity" and a perpatrator of "war crimes."

The resolutions and papers accepted and distributed within the various organizations of the United Nations were mostly collections of condemnations, abuses, and retouched histories that disregarded and even challenged the right of Israel to exist as a state. At the General Assembly, resolutions called for economic, diplomatic, and military sanctions against Israel which, had they not been vetoed in the Security Council, would have left Israel helpless against military attacks as well as political and economic ones. UN records contain many antisemitic outbursts, delegitimization attacks, obscene accusations, and diatribes against Israel. Critical reviews of the UN General Assembly records, of diplomatic efforts as well as the media coverage involved in passing these resolutions pointed to the annual and special UN conferences as forums for anti-Israel attacks. The UN played a major role in enhancing the prestige and international standing of the Palestine Liberation Organization (PLO) when its leader, Yasser Arafat, addressed the General Assembly in November 1974.

In the early 1980s the anti-Israeli campaign shifted to an effort to have the credentials of the Israeli delegation to the General Assembly disqualified, with the goal of having Israel suspended from the deliberations. As a result of the determined American position, accompanied by U.S. threats that it would withdraw if Israel were to be suspended, no deliberation on the disqualification of Israel's credentials took place. The revelations in 1986–7 on the Nazi past of Dr. Kurt Waldheim, the former Secretary General of the UN, dealt another blow to the prestige of the UN. Waldheim's file in the UN War Crimes Commission was not known to the public when he was elected, serving 10 years in this post.

In the field of UN peacekeeping forces, the Middle East and the Arab-Israeli conflict continued to be an active laboratory for various operations. In addition to the UN Disengagement Observer Force (UNDOF) in the Golan Heights since 1974, the UN Interim Force in Lebanon (UNIFIL) has been stationed in southern Lebanon since 1978. Criticism within the UN General Assembly of the Camp David Accords and the peace agreements between Israel and Egypt as well as the opposition of the Soviet Union in the Security Council prompted the creation of a new framework outside the UN, the Multinational Force, led by the United States, which was stationed in Sinai after Israel's final withdrawal to the interna-

tional border in April 1982. This Multinational Force replaced the UN forces in Sinai.

There are still about 300 UN personnel in the UN Truce Supervision Organization (UNTSO) that was established in 1948 to supervise the cease-fires and later the armistice agreements between Israel and its neighbors. The UN Relief and Work Agency (UNRWA) has been operating in the Palestinian refugee camps in the territories.

[Avi Beker]

After the short honeymoon in the wake of the Oslo Accords, hostility to Israel again reared its head as the Arab-Israel peace process became stalled and the second Intifada got under way in 2000. The Israeli perception of being labeled the primary aggressor in the Arab-Israel conflict was reinforced by events at the UN World Conference Against Racism, held in Durban, South Africa, in the summer of 2001, which steadfastly refused to concern itself with antisemitism and instead held up the Palestinians as victims of Israeli racism, as well as in the 2004 condemnation of Israel's security fence by the UN's International Court of Justice. In 2002 the UN was quick to call Israel's incursion in Jenin against Palestinian terrorists a "massacre" though it later had to admit that most of the 52 dead were armed combatants. In 2003 the General Assembly passed 18 resolutions critical of Israel, but only four mentioning any other country, with such gross violators of human rights as Syria and China not mentioned at all. International sentiment, as expressed by the United Nations' General Asembly, remained critical of Israel in the Middle East equation, implying that it could not play a meaningful role in the peace process.

On a more positive note, in 2005 the UN General Assembly proclaimed January 27 as International Holocaust Day, marking the first time that a resolution introduced by Israel was adopted by the General Assembly.

UNITED RESTITUTION ORGANIZATION (URO), legal aid society for claimants outside Germany for restitution and compensation. During World War II the Allies declared they would obtain restitution of the property of Nazi victims which had been confiscated, taken, or sold under duress; and financial compensation for their suffering – loss of liberty, health, profession, and employment, and loss of parents and family. Failing to agree on a uniform law, separate Ordinances on Restitution in each of the occupied zones were enacted, initially by the Americans (1948), and followed two years later by the English and French. A decree governing the Western Sectors of Berlin was promulgated about the same time. When the Western Allies agreed to recognize the sovereignty of the German Federal Republic in 1952, they stipulated that the Bonn government must pass a federal law on compensation at least as favorable to the refugees as any provincial law in force.

The United Restitution Organization was founded in 1948 as a legal aid society, to help claimants of limited means, living outside Germany, to recover both in restitution and compensation what was due to them. Legal offices were set up for this purpose, staffed by expert Jewish and European lawyers in the countries of refuge and in Germany itself and later in Austria. The URO was sponsored by the British Foreign Office as a qualified and responsible public service to undertake the preparation and pleading of claims in return for a modest fee in case of success. The administrative center, established in London, was headed from 1949 until his death in 1964 by Secretary-General Hans Reichmann, a German-Jewish civil servant. The number of clients soon reached 100,000, and rose in the peak period of activity to 250,000. For the first five years the URO was financed by Jewish voluntary bodies concerned with refugees: the *Jewish Agency for Palestine, the *American Jewish Joint Distribution Committee, and the *Central British Fund for relief and rehabilitation.

When the Government of Israel and the *Conference on Jewish Material Claims against Germany (formed in 1952), together demanded reparations, restitution, and compensation, the latter, as the representative of the Jews in the Diaspora, advanced sums from funds which it received from the German government and took over financial responsibility for the URO. A central office was opened in Frankfurt, and Benjamin Ferencz, an American lawyer and former head of the Jewish Restitution Successor Organization, became the first director general, succeeded in 1955 by Kurt May, a German lawyer. In 1958 the URO maintained 29 branch offices in 15 countries including South America and Australia; and had a staff of 1,000, of whom 200 were legal officers. The original estimate of the liability of the German government for compensation claims, i.e., excluding restitution, was DM 7,000,000,000 ($1,750,000,000). After the final legislation in 1966, it rose to DM 45,000,000,000 ($11,250,000,000). Ten percent of the claimants are clients of the URO. By 1967 the URO recovered for its clients over DM 2,000,000,000 ($500,000,000) and with the fees from claims which were successful, it has repaid the sums advanced by the Claims Conference and other philanthropic bodies. Later, the amount recovered for the clients and the fees paid declined considerably.

The total sum recovered includes compensation for Jews who resided in the Eastern Zone or Eastern Sector of Berlin, as the federal German government took over the liability which

was rejected by the Soviet authorities and the East German government. It also includes compensation for the confiscation of movable property, furniture, jewelry, securities, and bank accounts of Jews living in countries occupied by the Nazi armies, provided the claimant could prove that the property had been transferred to Germany. Since the Nazi bureaucratic system kept careful record of the Nazi spoliation, the research staff of the URO was able to trace it. The URO is a legal British nonprofit organization limited by guarantee since 1954. The organization did not take up the claims of Jewish and other victims of the Nazi Holocaust living in any part of Germany. It had offices in Frankfurt, Berlin, Munich, Cologne, and Hanover. At the peak of its operations the URO maintained 29 branch offices in 15 countries. Over the years it assisted more than 200,000 claimants.

By the end of 1965 the filing deadlines under the principal restitution and compensation laws expired. The scope of the URO's activities began to gradually diminish. Currently (2006) the URO maintains six offices located in Israel, the United States, Canada, and Germany.

UNITED STATES HOLOCAUST MEMORIAL MUSEUM. The United States Holocaust Memorial Museum adjacent to the National Mall in Washington, D.C., is America's national memorial to the Holocaust, whose mission is to advance and disseminate knowledge about that unprecedented tragedy, preserve the memory of those who suffered, and encourage reflection upon the moral and spiritual questions raised by those events. Most of the museums and monuments on the National Mall in Washington, D.C., celebrate the fruits of democratic freedoms. Standing as a sobering counterpoint, the United States Holocaust Memorial Museum reflects the opposite – the disintegration of civilized values and the perversion of technological achievements. The museum is housed in an award-winning building designed by architect James Ingo *Freed of Pei, Cobb, Freed and Partners. Freed's family fled Nazi Germany when he was a child. The Memorial Museum won the American Institute of Architects' Honor Award in 1994. The museum is a unique public-private partnership, built on public land with funds donated by the American people. The museum remains a joint effort of the United States government and private contributors from across the nation.

Background

The initiative for the creation of the museum began when President Jimmy Carter appointed the President's Commission on the Holocaust on November 1, 1978, to study the idea of an American national memorial to the Holocaust. Chaired by Elie *Wiesel, the commission issued its *Report to the President*, on September 27, 1979, calling for a permanent "living memorial" in Washington, D.C. The commission felt that such a memorial would fulfill the obligation to learn from the past and to teach future generations, in its words, "A memorial unresponsive to the future would also violate the memory of the past." The president accepted the Commission's recommendations and appointed a United States Holocaust Memorial Council.

By a unanimous vote on October 7, 1980, Congress established the United States Holocaust Memorial Council and charged it with raising funds for and building the memorial museum, conducting an annual national Days of Remembrance observance for the victims of the Holocaust, and establishing a Committee on Conscience to serve as an influential voice on issues of contemporary genocide and related crimes against humanity. Elie Wiesel and Mark Talisman were named the first chairman and vice chairman of the Council, respectively.

The Building of the Museum

An official groundbreaking ceremony on the site of the future museum took place on October 16, 1985, just south of Independence Avenue, bordering 14th and 15th Streets, Southwest. On October 8, 1986, the section of 15th Street, Southwest, in front of the site was officially renamed Raoul Wallenberg Place, in honor of the Swedish diplomat responsible for rescuing thousands of Hungarian Jews during the Holocaust.

In February 1987, President Ronald Reagan appointed Harvey M. Meyerhoff as chairman of the Council, succeeding Elie Wiesel, who had resigned the Council chairmanship in December 1986 after being given the Nobel Peace Prize.

President Reagan appointed William J. Lowenberg to serve as Meyerhoff's vice chairman. Albert Abramson chaired the Museum Development committee that oversaw the creation of the museum. Miles Lerman chaired the International Relations Committee and the Campaign to Remember, the fundraising arm of the Museum, and Benjamin Meed chaired the Content and Days of Remembrance Committees.

To spearhead the creation of the museum, in 1989, the council appointed Jeshajahu (Shaike) Weinberg to serve as museum director. Weinberg, whose background was in theater and museums, had pioneered the idea of a storytelling museum when he led the development of Beth Hatefutsoth, the Nahum Goldmann Museum of the Jewish Diaspora, in Tel Aviv, Israel.

The Museum Opening

The United States Holocaust Memorial Museum opened to the public on April 26, 1993, with a dedication ceremony attended by President Clinton, Vice President Gore, and many national and international dignitaries.

The museum opened at a time of dramatically increased attention to the Holocaust in the United States. The Museum of Tolerance had opened some two months before; *Schindler's List* premiered that fall; and in Bosnia ethnic cleansing was taking place in Europe for the first time since 1945. The museum drew large crowds, predominantly non-Jewish, from the day it opened. Almost 20 million visitors saw the museum

during its first decade, including about six million schoolchildren. Visitation is 90 percent non-Jewish. The museum has been an important destination for international visitors. Eighty heads of state have visited, as have almost 3,000 foreign officials from more than 130 countries.

Though the Holocaust did not take place on American soil, the museum's core messages are very much intended for American audiences as it reflects on American history and American values.

The museum, of course, has special meaning to Holocaust survivors and to the American Jewish community. Its creators felt free to create this memorial in the heart of America's civic landscape. The choice of Washington and not New York was a decision to take what could have been kept as the parochial memoirs of a bereaved community to the American people as a lesson for humanity, while preserving the Judeocentricity of the event.

Remembrance is at the heart of the museum and it resonates throughout the building. The hexagonal Hall of Remembrance and the Wall of Remembrance, which memorializes the murdered children, are the two specific memorial spaces.

Another memorial component is the Benjamin and Vladka Meed Registry of Jewish Holocaust Survivors, which contains information on more than 190,000 survivors and their family members, including names, cities of birth, places of transit and incarceration, wartime locations, and communities of resettlement. Remembrance is also central to the museum's programming, both onsite and around the country, ranging from the oral testimony in exhibitions to talks by survivors at the Museum and around the country. Perhaps most important, the enduring commitment to remembrance is affirmed annually when the Museum leads the nation in observing the Days of Remembrance with ceremonies in the United States Capitol Rotunda and at the Museum, and in commemorations in cities and states throughout the country. Every president since 1979 has spoken at the Days of Remembrance commemoration as well as many cabinet officials and Supreme Court justices.

Directed by Jeshajahu Weinberg, designed by Ralph Appelbaum, who worked in collaboration first with Martin Smith 1989–91 and later with Raye Farr as director of the Permanent Exhibition, to implement the storyline developed by a team of scholars, curators and museum conceptual developers headed by Holocaust scholar and Museum Project Director Michael *Berenbaum, the Permanent Exhibition presents a chronological account in a self-guided format that is designed for visitors 11 years of age and above. Traversing three floors, it is divided into three sections, "Nazi Assault – 1933 to 1939," "The 'Final Solution' – 1940 to 1945," and "Last Chapter."

The story is told through photographs, film, documents and artifacts – such as a barracks from Birkenau, a railcar of the type used to transport Jews from Warsaw to Treblinka, a milk can hidden by Jews under the Warsaw ghetto, and a Danish boat that transported Jews to freedom. Four themes underlie the permanent exhibition: personalizing the story of the Holocaust, making it accessible to American visitors intellectually and conceptually, including all victims of Nazi tyranny without diluting from the Judeocentricity of the event, and understanding the unique perspective of those who were there. The exhibition personalizes the history, encourages visitors to understand the Holocaust as an event that people did to other people, and encourages identification with the victims and the understanding that the victims were very much like us. Another permanent installation is *Remember the Children: Daniel's Story,* which recounts the history of the Holocaust from the perspective of a young boy growing up in Nazi Germany. This interactive exhibition with recreated environments was designed for younger audiences, eight years and above, accompanied by their families and teachers. Although intended for younger audiences, it is also very moving for adult visitors.

The museum also offers special exhibitions in the Sidney Kimmel and Rena Rowan Exhibition Gallery and the Gonda Education Center, as well as topical displays in the Museum's Wexner Learning Center. Designed as a destination for visitors to explore and discuss Holocaust history and its meaning today, the Wexner Learning Center examines various themes and features an array of digital media, group-discussion areas, artifact displays, and videos of eyewitness testimonies. It has explored such topics as liberation, war crimes trials, and contemporary genocide in Darfur, Sudan.

The National Institute for Holocaust Education

The museum has become a worldwide leader in Holocaust education in the broadest sense. Its stature has enabled it to work nationally, internationally, and with an array of U.S. and regional governmental entities.

The Teacher Fellowship Program provides advanced professional development training to highly experienced secondary level teachers in all 50 states. The Law Enforcement and Society Program serves police and federal law enforcement officers, as well as FBI agents and judges, encouraging participants to explore the implications of Holocaust history for their own professions. The Holocaust, the Military, and the Defense of Freedom Program reaches cadets from the U.S. Naval Academy, officers in training at West Point, foreign liaison officers at the Pentagon, and soldiers, sailors, pilots and marines from military bases, aircraft carriers, and active duty locations nationwide. Finally, the museum's Leadership and Diplomacy Programs reach out to senior civil servants within the Federal Executive Institute and foreign service officers in training with the State Department so they might approach their public service with a sophisticated level of moral discourse rooted in awareness of Holocaust history and a commitment to vigorous response when faced with contemporary threats of genocide.

Rescue the Evidence

The Museum's educational work depends on its collections and ensuring the vitality of Holocaust scholarship. Already housing the most comprehensive collection of Holocaust-re-

lated resources in a single location, the museum was fortunate to have negotiated with East European governments at transitional moments, before, during and after the revolutionary regime changes that swept across Eastern Europe in the years just prior to the museum's opening. It is also fortunate to receive donations of artifacts and material from Americans of all walks of life, survivors, rescuers, and liberators as well as their descendants. The museum is continuing its efforts to acquire materials through its Rescue the Evidence Initiative, seeking donations of objects and documents from Holocaust survivors, liberators, eyewitnesses, and their family members, as well as institutions and governments. The museum makes a concerted effort to offer access to highly relevant archival materials, otherwise widely dispersed internationally, via a centralized collection of microfilm copies. Many of these microfilms are also available in Jerusalem at *Yad Vashem and the museum has a policy of sharing microfilmed material to maximize its accessibility to scholars.

The Photographic Reference Collection is one of the museum's most widely used resources, containing copies of images from collections worldwide. It is an indispensable source of information for educators, filmmakers, curators, researchers, journalists, and publishers throughout the world.

In addition, the museum's Library comprehensively collects books, dissertations, music scores, sound recordings, periodicals, audiovisual materials, and other electronic media on the historiography and documentation of the Holocaust and the Third Reich, personal accounts of Holocaust survivors and victims, and materials relating to war crimes and war crimes trials. In order to support background research on the Holocaust and related topics, the Library also collects materials on World War II, genocide studies, antisemitism, and Jewish genealogical and cultural history as affected by the Holocaust.

Center for Advanced Holocaust Studies

From its inception the Museum was conceived of as an educational and scholarly institution, a center for both research and teacher training. Within months of its opening the Research Institute was opened with a scholarly conference. In 1998 the Center for Advanced Holocaust Studies was established to foster the continued growth and vitality of the academic study of the Holocaust. The center has taken the lead in training and supporting new scholars in the field through rigorous academic programs and is working to ensure that students at colleges and universities are taught at the highest levels of excellence by conducting programs for faculty members who specialize in this field. The center offers conferences, fellowships, awards, and stipends. It also publishes in the field of Holocaust studies, including the *Journal of Holocaust and Genocide Studies*, published in association with Oxford University Press.

As part of its effort to encourage a balanced and comprehensive approach to the field of Holocaust scholarship, the center launched its Jewish Source Study Initiative to encourage research on how Jews – as individuals and communities – responded during the Holocaust. This research program is an effort to balance the established research focus on the perpetrators with a commensurate level of attention to documenting the perspectives of those targeted.

Committee on Conscience

As the museum is a living memorial to the victims, its Committee on Conscience works to raise public awareness and alert the national conscience to contemporary acts or threats of genocide and related crimes against humanity. The committee has addressed areas such as Rwanda, Kosovo, Chechnya, and Sudan (both southern and Darfur regions). Working with the U.S. State Department and other federal entities, the committee recently launched an Academy for Genocide Prevention.

Museum Governance

The museum is overseen by the United States Holocaust Memorial Council, which includes 55 private citizens appointed by the U.S. president, five members of the Senate and five members of the House of Representatives, and three ex-officio members from the Departments of State, Education, and Interior.

Since the museum opened, the council has been led by Chairman Miles Lerman and Vice Chairman Ruth B. Mandel, appointed by President Clinton in 1993; Chairman Rabbi Irving Greenberg, appointed by President Clinton in 2000; Chairman Fred S. Zeidman, appointed by President Bush in 2002; and Vice Chairman Joel M. Geiderman, appointed by President Bush in 2005.

The council has appointed these individuals to serve as directors of the museum: Jeshajahu Weinberg, 1987–94; Walter Reich, 1995–98; Sara J. Bloomfield, from 1999.

UNITED STATES LITERATURE.

The Influence of the Bible and Hebrew Culture

The Jewish influence on American literary expression predated the actual arrival of Jews in the United States in 1654, for the Puritan culture of New England was marked from the outset by a deep association with Jewish themes. No Christian community in history identified more with the Israelites of the Bible than did the first generations of settlers of the

Massachusetts Bay Colony, who believed their own lives to be a literal reenactment of the biblical drama of the chosen people: they were the children of Israel; the American continent was the promised land; the kings of England were the pharaohs of Egypt; the Indians were the natives of Canaan or, alternatively, the *Ten Lost Tribes; the pact of Plymouth Rock was God's holy covenant; and the ordinances by which they lived were His divine law. Since they viewed themselves as the persecuted victims of the sinful Christian establishment of the Old World, the Puritans also had a natural sympathy for the Jews of their own time, at least in the abstract. The Puritan leader Cotton Mather repeatedly referred to the Jews in his prayer for their conversion as God's "Beloved People," and the lasting influence of this attitude no doubt accounts in large measure for the striking philo-Semitism that prevailed in American life and letters long after Puritanism as such had ceased to be a vital force.

A striking feature of the Puritan identification with the Old Testament was the high place accorded to the study of Hebrew in New England's intellectual life. Until late in the 18th century, Hebrew was a required subject at Harvard and Yale, and was also taught at Princeton, Dartmouth, Brown, and King's (Columbia) College. Commencement addresses were given in Hebrew and scholars such as Yale President Ezra *Stiles even conversed in the language. The very fact that the Puritans produced next to nothing of a literary nature apart from sermons and theological tracts bears witness in itself to their affinity to Judaic modes of thought, which were on the whole traditionally hostile to secular writing and to literary expression for its own sake.

[Milton Henry Hindus]

The Image of the Jew

It was only in the 19th century that Jews themselves first came upon the American literary scene, as both authors and fictional characters. Curiously enough, during this period it is only in the writings of non-Jews that Jewish characters appear. The works of the early 19th-century Jewish playwrights Mordecai Manuel *Noah, Isaac *Harby, and Jonas B. Phillips are conventional melodramas, conspicuously devoid of Jewish subject matter, despite the active involvement of Noah and Harby in Jewish community life. Perhaps they felt that Jewish life was too insubstantial to provide the working basis for a dramatic theme; or perhaps they wished to vie with their contemporaries on more universal ground. On the other hand, as drama critic of the New York *Evening Post*, Harby attacked the antisemitic stereotype of Shylock in Shakespeare's *Merchant of Venice*. A fourth Jewish dramatist of the period, Samuel Judah, was hostile to his background, and his unperformed biblical play, *The Maid of Midian*, was an attack on Old Testament religion. In contrast to the playwrights, two 19th-century Jewish poets, both women and southerners, wrote verse of a specifically Jewish character. The legendary Adah Isaacs Menken deservedly gained fame more for her romantic personality than for her poetry, but her volume *Infelicia* received considerable attention when it appeared shortly before her death in 1868. Her first poems, largely on Jewish national themes, were published by Isaac M. Wise in his *Israelite.

In contrast to the generally sympathetic treatment of Jews as a collective entity in American journalism and political writing of the age, the few portraits of Jewish characters in fiction and drama tended to draw heavily on the negative stereotypes of Jews that predominated in British literary tradition, on which American authors were greatly dependent until well into the 19th century. Perhaps the first such Jewish character to appear in American literature was in Susanna Haswell Rowson's *Slaves in Algeria* (1794), a drama about piracy along the Barbary Coast in which a central role was played by a rapacious Jewish miser and swindler. A similar character appeared in James Ellison's *The American Captive* (1812). In fiction, George Lippard's Gothic novel *The Quaker City* presents a minor Jewish character named Gabriel von Gelt as a misshapen incarnation of greed.

In the middle of the 19th century, Jewish characters began to make their appearance in serious works of American fiction. Significantly, their entry occurred at the time of the first large increase of the American Jewish population, which was created by the arrival of German Jews in the wake of the European upheavals of 1848. The critic John J. Appel has observed that in Hawthorne's well-known story *Ethan Brand* (1851) "the German-Jewish peddler reflected American awareness of the growing numbers of German-Jewish immigrants who traveled the backwoods with their moveable stocks of goods." These peddlers also appear in the correspondence of Emily Dickinson and may be the source of some odd images in her poems, such as one in which she describes her orchard "sparkling like a Jew!"

In contrast, Longfellow's moving poem "The Jewish Cemetery at Newport," which was written in 1852, delineates Jewish martyrdom and antisemitic persecutions throughout the ages with the profoundest sympathy for the victims. Yet its concluding stanza is hardly calculated to inspire any hope or nurse illusions in the heart of its Jewish readers:

> But ah! What once has been shall be no more!
> The groaning earth in travail and in pain
> Brings forth its races, but does not restore,
> And the dead nations never rise again.

This dispiriting ending prompted a protest by Emma *Lazarus – the author of the sonnet "The New Colossus," which is inscribed on the base of the Statue of Liberty – who pointed out that it was hardly consonant with the facts.

Walt Whitman's voracious curiosity about the inhabitants of the city of New York led him to consider the Jews. Long before the appearance of *Leaves of Grass*, he had published two sizable articles, in a newspaper he was editing at the time, recording his impressions of the customs of the Sabbath service that he had witnessed at the Crosby Street Synagogue. The philo-Semitic temper of the time is nowhere more evident than in the writings of William Cullen Bryant, who was not only a distinguished American poet but also, for almost 50

years, the influential editor of New York's *Evening Post*, a newspaper that enjoyed the greatest prestige in mid-19th-century America. Commenting on a performance by the Shakespearean actor Edwin Booth in the role of Shylock, Bryant took the opportunity to find fault with Shakespeare for his repulsive caricature of the Jew and paid eloquent tribute to –

> That superiority of intellect which has survived all persecutions, and which, soaring above the prejudice of the hour, has filled us with reluctant admiration on finding how many of the great events which work the progress of the age or minister to its improvement or elevate its past may be traced to the wonderful workings of the soul of the Hebrew and the supremacy of that spiritual nature which gave to mankind its noblest religion, its noblest laws, and some of its noblest poetry and music.

The mass immigration to the United States of East European Jews that began in the 1880s and lasted until after World War I totally transformed both the character and the size of the American Jewish community and, concomitantly, the attitudes of American intellectuals toward it. On the whole, the first reactions still echoed the generous sentiments of an earlier age. William Dean Howells wrote with great insight and compassion about the Jewish immigrants on New York's Lower East Side in his *Impressions and Experiences* (1896), and in the same year he wrote an article hailing the advent of Abraham *Cahan's novel of immigrant life, *Yekl*, for which he himself had helped to find a publisher. Howells' friend Mark Twain expressed himself equally strongly on the subject of Jewish immigration. The Jews' "contributions to the world's list of great names in literature, science, art, music, finance, medicine, and abstruse learning," he wrote in an article in *Harper's* in 1899, "are… out of proportion to the weakness of his numbers … [the Jew] is now what he always was, exhibiting no decadence, no infirmities of age, no weakening of his parts, no slowing of his energies, no dulling of his alert and aggressive mind…"

It is impossible to pinpoint with any precision the exact moment when far-reaching historical changes first began to challenge this hitherto predominant image of the Jew in American literature. If anything, it tended somewhat to predate the time when the tide of popular tolerance toward Jews began to recede in America, which the historian Oscar Handlin has dated to "the portentous period between 1913 and 1920." During this time, as Handlin puts it, "great numbers of Americans became obsessed with fear of the Jew." The new attitudes of the 20th century are already anticipated by Henry James in his novel *The American Scene* (1907), in which he speaks of his impressions on New York's Lower East Side of "a Jewry that had burst all bounds.… The children swarmed above all – here was multiplication with a vengeance.… There is no swarming like that of Israel when once Israel has got a start." In a similar vein, some years later in his novel *The Beautiful and Damned* (1922), F. Scott Fitzgerald described a trip down the length of the island of Manhattan:

> Down in a tall busy street he read a dozen Jewish names on a line of stores; in the door of each stood a dark little man watching the passers from intent eyes – eyes gleaming with suspicion, with pride, with clarity, with cupidity, with comprehension. New York – he could not dissociate it now from the slow, upward creep of this people – the little stores, growing, expanding, consolidating, moving, watched over with hawk's eyes and a bee's attention to detail – they slathered out on all sides. It was impressive – in perspective, it was tremendous.

Even the normally sympathetic Mark Twain commented wryly on the enormous increase of Jewish numbers in America:

> When I read [in the *Encyclopaedia Britannica*] that the Jewish population of the United States was 250,000, I wrote the editor and explained to him that I was personally acquainted with more Jews than that in my country, and that his figures were without a doubt a misprint for 25,000,000.

The same impression is communicated humorlessly in the correspondence of Theodore Dreiser, who was inclined to assume the existence of a sinister conspiracy on the part of official agencies to minimize Jewish population statistics in the United States. Dreiser's antisemitism, which was unusual at the time for one who held radical left-wing opinions, surfaced so unmistakably during the Depression following the financial crash of 1929, and especially after the accession of the Nazis to power in Germany, that he was publicly taken to task for it by his Communist comrade Michael *Gold, the author of *Jews Without Money* (1930).

During the first four decades of the 20th century, it became almost fashionable for many American writers of distinction – especially among the expatriates – to express antisemitism. It is sometimes present in the writings of Edith Wharton (who once described Fitzgerald's gangster-villain Wolfsheim in *The Great Gatsby* (1925) as the "perfect Jew"), Henry James, T.S. Eliot, Ezra Pound, Ernest Hemingway, e.e. cummings, and others. It is strong in those of German ancestry like Dreiser, H.L. Mencken, and Thomas Wolfe, and it even touches a writer like Gertrude *Stein, who was herself, as Wyndham Lewis described her, "a brilliant Jewish lady." In 1920, the year which saw the publication of the spurious Protocols of the *Elders of Zion in Henry Ford's *Dearborn Independent*, Mencken wrote: "The case against the Jews is long and damning; it would justify ten thousand times as many pogroms as now go on in the world." Yet such sentiments did not seem incompatible with Mencken's having Jewish friends and even Jewish publishers! Among those who wrote about urban Jewry was Damon Runyon, whose *Guys and Dolls* (1932) and other short story collections teem with amiable Jewish gangsters and Broadway characters.

In the late 1930s, the pendulum began to swing back again, as the emerging barbarism of the Nazis developed an inhibiting effect upon intellectual antisemitism in America. A number of American writers, including Thomas Wolfe, T.S. Eliot, and F. Scott Fitzgerald, whose sentiments concerning the Jews had hitherto been less than friendly, now gave signs of regretting that their own position might be confused with or lend comfort to that of the Hitler regime. After being lionized by the Nazis on his visit to Germany in the mid-1930s,

Wolfe returned to the United States to write a report on what he had seen, which promptly resulted in the suppression of all his books in the Third Reich. The outbreak of World War II and its aftermath once again generated a new wave of philo-Semitic sympathies in American intellectual life.

[Milton Henry Hindus / Hillel Halkin]

Works on Palestine and Israel

American writers who visited Palestine in the 19th century found the land both inviting and forbidding. The climactic experience of Herman Melville's trip to Europe and the Near East (1857) appears to have been the 18 days he spent in Ereẓ Israel, mainly in the area of Jerusalem. His *Journal* (published in 1955) contains a vivid metaphor summing up the writer's impression of the desolation there: "In the emptiness of the lifeless antiquity of Jerusalem, the emigrant Jews are like flies that have taken up their abode in a skull." All Judea, in fact, seemed to him an accumulation of stones, rubbish, and the "mere refuse of creation." Yet the experience haunted Melville's imagination, and almost 20 years later he published his two-volume *Clarel*; *A Poem and Pilgrimage in the Holy Land* (1876), which was inspired by this visit to Jerusalem. Ten years after Melville's journey, Mark Twain embarked on the steamship *Quaker City* for a tour of the Mediterranean, which he describes in *The Innocents Abroad* (1869). His impressions of Palestine were similar to those of Melville, but though anxious to debunk the guidebooks, he recognized that "Palestine is no more of this work-day world. It is sacred to poetry and tradition – it is dreamland …" Twain's testimony to the true fascination of the ancient land did more to promote foreign travel among Americans than all the tourist brochures of his day.

One of the earliest novels by a U.S. writer dealing with Ereẓ Israel was Henry Gillman's *Hassan: A Fellah; A Romance of Palestine* (1898). This account of romance and adventure in the Holy Land was in general very hostile toward the Jews, although as U.S. consul in Jerusalem (1886–91) Gillman had succeeded in preventing the Turks from expelling the Jews from the country.

Among the early American-Jewish poets inspired by the Holy Land was Jessie *Sampter. In *The Emek* (1927), she portrayed the first pioneers in the Valley of Jezreel through a series of vivid prose poems; and in the verse collection *Brand Plucked from the Fire* (1937), she expressed her attitude to Judaism and Zionism. Judah Stampfer (1923–), a poet deeply conscious of his Jewish roots, published several poems about Israel, which he knew as both soldier and teacher, in the collection *Jerusalem Has Many Faces* (1950). *Israel* (1925) by Ludwig *Lewisohn, was both a Zionist-oriented study of the Jewish question in the 1920s and an evocative and reflective travel book covering the development of the country. Meyer *Levin wrote two novels on the subject: *Yehuda* (1931), a first-hand description of the life on a kibbutz in the late 1920s; and *My Father's House* (1947), the story of a Polish boy's escape to Palestine during World War II. Michael Blankfort's novel *Behold the Fire* (1965) tells the story of the Palestinian Jews who assisted British intelligence during World War I, and another of his novels, *The Juggler* (1952), is also set in Israel. A defiant Zionist work of the post-World War II era was Ben *Hecht's drama, *A Flag is Born* (1946). Probably the most famous of all the novels about Israel's establishment and the idea of independence is Leon *Uris' *Exodus* (1958). Daniel Spicehandler's *Burnt Offering* (1961) also deals with the war, as does his autobiographical *Let My Right Hand Wither* (1950). Robert *Nathan's novel, *A Star in the Wind* (1962), tells how a young American gradually discovers his identity as a Jew while witnessing the events in Palestine in May 1948. The scene in Jerusalem at the same period is described in Zelda Popkin's (d. 1983) *Quiet Street* (1951). In the 1960s the most popular novel about Israel was James Michener's *The Source* (1963). Weaving his tale around a fictional archaeological site ("Makor"), Michener made his readers realize afresh the historical significance of Ereẓ Israel and its continuing relevance to the present and future.

The Jewish Contribution (to 1970)

Curiously enough, one of the first writers to realize that the growth of a Jewish audience provided the conditions for the evolution of a distinctive American-Jewish literary school was the non-Jew Henry Harland (well known in England during the 1890s as editor of *The Yellow Book*), who, under the pseudonym of Sidney Luska, wrote a number of popular novels during the 1880s on subjects of Jewish concern. One of them, *The Yoke of the Thora* (1887), dealt with the tragic difficulties of intermarriage more than 40 years before Ludwig Lewisohn's eloquent treatment of the same subject in *The Island Within* (1928). Although there were representatives of American Jewry in the field of belles lettres before 1880, the most significant Jewish writing had been in the form of biographical documents (rather than of works that aspired to art), such as those collected by Jacob Marcus in the three volumes of his *Memoirs of American Jews, 1755–1865* (1955–56). Few literary productions by American Jews concerning Jewish life at the turn of the century in the immigrant ghettoes or elsewhere are as interesting and significant as such memoir-type works as Mary *Antin's *The Promised Land* (1912), Ludwig Lewisohn's *Up Stream* (1922) and *Mid-Channel* (1929), Charles *Reznikoff's *Early History of a Sewing-Machine Operator* (1936) and *Family Chronicle* (1963), Anzia *Yezierska's *Red Ribbon on a White Horse* (1950), Morris Raphael Cohen's *Dreamer's Journey* (1949), Jacob *Epstein's autobiography *Let There Be Sculpture* (1940), S.N. *Behrman's *The Worcester Account* (1954), and Myer Levin's *In Search* (1950).

Abraham Cahan was the first American Jewish writer of considerable power to attempt the ascent from memoir and journalism, where he was initially at home (for the better part of his career he led the dual life of English novelist and editor in chief of the Yiddish Jewish Daily *Forward), and he undoubtedly met with exemplary success. In many ways,

he succeeded in writing the great American-Jewish novel as well as any of the writers who later followed him and reaped richer awards in popularity and critical acclaim. While Cahan wrote a number of novels, his magnum opus was indisputably *The Rise of David Levinsky* (1917), the value of which has been continually rediscovered by American-Jewish literary critics to their own surprise. Although *David Levinsky* is, among other things, a scathing indictment of the American "success story," the dream of so many millions of immigrants, it is also representative of the first generation of Jewish immigrants to America after 1880 in its refusal to make any sweeping rejection of American life as such. Although nearly all Jewish immigrant writers were critical in one degree or another of the American realities that confronted them, such as poverty (Mary Antin, Anzia Yezierska) or social discrimination (Ludwig Lewisohn), they were nevertheless grateful to America and could never forget the contrast between the freedom and opportunity they found there and the repressiveness and narrowness of the old world. None of them could ever have written, as did native-born Michael Gold in his "proletarian" novel about Jewish immigrant life in New York, *Jews Without Money* (1930), "America has grown so rich and fat because she has eaten the tragedies of millions of immigrants." Such an attitude arose from a depth of alienation, hostility, and resentment that they simply never experienced.

In this respect alone, a book like *David Levinsky* is superior to such second-generation "proletarian" successors of the 1920s and 1930s as *Jews Without Money*, Samuel *Ornitz's *Haunch, Paunch, and Jowl* (1923), and Isidor Schneider's (d. 1977) *From the Kingdom of Necessity* (1935). For all the genuine indignation over the social injustices of American life, out of which such novels were written, the schematic Communist theory to which they were molded turned out to be a Procrustean bed for the imagination to lie in. One feels that the predatory capitalists, venal and reactionary schoolteachers, corrupt rabbis, and sentimentalized workers who populate the pages of this Jewish-American school sprang more from some economic or political textbook than from their authors' actual observations of the life around them. The lessons of moderation, patience, and fortitude that were learned by the first generation of immigrants through hard experience seem to have been lost upon their rebellious offspring, whose psychological experience of American reality may have been even harsher because of the higher level of expectation with which they, as native sons, were raised. It was precisely the paradoxical contradiction so often evident in American life between limitless promise and limited performance that turned so many of them to social and political extremes.

The best literary work of this second, native generation of Jewish Americans was done by writers who, while they were by no means oblivious to social ills and may even have been for a time sympathetic to their more "activist" fellow authors, were more aesthetically oriented, more inclined to take professional pride in their literary workmanship, and more apt to look upon the art that they created as an end in itself. For the propagandist school of Ornitz, Schneider, Gold, and even Joseph *Freeman and Howard *Fast, art was an adjective. What was important to them was the substantive matter or views which it modified. But for writers like Henry *Roth and Charles Reznikoff, art was not only a noun, but a noun with a capital letter. Their great idol, as Reznikoff's *By the Waters of Manhattan* (1930) and Roth's *Call It Sleep* (1934) reveal, was James Joyce. Indeed, sharp-eyed observers of the American literary scene, like Scott Fitzgerald, had seen the shape of things to come before they actually materialized. In an article in *The Bookman* in 1926, Fitzgerald predicted the coming of a "novel off the Jewish tenement-block, festooned with wreaths out of *Ulysses* and the later Gertrude Stein." *Call It Sleep* appeared eight years later. Like *David Levinsky*, it has since enjoyed periodic rediscoveries by prominent Jewish critics. A powerful evocation of a Jewish childhood in a New York immigrant slum, it is a book worth reading and remembering, though to call it one of the great novels of the 20th century, as has been done on occasion, seems to be an unfortunate type of cultural inflation. Such enthusiastic overestimation by critics may originate in sheer delight at discovering that American-Jewish authors more than 30 year ago were capable of ascending into an atmosphere of pure aestheticism from the common ground of documentary social realism and political propaganda in which so many fellow authors of their generation were mired.

An anomaly among Jewish novelists of the 1930s was Nathanael *West, who in the course of his short life wrote only a few thin works, the best-known of which, *Miss Lonelyhearts*, is today generally considered a minor American classic. Though West avoided writing about Jews (characteristically, he changed his own name from Weinstein), in a sense he was, more than any other figure of his age, a precursor of the great flowering of American-Jewish writing that took place in the years after World War II. Whereas nearly all of his contemporaries wrote naturalistic fiction, West was inclined to imaginative fantasy; where his contemporaries cultivated a tone of dramatic seriousness, West's preference was for comedy; and whereas his contemporaries were for the most part concerned with the problems of immigrant life and/or the great depression, his own interest lay in that psychological alienation of the individual in modern, atomized, American industrial society that, in the final analysis, had little to do with either poverty or wealth. In all of these respects, West foreshadowed tendencies that were to be fully and exuberantly developed in the American-Jewish literature of the late 1940s, 1950s, and 1960s, which was undoubtedly one reason for the revival of interest in him in those decades.

Among Jewish playwrights in the 19th century was Mordecai M. *Noah whose historical plays, notably *The Fortress of Sorrento* (1808), *Paul and Alexis* (1812), and *She Would Be a Soldier* (1819), were well received. Another important figure was David *Belasco, whose *The Return of Peter Grimm* (1911) was considered an important play. The most prominent of Jewish playwrights in the first half of the 20th century were

George S. *Kaufman, S.N. *Behrman, Clifford *Odets, Elmer *Rice, and Lillian *Hellman.

[Milton Henry Hindus]

The quarter of a century of American literary life that followed the end of World War II witnessed a conspicuous emergence of Jewish talent and activity that reached its peak in the late 1950s and early 1960s, which were on occasion even referred to by critics as American literature's "Jewish decade" and as a period of "Jewish renaissance." I. Malin and I. Stark wrote in their anthology *Breakthrough: A Treasury of Contemporary American-Jewish Literature* (1964): "For the first time in history a large and impressively gifted group of serious American-Jewish writers has broken through the psychic barriers of the past to become an important, possibly a major reformative influence in American life and letters." While there is perhaps an element of hyperbole in such phrases, it is well worth considering why the phenomenon described here came into existence and what its defining characteristics were.

The period after World War II roughly marked the coming of age of a third generation in American-Jewish life dating back to the great East European immigration of the turn of the century. Three main features distinguished this generation from its predecessor: American-born itself, it was for the most part raised by parents who were either native-born or who had broken away physically and culturally from the immigrant ghetto; unlike these parents, most of whom grew up in relative poverty, it was largely the product of middle- or lower-middle-class homes, where physical want was unknown; and unlike its parents again, it was overwhelmingly college-educated. Forming a more thoroughly acculturated, economically secure, and better educated group than its parents, it was only natural that third-generation American Jewry should have included a higher percentage of academicians, artists, intellectuals, and writers.

At the same time, the salient fact about this third-generation intelligentsia, at least to judge by the literature that it produced, was an unmistakable sense of estrangement not only from the generation that raised it but in a subtler sense from American culture as a whole. The former reaction is perhaps the easier to understand. In a sense, the conflict between the generation of American Jews that reached intellectual maturity after World War II and the preceding generation was more intense and exacerbated than the conflict between the latter and the original immigrant generation. Whereas the earlier struggle was a clear-cut one between the desire to preserve certain old-world values and the urge to "Americanize" at any cost, the later one was between two conflicting versions of "Americanism" itself. If anything, it was precisely what the second generation looked upon as its successful adaptation to American life that was repeatedly excoriated and satirized in "third generation literature" as a vulgar materialism.

More difficult to explain is the definite sense of not being entirely at home in the general American landscape. Possibly this may be regarded as the surfacing of a residual Jewish unease, an atavistic sense of exile that continued to exist beneath the accomplishments of Americanization. In part, it may also be a reaction to the overall complacency and thinly veiled anti-intellectualism of a great deal of American life in the 1940s and 1950s, which made adjustment difficult for many non-Jewish artists and intellectuals as well. In any case, whatever its roots, what is significant about this feeling of estrangement is that time after time it is deliberately expressed in openly Jewish terms, as in Delmore *Schwartz's poem "Abraham":

> It has never been otherwise: /Exiled, wandering, dumbfounded by riches, /Estranged among strangers, dismayed by the infinite sky, /An alien to myself until at the last caste of the last alienation, /The angel of death comes to make the alienated and indestructible one a part of his famous and democratic society.

And in a remark which might be applied to the work of numerous Jewish writers of these years, Schwartz commented how "… the fact of being a Jew became available to me as a central symbol of alienation … and certain other characteristics which are the peculiar marks of modern life, and as I think now, the essential ones."

These words help to explain why Jewish writing played the crucial role that it did in America during this period, for if the theme of social and spiritual alienation seemed immemorially Jewish to the Jewish author, in an age when the individual was increasingly being viewed as a helpless pawn of the manipulations of big business, big government, mass communications, and modern technology, it was fast becoming basic to American intellectual life in general. The result of this overlap was, paradoxically, that at the very historical moment that American-Jewish writers were feeling sufficiently confident of their position in American life to express their sense of estrangement from it, non-Jewish readers and intellectuals were prepared for the first time to see in the figure of the "alien Jew" a genuine American culture hero of the times – or, more precisely, an anti-hero, since the treatment of alienation in the American-Jewish writing of these years was a self-directed irony by means of which the predicament of the alienated character was simultaneously intensified and mocked. This attitude owed much, it would appear, to traditional East European Jewish humor and is an excellent example of how fragments of immigrant folk culture survived among American Jews to be eventually transmuted into serious art.

If one takes for example the three postwar Jewish novelists whose work has aroused the greatest interest among the serious reading public in America, one finds that the most representative characters of all three share much with the traditional Jewish folk-humor figure of the *shlemiel*. For all the differences between these characters and the authors who created them, Saul *Bellow's Herzog (*Herzog*, 1964), Bernard *Malamud's Levin (*A New Life*, 1962) and Fidelman (*Pictures of Fidelman*, 1969), and Philip *Roth's Portnoy (*Portnoy's Complaint*, 1969) share a common private war against a society to which they cannot adjust and against which their only retaliation is to play the comic buffoon. The harder each tries, the more miserably each fails, yet none is ultimately defeated, for

in terms of a highly Jewish paradox, to win such battles is to lose, to lose is to win. If success corrupts within the moral universe set down by these books, absolute success corrupts absolutely; or, in the words of Ivan Gold, another Jewish novelist who made his debut in the 1950s, with a long comic story (*Taub East*) about Jewish servicemen in Japan: "There must be an outgroup. This is the divine order of things. If lucky enough to be one, rejoice!"

This association of the Jew with the eternal outsider – less by virtue of any sustained social prejudice directed against him than of his own ingrained sensitivities, which make it impossible for him to integrate successfully into the aggressive, competitive fabric of American life – occurs as a unifying theme in much Jewish fiction of the 1950s and 1960s, despite the wide variety of backgrounds and environments invoked. One finds it in the Kafkaesque stories of Isaac Rosenfeld; in Wallace Markfeld's recollections of boyhood in Jewish Brooklyn; in Herbert *Gold's short stories about life in Jewish suburbia; in Leslie *Fiedler's fiction about Jewish intellectuals on the campus; Edward Wallant's urban novels; in the Glass family stories of J.D. *Salinger; and in the writings of many other Jewish novelists and short-story writers of the period. Hardly any of the central characters created by such authors have any active sense of identification with the Jewish community or Jewish tradition as such. In fact, nearly all are more alienated from the organized Jewish life of the communities in which they lived than from their surroundings in general, yet few are not obsessed with the moral implications of being Jewish and the sometimes bewildering problems of dealing with them.

It is debatable to what extent the emergence in the 1960s of the so-called "novel of the absurd," with a wide range of grotesquely comic situations reflecting the meaninglessness of contemporary existence, was again indebted in part to the surfacing in American life of a traditional mode of Jewish humor. It is a matter of record, however, that among the earliest practitioners of "black humor" as a tool of social criticism were such stand-up Jewish comedians as Lennie Bruce and Mort Sahl (the former, in particular, acquired a devoted avant-garde audience before his early death). This same sensibility appears as a defining stylistic element in the works of a number of prominent Jewish novelists of the 1960s, such as Bruce Jay *Friedman and Joseph Heller. Heller's morbidly comic novel of army life during World War II, *Catch-22* (1961), became practically a Bible for a generation of young Americans who came to political consciousness at the time of the Vietnam War and for whom it epitomized the struggle of the individual to survive in a mindlessly bureaucratic world.

By far the most radical in his indictment of American society among major American Jewish novelists has been Norman *Mailer, whose prose virtuosity and intellectual boldness made him for many readers the most exciting American novelist and essayist of his time. On the whole, Mailer studiously avoided Jewish characters and concerns in his work, a fact that is itself of some critical interest and that constitutes the exception rather than the rule among his Jewish contemporaries.

American Jewish poets of this period have also, for the most part, drawn freely on their experience as Jews. Many would no doubt agree with Muriel Rukeyser (d. 1980) when she writes that

> To be a Jew in the twentieth century
> Is to be offered a gift. If you refuse,
> Wishing to be invisible, you choose
> Death of the spirit, the stone insanity

or with Hyam Plutzik's lines in "The Priest Eskranath," in which the Jew is portrayed as the eternal outsider, the compulsive intellectual critic who can never be at rest:

> Listen, you nations:/They will lure you from your spontaneous ecstasies,/And positive possessions, and with themselves,/Carry you forth on arduous pilgrimages,/Whose only triumph can be a bitter knowledge."

If one were to compile a list of leading American Jewish poets of these years – Charles Reznikoff, Louis Zukofsky (d. 1978), Karl *Shapiro, Howard Nemerov (d. 1991), Delmore Schwartz, David Ignatow, Irving Feldman, Babette *Deutsch, Denise Levertov, John Hollander, Kenneth Koch – one would find that few have not availed themselves at times of the wealth of symbolic and allusive material that the Jewish heritage provides, though few have actually made this heritage the theme of an entire volume, as did Karl Shapiro in his *Poems of a Jew* (1958). Unique among American Jewish poets in his impact upon both the American and the international world of poetry has been Allen *Ginsberg, whose long free-verse poem *Howl* (1955) was a landmark in the development of contemporary American prosody and one of the first poetic trumpet blasts of the "beat generation" and of the profound cultural transformation that began to affect American life in these years. Ginsberg has Jewish motifs, as in his poem *Kaddish* (1960), and his mystical inclinations have led him to take an interest in the symbolism of Ḥasidism and the Kabbalah.

In drama, Arthur *Miller was widely regarded throughout the 1950s as the leading American playwright of his age. His reputation faded somewhat in the 1960s with the decline of realistic theater in general, but his *Death of a Salesman*, at least, was certain to remain a classic of the American repertoire. Among the leading experimental playwrights of the 1960s were Jack Gelber, Arthur Koppitt, and Israel Horovitz. An avant-garde company that pioneered in the creation of what came to be known in the late 1960s as "total" or "action" theater, with its emphasis on improvisation, audience involvement, and radical social and political content, was Julian Beck's and Judith Malina's Living Theater, which spent much of the decade in political exile in Europe. One of the most accomplished troupes to arise under its influence was Joseph Chaikin's Open Theater, located in New York. In the commercial theater, Paddy *Chayefsky wrote a number of highly successful Broadway dramas and Neil Simon was the author of numerous popular comedy hits.

Particularly prominent among American literary critics in the postwar period were Philip Rahv, Alfred *Kazin, Irving *Howe, Lionel Trilling, and Leslie Fiedler. Common to all was a rejection of "new" or "form" criticism, with its insistence on regarding the literary work as an isolated artifice to be analyzed only in its own internal terms, and an interest in the study of literature for the sake of its wider cultural, political, and psychological ramifications. Among the leading exponents of this "neo-new" criticism of the 1960s, on the other hand, was Susan *Sontag. Also noteworthy in the 1950s and 1960s was the key role played in American literary life by cultural and critical publications presided over by Jews, among them the *Partisan Review*, edited by Philip Rahv; the *New American Review*, edited by Theodore Solotaroff; *Commentary, edited by Norman *Podhoretz; and the *New York Review of Books*, edited by Robert Silvers and Barbara Epstein.

No discussion of the Jews and American literature in this era would be complete without mention of the unique phenomenon of the Jewish "best-seller" – the popular book or novel on a Jewish subject whose sales ran into the hundreds of thousands or millions, frequently leading all other contenders on national "best-seller" lists. Since one can assume that such books – among the most popular of which were Herman *Wouk's *Marjorie Morningstar*, Leon Uris' *Exodus*, Harry *Golden's *Only in America*, Harry Kemelman's *Friday the Rabbi Slept Late*, Chaim Potok's *The Chosen*, John Hersey's *The Wall*, and James Michener's *The Source* (the last two by non-Jewish authors) – were in large measure purchased, or at least promoted, by Jewish readers, the dimensions of their success reveal the extraordinary impact of Jewish readership on the American book market in general. Characteristic of the Jewish "best-seller" was the fact that unlike most of the more serious American-Jewish novels mentioned previously (some of which also, however, were highly successful commercially), it tended to portray Jewish life in America and elsewhere in highly flattering and often sentimental terms. Of generally slight literary value, such books will nonetheless interest future historians for the picture they give of how the majority of American-Jewish readers during these years preferred to view themselves and their tradition.

[Hillel Halkin]

1970–2005

I

Modern American-Jewish literature is a colloquy between an America in process and a Judaism in change. This literature expresses the interplay amongst self, community, and *heritages*. This body of letters is also a dialogue with theology in large, and theologies in small, whether found in text, or in a determined seeking for engagement with God. Often, American-Jewish literature presents these complex relationships as the comportment of a Jewish ethic with the American present: the belief that justice and compassion transcend the *mores* and self-interest of the historical moment. The strong relay between Jewish existence, culture, and God is self-reflective, and communally defining. Significant readings of this are found in Max Schulz's *Radical Sophistication: Studies in Contemporary Jewish-American Novelists* (1969), which studies the Jewish writer's search for a balance between existential despair and the Jewish tradition of affirming a meaningful life; Allen Guttmann's *The Jewish Writer in America: Assimilation and the Crisis of Identity* (1971), exploring the claims made upon the idea and act of being Jewish; Alan Berger's *Crisis and Covenant: The Holocaust in American Jewish Fiction* (1985), emphasizing the secular and religious value systems of Judaism; L.S. Dembo's *The Monological Jew: A Literary Study* (1988), dealing, for example, with the impact of Buber and Sartre on modern American-Jewish writing, and Norman Finkelstein's *The Ritual of New Creation: Jewish Tradition and Contemporary Literature* (1992), covering such figures as Gershom *Scholem, Walter *Benjamin, Harold *Bloom, and Cynthia *Ozick.

By now, American-Jewish literature is also a sustained meditation on Jewish life as a civic identity, one authorized by American pluralism and democracy. The republication of Paul *Goodman's *The Empire City* (2001) once again reminds the reader that America's representative citizens could be portrayed by a Jewish writer. The always suggestive, if not polemical author names his protagonist Horatio Alger. As social critic and therapist, Goodman insists that his characters utilize the entitlements of American democracy, as well as their "natural" strengths, to overcome political obstruction and psychological impasse.

More often than not, this America for the contemporary Jewish writer is *not* an America of outward passage, attended by the themes of breaking away from the European past, learning English, earning a living, and creating or suffering one's future. Instead, American-Jewish literature charts the refashioning of a difficult, contemporary identity. It takes into account the assertions that Zionism is the end of Diaspora; that the Holocaust demands a new understanding of surety, theology, and politics; and that America is not simply a new chapter of Diaspora, but a new beginning in which Jewish text in a borrowed tongue redefines the Jewish past and opens up a unique future.

Contemporary American-Jewish literature often takes Judaism and Jewishness as the inescapable context of life. Whether set in a Europe lost to the imagination, or modern America, such a framework embraces both continuity and an imagined unity. To cite several examples: Chaim *Potok's *My Name Is Asher Lev* (1972); Francine *Prose's *Judah the Pious* (1973); Isaac Bashevis *Singer's *The Penitent* (1983); Anne *Roiphe's *Lovingkindness* (1987); Elie *Wiesel's *Twilight* (1988); Wendy *Wasserstein's drama *The Sisters Rosenzweig* (1993); Steve Stern's *The Wedding Jester* (1999); Joshua Hammer's *Chosen by God* (1999); Nathan Englander's *For the Relief of Unbearable Urges* (1999); Allegra *Goodman's *Paradise Park* (2001); and Jonathan Rosen's *Joy Comes in the Morning* (2004). There are also examples of women rebelling against the constraining religious life of the Orthodox: Naomi *Ragen's *Jephte's Daughter* (1989); Pearl Abraham's *The Romance Reader* (1995); Boaz Yakin's film *A Price above Rubies* (1998), and Hortense *Calisher's *Sunday Jews* (2002).

There is a marked return to biblical and rabbinic text. In the contemporary period, writers allude to the Hebrew Scripture and Talmud, as well as explore the possibilities of interpretation and retelling. Salient examples are Neil *Simon's play *God's Favorite* (published 1975), based on *Job*; David Rosenberg and Harold Bloom's *The Book of J* (1990) with its theory of authorship; Joseph Heller's *God Knows* (1984), which casts David's voice into modern idiom; Alicia Ostriker's *The Nakedness of the Fathers: Biblical Visions and Revisions* (1994), which is a writer's meditation on biblical themes, speaking across "boundaries" as well as addressing the character of women in the text; Norma Rosen's *Biblical Women Unbound* (1996), which seeks to recover the power of biblical matriarchs and their voices; Anita Diamant's *The Red Tent* (1997) which recreates Dinah's story; and Robert *Pinsky's *The Life of David* (2005). (Over these works looms, of course, Thomas Mann's Joseph novels which are probably the most compelling engagement of writer and Hebrew Scripture in the 20th century).

There are also studies of rabbinic exegesis and secular writing, as well as the relationship between Hebrew Scripture and contemporary literature: selected examples are, respectively, *Midrash and Literature* (ed. Geoffrey Hartman and Sanford Budick, 1986) and Robert *Alter's *Canon and Creativity: Modern Writing and the Authority of Scripture* (2000). During this contemporary period, Jewish writers seem to be eager to write about their grappling with text and how they came to do so. Among recent works are *Congregation: Contemporary Writers Read the Jewish Bible,* edited by David Rosenberg (1987), and *People of the Book: Thirty Scholars Reflect on Their Jewish Identity* (1996), edited by Jeffrey Rubin-Dorsky and Shelley Fisher Fishkin.

The modern American-Jewish writer and reader are doubly fortunate: foundational texts and traditions of interpretation are democratized and decentralized. Computer software for the Bible offers commentary, word searching, parsing, and multiple translations stacked across the screen (as for example with Bibleworks, which is Christian-centered), as well as the sea of Jewish text and commentary (as with Davka, which is in Hebrew). There are new hard-copy editions of the Talmud with English-language translation and gloss (for example the Steinsaltz and Schottenstein, complementing the classic Soncino). And, of course, new translations of, and commentary on, Hebrew Scripture, including W. Gunther Plaut and Bernard Bamberger's *The Torah: A Modern Commentary* (1967/1981); The *JPS Torah Commentary* (General Editor, Nahum Sarna; its five volumes were published between 1989 and 1996); The *Stone Edition* of *Tanach* (1996); Michael Fishbane's *The JPS Bible Commentary: Haftarot: The Traditional Hebrew Text with the New JPS Translation* (2002); Adele Berlin's and Marc Zvi Brettler's *The Jewish Study Bible* (2004); Richard Elliott Friedman's *Commentary on the Torah: With a New Translation and the Hebrew Text* (2001); *Etz Hayim: Torah and Commentary* (Senior Editor, David Lieber, 2001); and Robert Alter's *The Five Books of Moses: A Translation with Commentary* (2004). As a result, rabbinic and secular commentary jostle each other, supplementing, if not challenging, each other's authority. These works make contemporary interpretive communities abound by crossing intellectual, class, gender, and theological lines.

Given the ease of Jewish life in America, the authority of estrangement that the American-Jewish writer once possessed has diminished. Yet the modern canon is still deeply – and rightly – informed by an earlier generation of critics who made a moral use of alienation and its insights. Men of letters such as Leslie Fiedler, Irving *Howe, Alfred *Kazin, Philip *Rahv, Isaac *Rosenfeld, and Lionel *Trilling helped establish both the American as well as the American-Jewish literary imaginations, exemplifying the democratic tradition in which proverbial outsiders create national and world traditions. Modern representative examples of their work are Rahv's *Essays on Literature & Politics, 1932–1972* (1978); *Preserving the Hunger: An Isaac Rosenfeld Reader* (ed. Mark Shechner, 1988); Howe's *Selected Writings, 1950–1990* (1990); Fiedler's *Fiedler on the Roof: Essays on Literature and Jewish Identity* (1991); Leon Wieseltier's anthology of Trilling's writings, *The Moral Obligation To Be Intelligent: Selected Essays* (2000); and *Alfred Kazin's America: Critical and Personal Writings* (ed. Ted Solotaroff, 2003). The arc of their times, traversing ideologies and interpretations of a literature relevant to both American and American-Jewish culture is described by such critics as Bernard Rosenberg and Ernest Goldstein in *Creators and Disturbers: Reminiscences by Jewish Intellectuals of New York* (1982); Alexander Bloom in *Prodigal Sons: The New York Intellectuals & Their World* (1986); Alan Wald in *The New York Intellectuals: The Rise and Decline of the Anti-Stalinist Left from the 1930s to the 1980s* (1987); Mark Shechner in *After the Revolution: Studies in the Contemporary Jewish-American Imagination* (1987); and Carole Kessner in her edition of *The "Other" New York Jewish Intellectuals* (1994).

As an immigrant *Yidishkayt* passed from being a seemingly cohesive culture of the East European Diaspora, to being a creative minority presence in the United States, it also became an adjunct of an American civic faith. Its language became English; its rhetoric became increasingly receptive to a democratic, pluralistic, and diversifying society. *Yidishkayt* became an American "Jewishness." It defined the issues of American-Jewish life in terms of American political and social history. *Yidishkayt* retained its charms as an almost otherworldliness, indicating a putatively richer, thick life that was lost: Although this is a rightly disputed claim, its imaginative recall indicates that the past is not yet over: witness Rebecca *Goldstein's *Mazel* (1995). Readers ought to consult as well Karen Brodkin's *How Jews Became White Folks and What That Says about Race in America* (1998). The two-volume anthology edited by Ellen Schiff, *Awake and Singing: 7 Classic Plays from the American Jewish Repertoire* (1995) and *Fruitful and Multiplying: 9 Contemporary Plays from the American Jewish Repertoire* (1996) contain notable examples of the past suffusing the present.

For the contemporary American-Jewish writer, nostalgia is also a rite of recalled passage. Such homesickness wards off an uncertain future by creating a haven of memory, measuring the passage of the Jew from one bitter exile to a modernity that is sweet, but precarious. As David Roskies' and Diane Roshkies' *The Shtetl Book* (1975) indicates, the shtetl is now textualized. Important examples are *The Shtetl* (ed., Joachim Neugroschel, 1979); and the republication of A.J. *Heschel's poignant *The Earth Is the Lord's: The Inner World of the Jew in Eastern Europe* (1950/1987/1995). The shtetl's cultural assignment as a world more charmed because of its known extinction animates, for instance, the groundbreaking, somewhat rosy *Life Is With People: The Jewish Little-Town of Eastern Europe* by Mark Zborowski and Elizabeth Herzog (1952; ten years later, perhaps prompted by a growing American desire to "authenticate" a lost world, the book was subtitled *The Culture of the Shtetl*); the perennial revivals of *Fiddler on the Roof*; Melvin *Bukiet's *Stories of an Imaginary Childhood* (1992); and also the New American Library's two-volume collection of I.B. Singer's *Collected Stories* (2004). Although the shtetl's charm is denied by immigrant autobiographies, and early American-Jewish novels written by those fleeing Eastern Europe, there are few novels that have done so: perhaps the most significant are Peter Martin's *The Landsmen* (1952); and Bernard *Malamud's *The Fixer* (1966). Jonathan Safran Foer's *Everything Is Illuminated* (2002) depicts the betrayal of Jews within a shtetl. An important study about immigrant memories, often entailing the shtetl, and the Pale of Settlement is Jan Schwartz's *Imagining Lives: Autobiographical Fiction of Yiddish Writers* (2005).

Nonetheless, there is a return of sorts open to the American-Jewish writer: the homecoming to a definable locality, binding together the immediacy and *mores* of the past, and usually the past of one's childhood. For the American-Jewish literary protagonist, the other side of acculturation is the longing for the particularity of belonging, of enjoying the perceived solidarity of the Jewish community. Jay *Neugeboren's *The Stolen Jew* (1981) deals with his protagonist's return to Brooklyn. Steven Stern discovered the American "ghetto" life of "the Pinch" in Memphis, setting much of his fiction there (see, for example, his *A Plague of Dreamers: Three Novellas* (1994). In *American Pastoral* (1997), Philip *Roth's Nathan Zuckerman judges both the "Swede" and contemporary America in the light of childhood and adolescent values rich with irony and naiveté. Paradoxically, many acculturated American Jews now have come back to a community of Jews, but this time to a supportive community of the often elderly, remembering (or keeping at bay) all that is now past: Leslie Epstein's *Goldkorn Tales* (1985); Alan Isler's *The Prince of West End Avenue* (1994); Stanley *Elkin's *Mrs. Ted Bliss* (1995); and Andrew Furman's rendition of a young man among the Florida elderly, in *Alligators May Be Present* (2005).

Diasporas, both physical and intellectual, give American-Jewish literature possibilities for futures not solely determined by one national narrative but by many. So often defined in the late 19th and early 20th centuries as the migration away from the Eastern seaboard, whether that of the moving frontier, the mid-Western settlements, a commonizing America is now conscious of its histories. Nonetheless, an industrialized, urbanizing America, World War II, the Korean War, Viet Nam, and the Civil Rights movement give Jewish life in America the certainty of shared national, and international experience. As American-Jewish literature has moved away from the lamentation over the loss of a past rooted in places other than America, editors have preserved its diverse intellectual and cultural genealogies. Impressive examples are found in Jerome Rothenberg's *A Big Jewish Book: Poems & Other Visions of the Jews from Tribal Times to the Present* (with Harris Lenowitz, and Charles Doria, 1978); Howard Schwartz and Anthony Rudolf's *Voices Within the Ark: The Modern Jewish Poets* (1980); Ilan Stavans' *The Oxford Book of Jewish Stories* (1998); and Derek Rubin's anthology, *Who We Are: On Being (and Not Being) A Jewish American Writer* (2005). A companion work is Murray Baumgarten's *City Scriptures: Modern Jewish Writing* (1982).

Jewish thinkers and writers, who were not far from their immigrant pasts or its comportment with American promises of success, called into being a new understanding of American culture as well as American-Jewish literature. Their *Yidishkayt* and their Jewishness domesticated as well as made insurgent the values of a pluralizing American civilization. Louis Harap's indispensable *The Image of the Jew in American Literature: From Early Republic to Mass Immigration* (1974) analyzes how the figure of the Jew and the Jewish public appeared to American people-of-letters. His three volumes entitled *Creative Awakening: The Jewish Presence in Twentieth-Century American Literature, 1900–1940s*, (1987); *In the Mainstream: The Jewish Presence in Twentieth-Century American Literature, 1950s–1980s* (1987); *Dramatic Encounters: The Jewish Presence in Twentieth-Century American Drama, Poetry, and Humor and the Black-Jewish Literary Relationship* (1987); Susanne Klingenstein's *Jews in the American Academy, 1900–1940: The Dynamics of Intellectual Assimilation* (1991); and her *Enlarging America: The Cultural Work of Jewish Literary Scholars, 1930–1990* (1998); Andrew Furman's study, *Contemporary Jewish American Writers and the Multicultural Dilemma* (2000); and David Biale, Michael Galchinsky, and Susannah Heschel's anthology *Insider/Outsider: American Jews and Multiculturalism* (1998) address how American Jews are viewed on a cultural spectrum from the oppositional to appositional.

Diasporas, belongings, and returns involve the poetics of remembrance. The shaping of the American-Jewish canon calls attention to traditions of memory, rhetoric, and languages: the classic work is Henry *Roth's *Call It Sleep* (1934); a contemporary example is Myla Goldberg's *Bee Season* (2000). Critical discussion of this complexity is explored variously in Rael Meyerowitz's *Transferring to America: Jewish Interpretations of American Dreams* (1995); Sidra DeKoven Ezrahi's *Booking Passage: Exile and Homecoming in the Modern Jewish Imagination* (2000); and Ranen Omer-Sherman's *Diaspora*

and Zionism in Jewish American Literature: Lazarus, Syrkin, Reznikoff and Roth (2002).

Speaking in "American," a "trans-national" American rhetoric as Randolph Bourne might have called it, the American-Jewish novelists' characters invariably engage the past rather than dismiss it. Individuality is affirmed though at the expense of the sustaining community. American-Jewish novelists usually portray the ironic ease and anxiety of the American self as it moves between and within communities. Cases-in-point are Francine Prose's *A Changed Man* (2005) in which a former member of the Aryan Resistance Movement comes to support a Jewish reconciliation organization; and again in Prose's *Guided Tours of Hell* (1997), in which the protagonist, a minor American playwright, questions the authenticity of his life when measured against a Holocaust survivor's; Philip Roth's *The Human Stain* (2000) in which an African American poses as a Jewish professor of the classics; Emily Prager's *Eve's Tattoo* (1991), in which a character usurps what is thought to be a Holocaust victim's tattoo; and Michael *Chabon's *The Amazing Adventures of Kavalier and Clay* (2000), in which two young Jewish men, one gay and the other a refugee fleeing the Nazis, invent a comic book hero who becomes an American icon.

Yet America is not so liberally conceived as a humorous theater of invented selves. A good instance is Norma Rosen's novel, *John and Anzia: An American Romance* (1989), depicting the affair between John Dewey and Anzia *Yezierska. Both find each other exotic and iconic: Yezierska represents – to Dewey – the unbridled spirit of a colorful people, attuned to their instincts; Dewey remains the thinker whose New England background of order and obligation – as understood by Anzia – cannot accommodate a pragmatism that takes into account emotional directives.

Equally important, during this period the cultural relationships between Jews and African Americans began to unravel. On the one hand, African Americans wanted to shape their politics and culture without interference or control by others. On the other hand, Jews often felt that there was a shared heritage, best expressed by Hebrew Scripture: God authorizes freedom. The literary relationship between African Americans and Jews in this modern period reaches back, for a convenient origin, to Norman *Mailer's *The White Negro: Superficial Reflections on the Hipster* (published freestanding in 1957, and later, in the accessible *Advertisements for Myself*, 1959). Mailer reads the plight of the African American as an existential triumph: the living of felt needs. The "Negro" could stay alive by following "obligatory" pleasures. The hipster could model freedom upon the African American's "instantaneous existential states." The hipster's desire for the consecrated present would be shaped, in the future, by the African American's achievement of equality. The "potential superiority" of the African American, one that was feared, is "the underground drama of domestic politics." Hatred could be lived; violence is romanticized.

Whereas the African American could be viewed as part of the existential quest for the creation of self, other American-Jewish writers often spoke in terms of moral endowment. In Malamud's "Angel Levine" (1955), a feckless black angel inspires a small, defeated man to assent to the nature of the "other." The act is one of mutual confidence; both are transformed. *Bellow's eponymous protagonist of *Henderson the Rain King* (1959) encounters Africa not as Conrad's metaphor of darkness but as land that offers him a mentor in, and for, freedom. Jay Neugeboren's *Sam's Legacy* (1974) plays out the drama of freedom against *the* American sport, baseball. Mason Tidewater, an African American, gives to Sam his moving autobiography, "My Life and Death in the Negro Baseball League: A Slave Narrative," which weighs the issues of socially imposed identities against the moral strength of our devotion to others. *Doctorow's *Ragtime* (1975) portrays an African American as someone whose dignity demands that he challenge the injustices done to him. Lore Segal's *Her First American* (1985) explores the shock of surprise and comfort between a refugee and an African American.

As African American politics came to veer into antisemitism, so did American-Jewish writers portray the potential (and sometimes real) flashpoints of contact. Malamud's *The Tenants* (1971) presents the author's impasse reconciling an African American and a Jewish character. Bellow's *Mr. Sammler's Planet* (1970; discussed below), portrays an African American as a thief who displays his aggressive, flamboyant sexuality. In Bellow's *The Dean's December* (1982) the African American is yet more sinister. Philip Roth's *The Human Stain* (2000; discussed below) further complicates this difficult relationship; an African American assumes (or usurps) the identity of an American Jew, becoming a professor of the classics. Selected critical works on this topic are Louis Harap's *Dramatic Encounters: The Jewish Presence in Twentieth-Century American Drama, Poetry, and Humor and the Black-Jewish Literary Relationship* (1987); *Bridges and Boundaries: African Americans and American Jews* (ed. Jack Salzman with Adina Back and Gretchen Sorin, 1992); Emily Budick's *Blacks and Jews in Literary Conversation* (1998); and *Strangers & Neighbors: Relations between Blacks and Jews in the United States* (eds. Maurianne Adams and John Bracey, 1999).

Whereas the heritage of 19th-century realism remains strong, innovative narrative strategies question its adequacy. Although this experimentation is neither unique nor particular to Jewish letters, formal creativity challenges both our understanding of tradition and our reading of it. Cases are – and these are just a few – Norman Fruchter's *Single File* (1970); Norman Mailer's *The Executioner's Song* (1979); Art *Spiegelman's *Maus: A Survivor's Tale, I: My Father Bleeds History* (1986); and *Maus: A Survivor's Tale, II: And Here My Troubles Began* (1991); Doctorow's *City of God* (2000); Benjamin Zucker's *Blue* (2001); and Steve Stern's *The Angel of Forgetfulness* (2005). These works formally reconcile the heritages (and claims) of Diaspora cultures and gentile nations: a mingling of diaries, welfare reports, and characters' reflections for Fruchter; for Mailer, the new journalism which combines fact with novelistic rendition; the Talmud page for

Zucker; the comic book format for Spiegelman; narrative vying with narrative, and fiction becoming counter-fiction for Stern; and the novel of multiple voices, and narrative montage for Doctorow.

For a contemporary generation, the Holocaust is a memory challenging notions of a safe American haven. A God who vouchsafes the existence of the Jewish people has been splintered into a God who has committed Himself to accept historical choice, or has turned His face, or who demands a reconstruction of moral nature and engagement, or a delusion. Each of these possibilities challenges the hope of life without peril. Each choice creates an identity based on the conditioned and contingent. The literature is so vast that a few contemporary examples indicate the reach of the Holocaust into the present: Isaac Bashevis Singer's *Enemies, A Love Story* (1972) and his *Shosha* (1978); Susan Fromberg Schaeffer's *Anya* (1974); Philip Roth's *The Ghost Writer* (1979); Jerome Badanes' *The Final Opus of Leon Solomon* (1985); Ozick's "The Shawl" (1981) and "Rosa" (1984), published as one volume in the accessible *The Shawl: A Story and a Novella* (1989); Elie Wiesel's *The Fifth Son* (1985) and his *The Forgotten* (1992); Jon Baitz's drama, *The Substance of Fire* (published 1993); Melvin Bukiet's *Stories of an Imaginary Childhood* (1992), and his anthology, *Nothing Makes You Free: Writings by Descendants of Jewish Holocaust Survivors* (2002); Thane Rosenbaum's *Second Hand Smoke* (1999); Aryeh Lev Stollman's *The Illuminated Soul* (2002); Leslie Epstein's *King of the Jews* (1979); and Arthur *Miller's drama, *Broken Glass* (1994). Well worth viewing is the 1991 film, *The Quarrel,* based on Chaim *Grade's "My Quarrel with Hersh Rasseyner."

Questions of authority and sincerity dog a younger generation. Is the factual nature of the Holocaust open to the task of fiction *as* fiction? Can fiction formalize an experience that goes beyond the limits of representation? Is a speculative, if not interim rhetoric needed? Fire, ashes, smoke, railroad tracks, tattoos, the literal and metaphorical uncovering of human nature – the jigsaw pieces of life and death under Nazism are close to the surface but part of a new politics and rhetoric.

As with Holocaust fiction, there is a large body of critical commentary dealing with the roles of language, memory and representation. Part of such discussion are Terence Des Pres' *The Survivor: An Anatomy of Life in the Death Camps* (1976); James Young's *Writing and Rewriting the Holocaust: Narrative and the Consequences of Interpretation* (1988); *Probing the Limits of Representation: Nazism and the "Final Solution"* (edited by Saul Friedlander, 1992); Lawrence Langer's *Admitting the Holocaust: Collected Essays* (1995); and Edith Wyschogrod's *An Ethics of Remembering: History, Heterology, and the Nameless Others* (1998).

Zionism brings with it celebration and critique. A new Zion carved out of the wilderness, and an America affirming its history as redemptive make American-Jewish literature's depiction of Zionism rife with sincerity as well as irony. Portraits of Israelis and Americans wandering in Zion implicate the authenticity of American-Jewish existence and the authority of Jewish life in Israel. Examples are Philip Roth's *The Counterlife* (1986) and *Operation Shylock: A Confession* (1993); Anne Roiphe's *The Pursuit of Happiness* (1991); and the personal reflections found in Hugh *Nissenson's *Notes from the Frontier* (1968) and Bellow's *To Jerusalem and Back* (1976). Sabras and pioneers have long been replaced by characters – Americans in Israel and Israelis themselves – ranging from the manipulative to the naïve, as in Tova Reich's *Master of the Return* (1988) and *The Jewish War* (1995). Andrew Furman's *Israel Through the Jewish-American Imagination: A Survey of Jewish-American Literature on Israel, 1928–1995* (1997) and Ranen Omer-Sherman's *Diaspora and Zionism in Jewish American Literature: Lazarus, Syrkin, Reznikoff and Roth* (2002) explicate the American literary dialogue with Israel.

II

The generation of writers that came to maturity from the 1930s to the 1960s could draw upon the inheritance of being Jewish as inseparable from being ill at ease in the American Diaspora. The contemporary stylistic deployment of Yiddish words and diction by those whose native tongue is English; the reliance on the Jew as neurotic, or as schlemiel, or as divested of the strengths of Judaism are tics rendering the Jew harmless but provocative. The unease of writer and writing made estrangement the appropriate moral and political response to modern American culture. (It should be noted that V.L. Parrington, Van Wyck Brooks, and Lewis Mumford made the same case.) Dreams of socialism, the promise of psychoanalytic theory – all of these gave an edge to earlier American-Jewish writers' depiction of a specific America, one at variance with their families' understanding of America itself. At their most minatory, American-Jewish letters is overly suspicious of the literature of affirmation that argues that Jewish life not only endured in America, but also flourished. Norman *Podhoretz's *Making It* (1967) seemed – to its critics – less the tracing of choice and success than a surrender to cynicism and irony.

For contemporary readers and writers, American-Jewish literature seems blunted, incapable of bringing the cutting edge of politics and a shrewd cynicism to America's failures. And equally important, to the failures of Judaism to keep constant the Prophetic vision of the just society. The contemporary authorial task, so it seems, is witnessing. This, too, is a moral act, akin to the Prophets enumerating the refusal of those who confuse Hellenism with Hebraism.

Irving Howe, in his magisterial *World of Our Fathers: The Journey of the East European Jews to America and the Life They Found and Made* (with the assistance of Kenneth Libo, 1976); and in *Jewish American Stories* (1977), writes about the American-Jewish literary imagination as both regional and centralizing. American-Jewish literary culture draws upon the great tide of Jewish immigration (usually to the lower East Side), as well as Jewish tradition. Howe's work is part of a larger body of literature studying what he called this "regional" style. Selected works, dedicated to exploring the ferment of the lower

East Side and its influence are Ronald Sanders' pioneering *The Downtown Jews: Portraits of an Immigrant Generation* (1969); Mario Maffi's *Gateway to the Promised Land: Ethnic Cultures in New York's Lower East Side* (1995); and Hasia Diner's *Lower East Side Memories: A Jewish Place in America* (2000).

By now, the Jewish writer in America has moved beyond the culture of a thick *Yidishkayt*, and its immigrant traditions. American-Jewish writers have appropriated the geography of America as *the* sustenance of memory. Examples are Saul Bellow's Chicago (*Ravelstein*, 2000); Adam Berlin's Las Vegas (*Headlock*, 2000); Leslie *Epstein's West Coast (*San Remo Drive: A Novel from Memory*, 2003); Michael Chabon's Pittsburgh (*The Mysteries of Pittsburgh*, 1988); Rebecca Goldstein's Princeton (*The Mind-Body Problem*, 1983); the American South of Steve Stern (*A Plague of Dreamers*, 1994) and Tova Mirvis (*The Ladies Auxiliary*, 1999); Philip Roth's rural community in the Berkshires (*The Human Stain*, 2000); Malamud's "Wild West" (in his unfinished novel, *The People, and Uncollected Stories,* 1989) and his New England (*Dubin's Lives*, 1979); and Allegra Goodman's upstate New York (*Kaaterskill Falls*, 1998). Unsurprisingly, New York City remains a center for the imagination: the metropolis of Paul *Auster (*The New York Trilogy*, 1990); Jonathan Safran Foer (*Extremely Loud & Incredibly Close,* 2005); Hugh Nissenson (*Days of Awe,* 2005); and Cynthia Ozick (*The Puttermesser Papers*, 1997; and *Heir to the Glimmering World*, 2004).

Modern American-Jewish writers and anthologists have enlarged the American-Jewish present by expanding the canon, rescuing often-neglected works written by women, Sephardim, as well as gay and lesbian Jews. The following selected works are significant additions to the literature of and about American-Jewish women: Melanie Kaye/Kantrowitz and Irena Klepfisz's *The Tribe of Dina: A Jewish Women's Anthology* (1989); Joyce Antler's anthology, *America and I: Short Stories by American Jewish Women Writers* (1990); Sharon Niederman's *Shaking Eve's Tree: Short Stories of Jewish Women* (1990); Sylvia Barack Fishman's reader, *Follow My Footprints: Changing Images of Women in American Jewish Fiction* (1992); Ellen Uffen's *Strands of the Cable: The Place of the Past in Jewish American Women's Writing* (1992); Marlene Marks' *Nice Jewish Girls: Growing Up in America* (1996); Janet Burstein's *Writing Mothers, Writing Daughters: Tracing the Maternal in Stories by American Jewish Women* (1996); Paula Hyman and Deborah Dash Moore's *Jewish Women in America: An Historical Encyclopedia* (1997, 2 vols.); Ann Shapiro, Sarah Horowitz, Ellen Schiff and Miriyam Glazer's *Jewish American Women Writers: A Bio-Bibliographical and Critical Sourcebook* (1994); and Lois Rubin's *Connections and Collisions: Identities in Contemporary Jewish-American Women's Writing* (2005).

The experiences of gay and lesbian American Jews are found notably in works by Harvey Fierstein (*Torch-Song Trilogy*, consisting of *The International Stud*, *Fugue in a Nursery*, and *Widows and Children First!*, published in one volume in 1979); Tony *Kushner (*Angels in America: A Gay Fantasia on National Themes*, consisting of *Part 1: Millennium Approaches* and *Part 2: Perestroika*, and published in one volume, 1995); and Larry Kramer (*The Normal Heart* and *The Destiny of Me*, published in one volume, 2000). In addition, gay or lesbian characters are found, for example, in Alice Bloch's *The Law of Return* (1983); Leslea Newman's *A Letter to Harvey Milk* (1988); Lev Raphael's *Dancing on Tisha B'Av* (1990); and Adam Berlin's *Belmondo Style* (2004). Significant readers on this topic are *Nice Jewish Girls: A Lesbian Anthology* (ed. Evelyn Torton Beck, 1982) and Christie Balka and Andy Rose's anthology *Twice Blessed: On Being Lesbian, Gay and Jewish* (1989).

Diane Matza's anthology, *Sephardic-American Voices: Two Hundred Years of a Literary Legacy* (1996), spans categories from "The Descendants of the Colonial Sephardim" (for example, Penina Moise, Mordecai Noah, and Emma Lazarus) to "Issues of Identity" (including Rosaly Roffman, Herbert Hadad, and Jordan Elgrably, among others).

There is also a Jewish literature of imagined futures and mythographies. Envisaged futures and fantasias are found notably in the works of Isaac Asimov and Harlan Ellison; in Jack Dann's anthologies *Wandering Stars: An Anthology of Jewish Fantasy and Science Fiction* (1974); his *More Wandering Stars* (1981); as well as in Marge Piercy's *He, She and It* (1991). Examples of mythographies are Cynthia Ozick's title story of *The Pagan Rabbi and Other Stories* (1971); Arthur Cohen's *In The Days of Simon Stern* (1973); and Steve Stern's *Lazar Malkin Enters Heaven* (1986).

The image of the American Jew as timid, neurotic, and small, found for example in Woody *Allen's films (such as *Take the Money and Run*, 1969, and *Bananas*, 1971) has yielded to what might earlier have been considered as a Hellenizing of the American-Jewish man. Among these are Michael Chabon's *The Mysteries of Pittsburgh* (1988) with a protagonist choosing to plunge into chaos leading to self-revelation; Philip Roth's unbridled *Sabbath's Theater* (1995); and Adam Berlin's *Headlock* (2000), with its epigraph from Homer, offering a narrator exulting in his strength. That American-Jewish writers could be attracted to violence, and depict it with panache is an unsettling note but certainly offered in the works of dramatist and screenwriter David *Mamet, especially in his portrait of marginal people in *American Buffalo* (published 1977) and *Glengarry Glen Ross* (published 1984).

Modern American-Jewish humor, both defensive and aggressive, can be read in a slightly different way than its immigrant counterparts. American life was strange. The American-Jewish immigrants' humor was usually based on the shock of transplantation and surprise. The immigrant was unsure of American freedom, and dismayed by the insecurity of employment. In contrast, modern American-Jewish humor appears to have two movements. The first is its characteristic, sharp irony that hedges uncertainty: a major theme found in Diaspora Jewish humor. For the Jewish immigrant in the United States, though, this irony marked a refusal to accept fully American promises of surety. The second movement is the adoption of the attitude of American surety in order to retroject present insecurities into an earlier generation. Of-

ten, this historical irony is found in the durable themes of the Jewish overbearing mother, the feckless husband, the "Jewish-American Princess," the psychologically damaged child, and the appeal of the *shiksa*. (A convenient point of origin for the jagged edge of modern American-Jewish literary humor is Nathanael *West's fiction. Though his works rarely deal with Judaism, the alienation his fiction presents is that of the outsider who is too urbane to be shocked and yet the insider who is too shocked to accept American myths. The acceptance of his fiction's enormous savagery can be measured by the publication of his *Complete Works* in 1957; its re-issue in 1978, and his *Collected Works* in 1975). The double nature of modern American-Jewish humor is found in various degrees in Bruce Jay *Friedman's "black-humor" novels *Stern* (1962) and *A Mother's Kisses* (1963); Philip Roth's parody of the dominating Jewish-mother and neurotic Jewish son in *Portnoy's Complaint* (1969); Woody Allen's protean Jew, the eponymous protagonist of the film *Zelig* (1983); and Neil Simon's play *Lost in Yonkers* (1991). Notable works are *The Big Book of Jewish Humor* (eds. William Novak and Moshe Waldoks, 1981); Robert Menchin's *Jewish Humor from Groucho Marx to Jerry Seinfeld* (1997); *Encyclopedia of Jewish Humor: From Biblical Times to the Modern Age* (ed., Henry Spalding, 2001); and *Classic Jewish Humor in America* (ed. Henry Spalding, 1995). Important critical studies are *Jewish Wry: Essays on Jewish Humor* (ed. Sarah Blacher Cohen, 1990); and James Bloom's *Gravity Fails: The Comic Jewish Shaping of Modern America* (2003). Lawrence Epstein's *The Haunted Smile: The Story of Jewish Comedians in America* (2001) supplements these works.

All of the above-mentioned works indicate the possession of America's open imagination and opportunity. Philip Roth's Nathan Zuckerman sums up this appropriation by the America Jew. Recalling his adolescence in the late 1940s, he writes that he "wanted to become part of the national character." With her novel *O My America!* (1980), Johanna Kaplan captures the excitement as well as the anxiety of what we have come to call the "American experience." She prefaces it with two epigraphs. The first is Donne's, and provides the novel with its title. The body of a woman, for Donne, is as richly enticing as is America's conquest. The novel's second epigraph is from De Tocqueville, addressing the paradoxical nature of a country that does not seem to be historical so much as ahistorical. Democracy, De Tocqueville opines, produces an historical amnesia, making one forget genealogies. Democracy shears the self of the comfort and support of lineage, and could confine the individual "*entirely within the solitude of his own heart*."

The sequesterment of the American, and especially that of the American-Jewish literary character, speaks to the ironic solitude of the Jew in an inviting pluralistic society. On the one hand, Jewish culture is now often experienced away from ritual and rite. On the other hand, American-Jewish literature has both civic and Prophetic signatures: its ethical spirit is invariably a preachment for a renewed community within and for a nation. The judgment pronounced maintains its force because it is spoken with the fervor of an other-worldliness, one not indebted to historical variability but paradoxically addressing the immediate moment. As a result, the American-Jewish novel forces the reader to examine anew the implications of a timeless ethic within an historical present; and a mandated, ahistorical way of being described within the immediacy of the day.

From 1970 to the present, as numerous critics have pointed out, a generation of American-Jewish writers did not have as points of cultural and political reference the immediacy of the Holocaust, the founding of the State of Israel, and the feeling of a marginal American existence. Nonetheless, the enormous trepidation that marked an older generation's coming to maturity in the 1930s and 1940s, in which the Jewish future was far from assured, has left its mark.

For all the comfort America offers, there is a premonitory insecurity, a sense that American-Jewish life may be precarious. There are looming examples. In Philip Roth's "Eli, the Fanatic" (1959), Eli Peck, an acculturated young lawyer, reflects upon the America that he accepts as indisputable. Thinking about the safety America offers Jewish families, Eli muses, "What incredible peace." The irony is thick, but it is shared only by narrator and reader, not by Eli. In her 1970 essay, "Toward a New Yiddish," Cynthia Ozick reminded her readers that American-Jewish life, with its flowering of creativity in America, was not similar to Germany but analogous to Spain. Both led, she writes, to "abbatoir." Paul Auster endows a future that is just as ominous for Jews. *In The Country of Last Things* (1987), the simplicity of realism is cautionary fable. Anna Blume, a Jewish woman in search of her brother, wanders across a nameless, anarchic city. During a hard winter, she pushes her way into the National Library and comes upon a room in which she discovers Jewish men, talking urgently and animatedly. "I thought all Jews were dead," she whispers, yet hears the reply that only a small number remain. "It's not so easy to get rid of us…." Years later, there is an equally assertive wariness, again, from Philip Roth: *The Plot Against America* (2004). The novel begins in the present, with the narrator remembering with trepidation his boyhood. In this alternative history, a companion piece to Sinclair Lewis's *It Can't Happen Here*, a family named Roth finds itself living in a pre-World War II semi-totalitarian American state. Led by Lindbergh, America initiates state-sponsored antisemitism. Only by authorial intervention, history is righted; Roosevelt assumes the presidency.

III

American-Jewish literature produced its own histories, arguing for a conserved and preserving identity: a sign that American Jews are intent upon preserving a shared life through creating and assessing a common tradition. These re-evaluations may well be interim canons, suggesting how the strengths of the past can be used to shape the present. Among others, there are valuable histories and critical bio-bibliographies of American-Jewish literature by Louis Harap (men-

tioned above); *Twentieth-Century American-Jewish Fiction Writers* (ed. Daniel Walden 1984); *Handbook of American-Jewish Literature* (eds. Lewis Fried, Gene Brown, Jules Chametzky and Louis Harap, 1988); Sanford Pinsker's *Jewish American Fiction, 1917–1987* (1992); *Contemporary Jewish-American Novelists* (1997) and *Contemporary Jewish-American Dramatists and Poets* (both works edited by Joel Shatzky and Michael Taub, 1999); Stephen Wade's *Jewish American Literature Since 1945: An Introduction* (1999); *The Cambridge Companion to Jewish American Literature* (eds. Michael Kramer and Hana Wirth-Nesher, 2003); and Rosalind Reisner's *Jewish American Literature: A Guide to Reading Interests* (2004).

A point and counterpoint in these histories is the claim of the universal against the particular. A modern beginning for these pressures is Cynthia Ozick's "Toward a New Yiddish" (1970, and published again in 1983, in Ozick's *Art & Ardor*). Ozick later pointed out that she was "no longer greatly attached to its conclusions." (Well worth looking at is the strongly differing George Steiner's "Our Homeland, the Text" in *Salmagundi*, Winter-Spring, 1985.) The essay draws upon a large literary history: Aḥad Ha-Am's notion of Diaspora culture; Matthew Arnold's discussions of Hebraism and Hellenism; Isaac Rosenfeld's notion of creative estrangement; and the autonomous text of the New Critics. The points Ozick makes are hard, and not without irony. Ozick imaginatively summons for the reader a new Yavneh, a "Displaced Jerusalem." (The reader, of course, should recall that the original Yavneh had as its foreboding background the siege of Jerusalem. Yavneh rebelled against the might of empire by turning powerlessness into transmission of decree and commentary.) America, this new, metaphorical Yavneh, Ozick points out, is a temporary haven.

"Toward a New Yiddish" insists upon de-idolization: a rejection, by the Jew, of ideologies and acts effacing the divinely mandated and rabbinically authorized particularism of the Jewish people. Sinai condemns any desire obstructing the just community. The essay paints an alluring Hellenism, a metonym for universalism: from the declaration that all religions are the same, to the abandonment of an ethically demanding imperative, to ecstasy, to the individual as "mediator of the sacral." And, when Jewish novelists efface their particularity, they become lost to history. In effect, Hebrew Scripture funds the grand moral imagination. The commanding 19^{th}-century novels were Judaized, represented by writers such as George Eliot, Dickens, and Tolstoy, who dramatized conduct and its consequences.

A "centrally Jewish" literature impinges on the liturgical. It is bound to the "reciprocal moral imagination" and resounds within and for the community. It echoes God's voice, "the Lord of History." Ozick's concession is one to the form of the liturgical voice itself. Our houses of Jewish worship may well be empty, she argues, because we have done with the idea and form of the "cathedral." Whether in text or talk, our conversations reveal the possibilities of our future. And these may be large.

The new Yiddish, a language commensurate with the upbuilding of Yavneh in America, will be the language of Jewish discourse, spoken as well as written "by Jews for Jews." It will renew the American Jew for it will nourish new talmudic forms of creative literature. Although the new Yiddish will not be explicitly religious, it will feel the touch of the Covenant. We can try to be a holy people in America, developing our own *Aggadah*.

Ozick's essay gave later critics the chance to explore the association of the Covenant, with a covenanted literature. Two works, among several, deal with this relationship. *In The New Covenant: Jewish Writers and the American Idea* (1984), Sam Girgus points out how Jewish writers, transforming the rhetoric and myths of America, reshape and modernize these communalizing forces. Their work make significant "the American ideal," pitting it against "authoritarian and totalitarian ideologies." In terms drawn from their own background, these writers formulate anew a narrative of American redemption.

In *What Happened to Abraham?: Reinventing the Covenant in American Jewish Fiction* (2005), Victoria Aarons argues that the contemporary American-Jewish writer takes the "laws of the covenant" and transforms them into "metaphors and allegories of invention, promise, and design." The law may reappear in a number of forms and modes: for example, as assessment, and as framework. The writer's recognition of the Covenant involves a revitalization, a re-telling of a heritage leading to a dialogue with the large assumptions and concerns of "the Hebrew Bible." Aarons points out that this retelling involves an understanding of America, often presented as a radical metonym for "displacement and loss."

Anthologies of American-Jewish writing offer a reading of a canon in process, enhancing the terms of analysis. The anthologies' principles of selection provide a characteristic tension – that of being Jewish and being American. Strikingly, many of these anthologies do not emphasize a conversation with theology but rather focus on the living of Jewishness (which may well be such a conversation itself). Equally intriguing, some do not strongly accentuate a potentially unsettling conversation with Israel. Such choices indicate a confidence in America as a home for Jews. American-Jewish anthologies – and they are groundbreakers – have a large subject: the making of an American Judaism, the comportment of faith with a democracy that is experimental and unique. Important supplementary texts are Arnold Eisen's *The Chosen People in America: A Study in Jewish Religious Ideology* (1983), and Jonathan Sarna's *American Judaism: A History* (2004).

In 1974, Daniel Walden put together one of the first anthologies of contemporary American-Jewish writing. *On Being Jewish: American Jewish Writers from Cahan to Bellow* illuminates Walden's discussion of American-Jewish writing as obligated to narratives of immigration and acculturation. The anthology reflects a period in which the term "American-Jewish" writing was a triumphal designation, a narration of largely unchallenged success which was the significant literature of the American present. Roth, Malamud, and Bellow, major voices

then and now, bespeak an American-Jewish identity. (Walden includes them in the book's last section, entitled "The American Jews, The Jewish Americans"). Confidently, Walden's "Introduction" asserts the congruence of Jews and Judaism. The Jewish writer's work often conveys a Jewish ethic. Following biblical imperative, even in the face of American secular culture, American-Jewish writers "still choose life."

In the same year, 1974, Abraham Chapman's *Jewish-American Literature, An Anthology* was published. His collection takes note of the tension between an American culture and the legacy of Hebrew Scripture. Within a secular American culture, the modern Jewish-American writer usually expresses the dignity of humanity, a central theme of the Prophets. American-Jewish literature resists an easy conformity with American culture; its unease marks its heritage and chance for creativity.

In his anthology *Jewish American Stories* (1977), Irving Howe finds regional literature a useful category in understanding Jewish-American literature. Arguing that "regional" can be used in a metaphorical way, Jewish American writers (who are indisputably American writers) derive the subjects of their work from the early neighborhoods of Jewish settlement, or the more affluent areas of upward and outward migration. In an almost Hegelian moment, Howe compares American-Jewish writing with that of Southern literature, both "subcultures" finding their "voice" when they approach "disintegration." The immigrant milieu offers both a usable past as well as characteristic problems: the search for an adequate way to preserve and order the past. Moreover, the American Jewish writer has access to those traditions and implications designated as "Jewishness." Calling this the "persuasion of distinctiveness," Howe finds it to be a "rich moral perspective." Yet, such distinctiveness is protean, felt as "urgency and need."

For Howe, the culture of Yiddish is threnody and theory: narratives of immigration are exhausted. Nonetheless, Howe wonders about the cultivation of a new sensibility, the "post-immigrant Jewish experience" which may inform younger writers. His *World of Our Fathers* funds this claim, exploring the cultural variousness and political convictions of the lower East Side's Jews. Clearly a secular rendition of *Yidishkayt*, the book presents the Jew entering modernity through the harshness of the laboring day, the promise of socialism, and the reality of rough and tumble American politics.

In his *American Jewish Fiction: A Century of Stories* (1998), Gerald Shapiro disputes Irving Howe's claim that the major narrative line of the American-Jewish experience has thinned. Rather, he finds that the perennial topics Jews have engaged with are still being posed: Jewish identity and its implications, notably the tension "between skepticism and belief …"

Ted Solotaroff and Nessa Rapoport's introductory essays to *Writing Our Way Home* (Schocken, 1992; republished as *The Shocken Book of Contemporary Jewish Fiction* in 1996) also contest Howe's lament. *Writing Our Way Home* identifies the acts that kept afloat Jewish life. The *Yidishkayt* of the immigrant became a presence in American literature by finding its place in "the dynamic of acculturation." This took place decades after the great East European migration to America. But equally important, Solotaroff and Rapoport's work illuminates a tradition coming into being: post-acculturation alternatives for Jewish life. Could not the modern Jewish imagination be nourished "as much by imagination as by memory?" The victory of the Six-Day War, the emergence of spoken Hebrew, the fervent identification of American Jews with Israel, the rise of exciting learning communities – all of these suggest a new, assertive American-Jewish life.

For Michael Lerner, the guiding figure of *Tikkun*, Jewish writing can be seen as healing, a redemption from injustice and the will to power of politics. In his *Best Contemporary Jewish Writing* (2001), Lerner writes that his selections emphasize works that suggest the healing "that our planet and our community so badly need." Lerner sees Jewish text affirming that we make our freedom, and *can* make this freedom for the betterment of our society. He appeals to Jewish mystical tradition, recounting the contraction of God and the effulgence of sacred light that shattered their vessels: holy fragments that "need repair." Our labor is to liberate these sparks, returning the *Shekinah* to our world As Lerner suggests, this can be translated into political, social, and personal terms.

The most comprehensive and spacious anthology to date is Jules Chametzky, John Felstiner, Hilene Flanzbaum, and Kathryn Hellerstein's *Jewish American Literature: A Norton Anthology* (2001). Situating itself in a multicultural American literary history, the anthology addresses the widening term "Jewish American literature" so that it "signifies an American literature that is Jewish." Setting Jewish literature within the development of American civilization makes much sense. Chronology reflects the phases of immigration, estrangement, acculturation, and critique. The Norton's last section, "Jews Translating Jews," though a small part of the book, shines light on how an American language – its style, its pace, what Whitman might term its voice *en masse* – absorbs the Jewish polylingual heritage. This section also reminds us of the Jewish dialogue with its own imagination, making its past enter the present.

IV

The period from 1970 to the present had its major themes articulated by Malamud, Bellow, Ozick, and Philip Roth. Their literature has a broad descriptive trait which is best expressed as the claim of the ethical within and upon ordinary life. The oft-described quest for an American-Jewish identity becomes a search for the adequate, purposive community. This community can be made possible by text, tradition, or neighborhood. The works of these writers insist that dignity, justice, and compassion are ordinal virtues at the core of a desirable existence. For these authors, moral decision illuminates the contemporary situation but is not of it. It is akin to the Prophetic declamations about the just society. Moreover, the wellsprings of the ethical life, to paraphrase Mosaic exhortation, are not hidden. Given the autonomy America offers the self,

moral dereliction is an act of will. As Artur Sammler wearily puts it, "we know."

This ethical temperament is often described in earlier terms as a contest between what cultural historians, *pace* Arnold, have called Hellenism and Hebraism. In theme, these poles represent the civic culture of nations and the culture of the Covenant. Bellow describes the recoil from the sensual Byzantine city and its chaos. Ozick writes forthrightly about the Judaic strain of the novel, its ethical import, and a liturgical voice. Much of her fiction examines the boundaries enclosing the Jewish self. Malamud dramatizes the demand that one yield to a higher notion of selfhood than egoism. Roth envisions a community intent upon preserving a tradition of comportment, so much so, that an individual's turn against the *mores* and boundaries of American-Jewish culture undoes the self.

Several of their works form a "communalizing text," a representation of dominant themes that have been relevant to, and are still vibrant in American-Jewish literature. This large text is a colloquy exploring the social contract we make with civil society (its laws, its customs, its culture), and the covenant that we uphold with the Jewish ethic bespeaking the dignity of self. These multiple, rich, and often contradictory relationships take the form of explanation: an attempt to separate what is forbidden by *the* Covenant and what is permitted by modern society. Separation is presented in these exemplary works as the anxiety entailed by our making our selves discover a relationship to secular and sacred history. These encounters are not without awe. Such trepidation involves not simply the making of a self, but the willingness to live within a particular people and a pluralizing culture.

From 1970 onward, *Mr. Sammler's Planet* is the towering presence in American-Jewish writing and modern American literature as well. Bellow's later works, notably *Humboldt's Gift* (1975), *The Dean's December* (1982), and *Ravelstein* (2000), are deprived of a character whose history separates him from normalizing experience. *Mr. Sammler's Planet*'s cultural background is the *idea* of the city itself. American and European regionalist thinkers, from Patrick Geddes to Lewis Mumford, defend the city as concentrating human symbols and resources, allowing for creativity and the possibility of a balanced life. Cultural, social, and environmental assets can be cultivated and shared. The democratic city expresses the equanimity of the good life, countering the dangers posed by poverty, density, and injustice. This city is the aureate dream of civilization, and embraces Athens as well as Jerusalem.

Mr. Sammler's Planet (1970) addresses what the city has become. The Holocaust, the rise of a technics shorn of moral evaluation, and a democracy deprived of thoughtfulness give the novel its chance for judgment. Sammler's New York ingathers these. Bellow turns away from the eponymous adventurers of *The Adventures of Augie March* (1953), and *Henderson the Rain King* (1959), presenting Sammler, a man whose experience has been refined so that his action *is* judgment. Sammler is a collector of selves and of identities. No stranger to mass murder as well as intellectual society, his character easily moves amongst urban communities: the would-be students, speculators, the criminal, the deranged, urbane intellectuals, and his own family. A well-born Polish Jew; a journalist who knew H.G. Wells; a thinker drawn to a utopian project to regulate social life; and a Holocaust survivor, Sammler is blind in one eye. When the novel begins, he is living in Manhattan on the pension provided by a distant relative, Dr. Elya Gruner.

The novel's characters are people whose lives are truncated, either by history or dereliction. They celebrate their personal liabilities. As Sammler understands them, they are oblivious to the implicit moral "contract" that makes society just. The obligations to the "contract," as Sammler poses it, are obligations to ethical order and satisfaction, making the attainable – if not the good – life possible. Conduct is not justified by sentiment, but by consciousness of what is good for both self and others. His claim takes us back to rabbinic dictum: "the rest is commentary. Go and learn it."

A novel confronting the romantics of violence, and the imperatives of the ethical self, *Mr. Sammler's Planet* does not propose how we know the good: we simply know it. In Sammler's case, this world-weary knowledge is the recoil from untrammeled individuality, from mass movements that are based on rationales, not rationality, and from the fables of modern autonomy. A survivor who literally lived in a tomb, Sammler is resurrected in a world uncomprehending of the traditions of language, and of "high ceiling" thought. New York has become a society without an intellectual framework that makes room for moral judgment. Sammler possesses the authority of survival almost extinguished by barbarism. He is enabled to ask how we *should* live, not *how* we live. Sammler's task is to assess, to demand, and to pronounce. The company Sammler keeps has to be disenchanted of its banality. Easy explanations, the novel's massive collecting of nonchalant behavior, have to be traced to the myths for keeping them.

The novel's plot is architectural; layers imbricating layers. Images of the sea, of pipes bursting, of an aneurism, and of a reservoir punctuate the novel. They are offset by images of height: the moon, an airplane scraping a house and long-distance flight. They suggest the human desire to live in other places, to escape the limiting conditions of location, history, and mortality. As a result, the novel presents us with human boundaries and their crossings.

Sammler recoils from a city of crime and theatrical selves. As he traverses Manhattan by bus, the city becomes a modern theater. Individuals adopt historical costumes and roles: the bohemian, the hippie, the prince, the sexually provocative, and the deranged. His bus route to the library is also that of an African American pickpocket, elegantly dressed. Later, he confronts Sammler, pushing him against a wall, and exposing himself.

Beginning his meditations upon the contained as well as limitless self, Sammler reads the Bible and Meister Eckhart. Eckhart's writing on the purification of individuality as well as biblical ethical injunction are clues to Sammler's recoil

from the contemporary city. His conversation with Professor V. Govinda Lal, a biophysicist, is a plea for a renewed humanism. Lal's manuscript, "The Future of the Moon," has come into Sammler's possession. Their talk is built upon Sammler's defense of the necessary, ordered society, and Lal's vision of a lunar colony, an escape from the density of an ever-growing population and human limits. For Sammler, philosophy is grounded, literally and metaphorically. There can be no flight from the human condition or human betterment. On the one hand, H.G. Wells (whom Sammler knew from his days in London, and about whom Sammler is rumored to be writing a book) provides a point of critical departure. An explainer, a believer in mass education, Wells refused to abandon the high role of education in a mass society. On the other hand, modern culture witnesses a call to "noble actions" on the part of those who can least understand what this demands. Sammler's fear of disorder is his trembling before murder.

Lal's version of the planned society takes place on the moon. It is a metonym for the unbinding of man from humanistic tradition: a flight from the bounded. Philosophically interesting, it is a technological fugue that is captivating as well as implicative. For an American reader, Lal's proposals summon up Henry Adams' speculations about the age of ether, Lewis Mumford's discussions of unbridled technics, and Paul Goodman's understanding of the depersonalizing society. For Sammler, Lal's advocacy of the order of technics leads to the demolition of the species.

By the novel's end, the imagery Bellow has drawn becomes a tight knot: Elya's aneurism in the brain bursts. His feckless son has pulled the pipes apart of Elya's house, looking for hidden money. Sammler's former son-in-law, another survivor, Eisen, comes to America to interest people in his grotesque, pyrite "medallions," bearing the word "*Hazak*." As New Yorkers merely watch, Eisen slams the pickpocket in the head with his medallions. Though called a lunatic, Eisen acts and justly so. In the last scene. as Sammler sees Elya's body, he understands that Elya has met the terms of his contract. And, as Sammler concludes, we know those terms.

During this period, Malamud's works reveal the Jewish self as metaphorically all selves and as hapless as all humanity. For Malamud, Jewish history preserves if not *the*, at least *a* moral imagination. In an interview with Shlomo Kidrin in 1968 ("Malamud Explains Jewish Contribution to U.S. Writing," reprinted in *Conversations with Bernard Malamud*, ed. Lawrence Lasher, 1991), Malamud pointed out that he envisioned the Jew as a metaphor for "'universal man.'" For "'every man is a Jew'" even if he is unaware of this.

In Malamud's fiction, empathy and compassion are shown by the powerless because the powerful have lost this humanly defining response. They refuse or are unable to accept a common life. While hardly mandated by Jewish law, concern for others at the expense of self becomes authorized as a recognition that we are bound to others as we are bound to our notion of our best selves. "But if I am for myself only," Hillel asks in *Pirkei Avot*, "what am I?" An encounter with God becomes the daily encounter with an unfinished self and society.

Arguably his best work, *Dubin's Lives* (1979) deals with the quarrel between art and the ordered life: the opposition rendered as the struggle between Hellenism and Hebraism. The knowing of terms is Sammler's pathos. For Malamud's Dubin, action itself is unsettling, destabilizing his notion of himself. In terms of the novel, Dubin's character remains a theory read in the light of experience. Malamud depicts Dubin's limited abilities to live within the poetics of Hellenism, to nurture the instincts that D.H. Lawrence praised as authoritative and liberating.

Dubin is a middle-aged man, an eminent biographer, living in a now loveless marriage. While working on his *Passion of D.H. Lawrence*, he is swept by desire for the young Fanny Bick, whom he thinks of as "Venus revived." Of course, passion's ambiguity – need as well as desire – serves the book well. Dubin is helpless before his procreant urge. His pathos is his struggle to hold his idea of himself to account, and yet, to know that he will be tormented by its constraints: fidelity, honesty, and clarity. Dubin's life is Hebraic pain, as Emma Lazarus so aptly termed it: the Jew's abject bow before the culture of Hellas.

As Dubin hopefully enters this liaison, replete with humiliation and deception, he is reminded that he is now living Lawrence's myth of the natural self. Lying with Fanny in her New York apartment, he thinks he comprehends what Lawrence has meant by his celebration of paganism. Nevertheless, Malamud will not grant Dubin an easeful sensuality. Looking out the bedroom window, he sees a Jew praying in a synagogue. Dismissing the idea of a God ever listening to humanity, Dubin wonders, wistfully, whom should he pray for?

The image of a people apart claims him. Whereas Malamud ignores the Hebraic celebration of sexuality, he does not diminish the antisemitic notion of the Jew as an intruder within nature. Jogging along a road near his rural home, a farmer on horseback comes alongside him. Pointing to tractors bulldozing trees, the farmer shrilly raises the notion of deicide. The Jews, the farmer declaims, are "crucifyin'" the land. The spectral Lawrence confronts Dubin, hectoring him that his Jewish mind opposes "the active Male Principle." The Jew fears "primal impulses."

Malamud's struggle for the novel's ending is his labor for equipoise between Hebraism and Hellenism. On the crest of a renewed youthfulness, Dubin had declaimed that he wanted all of life. This Faustian wish is granted. Comforting his daughter who believes that Zen will bring her serenity, he argues that Jews do not withdraw from the world. In the last scene, Dubin, who now all too chaotically lives in the world, rushes from mistress to wife, holding his "half-stiffened phallus … for his wife with love." Even given the clumsiness of this ending, there is a victory over irresoluteness. The triumph is not Dubin's, though it is of his making. Fanny has been encouraged by him to fashion a purposeful life.

In her "Innovation and Redemption: What Literature Means" (found in *Art & Ardor*), Cynthia Ozick accentuates the claim that literature "*is* the moral life." Repelled by the notion that one could abandon moral judgment in art, that one could wrest art away from its all-too-real address of the human situation, she argues that those who assert that the moral sense in art is irrelevant are part of the Hellenic legacy. Writers under the influence of Hellas invariably lead to Hellas. Ozick's "Preface" to *Bloodshed and Three Novellas* (1976) enhances these claims. "Usurpation (Other People's Stories)" invokes what Ozick calls the "dread of imagination." As Ozick puts it, "Usurpation" militates against Apollo. The story counters "magic and mystification" because the drive to create stories can lead to the worshipping of idols, to adoring the "magical event." (A good companion piece is Heine's "The Greek Gods.") However, Ozick wonders if the urge to write stories is another form of idolization.

From "The Pagan Rabbi" (found in the accessible *The Pagan Rabbi and Other Stories*, 1971) through "Usurpation (Other People's Stories)" to *The Cannibal Galaxy* (1983) through *The Messiah of Stockholm* (1987) and to her *Heir to the Glimmering World* (2004), Ozick embroiders this theme, She poses the American-Jewish writer's dilemma: what can be heard both within and outside what Ozick has called the liturgical voice of Jewish writing? Saul *Tchernichowsky, and his poem about obeisance to Hellas, "Before the Statue of Apollo," haunt Ozick's work. Her fiction suggests that if Jewish writers accept the heritage of abomination, reading their own lives within gentile myth, they worship the forbidden on its own terms. As she puts it in *Bloodshed and Three Novellas*, the Canaanite idols will speak of such a writer "in the language of the spheres, kike."

Her *Heir to the Glimmering World* (2004) strongly defends the tradition of Jewish commentary that is an unfolding address to creation and Covenant. Such meditation is also a renewal of the human. The novel encloses fables of identity within each other, asking what acts of interpretation and enhancement sustain self and community. Told through the eyes of a young woman, Rose, the book takes two figures – the Bear Boy and Professor Mitwisser – as examples of Karaitism. Ozick's deployment of *Karaites in both historical and literary usages suggests its boundaries. In her "Toward a New Yiddish," she contends that the New Critics are "Christian Karaites," extracting the text from the richness of human circumstance, and hence making it an idol. In "Innovation and Redemption," she marks the Karaites as those who would obey the strict letter without accepting its halo of meaning.

At the novel's center are James A'Bair (known as Bear Boy, called so after being the model for his father's illustrated children's books) and Prof. Mitwisser, a scholar of Karaitism. Both seek a return (the latter in text; the former, in self) to an original state of being, free of elaboration by others. Called a Karaite by Mrs. Mitwisser, James (who is Mitwisser's patron) wants to throw off his identity as Bear Boy. He wants to fashion anew his own individuality by acts of self-will. He ends as a suicide, the classic argument for self-determination. Pursuing the meaning of a fragment by al-*Kirkisani, a Karaite writer, Mitwisser, discovers this figure is a unique theological rebel. As Mitwisser argues, al-Kirkisani "receives, in order to refuse." Mitwisser understands that he has comprehended al-Kirkisani's grand renunciation, a descent into a depth in which, finally there is only *the* authentic divinity, a God "who disbelieves in man." This God is God "the heretic." Mitwisser's claim, though, may well be untenable. His work and conclusions, returning to an unelaborated tradition, an ever-present moment of the new, have been too hasty.

More so than any other American-Jewish writer, Philip Roth's work encompasses the history of contemporary America. His last novels, those narrated by Nathan Zuckerman, depict an America that remains, in spite of its contradictory promises of freedom, a nation in which Jews can determine their identities. Set against this freedom is the stabilizing norm of American myth: the pastoral as possessed by the *American* consciousness. This pastoral is offered through images and dreams that ennoble, even in tragic defeat, Roth's characters. An "arcadian mountain," a farmhouse, a lake, a life of abundance and achieved repose – these constitute an American myth of imagined completeness. As Roth well makes clear, this cluster of images and ideas, delusory or not, holds chaos at bay.

Roth's America (of *American Pastoral*, 1997; *I Married a Communist*, 1998; and *The Human Stain*, 2000) reveals the broken self, one bereft of the adequate, morally informing community. His works offer a reading of the fables of American culture lauding autonomy, eradication of the past, and the planned life. Even so, these novels catalogue private and public injustices that the spirit cannot heal: murder, betrayal, malevolence, slander, and gossip.

Roth's gift for discerning the large drift of American *mores*, its claims for an invented self, describes both the comic and tragic art of these works. The endings of these novels are caustic, setting the tragic undoing of individuals by their own wishes, within an indifferent nature. Foreground and background no longer comport. The self's putative grandeur has long been diminished. The pastoral images suffusing his novels belittle the passions animating his characters. His self-confident American Jews survive only by a creative deception: assurance. Neither good intentions nor communal traditions stay their pathos. In fact, their Judaism is civic and thin. It is a fidelity to the lessons of democracy learned from hard-working parents, from neighborhoods, and schools – all of which evoke the poignancy of youthful beliefs still informing the present.

In these three novels, an older Nathan Zuckerman bears witness. He records the fates of those whose acculturation is ironic and bitter. His sensibilities and frailties (variously, cancer, a by-pass operation, and deliberate seclusion near Athena College) shape his narrations. In turn, these traits fund his ideas of the self and history. The reader is never far from Nathan's New Jersey childhood and the work-ethic of the Jewish

families he knew. His own limitations are strengths. He admits that writing is revealing and concealing. As a result, he discovers himself while he is compelled to write about lives that have been unimaginable to him. (The most salient analogue in American letters is Faulkner's *Absalom, Absalom!*, in which Quentin and Shreve invent Southern history, shredding its empirical nature to lay bare its fables of race and identity.)

Nathan reminds the reader that the novelist always gets it wrong. As he puts it, he is given to dream a realistic chronicle. His narrations, though, are far from this. They question his own sense of self, so much so that he is forced to change his life. He, and those whose lives he imagines he has reconstructed, discover that the past can neither be betrayed nor buried. As *I Married A Communist's* Murray Ringold puts it, quoting Shakespeare, "'And thus the whirligig of time brings in his revenges.'"

Nathan invokes Greek tragedy and Shakespearean drama; he echoes Fitzgerald and Faulkner; he is never far from Turgenev and Tolstoy, pushing his work into the great narrative of human failing, attendant upon success and arrogance. Nathan strains to find the majesty of failure within the seeming normalcy of lives: lives which cannot bear the gravity of such tragedy until they represent a summa and summation of what we recognize as an American character. The endings of his novels are less resolutions than they are commentaries about a civilization opposing the soft pastoral to its intent: the present cannot sustain myth. The pastoral now judges human incompleteness. In Nathan's understanding, it is the human stain that we must accept.

Roth's *American Pastoral* has as companion pieces both the novels of Russian moral realism and those classics of literature that speak directly to the ironies of naiveté: Tolstoy and Fitzgerald come easily to mind. For Nathan, the pull of his Jewish past unprepares him for the astonishing present. Nathan's idea of his childhood separates obligation from indulgence. The place of his boyish years was marked by industriousness, he remembers. "The goal was to *have* goals…."

The novel's protagonist, Seymour "Swede" Levov, a man without wit or irony as Nathan points out, enacts his understanding of America. A high school hero (Nathan calls Swede "the household Apollo" of the community's Jews), and a former Marine, he is raised on the virtues of responsibility and rationality. His self-imposed civic obligations and his concern for his family's glove manufacturing business make him stay in Newark, a city ruined by crime and riots.

The Swede has moved away, literally and communally, from the Jewish past of his father, and the Jews of his neighborhood. He marries a gentile, former Miss New Jersey and buys a farmhouse in the countryside, Old Rimrock, where his wife breeds cattle. American culture is both his charmed pastoral, and his destruction. His, and America's, dreams of insulation from violence by means of affluence, distance, and cultural myth are porous. His daughter, Merry, is responsible for the bombing of a local general store and post-office, killing one person. Fleeing her home, she is passed along a radical underground railway, aided in her flight, at first, by friends of the Swede. She becomes the nightmare of America's choice. She matures. She becomes expert at bomb-making, and later kills other people. Finally, starving herself and incapable of recognizing the horror of her crimes, she meets with her father, telling him she has become a Jain.

The last blow that the Swede takes is at a dinner party in his house. He realizes his wife is having an affair; that his daughter can no longer be defined as a sweet, gentle child manipulated by radicals, and that Merry's therapist and the therapist's husband have sheltered the child after the first bombing, leaving him in anguished ignorance of his daughter's whereabouts. At the same time, his father leaves the table, trying to coax a drunk, mentally ill woman to eat. She stabs him close to the eye. At the end of this chaos, a dinner guest sarcastically laughs at the fragility of seemingly "robust things." Roth's last lines – how sarcastically Olympian – ask what *could* be wrong with them? "What on earth is less reprehensible than the life of the Levovs?"

The novel takes unredeemable action as its center. Its Job-like litany of disease and death, success and affliction are built upon Nathan's recollection of one of the Swede's childhood books, *The Kid from Tomkinsville*. This book is a counter-narrative of American promise. The book is spun around baseball, yet in the book every success is met with disappointment and "accident." At one point, Nathan considers entitling his own account of the Swede as *The Kid from Keer Avenue*.

American Pastoral explores the stabilizing myths of the older generation of its Jews. It also depicts unforeseen consequences: the fables of revolution that children such as Merry use to define American history and social justice. An illuminating, elementary morality is destroyed within civic life. Yet the Swede is also morally sightless. At the dinner party, the Swede believes that Merry has opened his eyes; she has made him see. He is, however, no blind seer. He is only someone who understands his own self-deceptions as well as those of others. *American Pastoral* becomes an elegy for Nathan's and the Swede's youth. Nathan's grasp of his own mortality, and the Swede's death from cancer address the mortal heritage: the self's fate is particular. It cannot be determined.

I Married a Communist carries on the grand theme of social realism: a protagonist who is undone by willed self-ignorance. The novel depicts the career of Ira Ringold who has tried to prevent his past from engulfing man. His education is crisis, as well as a dogmatic Communist Party reading of crisis. The theme of what sort of education can America provide is a durable one, and finds its great examples in Dreiser's *An American Tragedy*, Farrell's *Studs Lonigan*, and Wright's *Native Son*. With Roth's novel, the American Jew enters again this pedagogy of insincerity.

Ira's life is a series of duplicities. A Communist who is exposed by a conniving gossip columnist and politician; a youthful murderer on the run; a radio actor married to Eve Frame, a Jewish antisemite; a husband beset by Eve's tyrannical daughter, Sylphid – these are the shards of Ira's life. His

marriage and desire for a family are shields. They protect him from his childhood, his violent anger and HUAC.

Ira, and his well-intentioned brother, Murray, a high-school English teacher, represent American-Jewish types. For Murray, education is an education in the culture of democracy. He succeeds because he thinks America nourishes a liberalizing culture of reason and opportunity. Ira also succeeds; his path away from the past is the Party. Yet both fail: Murray's wife is killed, in part, because of his liberal good will. Ira's understanding of others and himself is destroyed by ideology. Murray Ringold's pronouncement about his brother is final and decisive: "He never discovered his life." His judgment upon himself is just as bitter: the myth of his own goodness was his "final delusion." Nathan, who has listened to Murray's story for six nights, later looks at the heavens. They are part of a universe without conflict, fixed by no human machination. "The stars," he reflects, "are indispensable."

Nathan appears again in *The Human Stain*. The title's allusion is multiple, referring to the infamous stain on Lewinsky's dress, the imperfection of being human, and the stain of skin color. Its protagonist is Coleman Silk, an African American, who decides as a young man that he could pass the color line. And he does. His journey from his East Orange, New Jersey past to his professorship in the classics at Athena college, is a bargain made to protect what Nathan calls "the elaborate clockwork" of his life. Coleman has broken with his mother, and siblings, invented himself as a Russian Jew, and has married Iris Gittelman.

His life is undone because of political incorrectness. "Do they exist or are they spooks?" he asks his class about two missing students. "Spooks" is the word that undoes him. The two students are black. Silk is accused of racism. He is undefended and shunned by his colleagues. He is also victimized by a parody of the academic woman, Delphine Roux, who presents herself as a French "depaysee" professor, stranded at Athena College, and persecuted by Coleman. Sending a letter that is meant to intimidate Coleman, revealing his affair with Faunia, a seemingly illiterate woman, who works as a janitor, Delphine begins by writing "Everyone knows…."

This phrase resounds in Nathan's narrative: it is banal, reducing the complexity of life to malicious gossip. For what "everyone knows" opposes the revelation of the novel. Nathan opens up what had been seen as the simple arrogance and stubbornness of Coleman's life. Nathan enfolds the time-worn American fable of self-invention within the pattern of tragedy. Yet, as Nathan has mentioned elsewhere, literature depends upon particularity, upon the authenticity and uniqueness of character. His strategy, as always, recreates the painful moments when the self is recalled to its past, when its vaunting sense of individuality is caught by the furies that are the haunting of the past. Coleman's pedagogy speaks to his life – and to Nathan's art: the rage of Achilles, the Greek gods' quarrels, the cruelty exposing the human stain. Coleman's grandeur is his refusal to abandon his calibrated life. His refusal is also his fate.

Nathan's meditation on Coleman's life becomes Roth's dialogue with classical literature. Hellenism and Hebraism confront one another: can Hebraism be usurped or even adopted in order to judge as well as present Hellenism? The book's epigraph about blood expiation is taken from *Oedipus Rex*, bespeaking both an identity and a destiny that are interwoven. Roth easily leads the reader to one of Coleman's lectures, as Nathan reconstructs it. In a course dealing with heroes, gods, and myths, Coleman ironically encapsulates the crisis of his life and the recurrent despair of the epic hero. There is no repose for the Greek warrior, for *The Iliad*'s opening lines, Coleman declaims, provide European literature with its origin. The rage of Achilles, Coleman points out, is like "a barroom brawl." Faunia's ex-husband is Nathan's Americanization of the Greek warrior. Les Farley is a Viet Nam veteran, at the mercy of trauma and rage. He is cunning, stalking Faunia and Coleman, and, Nathan believes, later forces their car off a road so that they are killed.

To borrow Arendt's now classic phrase, Nathan confronts the banality of evil. For Nathan, it is a leave-taking. His romantic indulgence of the solitudinous life is over. The novel ends with Nathan looking at Les Farley who is ice fishing. Nathan calls the scene "pure and peaceful," a man fishing alone on an "arcadian mountain." It is a vision particularly fitting. It calls for, as Nathan himself has called for, an end to a deception so enormous and with such entitlement that America can no longer be looked upon as a civilization commensurate with unconstrained dreams.

[Lewis Fried (2nd ed.)]

POETRY. Jewish-American poetry since 1970 has come into its own. A relative late-bloomer compared to Jewish-American drama and prose fiction, this genre has virtually exploded in the past 35 years, producing a rich and diverse body of work representing nearly all aspects of Jewish life and thought in the United States. The earlier 20th century witnessed the publication of a number of important Jewish poems, such as Louis *Zukofsky's *Poem Beginning "The"* (1928) and *"A"*-12 (1950–51), and Allen *Ginsberg's *Kaddish* (1961). It was also the period during which Charles *Reznikoff (1894–1976), the one major American poet who wrote consistently about Jewish experience, produced nearly all his work. By contrast, the post-1970 period encompasses much of the careers of a number of important poets for whom Jewish experience is fundamental to their writing in terms of both form and content. We also see an increasingly serious engagement not only with Jewish-American daily life, but, perhaps even more importantly, with traditional Jewish texts and textuality, and with Jewish philosophy, religious practice, ritual and belief.

As is true of other literary genres and the arts in general, a widening and deepening of what it means to be Jewish in America marks the poetry of recent times. Never an "immigrant" or "ethnic" literature to the same extent as Jewish-American fiction, Jewish-American poetry at its most profound addresses longstanding concerns of the Jewish worldview that are, in effect, reconceived through American

history and culture. Then again, this recent work cannot be truly understood and appreciated without taking important trends and schools in modern American poetry into account; thus Jewish-American poetry must be recognized as a peculiar fold in a set of American literary and cultural concerns that have roots extending at least as far back as early-20th century modernism. This is especially true in regard to matters of style and form: the traditional English versification of a "Jewish" poem by Anthony Hecht or John Hollander is a far cry from the avant-garde practices shaping an equally "Jewish" poem by Jerome Rothenberg or Charles Bernstein. Because American poetry of the last 30 years has been marked by vigorous debate – if not outright conflict – in regard to issues of style, voice, personal and group identity, canon formation, and cultural institutionalization, we must acknowledge at the outset that recent Jewish-American poets have both shaped and been shaped by concerns that extend well beyond Jewishness per se.

This is clearly the case for those figures who have also made significant contributions to the *poetics* of Jewish-American poetry. The first of these poet-critics whom we will consider is Allen *Grossman (1932–). Grossman's engagement with Judaism dates from his first collection of poems, *A Harlot's Hire* (1961) and remains constant throughout his career. Deeply influenced by the Anglo-American Romantic tradition (his first critical study was on Yeats, and he has written distinguished essays on Whitman and Crane), Grossman acknowledges himself to be "a high-style writer," since "The high style is the style of high hope." Using elevated rhetoric, cunning irony, and phantasmagoric imagery, Grossman synthesizes the Romantic sublime with Jewish psalmic utterance and a weirdly deadpan, midwestern American humor; the result is one of the most unique voices in American poetry of the last 50 years. Thus in "The Song of the Lord," the poet announces that "The voice of the Lord opens the gates of day," while in "How to do things with tears," he affirms that "In thy springs, O Zion, are the water wheels / of my mind!" At the same time, however, Grossman raises doubts about the relationship of Jewish belief to the poetic imagination. As he declares in "Out of the Blue," "The meaning of the world / Is being made in defiance of the Jew."

What Grossman means by this enigmatic statement – along with many others in his passionately propaedeutic and dialogical poems – can only be understood in relation to the "long schoolroom" (the phrase comes from Yeats' "Among School Children") that constitutes the body of his writings on poetics, gathered in *The Sighted Singer* (1992) and *The Long Schoolroom: Lesson in the Bitter Logic of the Poetic Principle* (1997). The latter is particularly important for Jewish poetry, for it contains his early, penetrating review of Ginsberg's *Kaddish*, his article on "Holiness," originally written for the collection *Contemporary Jewish Religious Thought*, and above all, "Jewish Poetry Considered as a Theophoric Project," arguably one of the most profound essays ever written on poetry and the Jewish literary imagination. The argument of this essay is too complex to be rehearsed here, but Grossman's self-consciously problematic idea of Jewish poetry as "theophoric," i.e. "God-bearing," and dedicated to a "culture of holiness," actually stands in partial opposition to poetic creation as it is conventionally understood. For Grossman, "the Jew's one word (the Jew's poem of which I write) does not 'create', for that would be redundant, but repeats the one word [God's Word, the Word of Holiness and Presence] that is." Be that as it may, Grossman still concludes that the Jewish poet, dedicated to God's Presence, the Shechinah, "has an obligation to construct the place where 'Light and Law are manifest', to which the nations may come because it is where they are."

The Jewish invocation of the *Shekhinah* and its concomitant call to the nations lead us to a second highly influential figure in recent Jewish-American poetry, Jerome Rothenberg (1931–). A leading figure in the ethnopoetics movement, Rothenberg is a prolific poet, translator and anthologist whose influential work synthesizes the anthropological study of "primitive" cultures with the experimental practices of American and European modernism. Rothenberg sees in the Jews a "primal people," and understands Jewish culture, back to its most archaic origins, as sharing with other tribal cultures a power of *poesis* or imaginative making: "magic, myth, & dream; earth, nature, orgy, love; the female presence the Jewish poets named Shekinah." This quote comes from the "Pre-Face" to Rothenberg's *A Big Jewish Book* (1978; republished in a shorter version as *Exiled in the Word*, 1989), co-edited with the translator Harris Lenowitz. Constructed along the lines of his other ethnographically-inspired literary anthologies, *A Big Jewish Book* juxtaposes modern and traditional texts, orthodox and heretical, religious and secular, to present an immense collage of Jewish *poesis,* understood as "an inherently impure activity of individuals creating reality from all conditions & influences at hand." For Grossman, the *Shekhinah* represents the unique, monological nature of a Jewish poetry of presence, whereas for Rothenberg, the Shekhinah as Jewish muse links the Jews to all other peoples through the universality of poetic activity.

The "inherently impure activity" of Jewish *poesis* is nowhere more in evidence than in Rothenberg's *Poland/1931* (1974). Described by the poet as "an experimental attempt to explore, and recover, ancestral sources in the world of Jewish mystics, thieves, and madmen," this "supreme Yiddish surrealist vaudeville" is both an exercise in deep parody of Jewish ritual and textual practices and an altogether serious enactment of a "timeless" ancestral world. Beginning in a mythic Jewish Poland (which owes a great deal to the fiction of I.B. Singer), the book progresses through the immigration to America of the primal Jewish couples, Esther K. and Leo Levi, to culminate in the outrageous sexual conquest of the American west in the final poem, "Cokboy." Yet Rothenberg's vision of Jewish life is not altogether comic: *Khurbn & Other Poems* (1989) presents a wrenchingly bleak but equally uncanny vision of the Holocaust in Poland, based on the poet's visit to the town from which his parents emigrated in 1920, just twenty miles

from Treblinka. *Gematria* (1994), perhaps Rothenberg's boldest experiment in Jewish poetry, reworks into English the traditional interpretive system based on the numerological equivalents of the Hebrew alphabet, producing brief, exquisite poems that read like dictated portents inscribed by one of the ancient Jewish kabbalists that this postmodern poet continually invokes.

Kabbalah is also at the heart of *Spectral Emanations* (1978), John *Hollander's greatest achievement in Jewish poetry, though this elegant craftsman has written many other lyrics and sequences drawing on Jewish tradition and history. Hollander (1929–) has also distinguished himself as a critic of English poetry, and his own work bears the mark of a poet who has immersed himself in the formal values of that tradition. Measured, witty, and full of elegant word play, it nonetheless rises often to the level of the sublime, and nowhere more frequently than in *Spectral Emanations*. Structured according to the colors of the spectrum, with a text for each color, the poem also purports to be a quest for the lost Menorah of the Temple in Jerusalem, carried off by the Romans when they destroyed the city in 70 C.E. Yet it is also an unfolding vision of God's Presence through the figure of the *Shekinah*, who appears in various guises throughout, and an attempt at *tikkun*, or mystical restoration of the vessels that contain the supernal lights of the godhead in kabbalistic myth.

Like all of Hollander's Jewish poems, *Spectral Emanations* reflects the poet's observation, in his essay "The Question of American Jewish Poetry" (1988), "that the American Jewish poet can be either blessed or cursed by whatever knowledge he or she has of Jewish history and tradition." Though his knowledge proves a blessing, Hollander also warns that "Literalness is the death of the poetic imagination, and all groups in the cultural community that speak for Jewishness will always be very literal about 'Jewish experience' is, as will all groups that want to speak for 'American experience.'" Thus Hollander, like nearly all Jewish American poets, refuses to recognize any religious or cultural authority when it comes to the use of Jewish materials by the literary imagination.

Nowhere is this more apparent than in the work of the feminist poet and critic Alicia Ostriker (1937–). Vigorous, forthright, passionate and engaged, Ostriker's poetry casts a wide net in regard to Jewish matters: she writes about Jewish-American family life, about the Holocaust, about religious ritual, and most especially, about the Hebrew scriptures. One of the most ambitious midrashists among Jewish-American poets, Ostriker returns again and again to biblical tales and figures, probing, revising, turning and transforming the tradition in the light of her sharply critical but deeply humane social and political commitments. Perhaps her boldest venture into midrash is *The Nakedness of the Fathers: Biblical Visions and Revisions* (1994), in which poetry and prose, narrative and hermeneutic, personal reflection and scholarly exegesis are combined in a remarkably comprehensive reconsideration of nearly all the major tales and figures in the Torah. Concentrating on the nature of fatherhood and the tensions of gender relations in these familiar texts, Ostriker deconstructs patriarchal power, opening a space for "the return of the mothers." But in no sense does she dismiss or seek to dispense with the unpredictable God of the Fathers and his all too human patriarchs. An enlightened, modern rationalist, Ostriker, for all her passionate revisionism, insists on the notion of *progress* in Jewish history. For her, the original weight of Sinai dropped and upon Moses and the Israelites gradually lessens over the course of time: ironically, Jewish accomplishment, from those of King David to those of Maimonides to those of Kafka, Chagall, and Heifetz, lead her to "suppose that the mass of Sinai has decreased by the weight of a sparrow. Let it be pronounced we are making excellent progress. We are making history."

Such persistent tribal connections continue to reshape recent Jewish American poetry and poetics – or as Michael Heller puts it in his crucial poem "For Uncle Nat," "Not to make / Too much of it, but I know history / Stamps and restamps the Jew; our ways / Are rife with only momentary deliverance." In addition to a significant body of poems, many of them engaged not only with his own sense of identity but with the historical and philosophical dimensions of modern Jewish life, Heller (1937–) is also the author of *Living Root* (2000), a brilliant memoir which braids together Heller's family history, his early poetic development, midrashic commentary on his own poems, and more abstract, virtually kabbalistic considerations of language and being. Heller becomes, in effect, one of his own best critics, maintaining a striking sense of rigor and objectivity while at the same time gracefully illuminating his poems from within. Ranging from "Bialystock Stanzas," a meditation on photographs of his ancestral hometown in Poland destroyed in the Holocaust, to "The American Jewish Clock," a mordant consideration of the passage of generations in Jewish American life, to "Constellations of Waking," a stirring elegy on the suicide of Walter Benjamin, the German Jewish writer who has profoundly influenced Heller's work, the poems upon which Heller comments in *Living Root* constitute a remarkable tapestry of some of the most important moments of Jewish history and culture in the 20th century.

Heller is also a wide-ranging, exceptionally nuanced critic of modern and postmodern poetry. *Conviction's Net of Branches* (1985), the first full length study of the Objectivists, brings to light many of the ethical and linguistic concerns which make this largely Jewish group of poets one of the most important in 20th-century American literature. More recently, Heller's critical acumen has been confirmed with *Uncertain Poetries* (2005), a generous gathering of his essays, including pieces on George Oppen, Armand Schwerner, David Ignatow, and poetry of the Holocaust. The collection also includes "Diasporic Poetics," a definitive consideration on the Jewish dimension of Objectivist poetry which contains some of the most far-reaching remarks on the Jewish-American poetic sensibility. As Heller revisits his lifelong connection to this poetry, he concludes that "there is no such stable category as Jewishness.… What is religious, after all, are the very things

that question the boundaries of our being, which enable a traverse of psychic chasms, of difference and otherness." Nevertheless, "From so much utilitarian secularity, one might derive a nontheological theology of language, as if to say: thank Whomever (ironically of course) or whatever has designed this world. For I find new languages daily; I find that not all is written out, and that therefore I too am allowed to speak and write."

What Heller identifies as the "utilitarian secularity" of modern, urban America, dialectically generating "a nontheological theology of language," may well serve as a paradigm for many recent Jewish-American poets, however different from each other they may be in terms of poetic style, as well as the particularities of their Jewish experience. Keeping in mind the extraordinary stylistic diversity of modern American poetry in general, it must also be stressed that many Jewish American poets address Jewish matters (be they cultural, historical, political, religious, or, as is most often the case, biographical) only intermittently, and in relation to their other themes and interests. One may cite a major figure such as Adrienne *Rich (1929–), for instance, who for much of her career hardly addresses Jewish matters at all. An icon of modern feminism, Rich's reputation is built on a complex, highly politicized body of poetry and prose in which issues of identity and shifting subject positions are continuously filtered through a resolute, passionate sense of self. Yet the ethical imperative that drives Rich's work forward is decidedly Jewish, and her search for justice, as in the earlier instance of Muriel Rukeyser, one of Rich's most important precursors, does indeed find expression in Jewish matters. A poem such "Yom Kippur 1984" (from *Your Native Land, Your Life*, 1986) begins with the resonant line "What is a Jew in solitude?" and explores the political and dilemmas of various marginalized social groups, rising to a prophetic intensity in its last lines, "when leviathan is endangered and Jonah becomes revenger."

The same ethical imperative and concern for the enlivening diversity of modern American culture can also be found in the work of Charles Bernstein (1950–), one of the leading figures of the Language poets, who has become one of the most widely-recognized and influential avant-garde literary groups of the last thirty years. Unlike Rich, whose political commitment is often expressed through a rhetoric of righteous biblical wrath, Bernstein's vision of community, related to what he calls "the civic practice of Jewishness," often manifests itself more obliquely. His poetry is typically marked by a sly, mockingly self-conscious verbal play, owing as much to Borscht Belt comedy and the monologues of Lenny Bruce as to his more firmly "poetic" precursors like Gertrude Stein and Louis Zukofsky. As Bernstein puts it in "Poetry and/or the Sacred" (1999), "Against the priestly function of the poet or of poetry I propose the comic and bathetic, the awkward and railing: to be grounded horizontally in the social and not vertically in the ethers." Again, much of Bernstein's work is not explicitly engaged with Jewish matters; especially in the earlier part of his career, he adopts and furthers the defamiliarizing techniques of high modernism while developing a comic version of the "politics of the signifier" associated with postmodern literary theory. Yet Jewish cultural concerns are never remote from him. One of his best essays, "Reznikoff's Nearness," carefully relates the earlier poet's Jewishness not only to his subject matter, but to the seriality and discontinuities of his poetic forms. As for an instance of Jewishness in Bernstein's own poetry, consider the poem "Solidarity Is the Name We Give to What We Cannot Hold" (1996), consisting entirely of a long list of possible poetic identities carried to absurd lengths ("I am a serial poet, a paratactic poet, a / disjunctive poet, a discombobulating poet / … I am a capitalist poet in Leningrad / and a socialist poet in St. Petersburg; / a bourgeois poet at Zabar's [the famous Manhattan deli]"). When the poem was reprinted in *Jewish American Poetry: Poems, Commentary, and Reflections* (see below), Bernstein offered the following commentary: "But is it Jewish? / – I think, probably, maybe so / But it could also be not Jewish / – Exactly." For Bernstein then, as for so many other recent Jewish writers, the indeterminate and decentered nature of modern Jewish identity becomes, paradoxically, the ground on which a new sense of the self can be established.

The potential for comedy in the dilemmas of modern Jewish identity is nowhere more in evidence than in *Chelmaxioms* (1977), a booklength poem by Allen Mandelbaum (1926–). Mandelbaum, a translator noted for his magisterial versions of the *Divine Comedy*, the *Aeneid*, the *Odyssey* and the *Metamorphoses*, brings all his linguistic talents and breathtaking erudition (both classical and Jewish) to bear on this unique work, consisting of the "Maxims, Axioms, Maxioms of Chelm." For Mandelbaum, "Chelm is the Diaspora writ small, but nurtured in the narrow compass of its walls by the scoriae, residues, sediments of all the encounters of the Jew in exile." But this Chelm is not the well known "counterfeit, usurping Chelm of Yiddish folklore…so derivative of – so indebted for its humor to – early German lumpen humor." Rather, Mandelbaum claims to write of "the *echt* Chelm, the meandering Chelm of the maxioms, which follow the non sequiturs – yet arabesque – of talk of talk and talk of text, which mime the riverlike careers of the Oral Law and the Written Law but carry a cargo of alegalities." Inhabited by wandering tribes of scholars (legalists, spinozists, kabbalists, etc.), Mandelbaum's Chelm is a free-floating textual paradise forever remaining to be uncovered, layer after layer, like Schliemann's Troy. The poem is thus structured as a sequence of "Findings," and its maxioms, Mandelbaum suggests, constitute a virtual third redaction of the Talmud, following those of Jerusalem and Babylon. Inspired by "the Perfect Woman" (a.k.a. the Sabbath Queen or *Shekhinah*), the scholars of Chelm pass through the various gates of their city engaged in endless disputation, conveyed to us through Mandelbaum's elaborately rhymed lyrics and absurd but always elegant digressions, footnotes, and scoriae.

Mandelbaum's voice in *Chelmaxioms* is mediated by that of "the Hoarse Savant," an inspired pedant, a kabbalis-

tic schlemiel who gathers the fragments of word and act and binds them into the semblance of a unified poem. He is a close relation to the "Scholar/Translator" through whom we receive the text of Armand Schwerner's long poem *The Tablets* (1999). This boldly experimental work, written over the course of thirty years, has been compared to such works as Charles Olson's *Maximus Poems* and Zukofsky's *"A,"* but in its fascination with archaeology, ethnography, and the textually restorative powers of philology, it resembles the more overtly Jewish *Chelmaxioms* as well. A colleague of Rothenberg's in the ethnopoetics group, Schwerner (1927–1999) was also a translator, musician and performance artist, and like Rothenberg, Schwerner's interest in primitive and archaic cultures and their links to contemporary poetic practices is fundamental to *The Tablets* and his other poetry. Genealogically, *The Tablets* goes back further than any other exercise in ethnopoetics: it consists of a sequence of texts (mixing prose and poetry of various genres) that purports to be translations of Sumerian/Akkadian clay tablets more than four thousand years old. The "translations" and their commentaries come to us via Schwerner's "Scholar/Translator," an eccentric, perhaps even mad figure in constant dialogue with the voices of the archaic past, and much of the weird humor of the work arises from the discrepancies between the Scholar/Translator's observations and the materials he has managed to decipher with varying degrees of certainty. Appended to the poem is Schwerner's own "Tablets Journals / Divagations." These fragmentary observations, aphorisms, reflections and self-criticisms, many of them brilliantly insightful, further complicate the issues of commentary and of the transmission of scriptural traditions so fundamental to a Jewish understanding of textuality.

Thus, *The Tablets*, although neither ethnically nor historically "Jewish" in any overt fashion, is paradoxically one of the most important religious poems written by a Jew in recent years (though in all fairness, it should be noted that Schwerner, like a number of other prominent Jewish-American poets of his generation, such as Allen Ginsberg, was also a practicing Buddhist). For Schwerner, the poem in the process of uncovering – and making – reality, is simultaneously an act of sanctification and an interrogation of the sacred. The archaeological, linguistic, and paleographical methods of *The Tablets* lead us to reconsider some of our most reified assumptions about religious texts, scriptural canons, prophetic and priestly authority, and most importantly, the relation of the sacred to the profane. Positioned precisely in the space between ritual and scholarship, poetry and religion, Schwerner's masterpiece effectively deconstructs these polarities and reinstates the primacy of the linguistic imagination.

Given the radical degree to which *The Tablets* challenges what we have seen Michael Heller call any "stable category of Jewishness," Schwerner's work represents a limit case for Jewish-American poetry. Be that as it may, within these limits or categories, Jewish Americans of a number of generations continue to produce a richly varied body of work. The imminent publication of Harvey Shapiro's *The Sights Along the Harbor: New and Collected Poems*, for instance, marks the triumphant culmination of a career of over fifty years, which blends a Jewish search for "the Way" (*halakah*) with a sense of American openness and freedom that is also fully aware of the nation's political failures and historical disasters. Shapiro (1924–), who served as an Air Force gunner in World War II and went on to a distinguished career in journalism (including an eight-year editorship of the *New York Times Book Review*), represents the richness of recent Jewish-American poetry as fully as any of his contemporaries. Shapiro starts out, like so many poets of his generation, as a formalist, though his style changes dramatically under the influence of the Objectivists, whom he met in New York City in the 1960s (he became particularly close to George Oppen). By then, he had already published *Mountain, Fire, Thornbush* (1961), one of the most vivid instances of (to use Allen Grossman's term) a "theophoric" poetry, a poetry that participates in Jewish thought and history without being limited to a particular vision of Jewish ethnicity, but rather returns to biblical and rabbinic origins in order to understand the power of the Law and the overriding demands of the Holy. The elaborate rhetoric of this book will gradually modulate, in Shapiro's later work, into a looser, more conversational free verse, a greater sense of Objectivist economy, and the edgy, streetwise sound. With an eye that rivals Reznikoff's for urban detail, and a voice inflected with the rhythms of both the synagogue and the jazz club, Shapiro's poetry since the 1970s has become one of the best representatives of a New York Jewish style: wry, wise, restless and suffused with a sense of the blessedness of what he calls, to borrow the title of one of his books, "a day's portion."

In 2000, at the start of a new millennium, a book appeared that suggests, perhaps better than any other collection or anthology, the continuities and future of Jewish-American poetry. Edited by Jonathan N. Barron and Eric Murphy Selinger, *Jewish American Poetry: Poems, Commentary, and Reflections* offers a broad but also in-depth introduction to the field. In addition to a number of important historical and cultural analyses, it includes individual poems by twenty-six poets, along with their commentaries on the poems. This unique feature provides, as it were, a snapshot of contemporary Jewish-American poetry. The poems deal with virtually every aspect of Jewish life and thought, from religious meditations to ethnic memories, from ancient visions to modern American scenes. They represent well known poets with established reputations (Gerald Stern, Anthony Hecht, C.K. Williams, Philip Levine, and a number of the poets already mentioned here) as well as poets in mid-career (Ammiel Alcalay, Jacqueline Osherow, Bob Perelman, Norman Finkelstein). The commentaries are scholarly, playful, anecdotal, ironic, sentimental, intimate, hermeneutical, devout, profane. They convince the reader that Jewish-American poetry will continue to thrive, reflecting the remarkable heterogeneity and braided traditions of the culture from which it comes.

[Norman Finkelstein (2nd ed.)]

UNITED STATES OF AMERICA, country in N. America.

This article is arranged according to the following outline:

Introduction

American Jewish history is the product of a unique New World environment. It is also the outcome of centuries of social, religious, cultural, and political developments that reflect the myriad complexity and cross-currents of the history of East and West in the modern era, including the distinctive role played by the Jews in a variety of Christian and Islamic host societies and settings. This article traces the evolution and shaping of American Jewish life over time, from the colonization of North America in the early 17th century to the present age. It highlights broad themes and major topics in the American Jewish experience, examines divergent attitudes and perspectives on American Judaism, and investigates critical historical junctures in the relationship between the Jews and American society.

To understand the nature of American Jewish society and how American Jewry has organized itself for local, national, and international purposes, several factors specific to this continental community must be borne in mind. First, it is important to note the relative youth of American Jewry, a post-emancipationist community virtually devoid of persecution and expulsion, themes of special significance in the history of Jewish civilization. The overwhelming majority of today's American Jews date their arrival or that of their ancestors in America to the turn of the 19th century, the era in which czarist Russia's severe legal restrictions and widespread pogroms in Eastern Europe triggered the relocation of millions of Jews to Western Europe, Ottoman Palestine, and North and South America. To be sure, the first 23 Jews to settle in North America arrived in New Amsterdam (later New York) in 1654, but until the middle of the 19th century the total number of Jews in the United States was relatively sparse, especially in comparison to the vast numbers that arrived between 1881 and 1924.

A distinctive historical paradox of American Jewish life is that it tends toward being both chaotically over-organized *and* lacking in any central organizational structure. In fact, American Jewish life is typified by decentralization and competition in the marketplace of ideas over the direction of its communal agenda, and there has never been a figure (such as a chief rabbi) or group (such as the French General Assembly of Jews in the Napoleonic era) that can speak authoritatively for the entire Jewish community on social, religious, political, and philanthropic issues. The Council of Jewish Federations, an umbrella framework of Jewish Federations from across the country, wields considerable authority in regional affairs and often seeks to influence matters of domestic and international policy. Meanwhile, a host of formidable countrywide membership organizations have grown over time to exercise a profound impact on American, Israeli, and global Jewish affairs. This is true of the secular arena – consider, for example, the variety of non-religious American Jewish activity represented by the *American Israel Public Affairs Committee (AIPAC), the *Anti-Defamation League, *Hadassah, the *Jewish Labor Committee, the *National Jewish Democratic Council, the *Republican Jewish Coalition, and the *World Jewish Congress – *and* the religious spectrum demarcated by the Reform, Conservative, and Orthodox synagogue movements. Competition among and between these and other branches of institutional American Jewish life can be vigorous, especially in matters of theology, community relations, and philanthropy.

There have been frequent attempts in the United States to establish a central representative authoritative body of American Jews as well as strong counter pressure to preserve fragmentation, local autonomy, with large segments of the community refusing to become a part of any central organization. The impulse towards unification of the wider American Jewish community in the 20th century manifested itself in the *American Jewish Congress of 1917 and the *American Jewish Conference of 1943–45 and later in frameworks such as the *Conference of Presidents of Major American Jewish Organizations, the National Jewish Community Relations Advisory Council, and the General Assembly of the Council of Jewish Federations. More recently, the *United Jewish Communities was created in 1999 out of a merger of the Council of Jewish Federations, the United Jewish Appeal, and the United Israel Appeal to mobilize the energies of the American Jewish community. At the dawn of the 21st century, the United Jewish Communities constituted the fifth largest charity in the country, with a combined income of over $2.2 billion.

That no centralized authority exists in American Jewish life is, in large measure, a reflection of the anti-hierarchical model of American society as a whole. To borrow a phrase coined by the historian Ben Halpern, "America is different" in numerous ways, not only in size and age but, most importantly, in the absence of any established church or governmental recognition or support of religion. This is markedly unlike other host societies in Europe and the Middle East where there are long histories of officially recognized Jewish *Kultusgemeindes*, chief rabbis, and other spokespeople. The American constitutional system has hallowed the separation of powers and the ban on any support of religious activities, which is strictly monitored by the courts and other organizations, including many Jewish organizations, for any incursion

of government involvement in religious concerns. The American tradition does not recognize the perpetuation of separate ethnic or linguistic communities such as exist in Canada. This is one of the reasons for the lack of a religious census taken as part of the decennial census as well as the absence of definitive data about the size of the Jewish population in the United States. The estimate over the past 40 years has usually hovered around six million American Jews.

Many factors have contributed to the remarkable progress of the American Jewish community in almost every area of Jewish concern from the decline of antisemitism, the explosion of Jewish affluence, the emergence of higher institutions of Jewish learning and educational institutions, from elementary to post-graduate, to the growing influence and support of the community for Israel both politically and materially. It is hard to determine the extent to which the impact of the Holocaust and the creation of the State of Israel have contributed to the makeup of contemporary American Jewish life. Undoubtedly, both events were significant in reinforcing American Jews in their determination not to allow the repetition of what happened in the 1930s and 1940s when the United States stood by as European Jewry (one-third of the modern Jewish world) was destroyed by the Nazi regime.

In the three centuries since Jews first set foot on American soil – and roughly a century after the United States was but a distant, numerically insignificant outpost of the Jewish people – American Jewry has attained robust proportions, prosperity, cultural eminence, and political prestige. Humanitarianism, skill at organization, liking for innovation, and confidence in unlimited social and material improvement profoundly influenced the American Jewish experience. Such growth and achievements found no precedent in the history of the Jews, just as those of the United States itself were unparalleled. In post-emancipationist America – essentially devoid of feudal, aristocratic, and clerical roots – most of the legal and social problems that preoccupied European Jewry during and long after its era of emancipation were pointless. Discussions of Jewish status in the United States have sometimes had an apprehensive tone and antisemitism palpably existed. But American Jews, shaped in part by a continent-wide society composed of many religions and ethnic groups, has largely lacked the sense of the historical problematics that for centuries permeated Jewish life in Europe and the Islamic world. In American life, the Jewish role has been far in excess of the small Jewish percentage of the population. Only the State of Israel has played a greater role than its American counterpart in the transformation of the Jewish people in the modern period.

The Colonial Era, 1654–1776

THE PURITAN SETTING. The Hebrew Bible influenced the Pilgrims' journey from their native England to the new "Promised Land." The *élan vital* of the Pilgrim voyage was the profoundly biblical perception of a supernatural orientation to human history. After fleeing England, the "Separatists" (as the Pilgrims were known to their contemporaries) sojourned in Leyden, Holland. Before long, however, they began to fear that their children might be assimilated into the alien environment, and the group decided to resume its voyage to America without further delay. When this assemblage, The Scrooby Congregation, was ready to depart for the new land, the members fasted in a manner reminiscent of the ancient Israelites. Once settled in America, the custom was retained and frequently renewed. Early in 1620, the very year of the Pilgrims' landing in the new Plymouth, a solemn day of prayer was observed. This custom, combining prayer and fasting with biblical readings on important occasions, persisted at least until 1774, when Massachusetts declared a solemn day of prayer and fasting after the passage of the Intolerance Acts by the British Parliament. As late as 1800, President John Quincy Adams likewise called for a national day of prayer and fasting during the Napoleonic Wars. English colonists possessed of a similar sensibility soon followed in the footsteps of the pioneering Pilgrims. They, too, were impelled to forsake their native land owing to the political and religious persecution they endured under the prevailing ecclesiastical and civil authorities in England.

Of equal significance is the fact that the Puritan voyages to America were also part of a commercial phenomenon. The Endicott group, for instance, among the first to be sent to New England in 1628, was organized and financed entirely by a commercial concern established by English Puritans with the practical aim of turning a profit. Although it is difficult to disentangle the diverse strands woven into the Puritan effort to establish a new society, the two different elements – the search for religious liberty and the rise of capitalist enterprise – should be kept in mind when the colonization of North America is assessed.

In 1630 John Winthrop led the next major group of Puritan settlers to arrive in New England. He brought with him an organized form of government that attempted to fuse diverse political, social, and religious elements. The Massachusetts Bay Colony founded by Winthrop was ruled initially by an oligarchy of leading Puritan families, whose natural instrument of rule – since the colony itself was based on biblical principles and was moved by the Puritan spirit of the Scriptures – was the Holy Bible. The Puritans wholeheartedly believed it was their special mission to establish in America a society modeled on the precepts of Sacred Scripture. While there is considerable debate over whether the society established in the new colony was in effect a theocracy, the Massachusetts Bay Colony was at the very least a state inspired by and thoroughly devoted to the Bible.

The Puritans in coming to America believed they were entering a wilderness ruled by Satan and his attendant forces of idolatry, and they felt it their sacred duty to secure the rule of God in this latter-day Canaan. The Puritans' conviction that they were the Lord's chosen people *redivivus*, and, as such, partners in a new covenant with Him, pervaded every aspect of colonial life, political as well as religious. This had a twofold

effect. First, it distinguished them from other Christian sects in the New World; the well-known intolerance of the Massachusetts colony stemmed directly from this fervent belief in their divine election. Secondly, it reinforced their sense of autonomy from England; the Puritans were certain they had been led to America at God's express command, and that their successes were the direct result and special sign of divine favor, protection, and guidance. This prevailing belief found expression and confirmation in the Synod of 1679, which declared "the ways of God towards this His people are in many respects like unto His dealings with Israel of old. It was a great and high undertaking of our fathers when they ventured themselves and their little ones upon the rude waves of the vast ocean, that so they might follow the Lord into this land."

The Scriptures were not simply left to the clergy but also read and studied by the laity who related the Bible to their New World experience. Such active lay participation and control in matters that were not the ordinary concern of lay members of a church in Europe was due to the dominant role the laity generally played within the larger Puritan religious establishment. The New England "meeting house" was consciously modeled on the synagogue, serving as the central place of learning as well as the social center of the community. The emergent spiritual sensibility in the colonies had political implications as well. The Puritan practice of restricting political rights to Church members was justified by reference to the Hebrew Bible. If worldly men were electors, wrote John Cotton, they "would as readily set over us magistrates like themselves, such as might hate us according to the curse" (Lev. 26:17). A curious but illuminating sidelight of the conception of the Bible as a living document was the Puritan proclivity to view the indigenous Native American population as remnants of the "ten lost tribes of Israel."

Such conscious analogy with the Hebrew Bible was a regular feature of Puritan thinking in New England. If Israel had its Pharaoh, the Puritans had their King James I. The Atlantic Ocean was their Red Sea, America their Promised Land, and the "founding fathers" their Moses and Joshua. Such analogies came naturally to a people who so thoroughly incorporated the Bible into their lives. Accordingly, the first settlers in New England called themselves "Christian Israel."

The names of early cities, towns and settlements likewise derived from Hebraic sources. The names Salem (peace), Bethlehem (house of bread), and countless others bear witness to this phenomenon. For example, the name Nahumkeik, conferred upon the later Salem plantation original settlement in 1628, was clearly of Hebraic origin. It derived, according to Cotton Mather, from the combination of two Hebrew words, *naum* (comfort or consolation) and *keik* (haven): "And our English not only found in it an Haven of Comfort, but happened also to put an Hebrew name upon it; for they called it Salem for the peace which they had and hoped in it; and so it was called unto this day."

The practice of investing the strange New World environment with the more familiar nomenclature of the Bible was widespread in colonial America and continued for many generations. Very often, names were chosen because the implications they carried or the impression they conveyed seemed appropriate to the chosen site. Thus one minister chose the name "Rehoboth," meaning "the Lord hath made room." Names such as Goshen, Canaan, and Sharon were probably selected because they suggested rich valleys or lush plains. Many early American towns – Bethesda, Bethany, Zion, to mention but a few – received their biblical names in this way, and the custom continued throughout the country's history. The rugged terrain of the New World filled the early settlers with awe, and the names of many biblical heights were eventually bestowed upon the great mountains of America, e.g., Mount Carmel, Mount Horeb, Mount Nebo, etc.

That the early settlers showed an active interest in Hebrew language and nomenclature should not be surprising. Cotton Mather, to cite only one example, was extremely preoccupied with Hebrew. He reportedly began studying Hebrew grammar at the age of twelve and likewise taught his eldest daughter, Katherine, to read Hebrew. Hebrew words and phrases are found throughout his writings. In general, the Puritans drew inspiration from the Hebrew Bible and interpreted it to serve their own peculiar needs, often in an arbitrary fashion. Biblical Judaism thus served as a touchstone for America's early settlers, and it was this spirit that infused the colonization of the New World with intense religious devotion.

ARRIVAL OF JEWS IN NORTH AMERICA. After the medieval Crusades, European Jewish immigration moved eastward to Poland, but with anti-Jewish hostilities in the east, culminating in the *Chmielnicki uprising of 1648, the pendulum swung westward. Meanwhile, the Spanish *Inquisition and the expulsion of the Jews from Spain in 1492 and Portugal in 1497 prompted a transcontinental Jewish migration from the Iberian peninsula to Holland and England. Thus as the modern age dawned, Jews began rejuvenating their communities in Central and Western Europe.

Induced by the commercial and industrial revolutions and the exploitation of the Americas in this period, a relatively small number of Jews sought the opportunities of the Western Hemisphere. For those who did, the prime motivation was economic. One result was the establishment of a Jewish community in the Dutch colony of Pernambuco (*Recifé) in northeastern Brazil. With the recapture by the Portuguese of Dutch colonies in Brazil, the local Sephardi Jewish community disbanded. Not only did the Jews wish to flee from the Inquisition, but they also feared Portuguese retribution for having aided the Dutch in the development of the colonies. Those with means escaped to Amsterdam and London, but a small boatload of 23 Jewish refugees eventually landed in Dutch-controlled New Amsterdam aboard the St. Charles. The New Holland colony was small, with a population of approximately 750 persons, but it was also highly cosmopolitan. There the Jewish refugees expected to find a haven. However, though technically Dutch subjects, Peter Stuyvesant, former

director of the Dutch West India Company's colony in Curaçao in 1643–1644 and now governor of New Amsterdam, denied the Jews entry to the colony. In a letter dated September 22, 1654, Stuyvesant wrote a letter of protest to the Amsterdam Chamber, the most significant of the Dutch West India Company's five chambers of directors. He argued that the Jews would defile the colony.

> The Jews who have arrived would nearly all like to remain here, but learning that they (with their customary usury and deceitful trading with the Christians) were very repugnant to the inferior magistrates, as also to the people having the most affection for you; the Deaconry also fearing that owing to their present indigence they might become a charge in the coming winter, we have, for the benefit of this weak and newly developing place and the land in general, deemed it useful to require them in a friendly way to depart; praying also most seriously in this connection, for ourselves as also for the general community of your worships, that the deceitful race – such hateful enemies and blasphemers of the name of Christ – be not allowed further to infect and trouble this new colony, to the detraction of your worships and the dissatisfaction of your worships' most affectionate subjects.

Meanwhile, Amsterdam Jewry interceded vigorously on behalf of the St. Charles refugees. In January 1655 the Jewish community submitted a petition to the company's Amsterdam Chamber. They explained that the Jewish colonists had shed their blood to defend the Dutch possessions in Brazil, that the French and English allowed Jews in their colonies, and that there were several Jews among the company's "principal shareholders." They argued, correctly, that Holland's Jews enjoyed greater freedoms than Jews anywhere else. Their concerns were no doubt informed by a reflexive effort to protect their own liberties. In the event, the vigorous intercession of Amsterdam Jewry, Dutch fear of English competition, and the imperatives of mercantilism impelled the Dutch West India Company's board of directors to reject Stuyvesant's request. In a reply to Stuyvesant dated April 26, 1655 permission for the Jews to remain in New Amsterdam was grudgingly given.

> Honorable, Prudent, Pious, Dear, Faithful [Stuyvesant]… We would have liked to effectuate and fulfill your wishes and request that the new territories should no more be allowed to be infected by people of the Jewish nation, for we foresee therefrom the same difficulties which you fear. But after having further weighed and considered the matter, we observe this would be somewhat unreasonable and unfair, especially because of the considerable loss sustained by this nation, with others, in the [Portuguese re-]taking of Brazil, as also because of the large amount of capital they still have invested in the shares of this company. Therefore after many deliberations we have finally decided and resolved to apostille upon a certain petition presented by said Portuguese Jews that these people may travel and trade to and in New Netherland and live and remain there, provided the poor among them shall not become a burden to the company or to the community, but be supported by their own nation. You will now govern yourself accordingly.

The utilitarian rationale of the bigoted Dutch West India Company stemmed from the directors' overriding concern with the manufacture of raw goods, their consumption, and the quest for Dutch mercantile supremacy over their Western competitors. True to the mercantilist spirit of the age, they placed a premium on turning a profit rather than the character of the emerging North American colony. Stuyvesant, however, whose life was impacted by events thousands of miles from the mother country, viewed matters differently. "To give liberty to the Jews will be very detrimental there," he argued on October 30, 1655, "because the Christians there will not be able at the same time to do business. Giving them liberty, we cannot refuse the Lutherans and Papists." In time, he reluctantly acquiesced and the Jews gained a foothold in New Amsterdam. Although Stuyvesant subjected the Jewish newcomers to numerous and severe disabilities, by 1657 their lot had improved considerably and they were able to carry on as traders with little hindrance. Yet in a very few years the new Jewish community began to fade because of larger opportunities in other parts of the Atlantic Basin, especially in the West Indies. By the early 1660s the New Amsterdam Jewish community was moribund.

JEWISH LIFE IN THE ENGLISH COLONIES. In 1664 the English eliminated the Dutch wedge between Long Island and Maryland by conquering the province of New Netherland. Henceforth New Amsterdam was known as New York. Under the English, synagogue communities were established in six towns: *Montreal, *Newport, *New York, *Philadelphia, *Charleston, South Carolina, and *Savannah. Except for Montreal, all were in the tidewater, where most Jews lived. By 1700 there were at most 200 to 300 Jews in the country; by 1776, about 2,500. Up to 1720 the majority of the Jews were of Spanish-Portuguese provenance; after that year Central and East European Jews predominated, although they accepted the Sephardi *minhag* (custom). Many of the Ashkenazim who landed in North America came by way of England, where they had learned some English and had even Anglicized their names. When the Dutch left in 1664, the few Jews in New Amsterdam were not allowed, officially at least, to practice a craft or to sell at retail. They could hold no public religious services and, of course, no honorific offices. Conditions under the English changed for the better. By 1700 Jews were permitted to sell at retail, to practice crafts, and to worship openly. In New York City and in other places they were compelled to support the established churches. In a few colonies they were granted the franchise, certainly in town elections; nowhere however could they hold office, except onerous positions, such as that of constable. Shortly thereafter, however, the British authorities, more liberal than the colonists themselves and eager to further intercolonial trade, passed the British Naturalization Act of 1740.

> An act for naturalizing such foreign Protestants, and others therein mentioned, as are settled or shall settle, in any of His Majesty's colonies in America….
>
> Whereas the increase of people is a means of advancing the wealth and strength of any nation or country;

> And whereas many foreigners and strangers, from the lenity of our government, the purity of our religion, the benefit of our laws, the advantages of our trade, and the security of our property, might be induced to come and settle in some of His Majesty's colonies in America, if they were made partakers of the advantages and privileges which the natural born subjects of this realm do enjoy; Be it therefore enacted by the King's Most Excellent majesty… all persons… who have inhabited and resided, or shall inhabit or reside for the space of seven years or more, in any of His Majesty's colonies in America… and shall take and subscribe the oaths… shall be deemed, adjudged, and taken to be His majesty's Natural born subjects of this kingdom….
>
> Be it further enacted by the authority aforesaid, that whenever any person professing the Jewish religion shall present himself to take the said oath of abjuration in pursuance of this act, the said words – "upon the true faith of a Christian" – shall be omitted out of the said oath… shall be deemed a sufficient taking of the said oaths, in order to intitle such a person to the benefit of being naturalized by virtue of this act….

The naturalization law did not confer any political rights on colonial Jews. Indeed, Jews would not gain equality until the American Revolution. However, the British act did permit Jews to carry on trade anywhere in the empire. This was an important gain and it opened the door to the Jewish community's economic advancement.

Rare individuals like Francis Salvador were planters; a few were farmers, and some in Georgia ran cattle in the pine barrens. A considerable number were artisans, tailors, soapmakers, distillers, tobacconists, saddlers, bakers, and silversmiths. The economic aristocrats were the army purveyors who provisioned the British armies on the North American continent. During the frequent wars Jews also engaged in privateering. These economic activities were exceptional, however, since the typical Jew in the coastal plains was a small shopkeeper selling hardware, dry goods, and liquors. If successful, the Jew became a merchant or merchant shipper, engaged in retailing, wholesaling, commission sales, importing, and exporting. Moses Franks is an outstanding example in this regard. A talented and successful entrepreneur, Franks' fortune stemmed from speculation in the western region of the Illinois territory. His considerable business dealings with the British crown eventually impelled him to relocate to London, where he became a prominent merchant, shipowner, and financial investor. Like Franks, most Jews were exporters, limited primarily to the British Empire by the Trade and Navigation Acts, and they exchanged raw materials for English consumer wares. Jews also played a significant role in the sale of American provisions to the West Indies in exchange for molasses and rum. A merchant shipper like Aaron *Lopez of Rhode Island, who was denied naturalization in 1762, was also an industrialist contracting for anything from a work apron, to a prefabricated house, to a ship. A number of Jews were members of the United Company of Spermaceti Candlers, the first American syndicate to attempt control of the production and price of candles. Some of the candle manufacturers sent out their own whalers that penetrated as far south as the Falkland Islands. A few entrepreneurs, notably a handful of Newport merchant families engaged in the slave trade, including Lopez and his father-in-law Jacob Rodrigues Rivera, who invested in the international Guinea trade to Africa. Jewish participation in the slave trade, however, was relatively minor in comparison to the dominant role played by Christian merchants of the period. In the main, Jewish mercantile activity was governed by economic rather than moral considerations. A 1762 directive illustrates the matter-of-fact attitude of two Newport Jewish merchants toward the slave trade:

> [October 29, 1762]
> Captain John Peck,
>
> As you are at present master of the sloop Prince George with her Cargo on board and ready to sale you are to observe the following orders:
>
> That you Imbrace the first fair wind and proceed to sea and make the best of your way to the windward part of the Coast of Africa and at your arrival there dispose of your Cargo for the most possible can be gotten, and Invest the neat proceeds into as many good merchantable slaves as you can, and make all the Dispatch you possibly can. As soon as your Business there is Completed make the best of your way from thence to the Island of New Providence and there dispose of your Slaves for Cash, if the markets are not too dull; but if they should [be], make the best of your way home to this port… You are further to observe that all Rum on board your Sloop shall come upon an average in case of any Misfortune, and also all the slaves in general shall come upon an Average in case any Casualty or Misfortune happens, and that no Slaves shall be brought upon freight for any person…
>
> And also we allow you for your Commission four Slaves upon the purchase of one hundred and four, and the privilege of bringing home three slaves and your mate one.
>
> Observe not neglect writing us by all opportunitys of every Transaction of your Voyage. Lastly be particular Carefull of your Vessell and Slaves, and be as frugal as possible in every expense relating to the voyage….
>
> Isaac Elizer
> Samuel Moses

Jews of the 14th colony, Canada, were almost all in the fur trade. Others active in the buying and selling of this commodity were the New Yorkers and Pennsylvanians. These fur entrepreneurs rarely traded directly with the Native American tribes. They were the wholesalers supplying goods to traders who went directly to the army posts and Indian villages. It was an easy shift from Indian trading to land speculation, and Jewish businessmen soon helped launch huge enterprises in the trans-Allegheny West involving millions of acres. None of the proposed colonies in which they were concerned proved successful, but they did help in opening the West to American settlers.

The typical Jewish shopkeeper was an immigrant devoted to Judaism. The *kehillah* (communal framework) established by Jews in this period was a voluntaristic one, with a certain measure of compulsion built in. Recalcitrant Jews with nowhere else to turn could theoretically be excluded by

the collective. However, communal discipline, especially in matters of *kashrut* (dietary law), was constantly ameliorated by the need not to offend. There were simply too few Jews and the fact of voluntary association acted as a break on the authority of the Jewish community's leadership. Permanent cemeteries were established in 1678 at *Newport, and in 1682 at New York. Religious services that had begun in New Amsterdam in 1654 or 1655 were revived in New York not later than the 1680s. The typical colonial congregation had a *parnas* (sexton) and a board (*mahamad* or junta). Sometimes there was a treasurer (*gabbai*), but no secretary. New York had first-class (*yehidim*) and second-class members. No congregation in North America had a rabbi until 1840, but each employed a *ḥazzan* (cantor), *shoḥet* (ritual slaughterer), and *shamash* (sexton). On occasion the first two offices, and that of *mohel* (ritual circumciser) too, were combined in one individual.

A sizable portion of the budget, in New York, at least, went for "pious works," charities. Itinerants were constantly arriving from the Caribbean islands, Europe, and Palestine, and were usually received courteously and treated generously. Once in a while a Palestinian emissary would arrive seeking aid for oppressed Jews in the Holy Land. Impoverished members of the congregation were granted loans to tide them over, the sick and dying were provided with medicine, nursing, and physicians, respectable elders who had come upon hard times were pensioned, and the community itself saw to all burials. There is no conclusive evidence that a separate burial society functioned anywhere in British North America. Education was not a communal responsibility except for the children of the poor. *Rebbes*, private teachers, were generally available. By 1731 a school building had been erected in New York by a London philanthropist. At first the curriculum consisted only of Hebraic studies to train the boys for *bar mizvah*, but by 1755 the school had become a communally subsidized all-day institution also teaching secular subjects. The instruction was by no means inadequate. Gershom Mendes *Seixas, the first native-born American *ḥazzan*, received his education in this school.

There were surprisingly few anti-Jewish incidents in the North American colonies. A cemetery was desecrated now and then, "Jew" was a dirty word, and the press nearly always presented a distorted image of Jewish life both in the colonies and abroad. Despite the fact that Jews were second-class citizens, physical anti-Jewish violence was very rare. Rich Jews like the Lopezes and the army-purveying Frankses were highly respected. They were influential even in political circles. Jews were accepted in the English North American settlements because they were needed. Men, money, and talent were at a premium in the mercantilistic age. It was not their Christian interest in the Hebrew Bible that led Protestants to tolerate Jews. Christian Hebraists were enamored of Hebrew, but not of actual Jews or their descendants. Hebraism was an integral part of Christian culture. Nonetheless, Jews were often welcomed as business partners. At one time or another most Jewish merchants had worked closely with Christian businessmen. Many of these Jews had intimate Christian friends. Children of the wealthy went to college where they were made welcome, but on the whole the Jews showed little interest in formal higher education. Careers in law were closed, while medicine, apparently, had little appeal.

As illustrated by the well known Franks-Levy portraits, one of the most significant collections of extant colonial portraiture, Jews in this period typically dressed, looked, and acted like gentiles. Like the Franks-Levy clan, a prominent New York City Jewish family of merchants and arms purveyors, they were completely acculturated. Moreover, away from the community and its rigid controls many of the younger generation abandoned traditional observances and dietary laws. Social intimacies led to mixed marriage. Practically every Jew who permanently settled in Connecticut married out of the faith and most of them assimilated completely. Intermarriages even in the larger towns of the country were not unusual. The latter was a source of great concern for Abigail Franks, who in 1743 wrote to her son Naphtali, imploring him to remain faithful to Jewish customs and expressing her distress over the elopement of her daughter Phila to Oliver DeLancey, a gentile aristocrat.

> Flatt bush, June 7th, 1743
> Dear Heartsey:
>
> My wishes for your felicity are as great as the joy I have to hear you are happily married. May the smiles of Providence waite always on y'r inclinations and your dear [wife] Phila's whome I salute with tender affections, pray'g kind Heaven to be propitious to your wishes in making her a happy mother....
>
> I am now retired from town and would from my self (if it where possible to have some peace of mind) from the sever affliction I am under on the conduct of that unhappy girle [your sister Phila]. Good God, wath a shock it was when they acquaintyed me she had left the house and had bin married six months. I can hardly hold my pen whilst I am writing it. Itt's wath I never could have imagined, especially after wath I heard her soe often say, that noe consideration in life should ever induce her to disoblige such good parents.
>
> I had heard the report of her goeing to be married to Oliver Delancey, but as such reports had often bin off either of your sisters, I gave no heed to it further than a general l caution of her conduct wich has always bin unblemish'd, and is soe still in the eye of the Christians whoe allow she had disobliged us but has in noe way bin dishonorable, being married to a man of worth and character.
>
> ...My house has bin my prison ever since. I had not heart enough to goe near the street door. It's a pain to me to think off goeing again to town [lower Manhattan] and if your father's buissness would permit to live out of it I never would goe near it again. I wish it was in my power to leave this part of the world; I would come away in the first man of war that went to London.
>
> Oliver has sent many times to beg leave to see me... tho' I never will give him leave to come to my house in town, and as for his wife, I am determined I never will see nor lett none of the family goe near her.

He intends to write to you and my brother Isaac [Levy] to endeavour a reconciliation. I would have you answer his letter, if you don't hers, for I must be soe ingenious to confess nature is very strong and it would give me great concern if she should live un happy tho' it's a concern she does not merit…

Your affectionate mother,
Abigaill Franks

Although some Jews retained a strong sense of their identity, many identified easily with the larger community into which they were integrated. The desire for low visibility induced even the Sephardi *ḥazzan*, Saul *Pardo, to change his name to its English equivalent, Brown. In 1711 the most prominent Jewish businessmen of New York City, including the *ḥazzan*, made contributions to help build Trinity Church. In the days before the American Revolution the Union Society, a charity composed of Jews, Catholics, and Protestants, made provision for the poor of Savannah, Georgia.

The typical American Jew of the mid-18th century was of German origin, a shopkeeper, hardworking, enterprising, religiously observant, frequently uncouth and untutored, but with sufficient learning to keep accounts and write a simple business letter in English. This is well illustrated by a communication from Isaac Delyon of Savannah to Barnard Gratz of the respected Philadelphia mercantile firm B. and M. Gratz.

Savannah, 24 Sept., 1760
To Mr. Barnard Gratz,
Marchant in Philadelphia.
Mr. Gratz,
Sir:

By Capt. Joseph Howard I have inclosed you an invoice of sundry [goods] shipped you on my one [own] account; four barrels rice; four bundles of drear [deer] skins, one hundread dressed ones, fifteen onery [ordinary] six in the heir [undressed], which [you] will be good enuph to seal [sell] them to the best advantage. Please to seal them so that I may git the remittence by this schooner, because I don't know when the[re] will be a nother opertunity. Even if you should oblige to seal them something cheepor than the common rate, I should be glad if you would send me an account of the seals [sales] of which I have shipped you in all.

I should be glad if you have received the money of what you sould for me. If you have, you will be good enuph to remit it by this.

You rote me by Capt. Nezbet to let you know if starch seals heir [here]. It is now from 30s. to 40s. [shillings].

Pleas to send me the following artcles. You will mutch oblige me if you do send theme this time, because it will be mutch to my advantage. Pleas to inshure what you send. From

Your most humble servant,
Isaac Delyon

25 lb. chokolet
1 barrel linced [linseed]oil
1 doz best black grane [grain] calf skins
9 barrels makarels
1 ditto herrings
150 lb. gingerbread
2 barrels cranberys
10 barrels of apples

If there is any thing remaing, plead to send it in milk and butter bread if the wether is not low. Could send me 15 barrels ables [apples], but do let them be the last you put on board, for fear of the frost.

The American Jews of the pre-Revolutionary era brought with them from Europe to the New World a sense of Jewish communalism. Despite their absorption in business as they struggled for economic self-sufficiency, they kept their congregation alive. In general, Jews in British North America tended to be careless in matters of ritual, governed less by traditional prescriptions than by the unconscious principle of salutary neglect and a readiness to make concessions in order to keep more negligent fellow-Jews within the ambit of the *minyan* (religious quorum). There were exceptions to this rule, however, and fear of assimilation sometimes prompted bitter recriminations by communal leaders. In 1757, for example, having received disturbing reports that Jews were ignoring basic religious customs and laws, Shearith Israel, the flagship synagogue of New England and the mid-Atlantic provinces, issued a stern public warning. On the eve of Yom Kippur (Day of Atonement), the leaders of the New York congregation denounced those community members who flouted Jewish practices.

The *parnasim* [presidents] and elders having received undouted testimony that severall of our brethren that reside in the country have and dayly violate the principles [of] our holy religion, such as trading on the sabath, eating forbidden meats, and other heinous crimes, and as our Holy Law injoins us to reprove one another agreeable to the commandments in Liviticus … that is no one is to be punished unless first admonished:

Therefore whosoever for the future continues to act contrary to our Holy Law by breacking any of the principles command will not be deem'd a member of our congregation, have none of the mitzote [honors] of the sinagoge conferred on him, and when dead will not be buried according to the manner of our brethren … the Gates of our Community will be shut intirely against such offenders, but thos that repent and obey the precepts of the Almighty, we beseech the divine goodness to open to them the gates of mercy, and all their enterprises will be attended with the blessing of haven.… All who obey will be blessed [Hebrew].

In reality, however, the leaders of Shearith Israel and other early synagogues commanded few if any social controls. For although most colonial Jews were synagogue-goers, so too were they strongly influenced by the New World's relaxed social and economic rhythms. In time, a variety of synagogue communities emerged and the competition among them made it possible for Jews of varying attitudes and behaviors to find suitable religious and communal frameworks. Lack of a centralized authority in Jewish life, along with the considerable influence of synagogue lay leaders whose mercantile lifestyles predisposed them to benign acceptance of non-traditional behaviors and attitudes, undermined the fixity of *halakhah* in Jewish affairs. In sum, the Jewish newcomers of this period

seem not to have felt that they were in *galut* (exile). Rather, America for them was home.

Early National Period, 1776–1820

THE REVOLUTIONARY ERA. When the American Revolution broke out in 1775, the Jewish population of the New World numbered approximately 2,500, or less than one-tenth of one percent of the entire population. In accord with centuries of social conditioning some Jews, including Isaac Touro of Newport, were Tory loyalists and clung to the status quo. Others such as Aaron Lopez, a merchant of considerable importance who owned more than 30 ships and was heavily invested in inter-colonial and international trade, were not Tories and only quietly supported the revolution. When 8,000 British and Hessian troops occupied and sacked Newport, Lopez, his father-in-law Jacob Rodriguez Rivera, and his son-in-law, Abraham Pereira Mendez, relocated their families to Leicester, Massachusetts until the war's end. Still other families divided into opposing camps (like the Gomezes, Frankses, Hayses, and Harts), and a fair number were Jewish Hessians (that is, German mercenaries hired by King George III to help put down the American insurrection). However, the majority of Jews – once they were forced to make a choice and vacillation no longer remained an option – were Whigs. Indeed, by this time most Jews had few ties to England and were determined to become first-class citizens. They accepted the revolutionary propaganda that had already been aired for half a generation, and they were fascinated by the "Great Promise" of July 4, 1776, the Declaration of Independence. Quite a number were in the militia, which was compulsory, and some served in the Continental line as soldiers and officers. Three officers attained relatively high rank. Jewish merchants ventured into privateering and blockade-running, but the Jew was in general still a shopkeeper somehow or other finding the consumer goods so desperately needed in a nonindustrial country whose ports were often blockaded by the British fleet.

Among the most notable Jewish rebels was the Polish immigrant, Haym Salomon, an ardent patriot who served as an underground agent for the American forces while working for the British. When discovered, he fled to Philadelphia to avoid being arrested, leaving his family and considerable resources behind. The following memorial addressed to the Continental Congress, in which a penniless Salomon requested public employment, provides a detailed account of his services during the first three years of the war.

> Philad[a] Augt 25[th] 1778.
>
> To the Honorable the Continental Congress
> The Memorial of Hyam Solomon of the City of New York, Merchant.
> Humbly sheweth,
>
> That Your Memorialist was some time before the Entry of the British Troops at the said City of New York, and soon after taken up as a Spy and by General Robertson committed to the Provost – That by the Interposition of Lieut. General Heister (who wanted him on account of his Knowledge in the French, polish, Russian Italian &ca Languages) he was given over to the Hessian Commander who appointed him the Commissary War as purveyor chiefly for the Officers – That being at New York he has been of great Service to the French & American prisoners and has assisted them with Money and helped them off to make their Escape – That this and his close Connexions with such of the Hessian Officers as were inclined to resign and with Monsieur Samuel Demezes has rendered him at last so obnoxious to the British Head Quarters that he was already pursued by the Guards and on Tuesday the 11[th] inst. He made his happy Escape from Thence – This Monsieur Demezes is now most barbarously treated at the Provost's and is seemingly in danger of his Life And the Memorialist begs leave to cause him to be remembered to Congress for an Exchange
>
> Your Memorialist has upon this Event most irrevocably lost all his Effects and Credits to the Amount of Five or six thousand Pounds sterling and left his distressed Wife and Child of a Month old at New York waiting that they may soon have an Opportunity to come out from thence with empty hands –
>
> In these Circumstances he most humbly prayeth to grant him any Employ in the Way of his Business whereby he may be enabled to support himself and family – And Your Memorialist as in duty bound &c[a].
>
> Haym Salomon

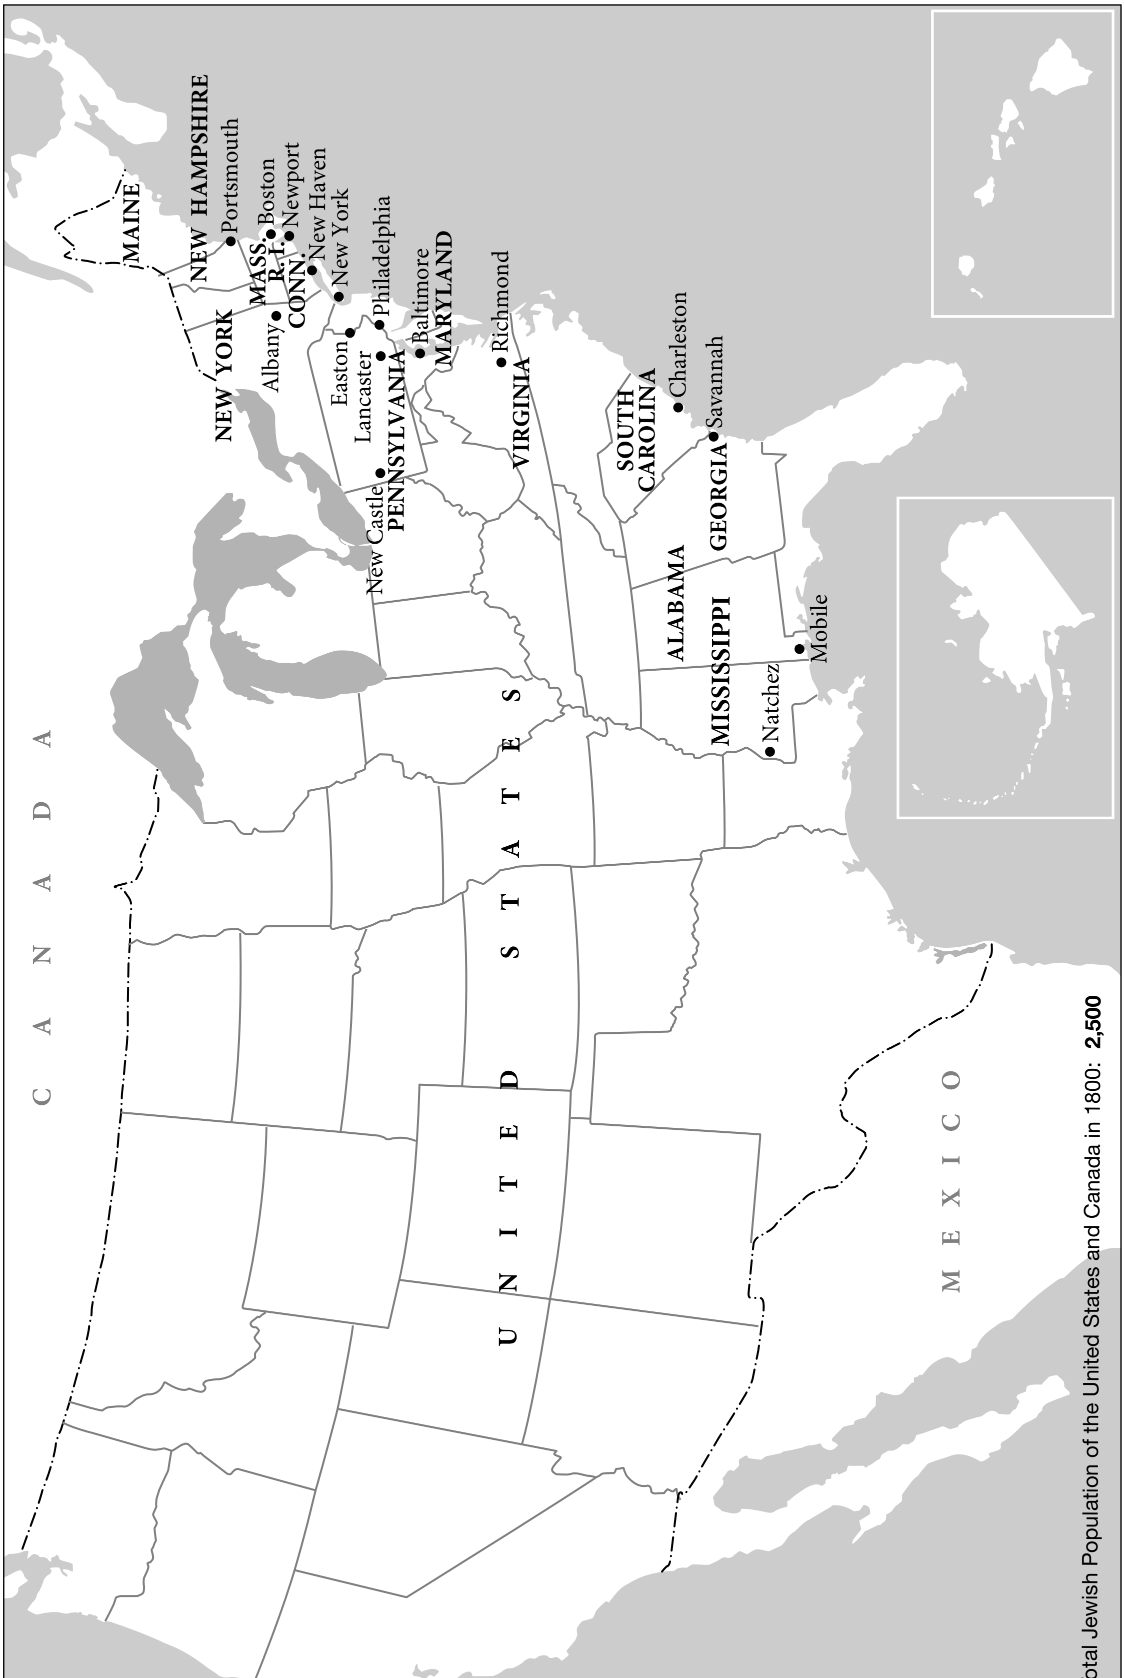
The Congress seems to have ignored Salomon's request and he subsequently opened his own brokerage business. He eventually became the best known war broker in the country. Indeed, it was in his capacity as a chief bill broker to Robert Morris, the superintendent of finance, that Salomon helped make funds available for the successful expedition against General Charles Cornwallis, which brought the war to an end.

Independence from England did not at once materially improve the political status of the American Jew. But in 1787 the Northwest Ordinance guaranteed that the Jew would be on the same footing as his fellow citizens in all new states. The Constitution adopted a year later gave the equality on the federal level. At the time this was not a great victory, for most rights were still resident in the states. This meant that while a Jew could be elected president of the American republic, he might be barred from becoming a local or state official. As late as 1820 only seven of the 13 original states had recognized the Jew in a political sense. Ultimately men of talent were appointed or elected town councilors, judges of the lower courts, and members of the state legislatures. The national authorities appointed them marshals and consuls; outstanding individuals made careers for themselves in the army and the navy, though the latter branch of the service was particularly inhospitable to Jewish aspirants.

In spite of these advances, in an era when the American form of government was still raw and new, the Jewish community as a whole was susceptible to the ambivalence of the dominant Christian majority and wary of the possibility of social discrimination in the New World. A telling illustration in this regard is the entreaty of the Jews of Newport, Rhode Island, presented to President George *Washington in 1790 as he campaigned along the eastern seaboard to win support

for ratification of the federal constitution. The letter reveals an early American Jewish sensibility that was conditioned, on the one hand, by life under the *ancien regime* and shaped, on the other, by the recent history of Jews in the new American society-in-the-making.

> Sir,
>
> Permit the Children of the Stock of Abraham to approach you with the most cordial affection and esteem for your person and merits – and to join with our fellow citizens in welcoming you to New Port.
>
> With pleasure we reflect on those days – those days of difficulty and danger, when the God of Israel, who delivered David from the peril of the sword – shielded your head in the day of battle: – and we rejoice to think the same Spirit, who rested in the bosom of the greatly beloved Daniel, enabling him to preside over the provinces of the Babylonish Empire, rests, and ever will rest upon you, enabling you to discharge the arduous duties of Chief Magistrate in the States.
>
> Deprived as we have been hitherto of the invaluable rights of free citizens, we now (with a deep sense of gratitude to the Almighty Disposer of all events) behold a government (erected by the majesty of the People) a Government which gives to bigotry no sanction and to persecution no assistance – but generously affording to all liberty of conscience, and immunities of citizenship – deeming every one, of whatever nation, tongue, or language equal parts of the great governmental machine. This so ample and extensive federal union whose basis is Philanthropy, mutual confidence, and public virtue, we cannot but acknowledge to be the work of the Great God, who ruleth in the armies of Heaven, and among the inhabitants of the Earth, doing whatsoever seemeth him good.
>
> For all the blessings of civil and religious liberty which we enjoy under an equal and benign administration we desire to send up our thanks to the Antient of days, the great Preserver of Men – beseeching him that the Angel who conducted our forefathers through the wilderness into the promised land, may graciously conduct you through all the dangers and difficulties of this mortal life – and when like Joshua full of days, and full of honor, you are gathered to your fathers, may you be admitted into the heavenly Paradise to partake of the water of life and the tree of immortality.
>
> Done and signed by order of the Hebrew Congregation in New Port, Rhode Island, August 17th, 1790.
>
> Moses Sexias [sic] Warden



Washington's judicious and cogent reply addressed the Jewish community's concerns in a respectful and dignified manner. Nonetheless, he also gently reproached them, offering a brilliant object lesson in civic rights. In the gracious and brief formulation that follows, he incorporated some of Jewish petitioners' felicitous language, while elevating the dialogue to the level of an ultimate test of America's hallowed principle of inalienable rights.

> Gentlemen:
>
> While I receive with much satisfaction your address replete with expressions of affection and esteem, I rejoice in the opportunity of assuring you that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to New Port from all classes of Citizens.
>
> The reflection on the days of difficulty and danger which are past is rendered the more sweet from a consciousness that they are succeeded by days of uncommon prosperity.
>
> If we have the wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good government to become a great and happy people.
>
> The Citizens of the United States have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship.
>
> It is now no more that toleration is spoken of, as if it was by the indulgence of one class of people, that another enjoyed the exercise of their inherent natural rights. For happily the government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support.
>
> It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration, and fervent wishes for my felicity.
>
> May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of other inhabitants, while every one shall sit in safety under his own vine and fig-tree and there shall be none to make him afraid.
>
> May the Father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own time and way everlastingly happy.
>
> G. Washington

The exchange of letters between the Hebrew Congregation of Newport and George Washington underscores the centrality of liberty of conscience and religious toleration in the struggle to create a free and open American society. The eloquent phraseology articulated by the Jewish petitioners and Washington – that the government of the United States "gives to bigotry no sanction, to persecution no assistance" – would in time become a classic formulation of the American attitude to minority rights.

From a global perspective, the ratification of the U.S. Constitution and subsequent amendments between 1788 and 1791 portended a significant and unprecedented departure from the general trajectory of Jewish history. In a mere 45 words, Article 1 (known today as the "establishment clause") erased the scourge of legalized social and religious discrimination which hitherto prevented Jews from participating fully in modern society: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble and to petition the government for a redress of grievances."

The Newport Jewish community disappeared after 1800, but the other Sephardi congregations continued to prosper, reinforced by the growth of communities in Philadelphia, New York, Charleston, and Richmond. The apparatus of all these synagogues was modified and enlarged: the status of the *ḥazzan* was raised to that of the Christian minister; secretaries and committees were common, and eleemosynary societies

Map 1. Main centers of Jewish population in the U.S., 1800, within state borders of today.

and confraternities (*ḥevrot*) rose in every congregation during this post-Revolutionary period. From then on special organizations took care of the poor, the sick, and the dead. Some of these societies, primarily concerned with mutual aid, offered sick and death benefits. Originally these new groups – whether composed of men or women – were closely affiliated with congregations, but from the very beginning they enjoyed a degree of autonomy. Given the voluntaristic nature of emergent American Jewish life, the charities would ultimately emancipate themselves from congregational control.

Changes also occurred in the economic activities of the Jews. As cotton became "king," Jewish planters increased. Merchant shippers, though still rich and powerful, lost their relative importance as the retail and wholesale urban merchants turned away from the sea and became specialists. With good titles possible, land speculation within the ambit of states and territories assumed increasing importance; Cohen & Isaacs of Richmond employed Daniel Boone to survey their holdings in Kentucky. Independence and affluence brought new economic fields into prominence in the United States. Jews began turning to banking and moneylending, insurance, industry, and the stock exchange. By 1820 they had entered the professions of law, medicine, engineering, education, and journalism.

Many Jews in the post-Revolutionary period, especially in South Carolina, were men of education and culture, at home in the classics, in modern languages and literatures, devotees of music and poetry. A number of *literati* both in the North and in the South were playwrights of some distinction; all were ardent cultural nationalists. Patriotism, however, was no guarantee against Judeophobia, which increased as the Jew rose in wealth, prominence, and visibility. For example, an antisemitic letter published in 1800 in the *Gazette of the United States*, a Federalist newspaper, publicly ridiculed and defamed Benjamin Nones in mocking tones for not having contributed to a collection of the Democratic Society of Philadelphia: "*Citizen N – the Jew*. I hopsh you will consider dat de monish ish very scarch, and besides you know I'sh just come out by de Insholvent Law. – *Several*. Oh yes let N – pass." When the *Gazette* refused to print Nones' reply, he turned to the *Philadelphia Aurora*, a leading Republican organ, with the following eloquent and damning refutation:

> Philadelphia Aug 11, 1800
> To the Printer of the Gazette of the United States.
> Sir,
>
> I hope, if you take the liberty of inserting calumnies against individuals, for the amusement of your readers, you will at least have so much regard to justice, as to permit the injured through the same channel as conveyed the slander, to appeal to the public in self defence… I can shew, that the want of prudence of this Mr. Marplot [the anonymous writer], in his slander upon me is equally glaring with his want of wit, his want of veracity, his want of decency, and his want of humanity.
>
> I am accused of being a *Jew*; of being a *Republican*; and of being *Poor*.
>
> I *am* a *Jew*. I glory in belonging to that persuasion, which even its opponents, whether Christian, or Mahomedan, allow to be of divine origin – of that persuasion on which Christianity itself was originally founded, and must ultimately rest – which has preserved its faith secure and undefiled, for near three thousand years – whose votaries have never murdered each other in religious wars, or cherished theological hatred so general, so unextinguishable among those who revile them…
>
> To be of such persuasion, is to me no disgrace; though I well understand the inhuman language of bigoted contempt, in which your reporter by attempting to make me ridiculous, as a Jew, has made himself detestable, whatever religious persuasion may be dishonored by his adherence…
>
> I am a *Republican*! Thank God, I have not been so heedless, and so ignorant of what has passed, and is now passing in the political world. I have not been so proud or so prejudiced as to renounce the cause for which I have *fought*, as an American throughout the whole of the revolutionary war, in the militia of Charleston, and in Polafskey's legion, I fought in almost every action which took place in Carolina, and in the disastrous affair of Savannah, shared the hardships of that sanguinary day, and for three and twenty years I felt no disposition to change my political, any more than my religious principles. – Your correspondent… cannot have known what it is to serve his country in time of danger and difficulties, at the expence of his health and his peace, of his pocket and of his person, as I have done; or he would not be as he is, a pert reviler of those who have done so… On religious grounds I am a republican…
>
> In the history of the Jews are contained the earliest warnings against kingly government…
>
> How then can a Jew but be a Republican? in America particularly. Unfeeling & ungrateful would he be, if he were callous to the glorious and benevolent cause of the difference between his situation in this land of freedom, and among the proud and priviledged law givers of Europe.
>
> But I am *poor*, I am so, my family also is large, but soberly and decently brought up. They have not been taught to revile a Christian, because his religion is not so old as their. They have not been taught to mock even as the errors of good intention, and conscientious belief. I hope they will always leave this to men as unlike themselves, as I hope I am to your scurrilous correspondent.
>
> I know that to purse proud aristocracy poverty is a crime, but it may sometimes be accompanied with honesty even in a Jew. I was bankrupt some years ago. I obtained my certificate and was discharged from my debts. Having been more successful afterwards, I called my creditors together, and eight years afterwards unsolicited I discharged all my old debts, I offered interest which was refused by my creditors, and they gave me under their hands without any solicitations of mine, as a testimonial of the fact (to use their own language) as a tribute to my honor and honesty…
>
> This is a long defence… but you have called it forth, and therefore, I hope you at least will not object to it. The Public will now judge who is the proper object of ridicule and contempt, your facetious reporter, or
>
> Your Humble Servant,
> Benjamin Nones

Not unlike Nones' predicament vis-à-vis anti-Republican sentiment, Jews who entered politics and joined the Jeffersonians were vilified in the Federalist press as "democrats," which was at the time used in public debate as a derogatory epithet. In

this manner, Jews seeking public office, even Christians of Jewish ancestry, were frequently and viciously attacked. Aside from a few plays, miscellaneous orations, addresses, and literary anthologies, however, Jews wrote relatively little of note in this period. Meanwhile, Jewish publishers in New York City did begin to make themselves known by reprinting significant European books. In the area of Jewish culture, American Jewry was equally uncreative. In the 1760s two English translations of Hebrew prayer books had appeared. After the Revolution, Jews brought out a few sermons and eulogies, a Hebrew grammar, and by 1820 a rather interesting polemic entitled *Israel Vindicated*, though there is no absolute proof that this was written by a Jew. More important was the reprinting of a number of apologetic works directed against deists and Christian missionaries. Some of these books had originally appeared in England.

The typical American Jew of the post-Revolutionary period was native born and completely acculturated. Intermarriage was not uncommon. Though nominally a follower of Jewish customs, most Jews of this era were in reality largely indifferent to the tenets and practices of traditional Judaism. Despite such an attenuated profile, they were nonetheless strongly and even belligerently attached to American and world Jewry by a strong sense of kinship. Altogether there were about 4,000 Jews in the United States by 1820, most of them in the Allegheny regions, but there was no town in the United States, even distant St. Louis, which did not shelter some Jews. Many of them were recent German immigrants who had drifted in after the Napoleonic wars. By the turn of the 18th century Central Europeans had already started a little Ashkenazi synagogue in Philadelphia. Within a generation Ashkenazi culture dominated the American Jewish scene.

German Jewish Period, 1820–1880

POPULATION, IMMIGRATION, AND SETTLEMENT. The salient development in American Jewry during the four decades before the Civil War was its growth from a small group, estimated at 6,000 in 1826, to a major world Jewish community. The number of Jews, which stood at about 15,000 in 1840, was authoritatively estimated at 150,000 in 1860, and probably reached 280,000 in 1880. This vast increase was largely due to foreign immigration, especially from German lands. In general, the Metternichian age in Central Europe was one of conservatism. Jews feared conscription, their right to move about freely and settle in the German lands was often limited, they were not always free to marry, the new industrialism was a threat to their traditional economy, the German guild system hemmed them in, and anti-Jewish prejudice was constant. This was the push that impelled them to emigrate; American liberties and opportunities attracted them.

In Bavaria, dozens of small largely Jewish villages saw most of their inhabitants leave for the United States, while in Posen (Prussian Poland) there was a steady outward movement. Germanized Jews from Bohemia and Hungary also emigrated. Immigration attained a peak during the early 1850s, when economic depression and the repressive aftermath following the abortive Continental revolutions of 1830 and 1848 impelled the greatest movement to the prospering American republic. Consequently, the Jewish community in the United States long spoke English with a German accent when it was not speaking its native German. The German Jews also proved to be hard working and highly adaptive to their New World environment. The swift Americanization and cultural elasticity that characterized German Jews in the antebellum period is evident in the following letter (translated from German) in which Jacob Felsenthal, originally of Cologne, invites his brother to join him in San Francisco.

> San Francisco, Calif., Jan, 13, 1854
> Dear Brother,
>
> It was a wonderful surprise to learn from a fellow named Liwey [Levy?] that you are in America! And also that you are living in Baltimore with a family named Herzog. I could not remember who the Herzogs are but it finally dawned on me that must be Jacob Herz and his wife from Limburg!
>
> How are you getting along and how's business? It's not great here since as you can imagine things don't just fall in your lap. Here I have learned what business means, and I have put up with a lot, especially in Panama. I was sick for several months and had no money, not even enough to eat. As I got a little better I got various jobs to pay for board and room, which cost a dollar-and-a-half a day. I was too weak even to play my guitar.
>
> But with God's help I got well, and after 4–5 months in Panama in that awful heat I was able to put away 120 dollars in gold which I earned in just five weeks. Then I was able to go to California! Luckily, through a doctor I know, I got a place on a steamer as a cook so I didn't have to pay any fare. Also, I made a deal with Carl Reis and made some money in potatoes, which cost 1 schilling a pound. I don't have to tell you how expensive everything is.
>
> I have now been in California seven months, in San Francisco, and am married! I have a fine wife and thank God things are going quite well. I have already taken in several hundred dollars. If you would want to come here then you and I and my wife would start up a nice café with music and singing every evening. Here a cigar costs 1 or 2 schillings each, and drinks the same, so there is money to be made. Also I am as well known in San Francisco as I was in Cologne …
>
> Write immediately of you are coming or not. If you don't have 50 dollars then let me know and I will send you the money. It would be better if you have the money and then I can put more into the business. In any case, answer by return mail so I can start arranging things. Don't buy a through ticket because it will cost 25 dollars more from Panama to San Francisco by steamer. Take a sailing vessel. As I said, write me by return mail. I won't leave you in the lurch. The sooner you come the better for you and me. An ordinary worker gets 4–5 dollars a day, so you can see how you'll do.
>
> I imagine you already speak good English. So do I since my wife is American and doesn't speak a word of German. She was born in Boston and speaks a little Spanish. But here every language in the world is spoken. If you get to Panama, then go to the pharmacist – take your right, then left – he is also German. They both know me; tell them you are my brother and ask their help to get you a job on the steamer so you won't have

> to pay passage. Don't stay in Panama long; it is very unhealthy. And don't eat too much meat. The sooner you leave the better. Do what is best for you.
>
> Regards from my wife who is looking forward to meeting you.
>
> Your brother,
> J. Felsenthal

In the decades prior to the Civil War, Jewish settlement traversed the North American continent. Old seacoast Jewish communities like those in Charleston, South Carolina, Newport, Rhode Island, and Norfolk, Virginia, failed to grow and declined in importance. The most important expansion took place along the route of the Erie Canal, which crossed upstate New York after 1825, and on the shores of the Great Lakes. The Jewish population of such cities as *Albany, *Syracuse, *Rochester, and *Buffalo in New York State, and *Cleveland, *Chicago, *Detroit, and *Milwaukee in the Middle West quickly rose to the thousands. On the banks of the Ohio and Mississippi rivers scores of smaller towns had Jewish settlements. *Cincinnati on the Ohio River stood second only to New York during the mid-nineteenth century, while *Louisville, *Minneapolis, *St. Louis, and *New Orleans on the Mississippi drew upon vast developing hinterlands for the commercial and industrial growth in which Jews took a prominent role. Dozens of towns in the southern Cotton Kingdom sheltered little groups of German Jews, who traded in the freshly picked cotton and kept general stores. A striking growth occurred in northern California during and after the Gold Rush of 1849–52; perhaps 10,000 Jews lived in the boom city of *San Francisco and scattered among the mining camps by 1860. New York City's numerical predominance in American Jewish life was well established by that date with 40,000 Jews, and Philadelphia and Baltimore were also important communities. Jews in New England, on the other hand, were very few.

The last significant traces of legal inequality disappeared early in this period. The most significant episode was the public agitation and debate in the State of Maryland over the disqualification of Jews for public office, which was finally removed by the "Jew Bill" of 1826. Like the debates during the period of the American Revolution, these deliberations concerned the alleged Christian basis of the state, rather than a contest between pro-Jewish and anti-Jewish feeling. The states of North Carolina and New Hampshire retained legal obstacles to Jewish tenure of public office but very few Jews resided there and prescribed Christian oaths appear to have been a dead letter issue.

The middle of the 19th century was the day of the German Jewish peddler. At a time when retail trade outlets outside large cities were few, the peddler was an important functionary of emergent American commerce. Thousands of men, mostly recent young immigrants, trudged the countryside east of the Mississippi River with packs on their back, successors of the Yankee peddler. Peddling proved to be a hard-scrabble existence and was susceptible to the attacks of those, like the anonymous author of *Men and Manners in America* (1833), who believed "the whole race of Yankee peddlers are proverbial for their dishonesty. These go forth annually in thousands to lie, cog, cheat, swindle… In this respect they resemble the Jews…" To the profile of the Jewish peddler must therefore be added the occasional encounter with petty antisemitism which, as the following text demonstrates, illustrated the darker side of America's European legacy.

> I continued my peddling until January 1835, when one evening, in deep snow and quite frozen I came to Easton, a pretty little town in Delaware, and entered an inn. A number of guests sat around the glowing stoves; and as they saw me enter, a pale and snow-covered merchant, a feeling of compassion must have come over them, for nearly every one bought something of me, and thus even in the evening, I did some good business, after I had run about the whole day in terrible winter weather, earning scarcely enough for a drink.
>
> While preoccupied with my business, I was watched by an oldish-looking, occasionally smiling, but apparently unconcerned man behind the stove. He allowed me to finish the business in peace but then he got up, tapped me on the shoulder and bade me follow him. Out of doors his first question was whether I had a trade-license for peddling? I still felt so strange in America, and he spoke in so low a voice that I did not understand him and, therefore, looked at him in astonishment. My long, ten-days-old beard struck him, and he asked me further whether I was a Jew. He did not want to believe me when I denied it. Fortunately, I had with me the passport of my homeland, which I presented to him. Now he grew somewhat better disposed, looked at me sympathetically and said: "Since I see that you are an honest Protestant Christian I shall let you go, although I am losing 25 dollars through it. I have no kind feelings for the Jews, and were you one of them, I would not treat you so gently. If I wanted to arrest you, you would have to pay 50 dollars fine or, until you were able to raise it, you would have to go to jail, and half the fine would be mine. Still I shall forge that; but you better give up your trade and look for another one. Sooner or later you will be caught and then you'll be out of luck."

Jews also became the purveyors of nearly all the necessities of gold prospectors in California. Although many had been trained in crafts and trades in Europe, few held to them in the United States and were instead drawn into grueling but lucrative peddling. Isaac Mayer *Wise, who served as a rabbi in Albany, New York, from 1846 to 1854, described his community as composed mostly of men who departed on Sunday morning for their peddling routes through the countryside, returning only for the following Sabbath. The progress of many of these men followed a classic pattern: from peddler on foot, to peddler on a wagon, to crossroads shopkeeper, to large merchant. Jews who practiced trades were mostly tailors and cigarmakers. The overwhelming majority of American Jews, native and immigrant, were occupied in commerce at its various levels and in skilled crafts. Very few tilled the soil. The proportion of Jews in the professions of the day – medicine, law, teaching, and journalism – was low. Here and there a man of significance stood forth in his profession, such as the physicians Daniel Peixotto *Hays, Jonathan P. *Horwitz,

Daniel L.M. *Peixotto, and Abraham *Jacobi. However, during the period of mass immigration into a very small original settlement, commerce remained the Jewish livelihood par excellence.

CULTURAL, RELIGIOUS, AND COMMUNAL ACTIVITY. The first countrywide stirrings of cultural activity, religious diversity, and communal organization beyond the synagogue appeared in the middle of the 19th century. German Jewish immigrants included a considerable number of persons versed or learned in Judaism. Thus while ordained rabbis were extremely few, many teachers from Europe assumed the rabbinic title and became spiritual heads of congregations. (This is best exemplified by the case of Isaac Mayer Wise, arguably the most important American Reform leader of the 19th century, whose own rabbinic qualifications were uncertain and never verified.) German-speaking culture was also widespread. As part of the vast German migration to the United States, many were active in German American cultural life. Jews were prominent in German theatrical societies, as writers and subscribers to German newspapers, members of German musical societies, leaders of German immigrant aid and charitable societies, and political personalities within the German ethnic group. For a large but indeterminate group of Jews in the United States German culture was a full substitute for their ancestral Judaism.

The decades between 1820 and 1860 were a period of broad freedom and social acceptance for American Jews. The small native bourgeois group readily entered United States life and politics in such centers as Charleston, South Carolina, New York City, and Philadelphia. Of actual antisemitism there was very little. Indeed, the antagonisms and tensions within American society found expression in anti-Catholicism, which was directed especially at recent Irish immigrants. By contrast, instances of antisemitism were infrequent – e.g., an attack on Jewish businessmen in the California legislature during a debate on a Sabbath closing law, explicitly phrased insistence that the United States was "a Christian country," or a biased courtroom address by a lawyer against a Jewish adversary. Branches of American Protestantism continued to produce extensive missionary literature, including newspapers, books, and pamphlets, but Jewish conversions to Christianity by such means were negligible. Linked to such proselytizing endeavors were expressions of faith that the Jews would ultimately be restored to their homeland, and sympathy for Jewish efforts, real or rumored, toward that end. If the biblical people of Israel still lay deep in the American mind, the contemporary Jews were on the whole not a preoccupation.

The most characteristic form of German Jewry's religious expression in the United States in this period was Reform Judaism. After an early episode in Charleston between 1824 and 1828, where the demand was mainly for more aesthetic ritual, Reform took root during the 1840s with the beginning of the Emanu-El Reformverein in New York and the founding of Reform congregations. Few synagogues, however, were founded on professed Reform principles. Usually an Orthodox congregation of German immigrants changed at first in a relatively superficial manner: it might omit the prayer for the long defunct Babylonian academies (*yekum purkan*), the incense formula (*pittum ha-ketoret*), and the complimentary benedictions during the reading of the Torah (*mi she-berakh*). More far-reaching alterations followed thereafter, such as the shift to a mainly English liturgy, the elimination of the second day of festivals, and the doffing of hats. It was less the initiative of the members of these early congregations than that of their rabbis which produced these changes. By the time of the Civil War several dozen congregations had taken their first steps toward Reform under the major rabbinic figures of the day: Isaac Mayer Wise, who settled in Cincinnati from 1854 after a stormy term in Albany to become the spokesman and organizer of American Reform; David *Einhorn, a theological radical of deeply Germanic and classical Reform thought; Bernard *Felsenthal, a moderate reformer; and Samuel *Hirsch and Samuel *Adler, similar to Einhorn in their Germanism and religious radicalism. The theological approach of these rabbis satisfied the widespread desire for Americanized forms of Judaism that harmonized with contemporary liberalism, rationalism, and optimism. Thus a version of Judaism was formulated in the United States that sought to bridge the chasm between Jews and Christians and refute the millennial view that Jews were living in exile.

To the difficulties of communication and transportation in this period may be added some apprehensiveness on the part of recently arrived German Jews over Jewish separatism and isolation. The synagogue was frequently the basic institution in the communal structure, although the founding of the fraternal order *B'nai B'rith in 1843 and its rapid growth outside the synagogue framework as a representative social and benevolent organization provided an alternate and rival form of Jewish affiliation and identification. Most cities also had their Jewish "literary" and charitable group. During the agitation over the *Damascus blood libel in 1840, protest meetings were purely local, but with some overall coordination. Repeated calls by Isaac *Leeser and Samuel M. *Isaacs of New York brought about the formation of the Board of Delegates of American Israelites in 1859, intentionally resembling in name and structure the Board of Deputies of British Jews. Like many central representative bodies thereafter, the Board of Delegates was founded on account of crises – on this occasion a not insignificant one in 1854 over the United States government's ratification of a treaty with Switzerland that enabled the latter country to bar foreign Jews from entry, and the more serious *Mortara Affair of 1858–59 in which a Jewish boy, Edgar Mortara, was secretly baptized by his Christian nurse and taken from his parents. The Board of Delegates was initially controlled by traditionalists and opposed by the Reformers. It claimed no more than 30 congregations – perhaps one-fifth of the number in existence.

The main ideas of American Reform Judaism were already articulated before 1860, but large-scale expansion of

the movement took place in the 1860s and 1870s. In 1873, Isaac Mayer Wise, author of *Minhag Amerikah* ("The American Custom," 1857), a prayer book intended to be the unifying text of American Judaism, led the movement in cohering around a relatively small organization calling itself the *Union of American Hebrew Congregations. The constitution of the new Union scrupulously avoided theological and ideological references. In the wake of the Civil War, the notion of "union" became a hallowed principle in itself and Wise and his followers sincerely hoped all American Jews would join them.

> [July 9, 1873]
> PREAMBLE, CONSTITUTION, AND BY-LAWS OF THE UNION OF AMERICAN HEBREW CONGREGATIONS PREAMBLE
>
> The congregations represented in this convention, in faithful attachment to the sublime principles of Judaism, and in consciousness of Israel's sacred duties, feel impressed with the conviction, that in order to discharge these obligations beneficially, a closer union of the congregations is necessary. To this end, under the protection of the benign Providence and the laws of our country, we hereby establish this sacred covenant of the American Israelites, as set forth in the following:
>
> CONSTITUTION
>
> *Name*
>
> *Article I.* The body hereby constituted and established shall be known as "The Union of American Hebrew Congregations."
>
> *Object*
>
> *Article II.* It is the primary object of the Union of American Hebrew Congregations to establish a Hebrew Theological Institute – to preserve Judaism intact; to bequesth it in its purity and sublimity to posterity – to Israel united and fraternized; to establish, sustain, and govern a seat of learning for Jewish religion and literature; to provide for and advance the standard of Sabbath-schools for the instruction of the young in Israel's religion and history, and the Hebrew language; to aid an encourage young congregations by such material and spiritual support as may be at the command of the Union; and to provide, sustain, and manage such other institutions which the common welfare and progress of Judaism shall require – *without, however, interfering in any manner whatsoever with the affairs and management of any congregation.*

Opposition to the Reform movement came from a few Orthodox and proto-Conservative figures, most notably Isaac Leeser, lecturer, editor, author of *Olat Tamid* ("Eternal Offering," 1858) – a traditionalist prayer book – and *ḥazzan* of the Sephardi congregation in Philadelphia. Leeser stressed the immutable character of Judaism as a revealed religion, and insisted that under American freedom the Jewish religion had to be observed in full, rather than truncated. In the final analysis, however, the times were not with Leeser and his companions.

In the 1840s and 1850s Jewish schools teaching both Hebrew and general subjects (usually under the auspices of a synagogue) opened around the country. They existed during the absence of adequate public schooling or because of a Christian sectarian tinge to the public schools. During the same decades the movement for free, universal, religiously neutral public schools spread throughout the United States. As they were established in city after city, the recently founded Jewish schools closed and their children were sent to the new public institutions. By 1860 a new pattern was set for Jewish children of the public school combined with the afternoon or Sunday supplementary Jewish school.

For much of the 19th century Jewish communal organization seldom reached above the local level. However, several notable instances of intensive regional activity did set the stage for later countrywide innovations. An excellent example in this regard is the case of Rebecca *Gratz, daughter of a family of successful German Jewish merchants, who used her considerable talents to help create and lead five benevolent associations: the Female Association for the Relief of Women and Children in Reduced Circumstances (1801), the Philadelphia Orphan Asylum (1815), the Female Hebrew Benevolent Society (1819), the Hebrew Sunday School (1838), and the Jewish Foster Home (1855). Gratz herself was religiously observant. But her participation in Philadelphia's elite social circles, her commitment to nondenominational civic causes, and her appreciation of successful Gentile communal agencies underscore the capacity and rapidity of Jewish integration into wider American culture. Her pioneering mindset led to experiments in communitywide Jewish organization and philanthropy that would ultimately transform the American Jewish scene.

THE CIVIL WAR. Moses Judah, a New York merchant, was apparently the first American Jew to play a leadership role in the emergent abolitionist movement. In 1799 he joined New York City's Society for Promoting the Manumission of Slaves and in 1806 he was elected to the group's executive committee. Judah was an exception, however, and before the American Civil War (1861–65) few Jews took part in the mounting debate over slavery. The 150,000 or so American Jews generally sided with their respective regions before and during the conflict. As tensions escalated, some American Jewish leaders and activists engaged in fierce public debates. In 1860 Rabbi Morris J. *Raphall of Congregation Bnai Jeshurun, the first Jew to open a session of the U.S. House of Representatives with prayer, and Michael *Heilprin of New York City engaged in a printed debate over the alleged biblical legitimization of slavery. The exchange garnered nationwide attention. Asserting that "the slave is a person in whom the dignity of human nature is to be respected," Raphall nonetheless sought to justify the institution of slavery on theological grounds. "If our Northern fellow-citizens, content with following the word of God," he stated in a widely disseminated sermon, "would not insist on being 'righteous overmuch,' or denouncing 'sin'… they would entertain more equity and less ill feeling towards their Southern brethren." In response, Heilprin offered a cogent exegetical and scholarly retort, printed on January 15, 1861 by the *New York Daily Tribune*, which reached a substantial newspaper audience.

> If [Raphall's pro-slavery] assertion needs a refutation you can find it in the concluding passages of the Book of Job, in which

> you will find how the martyr was rewarded for his constancy, all his former possessions being restored double, his sheep, his camels, his oxen, and his she asses – but is there a word of slaves? So much for your proofs from passages of the Scriptures.
>
> Another ample and general refutation of our Rabbi's view can be found in the history of the Hebrews as a nation, a history of fifteen centuries, full of wars, revolutions, civil strifes and catastrophies, but without a mention of a single slave rising, or a single similar event. And how often do the Helots figure in Spartan history! How often slaves in the history of Rome! The history of this country, alas, has scarcely a page on which is not written the black word "Slavery." Shall its history be so continued? Answer, statesmen and people of America!
>
> And you, Rev. Rabbi Raphall, make your Bible, by some process of reasoning, to be pure, just, and humane, if you want to have it regarded as divine; or reject it as full of human frailty, if you dare! *Shalom!*

In addition to the secular abolitionist worldview of Heilprin, the American Jewish landscape was dotted with rabbis who took different positions on the question of abolition. An especially courageous communal leader was Rabbi David *Einhorn, the Baltimore reformer, who called slavery "the cancer of the Union" in the German-language monthly *Sinai*. He also staunchly upheld abolitionism in the slaveholding state of Maryland, in the heart of a city where one-tenth of the population consisted of slaves, and despite the opposition of his congregation *and* threats to his personal safety. He fled to New York City from a mob in 1861. On the other hand, Rabbi Isaac M. Wise probably reflected the mixed sympathies in his border city of Cincinnati by remaining silent about the Civil War and its issues; the reverends Isaac Leeser and Samuel M. Isaacs did likewise. Meanwhile, Judah P. *Benjamin, a distinguished Southern Jewish jurist, slave owner, and plantation farmer, who rose to become a United States senator representing Louisiana, played a key role in the secessionist movement. Benjamin, a close personal advisor to Jefferson Davis, would later serve as attorney general, secretary of war, and secretary of state of the Confederacy. Although Benjamin's attachments to Jewish life were minimal, he swiftly became an object of ridicule for antisemites in the North and the South, who feverishly accused him of treason, profiteering, and the like.

Perhaps 10,000 Jews served, about 7,000 in the Northern armies and 3,000 in those of the South, and over 500 lost their lives. Many of these soldiers, recent immigrants from Germany, served in the numerous units of German-born soldiers. The Union army began to appoint Jewish military chaplains in 1862, after the restriction under the law of 1861 on the appointment of military chaplains to Christian clergy was abolished.

Among the extant documents that illustrate the wartime experience of American Jews is an anonymous letter by a Union soldier, in which the writer discloses the self-consciousness of Jews in the military.

> As a general rule, the Jews do not care to make their religion a matter of notoriety, as it would at once involve them in an intricate controversial disquisition with the Christian chaplains, for which they do not always feel themselves qualified, and which, of course can, under no circumstance, afford them anything but annoyance. Some of our brethren fear that, were they known as Hebrews, it would expose them to taunts and sneers of those among their comrades who have been in the habit of associating with the name of the Jew, everything that is mean and contemptible; but I must say, and it redounds much to the credit of the army, that in the course of my experience in the camps, which has been considerable, I have heard but of a single instance in which a Jew was wantonly insulted on account of his religion, and that was by a drunken Scotchman, who commenced damning in every variety of language and motion, when he learned that he was addressing an Israelite, declaring them all to be cheats and thieves.…
>
> Most people take it for granted, that every soldier is an infidel, and that no sooner does he enter on active duty, than he banishes all the idea of religion from his mind. This is a great mistake, at least as far as the Jews are concerned. My own observation has convinced me that military life does not injuriously affect their ideas of duty and devotion.… It is quite common for Jewish soldiers belonging to the same company, to meet together for worship on Sabbath, in some secluded spot, and I know a young soldier, who was on Kippore [sic] morning, ordered to take part in a skirmish, near Harper's Ferry, which he had to go through, without having tasted food, and as soon as the enemy retreated, he retired to the woods, where he remained until sunset, reading his prayers.…
>
> Some Jewish soldiers suggested the idea of organizing all the Jewish soldiers in the army, into distinct regiments, with Hebrew banners, etc., so that both our food and religious services may be more consonant with our habits and ideas, and we may have the pleasure of associating with our own brethren. I was further informed that such was actually the custom among the Dutch Jews.… The suggestion of my friends to form themselves into separate regiments was, however, disapproved of by wiser heads, which was altogether unnecessary, as it is at present impracticable, and we are quite satisfied to fight with our Christian comrades for one cause, one country, and THE UNION.

Another useful example of American Jewish life during the Civil War is the memoir of German-born Marcus Spiegel, who served as a second lieutenant in the 67th Ohio Infantry and then as a colonel in the 120th Ohio Infantry. Marcus' extensive correspondence with his wife Caroline, a convert to Judaism, underscores the conflict's tragic impact on family life in this period. Addressing his "good, lovely and abused Wife," Marcus noted:

> I speak truly when I say "abused Wife": a Woman as good and lovely, as saving and industrious, as kind a wife and good mother as you are should [not] be left alone hundreds of miles from her husband who loves her more and more with fervor, zeal, and devotion… with three small children and one coming, or that he should leave her at all.

Somewhat later, Marcus lay dying in 1864 from a mortal wound and wept to an attending surgeon, "This is the last of the husband and father, what will become of my poor family?"

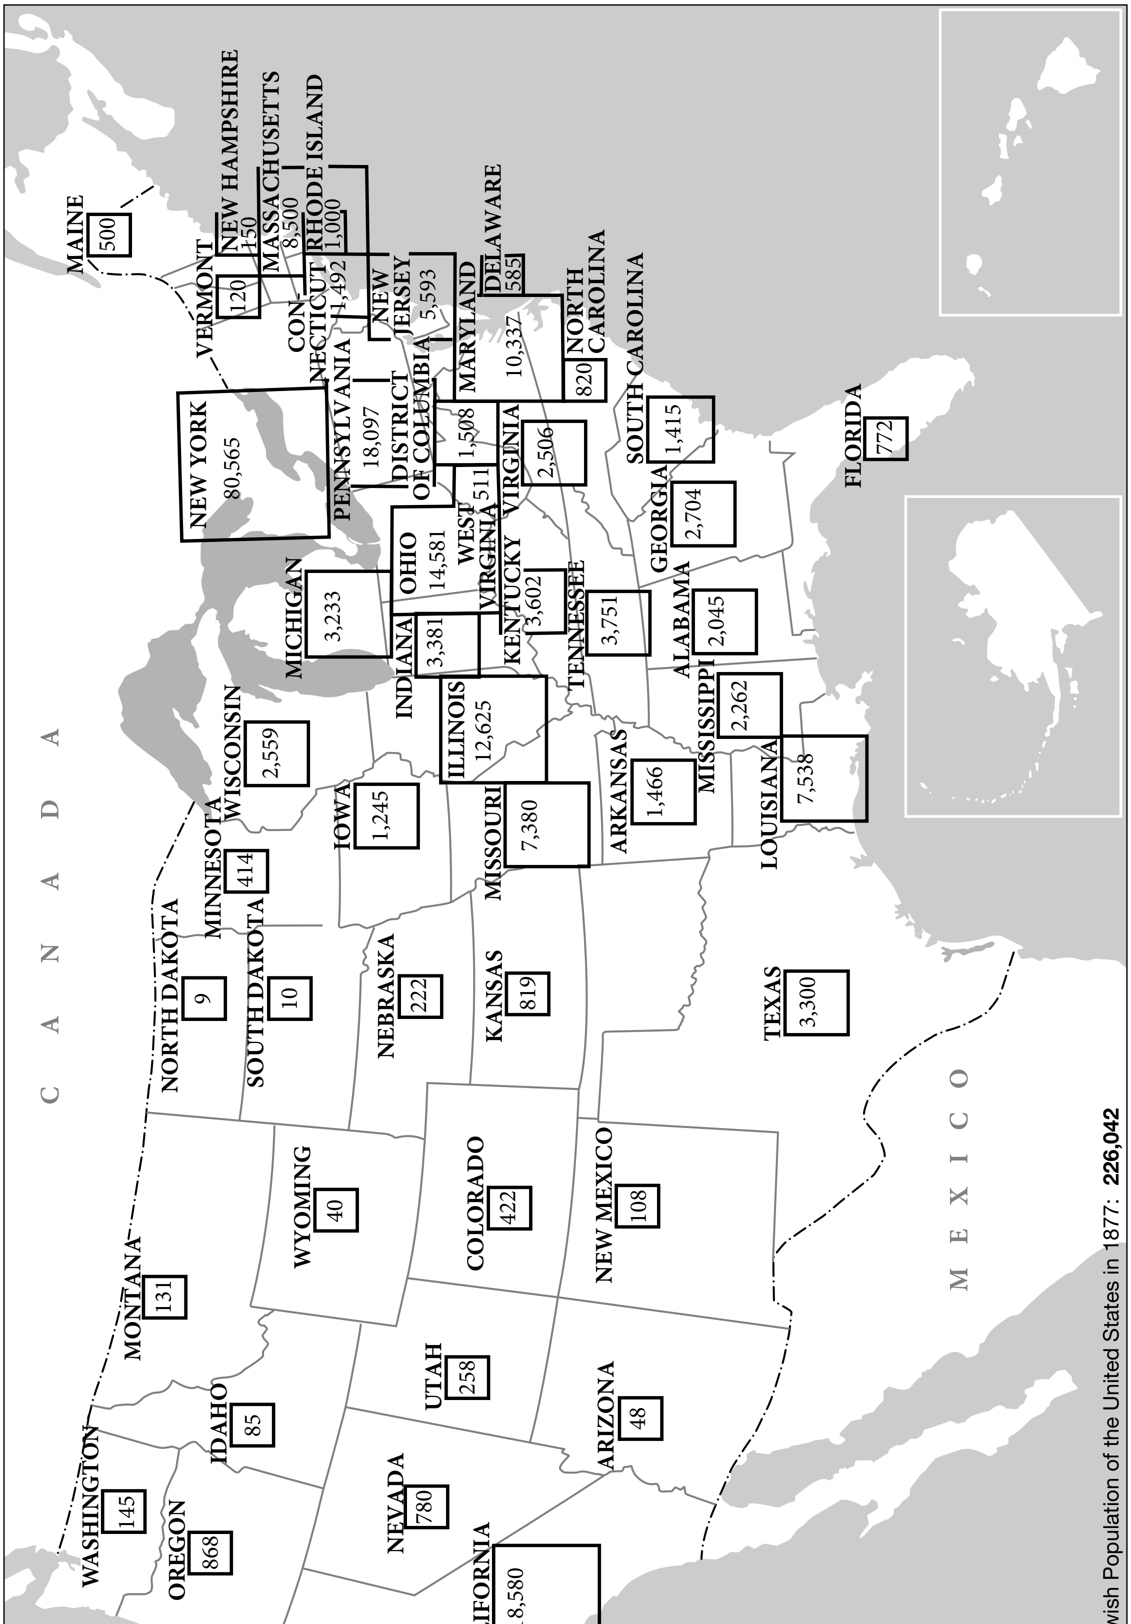
As the tragedy of the war deepened, casualties mounted, and hardships intensified, the beleaguered Confederacy be-

came subject to serious antisemitic agitation, most of which focused on Judah P. Benjamin. The agitation was mainly felt in the smaller towns, however, no instance appeared of antisemitic physical assaults. By contrast, in the North, General Ulysses S. *Grant's General Order No. 11 was a serious albeit short-lived instance of official antisemitism. Predicated on the claim that "the Jews as a class" were engaged in illegal trade with the Confederate army, specifically that they were profiting from illicit traffic in cotton, Grant unilaterally expelled all Jews from the Department of Tennessee, the region along the lower Mississippi occupied by the Union army.

> Head Quarters 13th Army Corps
> Department of the Tennessee.
> Oxford, Miss. Dec. 17th 1862
> General Orders No. 11 (12)
>
> I. The Jews, as a class, violating every regulation of trade established by the Treasury Department, and also Department orders, are hereby expelled from the Department.
>
> II. Within twenty-four hours from the receipt of this order by Post Commanders, they will see that all of this class of people are furnished passes and are required to leave, and any one returning after such notification, will be arrested and held in confinement until an opportunity occurs of sending them out as prisoners unless furnished with permits from these Head Quarters.
>
> III. No permits will be given these people to visit Head Quarters for the purpose of making personal application for trade permits.
>
> By order of Maj. Genl. U.S. Grant
> Jno. A. Rawlins
> Ass't Adj't Genl.

The Jews of Paducah, Kentucky, led by Caesar Kaskel, immediately petitioned President Abraham *Lincoln for removal of "this inhuman order, the carrying out of which," they argued, "would be the grossest violation of the Constitution and our rights as good citizens under it, and would place us, besides a large number of other Jewish families of this town, as outlaws before the world." President Abraham Lincoln promptly nullified and rescinded the order.

> War Department
> Washington, January 4, 1863
> Major General Grant,
> Holly Springs, Miss.
>
> A paper purporting to be General Orders, No. 11, issued by you December 17, has been presented here. By its terms it expels all Jews from your department.
>
> If such an order has been issued, it will be immediately revoked.
>
> H.W. Halleck
> General-in-Chief



Like the wider Christian society of the North, Jews also shared in the prosperity that was a byproduct of the Civil War. The demands of military supply provided unusual opportunities to entrepreneurial businessmen and provisioners, who developed and expanded the ready-made clothing industry from large-scale orders for army uniforms. For example, the Jewish communities of Buffalo and Rochester experienced a wartime boost as result of their significant participation in the local garment making and tailoring industries. Similarly, American banking in general was vastly stimulated by the needs of government finance. The success of the *Seligman brothers in marketing Union bonds on the European market was a critically important contribution to the war effort. Numerous Jewish bankers of the 1870s and 1880s started with capital they amassed during the Civil War years as clothing manufacturers and merchants.

POST-CIVIL WAR STABILITY. The years between the end of the Civil War in 1865 and the onset of mass immigration from Eastern Europe during the 1880s marked the maturity of German Jewry in the United States. Jewish community leaders and heads of households in this period were predominantly merchants, manufacturers of clothing and other consumer goods, and bankers in large cities and also in the small towns of the West and South. "Germandom" reached its peak in this time and Reform Judaism became the dominant institutional religious form in American Jewish society.

Meanwhile, Jews also played a visible role in the economic and political development of the South following the emancipation of the slaves and the breakup of the plantation system. Jewish peddlers and storekeepers played an important part in the economic development of the region. One contemporary attributed part of their success to the habit they had of addressing black customers as "Mister" rather than by given name. This cultural openness signaled the Jews' lack of attachment to the region's racial system. In this period, several Jews became prominent politicians, notably Raphael J. *Moses in South Carolina.

Jewish immigration to the United States resumed after its near cessation during the Civil War period. The Jewish population rose from about 150,000 in 1860 to perhaps 280,000 in 1880, much of it due to a substantial excess of births over deaths within a young immigrant population, but even more to continued immigration. For the first time there were serious discussions in the Jewish community over the possibility of organizing Jewish immigration from Europe. In 1870 about 500 East Prussians and Lithuanians were brought from their famine-stricken region. Oppressed Romanian Jews also figured as potential immigrants in 1872. Despite these discussions, Jewish migration to the United States remained a matter of individual initiative. Of profound significance was the shift in its geographic sources from Germanic to Slavic areas of Europe. To be sure, some small immigration arrived from Alsace following the German annexation of the province in 1871, and scattered immigration continued from many other lands.

The German Jewish merchant class climbed rapidly in the post-Civil War age of industrial and financial expansion and the private banker also reached his zenith during the last decades of the century. Joseph Seligman and his brothers in New York and San Francisco were among the foremost bankers of their day. He declined President Ulysses S. Grant's offer

Map 2. Jewish population of the U.S., 1877, within state borders of today.

to appoint him secretary of the treasury in 1869. Entrepreneurs like Max A. Meyer of New York City, a leading domestic and foreign dry goods dealer, Philip Heidelbach of Cincinnati, a significant clothing manufacturer, the banker and city alderman Henry *Greenebaum of Chicago, and I.W. *Hellman in Los Angeles, then still a village, were important personages. In particular, Jacob H. *Schiff swiftly rose in this period to become one his generation's and the country's most influential investment bankers.

The decades after the Civil War witnessed the greatest period of synagogue construction up to that time. Dozens of congregations founded ten and twenty years earlier had achieved size, stability, and prosperity, and the numerous edifices they erected during this period, many with elaborate decoration in Romanesque Moorish style, attest to the confidence and optimism of their builders. (Three outstanding surviving specimens are the Plum Street Temple, at Plum and Sixth Streets, Cincinnati, built in 1869, the Central Synagogue, New York City, built in 1870, and the former home of Congregation Beth Emeth, at Swan and Jay Streets, Albany, built in 1891.) Reform Judaism reached the peak of its influence during the 1870s and 1880s, when it came close to being synonymous with American Judaism, the growth of which its organizer and leader Isaac Mayer Wise anticipated in the 1850s. The ritual in Reform congregations made the rabbi its moving force, and his sermon the focus. The use of English (or in some congregations, German) greatly outweighed that of Hebrew. A shortened public worship was held on Sabbaths and the first day only of festivals. Theological changes were even more profound, probably the most basic of them being the transformation of the conception of Jewish exile and ultimate messianic redemption into a Jewish mission to spread the enlightenment of ethical monotheism to the world, and to hasten the millennium of human perfection and true faith. The Reform theological position was epitomized in the *Pittsburgh Platform of 1885, drawn up by Rabbi Kaufmann *Kohler, which remained the standard Reform creed for 50 years. The organizational strength of Reform Judaism was solidified by the founding of the *Union of American Hebrew Congregations in 1873, the *Hebrew Union College in 1875, and the *Central Conference of American Rabbis in 1889.

While Reform attained structural maturity and theological stability, traditionalists, both Orthodox and proto-Conservative, were confined to a few synagogues and were linked by personal and family ties. Their strength grew out of the mass immigration of East European Jews that reached the United States from the 1880s to the 1920s in unprecedented numbers.

Jewish participation in mainstream American culture grew considerably in the late 19th century as ever increasing numbers of Jews interacted socially, economically, and politically with their gentile peers. For many, the fraternal order B'nai B'rith, established in 1843 by German Jews, provided a pluralistic non-religious framework for meaningful association. By 1876 B'nai B'rith's reach grew to include lodges all across the country. All in all, however, Jewish participation in the arts remained marginal, with the exception of music, which was extensively cultivated by German Jews. Nor did any novelist, poet, essayist, artist, or scholar hold major rank. The emergence of Emma *Lazarus in this period was a notable exception and her sonnet "Ode to Colossus" would later adorn the base of the Statue of Liberty. Nevertheless, Lazarus' early work showed little concern with Jewish themes and issues. Her attitude would change dramatically in the 1880s following the outbreak of anti-Jewish violence in czarist Russia that impelled the mass waves of East European Jewish immigration to the United States. Of scientists there were few, but physicians became comparatively numerous and some were distinguished. Among them were the father of American pediatrics Abraham *Jacobi and Ernst Krakowitzer, who first used the laryngoscope, and others.

The phenomenon of Jewish exclusion from upper-level social circles was especially notable in the 1870s. It erupted notoriously in 1877, with the refusal to admit prominent Jewish financier Joseph Seligman to the fashionable Grand Union Hotel in Saratoga Springs, New York. In the event, the hotel's manager Henry Hilton gave explicit "instructions that no Israelites shall be permitted in the future to stop at this hotel." This act aroused widespread anger and indignation, not only among Jews but in the general press and among such liberal Protestants as Henry Ward Beecher. The social clubs for the wealthy that were being established in the 1870s and later mostly kept Jews out and the German gymnastic and social *Turnvereine* were also inhospitable. In 1879 the *New York Herald* published an interview with Austin Corbin, president of the Long Island Railroad and the Manhattan Beach Company, in which Corbin candidly explained his rationale for barring Jews from Coney Island, which he planned to develop as a fashionable resort. The interview with Corbin captured the genteel antisemitism of America's elite in the *fin de siècle*.

> The war against the Jews, which was carried on at Saratoga two years ago, is apparently to be revived at Coney Island. This time it is in a quarter where Jewish residents of New York City are particularly aimed at. Several days ago a rumor was circulated to the effect that Austin Corbin, the President of the Manhattan Beach Company, had taken an open stand against admitting Jews to the beach or hotel. The report was on Sunday strengthened by a statement by Mr. P.S. Gilmore, the leader of the Manhattan Beach band, who said that Mr. Corbin told him he was going to oppose the Jews, and that he would rather "sink" the two millions invested in the railway and hotel than have a single Israelite take advantage of its attractions. A representative of the *Herald* called upon Mr. Corbin at his banking establishment in the new Trinity building, No. 115 Broadway, yesterday, to ascertain what foundation there was for these most extraordinary rumors. Mr. Corbin at first exhibited some timidity about talking on the subject, but finally invited the reporter into his private office, where he was joined by his brother and partner, Daniel C. Corbin.
>
> "You see," he began, "I don't want to speak too strongly, as it might be mistaken for something entirely different from its intended sense. Personally I am opposed to Jews. They are

a pretentious class, who expect three times as much for their money as other people. They give us more trouble on our road and in our hotel than we can stand. Another thing is, that they are driving away the class of people who are beginning to make Coney Island the most fashionable and magnificent watering place in the world."

"Of course, this must affect business?"

"Why, they are hurting us in every way, and we do not want them. We cannot bring the highest social element to Manhattan Beach if the Jews persist in coming. They won't associate with Jews, and that's all there is about it."

"Do you intend to make an open stand against them?"

"Yes, I do. They are contemptible as a class, and I never knew but one 'white' Jew in my life. The rest I found were not safe people to deal with in business. Now, I feel pretty warm over this matter, and I will write a statement which you can publish."

Mr. Corbin sat down at his desk and wrote a few sentences on a slip of paper, as follows:

"We do not like the Jews as a class. There are some well behaved people among them, but as a rule they make themselves offensive to the kind of people who principally patronize our road and hotel, and I am satisfied we should be better off without than with their custom."

"There," said he, handing the statement to the reporter, "that is my opinion and I am prepared to follow up the matter. It is a question that has to be handled without gloves. It stands this way: We must have a good place for society to patronize. I say we cannot do so and have Jews. They are a detestable and vulgar people. What do you say, eh, Dan?"

This last sentence was addressed to his brother, Mr. Daniel Corbin, who had taken an active part in the conversation. Dan said, with great emphasis, "Vulgar? I can only find one term for them, and that is nasty. It describes the Jews perfectly."

Mr. Austin Corbin then spoke warmly of the loss sustained by the Manhattan Beach Company in consequence of Israelitish patronage.

"Do you mean, Mr. Corbin, that the presence of Jews attracts the element of ruffianism?" asked the reporter.

"Not always. But the thing is this. The Jews drive off the people whose places are filled by a less particular class. The latter are not rich enough to have any preference in the matter. Even they, in my opinion, bear with them only because they can't help it. It is not the Jews' religion I object to; it is the offensiveness which they possess as a sect or nationality. I would not oppose any man because of his creed."

"Will the other members of the Manhattan Beach Company support you in your position?"

"I expect them to. They know just as much about it as I do, and no reasonable man can deny that the Jews will creep in a place just as it is about to become a grand success and spoil everything. They are not wanted at the beach and that settles it."

"Have you spoken to any other members about it?"

"No, but I guess they know my opinions."

Mr. Corbin rose from the chair he had been sitting in and paced the floor. "I'll tell you," he said, running his fingers through his hair, "if I had my way and there was no one to consult with in the matter but myself, I would have stopped the Jews from coming long ago. You just publish my statement. It covers the whole ground, and I mean every word of it."

Mr. Corbin concluded the conversation by telling the reporter to be sure not to give the impression that he was warning against the Jewish religion, but he stigmatized the Jews as having no place in first-class society.

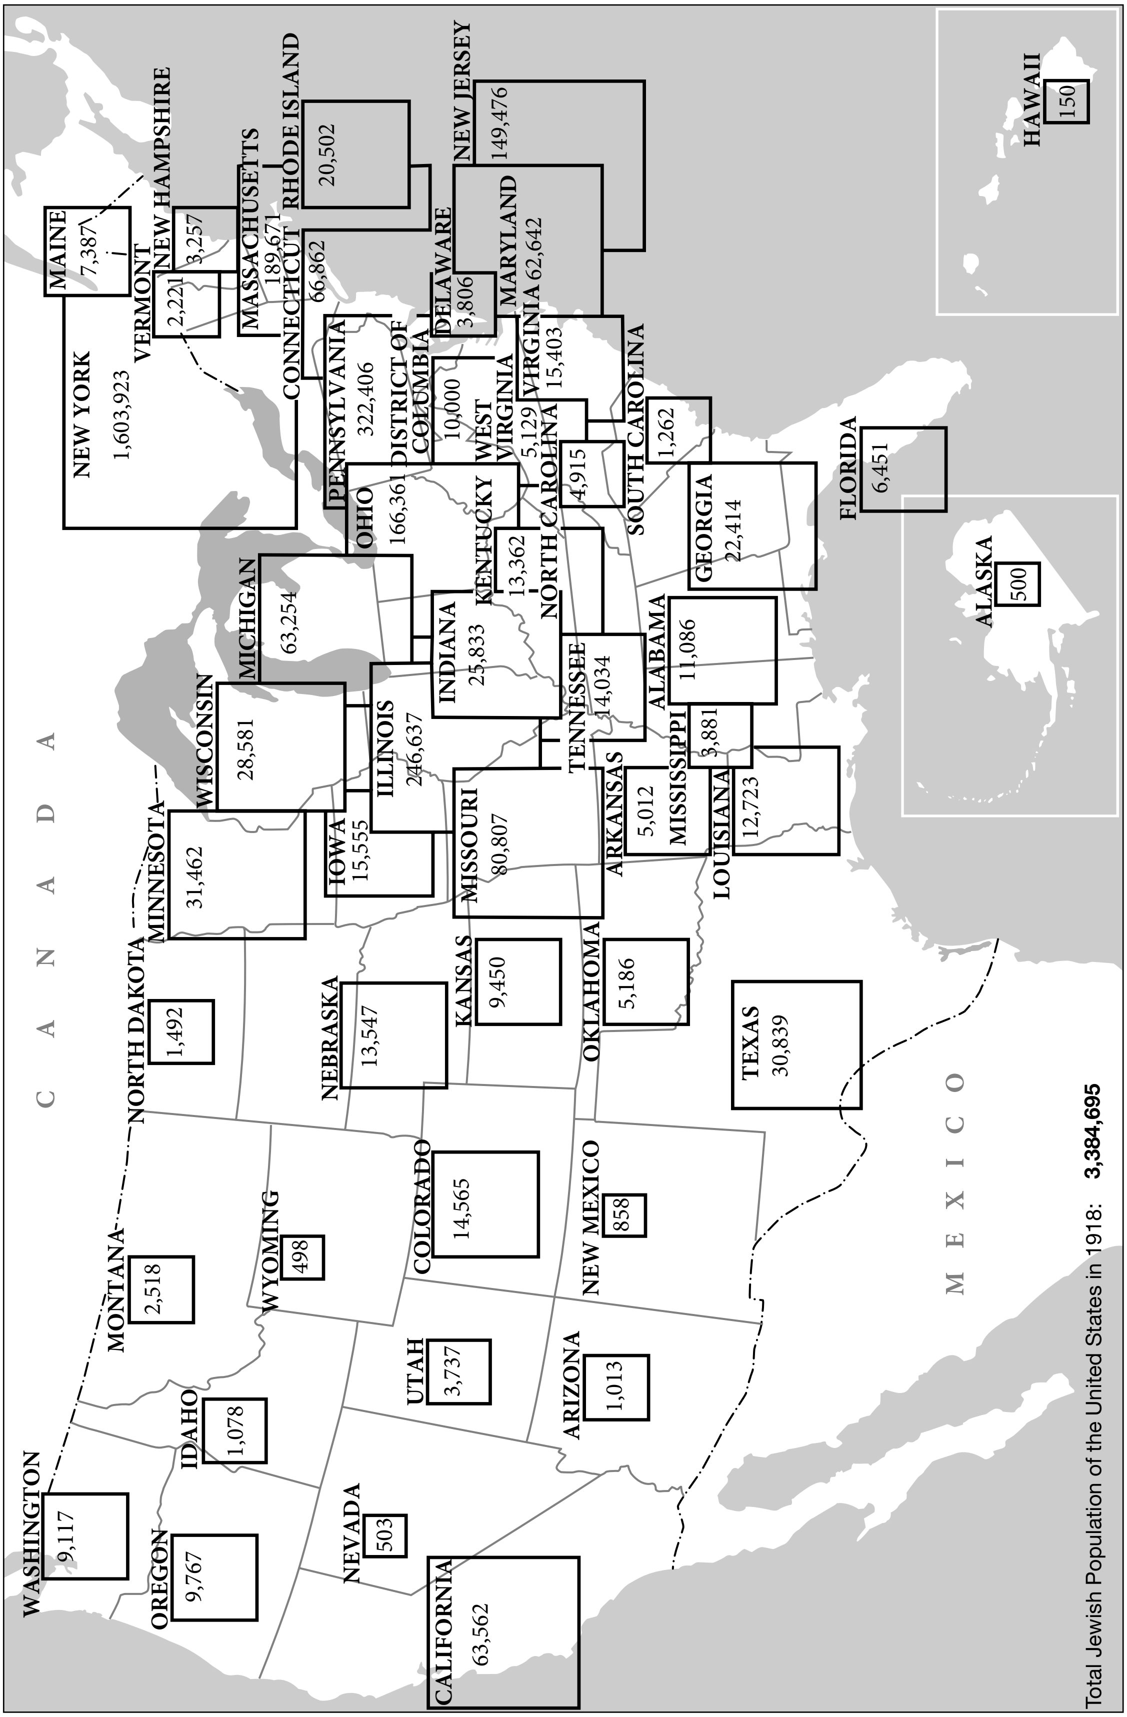
In contrast to the major urban centers of the eastern seaboard, it generally appears that during the early development of many midwestern cities Jews had the freest opportunities for social mingling and political advancement. Indeed, it was quite usual for a Jew, as one of the few literate, stable settlers, to become mayor or a leading official of a so-called frontier town. However, once these pioneer years ended and more fixed social groupings came into being, a tendency to exclude Jews from elite social and business circles became evident.

WOMEN. Over the course of the 19th century, the profile of American Jewish women changed dramatically. In the antebellum period, German Jewish immigrant women participated actively in the family economy as their male counterparts made the transition from itinerant peddling to stationary businesses such as small stores and boardinghouses. Within a short period, German Jewish immigrant families achieved a measure of economic stability. The liberal climate and dynamic social setting of America provided the scope and inducement for American Jewish women to opt out of a traditional Jewish lifestyle marked by domesticity and religious piety. Moreover, the Reform movement's concomitant emphasis on Americanizing Judaism and eliminating aspects of Jewish practice that set Jews apart from the dominant middle-class Protestant culture of the period, including the labor intensive activity of maintaining a Jewish household in accordance with traditional dietary laws, paved the way for new models of female behavior.

As early as the 1820s and 1830s, upper-middle-class German Jewish women in urban centers transformed the activity of *ḥevrot nashim*, women's groups that sought to fulfill the commandment of performing *mitzvot* (charitable acts) such as preparing the dead for ritual burial, visiting and caring for the sick, and assisting the poor, into an emerging network of self-governing female benevolent societies devoted to a wide array of communal and philanthropic work. In 1819 Rebecca Gratz established the prototype of the Ladies' Hebrew Benevolent Society in Philadelphia. In ensuing decades, this innovative framework became a countrywide phenomenon characterized by voluntary membership, democratic procedures, and fundraising. Following an initial phase during which such female societies were attached to synagogues and run by male officers, they evolved into truly independent non-synagogal frameworks managed and directed by women. Meanwhile, the steady acculturation and secularization of German Jewry, the swift upward mobility of the German Jewish family and its embourgeoisment, and the development of an intricate web of new sociocultural institutions in wider middle-class American society – including in 1843 the creation of the B'nai B'rith fraternal order – provided a context in which Jewish women's groups became normative.

In the decades following the Civil War, a variety of Jewish female social agencies and charitable institutions emerged. Among the most notable examples from this period are the

Henry Street Settlement house, created in 1893 by social activist Lillian *Wald, and the Clara De Hirsch Home for Working Girls, a trade school established in 1897 that quickly became a model for similar enterprises across the country. The year 1893 also witnessed the founding of the *National Council of Jewish Women, organized during a Jewish Women's Congress held as part of the World's Parliament of Religions at the Chicago World's Fair. Thereafter, with the support of Lillian Wald and Jane Addams, the National Council of Jewish Women established more than a dozen settlement houses in immigrant neighborhoods across the country. In the decades that spanned the 19th and 20th centuries, American Jewish women of German ancestry opened the door to new social patterns and political roles that would ultimately transform the place of women in Judaism and American Jewish life.



East European Jewish Period, 1880–1930s

MASS WAVES OF IMMIGRATION. The "East European Era" in American Jewish history started in 1881–82 with widespread pogroms in tsarist Russia and reached a climax with the implementation of the Johnson-Reed Act in 1924 when the United States Congress effectively closed the doors to the "Golden Land." During these years, the number of Jews in the United States grew from about 280,000 in a U.S. population of 50,155,000 in 1880, to approximately 4,500,000 of 115,000,000 in 1925. Some 2,378,000 Jews arrived in the United States between 1880 and the end of free immigration in 1925. The peak was reached during the five consecutive years 1904 to 1908, when 642,000 reached American shores. This movement, which formed part of the mass waves of migration from Europe to the United States in general, was indeed epoch-making. Vast numbers of Jews who moved from Eastern Europe into the world's fastest growing economy were automatically emancipated from all legal discrimination and rapidly entered Western culture.

Events stimulating European emigration, such as the pogroms of 1881–83, the expulsion from Moscow in 1890, and Russia's years of war, revolution, and pogroms between 1903 and 1907 were notorious episodes. Other causes of the mass migration lay deeper, however, and were more influential. Probably the most important cause was the growth of East European (Russian Empire, Austrian Poland, Hungary, Romania) Jewry from perhaps 1,500,000 in 1800 to some 6,800,000 persons in 1900, generating nearly insoluble questions of sheer physical survival. The economic development of Eastern Europe failed to provide sufficient livelihood for its Jews, and Russian governmental policies excluded Jews from the new industrial cities, kept them off the land, and burdened them with drastically restrictive decrees. The feeling among Russian Jews grew stronger that their lot would never improve by normal political and economic processes but required emigration abroad or revolution at home. The Jews of Romania, mostly 19th-century immigrants from Russia who attained a better economic position by their move, suffered greatly from arbitrary and occasionally violent treatment as aliens without rights. In Galicia, under Habsburg rule, the Jews enjoyed emancipation from 1867, but the economic backwardness of that area fostered the highest emigration rate in Eastern Europe. By then emigrants could travel by fully developed railroad and steamship lines, so that the journey from a town in Eastern Europe to the port of New York City might be consummated in two weeks. Entry into the United States was virtually free, with barely one percent of arrivals turned away, mainly because of contagious diseases.

The pace of immigration increased with each decade. The annual average between 1881 and 1892 stood at approximately 19,000; between 1892 and 1903, at 37,000; and for the decade between 1903 and the outbreak of war in 1914, at 76,000 for each year. The mass waves of immigration triggered alarm bells in nativist circles, particularly among the established segments of white Protestant America who feared the mongrelization of the Christian West by so-called "new immigrants." This theme gained widespread credence as a result of the work of the Immigration Commission of the 61st U.S. Congress, chaired by the xenophobe Senator William P. Dillingham of Vermont. In 1910, the Dillingham Commission resolved "within a half hour of the time when, under the law," its report must have been filed – and with nary a reference to the findings of a 42-volume report concerning recent immigrant groups in the United States – to recommend that the American government henceforth place a premium on immigrants of "Aryan stock" from northern and western Europe and severely restrict the flow of immigration from southern and eastern European lands. Even before its formal recommendation to the U.S. Congress, news of the Dillingham Commission's nativist predisposition sent shock waves through the organized American Jewish community. The officers of the American Jewish Committee and the lay leadership of the Union of American Hebrew Congregation assumed an active role in trying to defend the interests of the American Jewish community as a whole, while protecting the burgeoning Yiddish-speaking immigrant communities now heavily concentrated along the eastern seaboard and in the Middle West. Testifying before the commission in 1909, Simon *Wolf, a prominent Washington, D.C., lawyer and Jewish leader of German ancestry active in both groups, attempted to disabuse Senators William P. Dillingham, Henry Cabot Lodge, and other commission members of their hostile attitude toward the Jews. Much of the commission's antipathetic attitude to the Jews derived from antisemitic assumptions and pseudo-scientific assumptions about race and genetics. "The point we make is this," Wolf asserted, "a Jew coming from Russia is a Russian; from Roumania, a Roumanian; from France, a Frenchman; from England, an Englishman; and from Germany, a German; that 'Hebrew' or 'Jewish' is simply a religion."

> Senator [Henry Cabot] Lodge: How would you classify those coming from the seventeen provinces of Austria – men of utterly different races, historically speaking? We classify the Croatians, the Bohemians, according to the race they represent in Austria …

Map 3. Jewish population of the U.S., 1918, within state borders of today.

Mr. Wolf: I am aware of that.

Senator Lodge: The Irish are a perfect illustration of that. They are not classified according to their religion. They are British subjects –

Mr. Wolf: Certainly.

Senator Lodge: But we classify them as Irish because they are Irish, and undoubtedly there is a great deal of mixed blood in Ireland – English, Scotch, and Welsh blood.

Mr. Wolf: That is altogether geographical, and so with respect to the seventeen Austrian provinces.

Senator Lodge: The Irish are not classified geographically. An Irishman is classified as an Irish immigrant wherever he may come from.

Mr. Wolf: You seem to forget – and you are certainly sufficiently versed in the history of all people and especially the people I represent to know – that when a Jew is spoken of, a Jew in faith is meant.

Senator Lodge: Not at all… There is where we start off with a vast difference….

As manifest by the Dillingham Commission's monumental report and the Lodge-Simon exchange, the American political establishment had ample access to objective data and information about Jews and Jewish immigrants. But Dillingham, Lodge, and other key political figures were hardly predisposed to view such evidence rationally. Instead, they set in motion a chain of legislative initiatives that ultimately succeeded in closing the doors to the United States between 1921 and 1924.

Notwithstanding the wave of xenophobia and isolationism that swept the country in these years, the vast majority of East European Jewish immigrants proved successful in transplanting themselves to American soil. Indeed, the 42-volume report of the Dillingham Commission's report included considerable documentation in this regard. Meanwhile, the proportion of immigrants that returned to Europe from among the immigration of the 1880s has been estimated at 25 percent. From that point it steadily declined; in 1908 and after, when statistics began to be taken, the rate of return was about eight percent; after 1919 it sank below one percent. Clearly, the Jewish immigrant came to stay, to a greater extent than all his immigrant contemporaries except the Irish. A negligible number followed the advice of the Palestinian sage *Israel Meir ha-Kohen, known as the "Ḥafez Ḥayyim," in his emigrant guide *Niddeḥei Yisrael* ("The Dispersed of Israel") to return as early as possible and live in prosperous piety. Indeed, the Jewish immigrants who came to the United States became a permanent addition to the population. They raised the number of Jews in the United States to approximately 1,000,000 in 1900, 3,250,000 in 1915, and 4,500,000 in 1925, establishing the Jews as a major ethnic and religious group, and made American Jewry the largest Jewish community in the world after 1918.

Almost 80 percent of the East European newcomers were 15 to 45 years old, the age range typical of immigrants to the United States generally. Men outnumbered women only slightly, indicating the permanence and family character of this emigration, even though families were often separated for considerable periods of time. Owing to the sizable quotient of female Jewish immigrants of child-bearing age, the Yiddish-speaking immigrant community was a very fecund group; very high birthrates are recorded for urban districts where they preponderated.

Meanwhile, the earlier German Jewish stock, joined by later middle-class German Jewish immigrants and a few from England and France, shifted from predominantly mercantile occupations to a more varied spectrum. Law and politics, banking and finance, department store ownership, publishing, medicine, and literary, academic, and scientific pursuits all became widespread. A comparatively noticeable group functioned as collectors and patrons of the arts, and as philanthropists. During the 1870s German Jewish settlement had spread wide, with hundreds of small towns in California, along the Mississippi River, and throughout the South and Middle West where there were small Jewish communities. A stream of East European Jewish immigrants followed in their wake, including would-be farmers who established Jewish agricultural communities along the eastern seaboard with the support of the Baron De Hirsch Fund and the Jewish Agricultural and Industrial Aid Society. Additionally, small groups of Am Olam (Eternal People) pioneers created quasi-socialist Jewish pioneering colonies that dotted the American landscape from New Jersey to Oregon. Within the space of a generation, however, most Jews quit these towns and colonies. The great expansion of America's industrial cities, the depression of the agricultural economy upon which many small towns and rural communities were reliant, and the antisemitic undertones and religious fundamentalism to be found in remote areas of the country helped to make Jews of the 20^{th} century a largely metropolitan group.

SOCIAL AND CULTURAL LIFE. The Jewish labor movement helped to foster a secular Yiddish-speaking environment that flourished from the 1910s into the 1930s and offered a modern, social democratic alternative to Jewish tradition. About 80,000 families, mainly members of Jewish unions and small businessmen, belonged to the Arbeter Ring (*Workmen's Circle) at its peak in the mid-1920s. Like the socialist Zionist Farband, it provided sick and death benefits as well as a diverse Yiddish cultural program. In this period, there was a lively and robust Yiddish daily press with a combined circulation of about 700,000 at its peak in 1916. Through a variety of weeklies, monthlies, literary journals, and periodicals, a rich diet of news as well as Yiddish literature was supplied by prominent writers, poets, and literary critics including Sholem *Asch, M. *Boraisha, David *Einhorn, R. Eisland, Mendel Elkin, Jacob *Glatstein, Moshe Leib *Halpern, Peretz *Hirschbein, Zishe *Landau, Mani Leib, A. Leiles, N. *Minkoff, Samuel *Niger, David *Pinski, Abraham *Reisin, J. *Rolnick, Morris *Rosenfeld, H. *Rosenblatt, I.J. *Schwartz, L. *Shapiro, Isaac Bashevis *Singer, Israel Joshua *Singer, J. Slonim, and *Yehoash.

Among the most significant Yiddish newspapers in this period were the traditionalist *Yidisher Tageblatt* ("Jewish Daily News"), the Labor Zionist weekly **Yidisher Kemfer* ("Jewish

Fighter"), which attracted significant public intellectuals including Nachman *Syrkin, Chaim *Zhitlowsky, and Ḥayyim *Greenberg, *Zukunft* ("Future"), which became the leading Yiddish monthly under the editorship Abraham Liessen, the conservative-leaning *Morgen Zhurnal* (**Morning Journal*), and the liberal pro-Zionist *Tog* (**Jewish Day*). In the final analysis, however, the *Forverts* (**Jewish Daily Forward*), edited by Abraham *Cahan, was unquestionably the most influential newspaper of the day. The most popular feature of the *Forverts* was "*Bintel Brief*" (Bundle of Letters), a forum edited by Cahan himself in which he dispensed advice to thousands of Yiddish-speaking immigrants who wrote seeking advice about their everyday concerns, struggles, hopes, fears, and needs. The column was wildly popular, and it also proved to be important to the *Forvert's* general commercial success. Viewed in historical perspective, *Bintel Brief* throws considerable light on the daily experiences and hardscrabble lives of East European Jewish immigrants in this period. For example, a debate over secularism and tradition in 1908 prompted the following exchange:

> Worthy Mr. Editor,
>
> Please help us decide who is right in the debate between friends, whether a Socialist and freethinker should observe *yohrzeit* (the traditional anniversary of mourning one's relatives)?
>
> Among the disputants there is a Socialist, a freethinker, who observes his mother's *yohrzeit* in the following manner: He pays a pious man to say the *kaddish* prayer for the dead, and burns a *yohrzeit* candle in his home. He himself doesn't say *kaddish*, because he doesn't believe in religion. But his desire to respect the memory of his mother is so strong that it does not prevent him from performing this religious ceremony.
>
> Among the debaters there are those who do not want to know of such an emotion as honoring the dead. But if one does desire to do so, one should say *kaddish* himself, even if he does not believe in it.
>
> Therefore, our first question is: Can we recognize the beautiful human emotion of honoring the dead, especially when it concerns one so near as a mother? The second question: If so, should the expression of honor be in keeping with the desires of the honored? Third: Would it be more conscientious and righteous if the freethinker said *kaddish* himself, or if he hired a pious man to do it for him?
>
> Being convinced that this matter interests a great number of people, we hope you, Mr. Editor, will answer us soon.
>
> With regards,
> The Debating Group

To which Cahan responded:

> Honoring a departed one who was cherished and loved is a gracious sentiment and a requisite for the living. And everyone wants to be remembered after his death. Socialists and freethinkers observe the anniversaries of their great leaders – just recently they commemorated the twenty-fifth anniversary of the death of Karl Marx.
>
> Saying *kaddish* is certainly a religious rite, and to pay someone to say *kaddish* is not the act of a freethinker. But we can understand the psychology of a freethinker who feels that hiring someone else is not as much against his own convictions as to say *kaddish* himself.

Women, too, wrote to Cahan about their travails in the New World. Many female writers discussed their struggles as workers, wives, and mothers. The following exchange from 1908 provides a glimpse of a dilemma that faced many Jewish immigrant women: abandonment by their husbands. Known in Jewish tradition as *agunot* (abandoned wives), such women often suffered deep personal and intense social and economic trauma. Indeed, the *Forverts* frequently published lists of husbands who deserted their wives in an effort to reunite broken families.

> Worthy Editor,
>
> Have pity on me and my two small children and print my letter in the *Forverts*.
>
> Max! The children and I now say farewell to you. You left us in such a terrible state. You have no compassion for us. For six years I loved you faithfully, took care of you like a loyal servant, never had a happy day with you. Yet I forgive you for everything.
>
> You ever asked yourself why you left us? Max, where is your conscience: you used to have sympathy for the forsaken women and used to say their terrible plight was due to the men who left them in dire need. And how did you act? I was a young, educated, decent girl when you took me. You lived with me for six years, during which time I bore you four children. And then you left me.
>
> Of the four children, only two remain, but you have made them living orphans. Who will bring them up? Who will support us? Have you no pity for your own flesh and blood? Consider what you are doing. My tears choke me and I cannot write anymore.
>
> Be advised that in several days I am leaving with my two living orphans for Russia. We say farewell to you and beg you to take pity on us and send us enough to live on…
>
> Your Deserted Wife and Children

As the foregoing illustrates, many Jewish immigrants to the United States experienced downward mobility and consequently thousands did return to Europe despite the dangers and uncertainty they might face, particularly in tsarist Russia. That the Old World continued to exert a strong pull for many immigrants, even after they had been living in America for several years, is evident in the following exchange from 1912.

> Dear Editor,
>
> Twenty-two years ago I came to America with my wife and four little children. We lived in Chicago nineteen years, and we have been in New York for three. I am not skilled in a trade, but I am a businessman, and all these years I've struggled because I never made a living. I know English, I am not lazy, I've tried everything and never succeeded.
>
> When the children were young I had to appeal for aid to my wealthy family in Warsaw, and they helped me many times. Later, as the children grew up and began to earn money, it was easier, but I, with all my ability as a businessman, couldn't get myself settled in this country. In the city of Warsaw, where I lived before immigrating to America, there were times when

things weren't too bad. In America, however, it always went badly and I haven't been able to adjust to the country.

Now, when my children are all married and in good positions, I got an idea that it might be good for me and my wife to go back to Warsaw. It is very hard to part with the children, but to live in poverty is also bad. It seems strange to me that I must go away from the free America in order to better my condition. But the chances for me are still better there. I ask your advice and I thank you in advance.

Respectfully,
The Unlucky One

Cahan's responded to the unfortunate man with a mixture of sympathy and hard-headed realism as follows:

> The advice to this letter writer is not to go back to Warsaw, because after so many years in this country he would feel like a stranger there. He must understand he is no longer the same man he was twenty-two years ago and the city of Warsaw is also not the same as it was in the past.

Over the course of the next half a century, the *Forverts* emerged as the central publication of the Yiddish-speaking milieu. Following World War I, it gradually warmed to the cause of Zionism and became disenchanted with Soviet-style Communism. In time, although it never completely abandoned its socialist ethos and concern for the Jewish workers movement, the paper was gradually transformed into a vehicle of Jewish liberal opinion. In 1922 the prominent American publicist Oswald Garrison Villard, owner of *The Nation*, offered the following description of a typical issue of the *Forverts* at the height of its influence and prosperity:

> Its eight pages of eight columns each (28 or 32 pages on Sundays) offers a variegated bill of fare. Pictures, of course, occasional cartoons; little of crime (about two columns a day); often sensational matter… extraordinarily valuable letters from abroad, together with a great deal of Jewish and labor news, all with Hearst-like headlines. In one week in July 1922 it carried 24 columns of letters and cablegrams from its own correspondents (in eastern Europe)… In that same week it carried 154 columns of serious reading matter and 137 columns which can be termed "light matter," though this does not adequately describe it, for while the *Forward* writes down to its readers it is also printing today by far the best fiction and *belles lettres* of any newspaper in America.

Beyond the world of print, vast audiences also responded enthusiastically to the musical artistry and liturgical compositions of cantorial singers, some of whom recorded the earliest gramaphone records. One of the most celebrated figures in this regard was Yossele *Rosenblatt, who immigrated to the United States from Germany to conduct services at the First Hungarian Congregation in Harlem, New York. He quickly attracted a following of Jewish and non-Jewish music lovers who flocked to his services and concerts. There was also a flourishing of scholarly public Yiddish lectures, Yiddish afternoon schools sponsored by a variety of organizations, and a burgeoning Yiddish theater scene, of which there were numerous troupes. The case of Abraham *Goldfaden, a pioneer of the Yiddish theater, exemplifies the complexity of the East European Jewish scene in this period. Goldfaden himself fled to the United States in 1903 after his plays were banned by the tsarist regime which feared their incendiary and revolutionary nature. He went on to write some 60 plays, including many popularly acclaimed comedies and melodramas. In the process, as historian Martin Gilbert writes, "Goldfaden became a strong critic of Jewish assimilation and participation in the life of other nationalities."

In his play *Ben Ami* (*Son of My People*) he called for Jewish national redemption in Palestine as an answer to the Russian pogroms. The play's aristocratic hero, on discovering his Jewish origins and witnessing a pogrom in Odessa, leaves the bloodstained soil of Russia for a new life, not in America, but in Palestine. Once there, the hero sets as his task the training of Jewish youth to till the soil and to work for the national regeneration of the Jewish people. As assimilation gained ground in the United States, and Zionism saw emigration to Palestine as the countermeasure to it, Goldfaden's play – it was the last that he wrote – held a particular resonance.

Somewhat later there were Yiddish films and part-time as well as full-time radio stations. It was here that many Jewish performers and actors got their start. For example, the Hollywood film star Theda *Bara (born Theodosia Goodman in Cincinnati, Ohio) appeared in more than 40 films between 1914 and 1919 including *A Fool was There* (1915), in which she was cast as a vamp and acquired her signature role as an object of intense sexual desire. Another significant Jewish celebrity in this period was Fanny *Brice, who immigrated to the United States from Hungary with her family at the turn of the century, and made her debut in 1916 performing in the Ziegfield Follies. She launched her career dressed as an American Indian speaking English with a heavy Yiddish accent, a routine she would later develop and make famous in her role as Mrs. Cohen, a gossip who ordered her husband around. Years later, reflecting on her career in show business, Brice explained her comic strategy in the following terms: "In anything Jewish I ever did, I wasn't standing apart, making fun of the race. What happened to me on stage is what could happen to them. They identified with me, and then it was all right to get a laugh, because they were laughing at themselves as well as at me."

Most Yiddish-speaking Jews were secular and abandoned religious practice, but they retained strong ethnic attachments and folk loyalties. Except for the small socialist Zionist groups, they were generally indifferent or opposed to Zionism, although such attitudes waned after the 1920s as Palestine Jewry grew and concretized many socialist ideals. They were divided bitterly and irreconcilably in their attitude to Soviet Russia.

Very few Jewish immigrants, especially before 1900, were highly educated; they were mainly from the poorer working classes. Virtually all knew the rudiments of Jewish law and ritual, Hebrew Bible, and frequently some talmudic and rabbinic literature. Very few women, however, possessed any formal education. Only a minority maintained a brand of East European orthodox Judaism unswervingly against the over-

powering force of the urban, industrial, and secular life into which they were cast. Another minority, mostly of younger intelligentsia, embraced socialism in one of its numerous contemporary forms, and in smaller numbers Zionism, Hebraism, or literary modernism. The mass of immigrants, it appears, retained a measure of outward signs of religious observance while, for example, neglecting the Sabbath rules and other daily stringencies. Only a tiny minority had time or inclination for pious study before or after work. Characteristically, they flocked to the synagogues on Rosh Hashanah (the Jewish New Year) and Yom Kippur (the Day of Atonement), and were diligent in matters of filial piety like the recitation of *yizkor* (the traditional memorial service) and the mourner's *kaddish* (memorial prayer). The *bar mizvah* of the sons of East European immigrants, symbolizing generational and ethnic continuity, was all but universally desired.

The most widespread immigrant organization was the *ḥevrah* (society), usually founded on a **landsmanshaft* (hometown) basis. In New York City alone at least 1,200 *landsmanshaften* (pl.) existed in 1915. In addition to providing a fraternal social atmosphere for their members who knew each other still from Europe, the *landsmanshaften* invariably provided funeral arrangements and burial rights. Sick benefits and occasionally unemployment help were also granted. The societies probably reached their peak during the World War I era, when assistance to the war-smitten Jews of the native town became another major activity. A large proportion of such *landsmanshaften* affiliated with the Arbeter Ring, the Federation of Galician Jews, and other central organizations. Many maintained synagogues, all of which were Orthodox and Yiddish-speaking and preserved East European habits of worship. The little houses of worship known as *shtieblakh* (pl.) – New York City alone numbered over 500 in 1916 – were generally transitory venues and few of them survived the immigrant founders and the shift to areas of second settlement.

The entire immigrant milieu thus described was largely a generational experience. Sons and daughters generally did not follow their parents into the Jewish trade unions, so that the proportion of Jews in their ranks fell below half by the 1920s. The Yiddish press, theater, and literature steadily declined, for the next generation's language was English. They could care little for the ancestral town and its *landsmanshaft* and preferred other voluntaristic forms of Jewish life in the New World including Americanized synagogues, fraternal orders, membership societies, and institutions that offered benefits for death and illness. Indeed, the entire immigrant environment – problem-ridden, colorful, and dynamic – existed by grace of the stream of arrivals that continued until the restrictive legislation of the 1920s took full effect. Lacking replenishment from overseas, the Yiddish-speaking immigrant milieu contracted and shriveled; by the 1940s it was a relic.

NEIGHBORHOODS, OCCUPATIONS, AND THE JEWISH LABOR MOVEMENT. The East European Jewish immigrants clustered in distinct urban neighborhoods, which were generally older or slum districts close to downtown. The streets where they lived became all but exclusively Jewish in population, and the stores, the Yiddish heard on the streets, and the festive atmosphere on the Jewish Sabbath and holidays reflected the character of the inhabitants. Every American metropolitan center had such an area between the 1890s and 1920. The largest of them, the Lower East Side of New York City, sheltered an estimated 350,000 Jews in 1915 in less than two square miles. These neighborhoods were very seriously congested with dangerous problems of health and sanitation. Yet their prevailing atmosphere was one of hope and confidence, with a rich and varied cultural life. As material circumstances improved families quit the immigrant district for more attractive neighborhoods – resettlement locales referred to by historians as "areas of second settlement."

The immigrants' prime motive in coming to the United States was to improve their material and economic conditions. European fables about the "*goldene medine*" (golden land) notwithstanding, their lot was a hard one. They made their living among a vast variety of trades, although hardly any Jews worked on railroads, docks, or in mines and large factories. As was true of American occupations generally, habits of ethnic concentration could be found among the Jews. Petty trade proliferated as Jewish immigrants opened small stores throughout booming metropolises and in smaller cities as well. The venerable peddling trade, however, lost its luster. As a nationwide network of retail trade and mail order companies spread – the greatest of which, Sears Roebuck, was built by the Jewish entrepreneur Julius Rosenwald – the peddlers' status declined from an important agent of commerce to a marginal tradesman.

The Yiddish-speaking Jewish immigrant generally joined the working class, working mainly in the ready-made clothing industry that was growing with remarkable rapidity. The number of Jews employed in it as workers, entrepreneurs, salesmen, and so forth may have reached 300,000 around 1915. The ready-made garment industry was composed mainly of shops where workers labored on one or two parts of the total product. In such important centers as Rochester, Cleveland, and Chicago, clothing was produced in substantial factories, owned mostly by Jews. On the other hand, in 1910, in the Borough of Manhattan within New York City, there were 11,172 clothing firms employing 214,428 persons; 78 percent of them, in 1913, averaged five employees each. These were the notorious sweatshops – tiny, crowded, dirty, unventilated, often the petty employer's dwelling – where the employee often worked for 16 hours a day during the busy period of this highly seasonal industry. Despite all their evils, the workshops did enable thousands of immigrant wage workers to enter the garment business on their own. Failure only meant that the unsuccessful entrepreneur returned to wage work, while success in the ferociously competitive industry might lead to independence and wealth. New York City was the great center of the clothing industry; its East Side and then lower West Side, and finally midtown Seventh Avenue were the foci of manu-

facturing. Chicago was a second major center, especially for men's clothing. Philadelphia, Baltimore, Rochester, Boston, and Cleveland were also important in this regard. After 1900 successful East European immigrant entrepreneurs moved into the leadership of the industry as the earlier German Jewish capitalists tended to quit it. In Cleveland, by contrast, the earlier families held sway.

Highly decentralized, low-cost ready-made clothing production was as nearly Jewish an industry as ever seen in the United States, although large numbers of Italian, German, and Irish workers, especially women, also held jobs. It inspired the Jewish trade union movement, beginning in the 1880s. The Jewish labor movement spoke in revolutionary tones during early years, but made little headway before 1900. The seasonal fluctuations of the industry, the virtually unorganizable mass of puny workshops, the relation of employer and employee who might be relatives and *landsmen* (fellow townsmen from Eastern Europe) and could readily exchange places under the conditions of the industry, the failure of the early unions to organize solidly, the legal obstacles and public hostility to trade unionism, especially when it was professedly socialist and revolutionary – were all factors which hindered the development of the Jewish labor movement before 1900. However, larger clothing factories became more common after 1900, and their size and overhead tended to reduce seasonality and sever personal relations between worker and employer. The downfall of the revolutionary movement in Russia in 1906, moreover, caused a considerable number of able labor organizers to flee to the United States. In this period, American public opinion also began to sympathize with trade unionism.

The period of the successful organization of Jewish labor, from 1909 to 1916, coincided with the great drive by American trade unionism at large. In New York City the surge of trade unionism began with the tragic Triangle Shirtwaist fire of 1911, in which 146 Italian and Jewish workers, almost all girls and young women, perished. It was followed by the bitter "revolt of the shirtwaist [blouse] makers," an unsuccessful six-week strike which drew widespread public sympathy but failed nevertheless.

The most important labor event of the period was the three-month strike of 60,000 cloakmakers in 1910 under the direction of the previously ineffectual *International Ladies Garment Workers Union, founded in 1900. In this largest sustained strike in the city's history up to that time, the main demand was for recognition of the union as the exclusive bargaining agent for the workers, and it was on this point, rather than those which concerned wages, hours, and subcontracting, that employers' resistance was bitterest. Such acculturated American Jews as Judah L. *Magnes, Louis *Marshall, and Jacob H. *Schiff intervened in the struggle, but the settlement was worked out by Louis D. *Brandeis, making his first appearance in the Jewish public arena. The "Protocol of Permanent Peace" provided for a system of joint employer-employee-public boards to deal with grievances, sanitation, and other issues, while the contest over union recognition was settled by "the preferential shop," i.e., preference in employment given to union members. The success of the protocol attracted countrywide attention in labor and governmental circles. As well, both the American and Jewish press helped to spread the word of Brandeis' skill and authority as an arbitrator. In a carefully crafted letter written in 1912 to Lincoln Steffens, the era's leading muckraking American journalist – copies of which were forwarded to several major newspapers and their editors – Brandeis spelled out his Progressive vision of employee-employer relations.

> In my opinion the time is ripe for a great advance in the scope and influence and the quality of trade unionism.
>
> On the one hand, the disclosures incident to the labor policies of the strong trusts and particularly the hours of labor, wages, and conditions in the steel industry are making many Americans recognize that unions and collective bargaining are essential to industrial liberty and social justice.
>
> On the other hand, the abuses of trade unionism as we have known them during the last twenty years with their violence, restriction of output, and their lack of constructive policy, are in large part the result of the fact that they have been engaged in a bitter struggle for existence. When public opinion is brought actively to the support of labor unions these abuses will, I believe, tend rapidly to disappear. But the American people should not and will not accept unionism if it involves the closed shop. They will not consent to the exchange of the tyranny of the employer for the tyranny of the employee. Unionism therefore cannot make a great advance until it abandons the closed shop; and it cannot accept the open shop as an alternative. The open shop means the destruction of the union.
>
> The advance of unionism demands therefore some relation between the employer and the employee other than the closed or open shop, and I feel confident that we have found a solution in the preferential union shop.
>
> …This seems the time to commence the campaign of education. Much hammering will be necessary; for the employers will be loath to enter into so comprehensive an agreement with unions; and unions will be loath to give up the closed shop. But the preferential shop seems to be a way out of our present serious difficulty; and we must pursue it unless a better can be found.

Though Brandeis' letter to Steffens ostensibly deals exclusively with the question of the preferential union shop, it also provides a glimpse of the amalgam of political liberalism and sensitivity to the rights of disenfranchised groups that would become a hallmark of the American Jewish community in the 20th century. Meanwhile, the size, duration, and the unprecedented settlement of the cloakmakers' strike made it a milestone in the history of American labor and a pivotal event which turned the Jewish labor movement into a powerful force. The episode also elevated the visibility and underscored the political capital of other Jewish participants, most notably the union lawyers Morris *Hillquit and Meyer *London. In fact, London subsequently won election in 1914 to the U.S. House of Representatives as the standard bearer Socialist Party for the Lower East Side; he was reelected in 1916.

The cloakmakers' strike was followed by several other successful ones, including in 1912–13 the strike of the furriers, men's tailors, and ladies' waist- and dressmakers. Surveying this turbulent period, the historian Jonathan Frankel has observed that "at one point in 1912, an estimated 175,000 workers in the 'Jewish trades' were out on strike." Another important strike that followed was the Chicago men's clothing strike in 1914 and 1915. Here leaders of the United Garment Workers, whose preponderant ethnic elements were not Jewish and did not work at ready-made clothing, made an unauthorized deal with the employers which brought about the secession of the Jewish and other ready-made tailors and the founding of the Amalgamated Clothing Workers of America, led by Sidney *Hillman. The new union conducted a series of victorious strikes in Chicago and then in other major centers of the trade. However, neither they nor the International Ladies Garment Workers Union (ILGWU) were uniformly successful. Thus in Cleveland the factory employers defeated strikers and union organizers until 1917. By 1920 at least 250,000 Jews belonged to the Jewish unions.

WOMEN. American Jewish women lived under a set of unique circumstances at the turn of the 19th and 20th centuries. In stark contrast to their counterparts in much of Europe, Jewish women in the United States enjoyed increasing freedom of individual movement and expression, and some even possessed funds for philanthropic activities. Such liberties and assets were almost totally lacking in Eastern Europe, where traditional gender-differentiated Jewish values and systems prevailed and where the possibility for Jewish participation in the host society was marginal. In many situations, Jewish women experienced double oppression – as Jews in an antisemitic milieu and as women in a patriarchal society. The lack of birth control, opportunities for education, and a secure income severely restricted the lives of Jewish women in Eastern and Central Europe. In the United States, these forces were muted.

In late 19th century America, Jewish women expanded and deepened their participation in American Jewish life. The mass waves of East European Jewish immigrants, including many thousand radicalized young Yiddish-speaking women, helped create the American Jewish labor movement and some of the most important American labor entities including the International Ladies Garment Worker's Union. They also became involved in the anti-prostitution movement, the Settlement House movement, the suffrage movement, and in the birth control movement.

Women leaders of the early American Jewish labor movement included Clara Lemlich (*Shavelson), Pauline *Newman, and Rose *Schneiderman, who served as president of the New York Women's Trade Union League. These women proved especially adept at negotiating the delicate relationship of women workers, the male-dominated labor establishment, and various progressive and middle-class allies of the labor movement. The significance in this regard became evident in the wake of the notorious Triangle Shirtwaist Fire of 1911, in which more than 140 women workers perished as result of inhumane sweatshop conditions on the Lower East Side of New York City. Following the tragedy, these and other women campaigned for the regulation of safety standards, sanitary conditions, wages, and working hours. Meanwhile, the establishment of the Amalgamated Clothing Workers of America was due, in large measure, to the organizational talents of political activist Bessie Abramowitz (*Hillman), who shortly thereafter married American labor leader Sidney Hillman. At its peak between World Wars I and II, approximately 40 percent of all Jewish laborers could be found in the American garment industry, including a sizable quotient of women, the majority of whom belonged to International Ladies Garment Workers Union and the Amalgamated Clothing Workers of America. In this period, Dorothy Jacobs Bellanca, Fannia *Cohen, and Rose *Pesotta assumed national prominence as influential American labor leaders. The importance of Jewish rank-and-file participation in the American labor movement and the impact of Jewish workers' activity on American Jewish life is indicated by the ringing editorial endorsement of the International Ladies Garment Workers' Union by the Yiddish-language daily *Forverts*, which at the time had a circulation of well over a quarter million.

> In Chicago a convention of the International Ladies Garment Workers' Union opens today [May 3, 1920] at which there will be present about three thousand delegates from the entire length and breadth of the country.
>
> For the first time in the history of this powerful labor organization, the most important trade in the general women's clothing industry comes to the convention one hundred percent organized. The cloak makers have, during the past two years, captured the last stronghold of the employers, who have always been considered invincible. Cleveland fell; the last factories in Canada were captured; cities in the far West were organized; and the cloak trade comes to the convention entirely under the flag of the union.
>
> Of great significance is the recommendation of the executive committee that the union should organize cooperative shops. This plan reflects the spirit of the new tendencies in the union movement of the world, the spirit which leads workers to control industries themselves.
>
> The ILGWU stands now in the foremost ranks of the American labor movement, both materially and spiritually. It is one of the most important unions in the country. It has won for its members such conditions that very few of the real Americans may compare with it. Spiritually it is in every respect one of the most progressive. It responds to every movement for justice, for light. It is always prepared to help the workers in other trades in their struggles to help the oppressed and the suffering.
>
